On the ground of these traditions, the judge, the witnesses, and the culprit must all do their best to prevent the infliction of punishment, if it is a hage Allāh. The culprit is then not bound to acknowledge his guilt if he is accused; he may even revoke his confession before the judge; for the witnesses it is not regarded as meritorious to give evidence against the culprit; the judge must expressly point out to the accused the means by which he may escape punishment; and he may not condemn him before his guilt has been proved, according to the demands of the canon law, even though he personally knows with complete certainty that the crime has actually been committed.

In practice, the crimes which must be punished with hadd can hardly ever be proved except by the voluntary confession of the culprit, because the legal proof is too difficult. To prove fornication, for instance, it must be possible to call four witnesses who have all observed the act (see ADULTERY [Muslim]). If the guilty person does not desire to do penance for his crime, and in this way to purify himself from his sin, it is therefore usually impossible to punish him. If, however, his guilt is formally certain, the judge is obliged to inflict the *hadd* precisely according to the regulations of the canon law.

2. Retaliation (qiṣāṣ).—According to the Muslim law-books, retaliation is still permitted in only two cases: (1) when any one has deliberately and unjustly killed another, the heirs of the latter have the right to kill the murderer; (2) if any one is deliberately and unjustly wounded or mutilated, he has the right to revenge himself on his injurer, if it is possible to make him suffer precisely the same wounding or mutilation. According to Muslim lawyers, this is in general possible only when a hand, foot, arm, log, ear, finger, nose, toe, tongue, eye, or tooth, or other part of the body, has been cut off or destroyed. Moreover, retaliation is in both these cases permissible only (1) if the guilty person was of full age when his crime was committed, and in the full possession of his intellectual powers; (2) if the injured party is at the same time an equal of the guilty person. According to the majority of Muslim lawyers, a slave is not the equal of a free man; only the Hanafites hold that the rules of retaliation are applicable also to a free man who has killed or wounded the slave of another. If an unbeliever is killed by a Muslim, it is not, as a rule, permissible to take vengeance for blood on the latter unless the deceased unbeliever had been expressly promised protection of his life by a Muslim. Also the father may not be put to death when he has killed his son.

Those who have the right to demand revenge for blood are the heirs belonging to the first and second classes, the 'aşabāt and the dhawu'l farā'iḍ

Second diasses, the travel that the automate fact the 1 According to Muslim canon law, the question whether the culprit acted deliberately or not depends on the sort of weapon with which his act was accomplished. The opinions of the various fight-schools differ as to the details.

2 The qisas is not applicable to one who has killed or wounded another if he had a right to do so. He, for instance, who finds a thief in his house, or any one outraging his wife, may immediately kill him without incurring penalty—not only in self-defence, but also in vengeance on the offender.

(see art. LAW [Muhammadan]); according to the Mālikites, however, wives cannot exercise any qiṣāṣ. If the heirs give up their right to qiṣāṣ, the guilty person is obliged to pay the price of blood (diya); according to the Hanafites, however, the dina cannot be demanded in this case, if the guilty person does not himself agree to it. If the deceased has left various heirs, and some of them are willing to spare the guilty, no vengeance for blood may be exacted, but only the diya.

Vengeance for blood is carried out personally, under the supervision of the judge, by those who

have instituted the proceedings against the guilty person. If there are several who demand it, one

of them is appointed to carry out the punishment.

3. The price of blood for manslaughter (diya).

—The price of blood for manslaughter may be demanded: (1) when any one has been killed deliberately and unjustly, and his heirs give up their right to exact the qiyüş; (2) when any one has been killed unintentionally. In both cases the diya consists of 100 camels, or 1000 dinar of gold, or 12,000 dinams of silver (according to the Hanaites, however, 10,000 dinhams of silver). But in the first case the so-called 'heavy,' and in the second case the 'light,' price of blood is incurred. In the fight it is accurately decided what sorts of camels must be given in each of these cases. gold or silver is paid in place of camels, according to some Muslim lawyers a greater sum may be demanded for the 'heavy' diya than for the 'light'; but according to others it is not so; and, according but according to others it is not so; and, according to the later opinion of Shāfi'ī, no fixed payment of gold or silver is due, but the worth of the 100 camels. The 'light' price of blood must be paid within a period of three years by the so-called 'āqila, i.e. by those who pay the 'aql ('price of blood'). To these 'āqila belong, according to the Hanalites and Mālikites, all 'aqabāt (i.e. the male relations on the paternal side) of the culprit, and according to them he must also himself pay part of the sum incurred; according to the Shāfi'ites, on the other hand, neither the culprit himself nor his the other hand, neither the culprit himself nor his blood-relations in the direct line belong to the

When the Muslims after the great conquests established themselves in Egypt, Syria, Persia, and other lands, the Old Arabian family-organizaand other hands, the out Araban family-digantza-tion partially lost its importance, and there arose a new grouping of persons who had the same interests to defend. According to the Hanafites, the same rules concerning the payment of the price of blood are applicable to these new groups as to the blood-relations of the guilty person; according to them, therefore, all persons belong to the aquia who are bound to give their mutual support to each other (among others, neighbours, those who practise the same profession, those who belong to the same army-corps). The 'heavy' price of blood, on the other hand, may be demanded only from the culprit himself; and, according to most fagils, he has no right to postpone payment. According to the Hanalites, however, he also is only obliged to pay

the sum within a period of three years.
(3) Besides the cases in which any one is killed either intentionally or accidentally, Muslim lawyers distinguish yet a third case in which the culprit did, indeed, attack the deceased intentionally, but without meaning to kill him. In that case the 'agila must pay the so-called 'heavy' diya. They are also obliged to do this, according to some Muslim lawyers, if he has killed another accidentally, either in the sacred territory of Meeca or during one of the four sacred months (Muharram, Rajab,

It must be noticed that, according to Muslim lawyers, any one who has accidentally killed another is punishable even if no fault attached to him in so doing. The price of blood may even be demanded if, for instance, any one has fallen from the roof and in his fall has killed another.

Dhu'l-qa'da, Dhu'l-hijja); further, if the deceased was a mahram (i.e. a relation whom it is forbidden to marry) of the culprit; according to others, however, they are in this case liable only to the 'light'

For the death of a woman only half the price of blood can be demanded; for the death of a Christian or a Jew, according to the Mälikites, also only half the diya, according to the Shāfi ites only one third, but, according to the Hanafites, the full price of blood. If any one kills the slave of another, according to most Muslim lawyers he must himself make good to the owner the full value, even though this cost more than the diya for a free man; according to the Hanafites, however, the owner has never a claim to more than the value of 100 camels decreased by one dinar. If the culprit was under age or mad, the price of blood must be paid out of his property by the guardian or curator; if the culprit was a slave, his master is responsible, but he can free himself from all further obligation by giving up the slave.

In addition to the  $qis\bar{a}s$  or the diya, manslaughter demands a kafföru ('atoning sacrifice'); and, according to Qur'ān, iv. 94, this must consist in the setting free of a Muslim slave, or, if this cannot be done, in fasting for two months. The feeding of 60 poor persons, which in some other cases of kaffara may take the place of fasting, is in this case, according to most fagiles, insufficient. According to the Hanalites and Malikites, this kaffara is incurred only when any one has been put to death accidentally (on the ground of the words of Qur'an, iv. 94); but, according to the Shāfi ites, also if the culprit has acted intentionally.

The diya and other damages for wounding. if he gives up his right to qişās, claims the diya in place of it (according to the Hanalites, only if the guilty person agrees). The full diya is incurred when, because of the wound, a part of the body is lost (c.g. the nose) of which a man has only one; he who loses a part of the body of which men have two (e.g. an eye, ear, hand, or foot) may claim the half of the diya as damages; in the same way \(\frac{1}{2}\) of the full price of blood is incurred for an eyelid,  $\frac{1}{40}$  for a finger, and for a joint of a finger  $\frac{1}{30}$  of the diya. The rules and distinctions concerning the diya for manslaughter apply also to the diya

for lost parts of the body.

Damages are incurred also for wounds for which no qiṣāṣ can be demanded, as, for instance, those which are caused by stabbing or cutting the body. In the Muslim law-books, regulations concerning the various sorts of these wounds are worked out in detail. Ten of them (all wounds worked out in detail. I'm or then fail wounds caused by cutting on the head or the face) are known as the shijaj; the midiha is a wound which has cut to the bone, etc. The damages which the culprit must pay depend in some cases on an express regulation of the law-books, and are then called arsh; in other cases they must be fixed by a called arsh; in other cases they must be fixed by a legal sentence (hukūma), according to the loss suffered by the injured. An expert has then to estimate what value the body of the wounded person would have had before and after the wound, if he was a slave. If it appears that the value of his body was diminished by, for instance, \(\frac{1}{10}\), the judge sentences the culprit to pay \(\frac{1}{10}\) of the full diya. If any one has been wounded simultaneously in several places, he may claim damages for each in several places, he may claim damages for each

wound separately, and therefore in some cases may receive even more than the diya for manslaughter.

5. Misdeeds which must be punished with a hadd.—For the hadd in consequence of zinā, see art. ADULTERY (Muslim). The punishment for apostasy from Islām, which is regarded by some Muslim jurists as a hadd, is treated in art.

APOSTASY (Muhammadan). We have therefore here to treat only of the other fixed penalties, viz. those for qadhf, wine-drinking, theft, and high-

way robbery.

(1) Qualif.—By this the Muslim canon law understands only such slander as is meant in Qur'an, xxiv. 4. Since only slander of 'honourable' women is mentioned there, the crime of qualify consists, according to Muslim lawyers, of the accusation of fornication brought against a muhsan (i.e. an 'honourable' person, who is, moreover, a free Muslim of full age, in the full possession of intellectual power) without its being possible to adduce proof by four male witnesses. He who is guilty of this crime must be punished with 80 stripes if he is a free man, and with 40 if he is a slave. This hadd is not enforced if he is under age, or insane, or if he is the husband of the slandered woman and swears that she is guilty, invoking Allah by means of the so-called li'an (see art. LAW [Muhammadan]). According to some Muslim lawyers, the slandered person has the right of excusing the punishment of the guilty, but not according to others; there is also a difference of opinion as to whether the heirs of the slandered person have the right of exacting this hadd.

(2) The hadd for the drinking of wine and other strong drinks consists of a certain number of stripes, on the ground of the tradition as to the way in which the Prophet punished drunkards in Medina. As to the number of stripes, there is a difference of opinion: according to the Shāfi'ites, the punishment consists of 40, according to the other figh-schools, of 80 stripes for a free man, and the half of that number for slaves. The guilt of him who is accused of this crime can, according to canon law, be proved only by two male witnesses, or by the confession of the guilty. Moreover, the punishment is not applicable to minors, insane

persons, and unbelievers.

(3) The hadd for theft depends on the command given in Qur'an, v. 42, 43, 'From the man thief and woman thief cut off the hands, as a warning example from God.' According to the Shafi'ite and the Mālikite doctrine, a thief after his first theft must lose the right hand, after the second the left foot, after the third the left hand, after the fourth the right foot, and after the fifth and following thefts he must be punished by tazīr. According to the Hanafites, however, the thief must never lose more than the right hand and the left foot; if he continues to steal after his second offence, he must be kept in prison until he is reformed.

Theft is, however, punished with this hadd only when the stolen article had been put away in a proper manner, and, moreover, had a certain value (the so-called niṣāb). According to the Shāfi'ites, the hadd is applicable only if the value of that which is stolen is at least \(\frac{1}{2}\) of a dinār (about 3 shillings); according to the Hanafites, only if the worth was at least one dinār, or 10 dirhams; according to the Mālikites, \(\frac{1}{2}\) of a dinār, or 3

dirhams.

The hadd for theft is also not applied if the thief was under age or insane, or if he could make good a certain claim to the stolen property. The last is the case if one of those who have taken part in a battle steals something from the booty before it has been divided among the troops, or if a Muslim steals from that which was intended for the general use of Muslims. If one of a married couple steals something to the injury of the other, according to some Muslim lawyers the culprit must be punished with hadd, but not according to the opinion of others.

The person whose property was stolen has the right to reclaim the stolen article; and, if this has

been lost, the thief must pay damages in its place. According to the Hanasite doctrine, however, the thief is not obliged to make such payment of damages if the hadd for theft has been applied to

(4) The hadd for highway-robbery is deduced

from Qur'an, v. 37, 38:

The punishment for those who fight against Allah and his apostle, and pass through the land spreading disaster, shall be that they shall be slam or crucified, or have their hands and feet out off cross-ways, or that they be banished from the land. unless they reform before they fall into your hands. God is forgiving and compassionate.'

Since, therefore, this hadd was not accurately efined, there arose much difference of opinion among Muslim lawyers as to the punishment of highway-robbers. The various opinions cannot all be mentioned here in detail. According to the Shāfi'ite doctrine, four cases must be distinguished: (1) if the culprit has only made the road unsafe, he must be banished; (2) if he has also practised robbery (namely, in the sense that he would incur the hadd for theft if he were not a highwayman), his right hand and left foot are cut off (in the case of a repetition of the offence, the left hand and right foot as well); (3) if he has deliberately murdered any one, he must be put to death, even though the heirs of the murdered person were willing to content themselves with the diya; (4) if he has as a highway-robber robbed and killed, not only is he punished with death, but his corpse is exhibited for a time on a cross. According to the other madhhabs, regulations obtain which are partially different.

When the robber repents before he has been captured, the special hadd for highway-robbery is no longer applicable to him, but he remains, for instance, obliged to restore that which has been stolen; and, if he has killed any one, the heirs of the latter have, just as in other cases, the right of

exacting the qisas or diya.

6. Ta zir ('correction').—When no special punishment is prescribed, the judge, as has already been noted, must condemn the culprit to the punishment which seems to him to be the most suitable in view of the circumstances. He may, for instance, send him to prison, exile him, or sentence him to be publicly put to shame or scourged, etc. According to the Mālikite doctrine, he is even entitled in this case to condemn him to as many stripes as are prescribed in the case of hadd, or even more; according to the other fighschools, however, this is not permissible. According to them, the  $ta'z\bar{\imath}r$  must always be less severe than a hadd. The  $ta'z\bar{\imath}r$  is, among other things, applicable to a thief when the stolen property has not so much value that the culprit must be condemned to the hadd; furthermore, in general, to all kinds of transgressions for which no other kind of punishment or any special atoning sacrifice (kaffāra) is prescribed.

The judge is not always obliged to apply the

ta zir; according to the Shafi ites, only when the injured person expressly requires him to punish the culprit; and, according to the Hanafites and Mālikites, also when he is convinced that the latter will not reform without punishment. A hadd, on the other hand, must always be inflicted when the guilt of the culprit has been proved, because this punishment is expressly prescribed in the canon

CRIMES AND PUNISHMENTS (Parsi).—
From the list of the contents of the original twenty-one nusks of the Zoroastrian canon, the bulk of which is irretrievably lost, we find that seven of them consisted of the dātīk, or 'legal' literature (Dīnkurt, viii. 1, 11). Of these the Vendīdād, 'the Leviticus of the Iranians,' is preserved in its entirety, and this work, with some other portions of the extant Avesta and Pahlavi books, forms the chief source of our information on the criminal law of the ancient Persians.

Offenders against law are punished, first, in this world, according to the penalties laid down for various crimes; and, secondly, in the next world. The usual form of corporal punishment is the prescription of a certain number of stripes (upazana) with the two implements aspa-astra ('horse-goad') and sraoso-carana ('scourge'). The number of such stripes prescribed for different crimes ranges between five and ten thousand. The extravagant number of strokes and the physical impossibility of a human being enduring this torture have led scholars to think, with Spiegel, Geiger, and Darmesteter, that the stripes were not actually meant to be laid on the culprits, but that the number of strokes either meant that the sinner should kill so many noxious creatures, or that they were so many strokes inflicted upon the realm of darkness, or that they were only meant to impress on men the gravity of the crimes. For instance, it is prescribed that a woman who has been delivered of a still-born child shall refrain from drinking water for the good of her own health for some time (Vend. vii. 60-72). The violation of this precept is punishable with two hundred stripes. Now this would be brutal, and the later writer of the Rivāyat states that in such a case, if she should thus drink water to avert serious illness, it would be sufficient for her husband to atone for her fault before a Dastur by patet, or 'penitence' (Old Rivāyat, p. 98b, quoted by Darmesteter in SBE iv. 92, n. 5, Le Zend-Avesta, ii. 112, n. 88). In the later Pahlavi period, these stripes are converted into money relies and contain from the later for the period, these stripes are converted into money value, and certain fines are laid down for the various number of stripes. Very often the word marquazān, 'worthy of death,' is loosely employed to denote the hideousness of a crime. Some offences are termed anaperetha, 'unatonable.' The chaif among them are the burying, burning, and eating of dead matter, and sodomy.

The characteristic feature of the Mazdavasnian

The characteristic feature of the Mazdayasnian law is that it prescribes very rigorous punishment for the violation of the rules of sanitation and hygiene; for it is said that the man who violates these rules imports or furthers epidemic, and endangers human life. The punishment for the ill-treatment of the various classes of dogs is exorbitant, and is calculated to ensure good treatment of this faithful animal, who as a sentinel guards the flocks of the faithful, and protects them from the attacks of wolves and other wild beasts, as also from the depredations of thieves and bandits. Any wilful harm done to so useful an animal is believed to deprive the community of his services, and to expose life and property to

Capital punishment is prescribed for the man who carries a dead body alone, and for the man who falsely undertakes to cleanse one defiled with

dead matter. Strange as it may seem, only ninety stripes are prescribed for one who commits murder. Instances are found in Persian history in which capital punishment is meted out to manslayers. When the Sasanian king Ardashir discovers the plot of his queen to poison him, he consults the Dastur as to what should be done in the matter. The high priest thereupon replies that one who attempts to take the life of another deserves death (Kārnāmak-i Artakhshīr-Pāpakān, ix. 16-17). The cruel punishment of cutting off the hands, ears, and other parts of the body, is not unknown. Darius orders the nose, ears, and tongue of his rebel victim to be cut off, and his eyes to be put out (Old Pers. Inscriptions on Mount Behistan, ii. 74, 89; see F. H. Weissbach and W. Bang, Dic altpersischen Keilinschriften, Leipzig, 1893, i. 21).

1. Assaults.—There are seven kinds of outrages,

i. Assaults.—There are seven kinds of outrages, which are called in Pahlavi pāyak vinās, and in Sanskrit padāni pāpāni, meaning 'chief crimes' (Shāyast lā-Shāyast, i. 1; Patet Pashimānī, iii.). These are (1) āgerepta, 'stroke': when a man lifts his hand and wields a weapon with the intention to strike a blow, he becomes guilty of this crime (Vendīdād, iv. 17). The punishment for the first offence is five stripes with the aspa-astrā and five with the sraosō-caranā. The penalty increases proportionately with the repetition of the crime, until, on the eighth committal of the same, the man is termed a pesōtanu, 'of sinful body,' and is to be punished with two hundred stripes (ib. 18-21). (2) avaoirista, 'blow.' This is the name of the assault wherein a man brandishes a weapon (Vend. iv. 17). He receives ten stripes for the first crime, and the maximum penalty of two hundred stripes is prescribed in his case if, without atoning for his previous crimes, he repeats it seven times (ib. 22-25). (3) aredus, 'wound.' The penalty for this crime begins with fifteen stripes, and makes the culprit liable to two hundred stripes on the repetition of the same for the sixth time (ib. 26-29). (4) avaara, 'sore wound.' This is punishable with thirty stripes for the first crime, and two hundred for the fifth repetition (ib. 30-33). (5) tacatvohunī, 'bloody wound.' The penalty is lifty stripes for the first offence, and the fourth committal of the same raises the punishment to two hundred stripes (ib. 34-36). (6) astō-bid, 'bone-breaking,' begins with the punishment of seventy stripes for the first offence, and the fourth committal of the same raises the punishment to two hundred stripes for the first offence, and the fourth committal of the same raises the punishment for this crime is ninety stripes for the first offence, and two hundred for the second (ib. 40-42).

The Pahlavi Shāyast lā-Shāyast variously speaks of eight or nine classes of crimes (i. 1, xi. 1). The farmān and sraosō-caranā are the additional sins mentioned here. Certain degrees are assigned to the various crimes, and the bodily punishment is converted into fines. Thus the degree of the smallest crime, farmān, is estimated at four stars (a star being equivalent to four dirhams). The degrees of the crimes rise in proportion to the gravity of the offences, until the tanāfur sin is estimated at three hundred stars (i. 2, xi. 2, xvi. 2-5).

2. Theft.—The tāyu, 'thief,' and hazanha, 'robber,' 'bandit,' who rob the faithful of their

2. Theft.—The tāyu, 'thief,' and hazanha, 'robber,' 'bandit,' who rob the faithful of their cattle and property, are severely punished. According to the Mazdayasnian declaration of faith, a true Zoroastrian undertakes to put down these crimes (Yasna, xii. 2). Haoma is invoked to warn the faithful of the cunning movements of the thieves (ib. ix. 21), and Rashnu, the angel presiding over truth, is spoken of as the best killer, smiter, and destroyer of the thieves and bandits (Yasht, xii. 7 f.). The sacrifices offered to Khurshād, asking him to help the pious to withstand these evil

forces, is said to be equivalent to offering the same to Ormazd (Yt. vi. 4; Nyāish, i. 14), and Ardvīsūra is invoked to pour down her waters as a source of torment to the brigands (Ys. lxv. 8). The routing of the thieves and robbers is eagerly prayed for (Ys. lxi. 3). The man who takes a loan from another, with the evil intention of not returning it, is a thief; and the commentator ex-

plains that, if he bluntly refuses to restore it, he becomes a robber (Vend. iv. 1).

The culprits had either to pay fines, or their ears and hands were cut off, or they were imprisoned. If a man stole a dirham (about 7d.), he had to pay two dirhams, one of his ears was cut off, ten blows with a stick were inflicted upon him, and he was imprisoned for some time (Sad Dar, lxiv. 2-3). If he stole another dirham, four dirhams formed his fine, he had to forfeit his other ear, to receive twenty blows, and to be imprisoned for a period twice the length of that inflicted at the time of his first crime (ib. lxiv, 4). The third repetition of the crime was punishable by cutting off his right hand (ib. 5), and if, persisting in his evil work, he finally stole five hundred dirhams, he was to be hanged (ib. 6). The bandit who had robbed a person of something by violence, had to restore to the owner four times as much as he had taken, or he was to be killed if public safety required it (ib. 11; cf.,

further, on theft, Dinkart, viii. 20. 123, 21. 1-14).

3. Breach of contract.—The man who lies to 3. Breach of contract.—The man who has to Mithra is guilty of  $Mithr\bar{o}$ -druj, and brings death to the whole country (Yt. x. 2). The faithful are exhorted not to violate contracts entered into with any one. The six important forms of contract are: (1) word-contract, (2) hand-contract, (3) the contract to the value of a sheep, (4) the contract to the value of an ox, (5) the contract to the value of a man, and (6) the contract amounting to the value of a field (*Vend.* iv. 2). The penalty for breaking these contracts begins with three hundred stripes with aspa-astrā and an equal number with sraoso-caranā, for the violation of the first class of contract, and rises to the maximum punishment of a thousand stripes each in case of the breach of the final contract, namely, the field-contract (ib. 11-16).

4. Crimes connected with the defilement caused by corpses and dead matter.—The earth, being one of the sacred elements of nature, is to be kept one of the sacred definence. Ahriman created the sin of interring corpses in the earth, for which there is no atonement (*Vend.* i. 13, iii. 39), and it is therefore the sacred duty of the faithful to disinter the dead bodies, wherever possible. If a man lets a corpse remain buried, and neglects his duty to dig it out within six months, his punishment is five hundred stripes with each of the two punishing rods. The penalty is doubled in the case of a corpse remaining buried for a period of one year, and if it is not disinterred within a period of two years, it makes the man guilty of anapcretha, for which there is no atonement (ib. iii. 36-39).

Under no circumstances is a corpse to be carried by a single person, lest he should be defiled. Capital punishment is meted out to him who violates this precept. The culprit is to be removed violates this precept. The culprit is to be removed to a barren place, and to be kept there until he grows old, after which his head is to be cut off (ib. 15-21). The man who does not properly observe the rules of removing the corpse to the top of a mountain, and fastening the body with brass or stones by the feet or hair, to prevent the dogs and birds from carrying the dead matter to water and trees, is to be punished with two hundred stripes (ib. vi. 47 f.). If a man happening to touch a (ib. vi. 47 f.). If a man, happening to touch a

viii. 104-106). Wilful carrying of the dead matter to water or fire makes one worthy of death (Sad Dar, lxxii. 1). Unnecessary waste of anything is deprecated, and a man who throws more cloth on the corpse than is essential has to suffer the punishment of four hundred stripes, rising to one thousand stripes with both the whips, in proportion to the quantity thus wasted (Vend. viii. 23-25).

Among the worst crimes created by Ahriman is that of cooking corpses, for which there is no atonement, and of which the penalty is death (Vend. i. 17, viii. 73f.; Strabo, p. 732). The eating of the carcass of a dog or the corpse of a many parks one unplace for corpse of a man makes one unclean for ever, and it is pre-scribed that the heart of the man guilty of this crime shall be torn out, and his eyes put out (Vend. vii. 23; Şad Dar, lxxi. 2; Grand Rivāyat,

The ground on which a dog or man has died is not to be tilled for a period of one year. The man who does not observe this rule is punishable with two hundred stripes. The man who tills the ground without cleansing it of the bones, hair, urine, and blood lying on it becomes a pesotanu, and receives two hundred stripes with the two instruments of punishment as a penalty (Vend. vi. 8f.). It is sinful to throw bones of a dead dog or a dead man on the ground as the dog or a dead man on the ground, as the marrow flowing from them pollutes the ground. The penalty of throwing a bone of the size of the top-joint of the little finger is thirty stripes, and rises proportionately, to the maximum penalty of one thousand stripes when the body of a dead dog or a dead man is thrown on the ground (ib. vi. 10-25). Bringing back fire into a house in which a man has died, within nine nights in winter and a month in summer, is punishable with two hundred strings with the same attack and two hundred strings with the same attack and two hundred. dred stripes with the aspa-astrā, and two hundred with the sraosō-caranā (ib. v. 43 f.).

5. The crime of ill-treating the dog.—The Iranians held the dog as the sacred animal created

by Ormazd, and rigorous punishments are pre-scribed for his ill-treatment. The giving of bad food to various classes of dogs is punishable with fifty to two hundred stripes, in accordance with the importance of the class of dogs (Vend. xiii. 24-27). Seven hundred stripes with each of the two implements are prescribed for him who smites a bitch that is with young (ib. xv. 50). Five hundred to one thousand stripes are the lot of those who kill various kinds of dogs (ib. xiii. 4, 12-15). The murder of a water-dog is to be atoned for by ten thousand stripes, or by carrying ten thousand loads of sweet-scented wood to the fire, or an equal number of barsom twigs, or by carrying the same number of zaothra libations to the waters, or by killing as many snakes and other noxious creatures, or by helping to contract marriage between the faithful, and by doing various similar redeeming works (20. xiv. 1-18).

6. Crimes relating to women in menses.— Elaborate rules are laid down for the period of menstruation, during which a woman remains in seclusion, the violation of which is generally punishable in the next world. Intercourse with a woman during this period amounts to wilful mur-der, burning of the life-giving seed, and is punished with thirty stripes for the first offence, and rises to a penalty of ninety stripes in case of its repeti-tion (*Vend.* xvi. 14-16). The penalty rises to one thousand stripes when the offending parties wilfully and knowingly indulge in the crime, and the man has to atone for his sin by an additional performance of meritorious deeds, as those of killing about nine thousand noxious creatures such as corpse in the wilderness, approaches water and trees without cleansing himself, he receives four hundred stripes with each of the two instruments (ib.) If the woman who has brought forth a still-born child drinks water for the good of her own health, she becomes a pesotanu-her offence is punishable with

two hundred stripes (ib. vii. 70-72).

7. Crimes regarding the purificatory rites.—
Capital punishment is meted out to him who officiates as a cleanser without himself being well versed in the rites of cleansing. His hands are to be bound, his head is to be cut off, and his body is to be thrown to the vultures (*Vend.* ix. 47–49). A later work prescribes that he shall be nailed with four nails, his skin taken off, and his head cut off (Fraser Evazgat, p. 398, as quoted by Darmesteter in SDE iv. 135, n. 1, Le Zend-Avesta, ii. 170, n. 55).

8. Unnatural crime.—Zoroaster denounces this

deed as the worst crime against morality (Ys. li. 12). Ahriman is its creator (Vend. i. 12). There 12). Ahriman is its creator (Vend. i. 12). There is no sin greater than this, and the man practising it becomes worthy of death (Sad Dar, ix. 2). This is the only crime which entitles any one to take the law into his own hands, and to cut off the heads of law into his own hands, and to cut off the heads of the sodomites and to rip up their bellies (ib. ix. 3f.). The Dātistān-ī Dēnīk (lxxvi. 3) modifies this, and states that, before taking the law into one's own hands, one should try to impress the heinousness of the crime on the minds of the wicked sinners, but, if that is of no avail, one may kill them on the spot. The sodomite is called a demon, a worshipper of demons, a male paramour of demons, a female paramour of demons, as wicked as a demon; he is a demon in his whole being while he lives, and remains so his whole being while he lives, and remains so after death (Vend. viii. 32). The faithful should not have any intercourse with such a man, except by way of attempting to reclaim him from this inexpiable crime (Dāṭistān-ī Dēnīk, lxxii. 10). The crime puts one on a par with Ahriman, Afräsiyäh, Zohak, and other wicked ones (Şad Dar, ix. 5), and greatly increases the joy of the Evil Spirit (ib. 6). Eight hundred stripes with each of the two rods is the penalty for him who has been forced by violence to this crime, but there is no atonement for him who voluntarily submits to it (Vend. viii. 26 f.). The same crime committed with a woman is equally heinous (Sad Dar, ix. 7).

9. Adultery and abortion.—See ADULTERY (Parsi) in vol. i. p. 133 f., and FETICIDE.

(Parsi) in vol. 1. p. 133 f., and Feticide.

Literature.—J. Darmesteter, Le Zend. Avesta, Paris, 1892, ii., Introd. pp. xv-xxiv, SBE iv., Introd. lxxxii-lxxxvii; W. Geiger, Ostirān. CRIMES AND PUNISHMENTS (Roman).—

CRIMES AND PUNISHMENTS (Roman). Roman law never acquired on its criminal side the clearness and precision which characterized its civil applications, in an ever increasing degree, until the collapse of the Empire came. Among the many causes for the imperfect development of criminal law, the most important is the compara-tively large influence which political conditions exercised upon the definition and punishment of crime, Under the democratic system, when the crime. Under the democratic system, when the assembled citizens were in theory sovereign, evolution was slow; with the advent of autocratic rulers—Sulla, Julius Cæsar, and the Emperors—change proceeded apace, and criminal administration was made more systematic. For the purposes of our brief exposition, three sections of the subject may be distinguished. The first comprises the notions attached to crime, the gradual abridge. the notions attached to crime, the gradual abridgment of the gulf between criminal law and morality,

and the widening jurisdiction of the State over The second branch concerns the prooffences. cedure leading up to punishment; the third, the nature of the punishments inflicted. Needless to say, the boundaries between these three divisions cannot be precisely drawn.

In the earliest days of the Roman community, most functions of the State were rudimentary, and there was little scope for the public punishment of actions committed by citizens, even when they shocked the moral sense. Much was left to the vengeance of heaven, and in some cases any citizen could make himself the champion of the offended gods. The close-knit organization of the family (familia) and the clan (gens) also greatly restricted the scope of criminal law; and, though the framework of the gens early fell to pieces, that of the fumilia retained many of its primitive elements until Roman civilization succumbed. Survivals in the historical period clearly show that the head of the family (paterfamilias) once possessed uncontrolled authority (imperium) over the lives of all who were in his power. The wife, the child (born in the family or brought into it by adoption from without), and the slave were in this respect all on the same level. Of course ancestral custom (mos maiorum), powerful in every age of Rome, restricted in practice the exercise of this authority, though in principle it was absolute, and required it to be used with a certain formality and reasonableness. The law stepped in later and protected to an increasing extent the freeborn members of the family. New forms of marriage enabled the wife to escape from the absolute imperium of her husband. Examples of the execution of women by family decree are found in the 2nd cent. B.C., and of men in the 1st; but the bare right of the head of the family to put to death those subjected to him was only removed by Constantine, and the cruel exposure of newly-born children was permitted long after his time. Even the slave was protested by the Imperial legislation. See art. CONSTANTINE, above, p. 80.

In so far as the State corrected crime, the

In so far as the State corrected erime, the supreme magistrate, whether known as rex, dictulor, consul, or prator, was, in the remoter age, in the same position as the paterfamilias, that is to say, his imperium was, within its own sphere, in principle unlimited, though he would often have to submit, in the case of citizens, to the force majeure of custom, and in the case of aliens to that of treaty obligations. The Republic introduced, as one of its few fundamental innovations, the right of spread (presential) which patitled the right of appeal (provocatio), which entitled every citizen to a trial by his fellow-burgesses in all weightier matters. Only in special circumstances, which will be described later, was he subjected to arbitrary treatment during the Republican age. The protection afforded by the provocatio was at first valid only against magisprovocatio was at list valid only against magistrates who acted within the city and a thousand paces outside, but it was gradually extended to Italy and even to the provinces. The changes which were brought about by the Empire were profound. As in other departments of government, so in criminal administration, the Emperor became supreme. From the first his autocracy

became supreme. From the first his autocate, was practical, and in the end it was undisguised. Apart from the traces of primitive practice preserved in later institutions, the first glimpse afforded to us of the criminal side of Roman law is given by the fragments of the Twelve Tables. Punishment of individuals by special enactment (privilegium), i.e. by an act of attainder, is forbidden. The State recognizes as offences against itself only a few acts—treason (perduellio), aggravated murder (parricidium), arson, theft of grain from the soil, lampooning, and possibly false witness.

The definition of crimes was vague, especially (as was natural) in the case of treason, but later legislation gave more precision to the legal view of crime, and extended the range of criminal inquiry. Sulla carried out a great codification of criminal law, and grouped crimes under eight or nine heads. To each group a separate court (quæstio) was assigned, each with a fundamental law, dealing carefully with the substance and the forms of its jurisdiction, and Sulla's regulations were further elaborated by Julius Cæsar and Augustus. The courts set up by Sulla dealt with the following crimes: (1) extortion by officials in the provinces (repetundæ); (2) theft to the detriment of the gods (sacrilegium), or of the State (peculatus); (3) murder and offences akin to it-brigandage, misuse of criminal proakin to it—brigandage, misuse of criminal procedure in capital cases, poison, magic, arson, and wrecking; (4) public bribery (ambitus); (5) treason (now termed maiestas); (6) forgery (falsum); (7) the infliction of bodily damage (iniuria); (8) public violence (vis); and (9) kidnapping (plagium). The crimes mentioned are only the principal ones which came before these courts, for they also dealt with many other outrages (such as sexual offences) by distribution of pratifical retarties, under conditions by direction of particular statutes, under conditions which are difficult to determine. Augustus estawhich are difficult to determine. Augustus established separate courts to deal with (1) adultery, which had not been previously treated as a public crime; and (2) usury, against which many Republican statutes had been directed (mostly in vain), and the offence of artificially raising the price of corn. Later on, many forms of wrongdoing, e.g. delatio (the trade of the informer), received special attention from the government. Thus, by the attention from the government. Thus, by the time of the early Empire, a multitude of deeds, not formerly punishable, or punishable only by fine, came to be included in the category of crimes, while others that had been vaguely classed together as criminal were separated and precisely defined. As will be explained later, many acts which did not come before criminal courts properly so called were subject to punishment in other ways. The repression and prevention of crime were much more rigorously carried out by the Empire than by the Republic. For instance, Augustus first effectively suppressed brigandage in Italy and piracy on the high seas. The range of private vengeance, which was wide in the early age, was now narrowed almost to vanishing point, and only violent attacks against which there was no defence but violence excused homicide. The Twelve Tables permitted the nocturnal thief to be killed unconditionally, but later the killer had to prove urgent need for his action. One department of crime needs special comment

that of treason, the treatment of which is vital in Roman history at every period. The old name perduellio indicates by its derivation that treachery in connexion with war was solely or chiefly viewed as treason in the early days; but soon the name was made to cover any act which the assembly of citizens could be induced to regard as a deadly injury done to the community at large. In the later age of the Republic, the offence was called maiestas, which is an abbreviation for crimen maiestatis imminuta, a charge of impairing the greatness of the country. The range of acts which might come under this description was wide, so that many breaches of a citizen's or a magistrate's duty, besides those closely connected with war, belonged to this category. With the establishment of the Empire, treasonable actions came to be viewed as directed against the Emperor alone. This was the natural ultimate development of the Republican idea that insults to the higher magistrates were treasonable. One of the most interesting Roman applications of the doctrine of treason, and one somewhat remote from modern

ideas, made it cover disrespect for, or attacks on, the recognized religion of the State. Regard for religion was a matter of civic duty, though the State did not force religious observances on the citizen as such until the conflict between Christianity and the Empire became acute in the 3rd century. Till then, a Christian's religion would rarely bring him into antagonism with the government, unless some public function, such as that of magistrate or soldier, required him to join in heathen ceremonies. The deification of the Emperors provided for the first time a cult which was common to the whole Empire, and rendered the position of the Christians more difficult. But the persecutions which they suffered were due mainly to local fanaticism, and were seldom enjoined or favoured by the central administration. When Christianity became the Imperial religion, both heathenism and heresy were treated as public offences.

As has been stated, the absolute control of the chief magistrate over punishment was abolished on the foundation of the Republic. The right of appeal (provocatio) entitled the citizen to a trial by his fellow-burgesses, and the magistrate who set the right at naught was himself subject to penalty. But limits were imposed on the provocatio, sometimes by law, sometimes by custom. At first the dictator was not bound to grant an appeal, but he was placed in the same position as other magistrates by a lex Valeria, enacted in 301 B.C. Military rule naturally excluded the provocatio. The idea that a lex Porcia, passed before 108 B.C., withdrew from the commander in the field the right to impose the death penalty, rests on a wrong right to impose the death penalty, rests on a wrong inference from a passage in Sallust (Jug. 59). The statutes which conferred power on Sulla, and on the Triumvirs in 43 B.C., established naked autocracies, and legalized the proscriptions. The Senate from time to time claimed the right to authorize the magistrates to inquire into offences and to punish them without regard to the assembly. The earliest recorded example of this usurpation is afforded by the suppression of the so-called Bacchanalian conspiracy in 186 B.C., when, in a time of panic, many citizens, as well as members of allied communities, were arbitrarily executed. This was done in the interest of religion, over which the Speak appropriate appropriate conversion of the solution of the solu which the Senate exercised an unquestioned supervision, but later the special criminal commission was used as a political engine. After the deaths of was used as a pointed engine. After the deaths of the Gracchi many of their supporters suffered in this way, though the younger brother was the author of laws which were designed to put an end to such proceedings. The decree of the Senate, commonly known as senatus consultum ultimum, which empowered magistrates to attack by force and slay men whom the senators chose to regard as rebels, was a device which belonged to the decadence of was a device which belonged to the decadence of the Republic. It was first put into force against the younger Gracchus and his followers; the slaughter of the elder with his partisans was not even covered by this form. The decree was re-peatedly passed and acted on afterwards, though its legality was ficrcely contested by the democrats. Apart from the special criminal commissions issued Apart from the special criminal commissions issued by the Senate, and the senatus consultum ultimum, some cases existed in which custom sanctioned the summary punishment of a wrongdoer. Thus erring Vestals were sentenced to death by the Pontifex Maximus, though in the later Republican age they were sometimes arraigned before the assembly. A division who transcreamed against the assembly. A citizen who transgressed against the rights of a foreign people could be surrendered to that people. One who did not appear when summoned to military service could be sold into slavery, and so might the burgess who disregarded the call of the censors at the periodical registration of citizens and their property. In these instances the citizens were deemed to have passed judgment on themselves by their absence (Cic. pro Cuc. § 99). It may be added that, in the last century of the Republic, the tribunes of the plebs sometimes asserted, though they were not allowed to exercise, the privilege of putting to death summarily any one who insulted them. This was assumed to be in accordance with the provisions of the ancient legs sucretæ, which rendered the persons of the tribunes inviolable. These laws, like others of an early date, merely decreed against the offender the vague condemnation contained in the words saccresto ('let him be accursed'). The scholars of the later Republic, and the tribunes along with them, held that the clause deprived the guilty man of all legal protection, gave every citizen the right to decide upon his criminality, and allowed his blood to be shed without blame, though, from the earliest days of Roman civilization, some public control must have existed over such executions.

The establishment of the plebeian tribunate (494 B.C.), the enactment of the code of the Decemvirs known as the 'Twelve Tables' (450 B.C.), and the laws which were adopted when the Decemvirs were overthrown (449 B.C.) had a profound effect upon the course of criminal justice. The right of appeal was strongly confirmed. Arbitrary punishments of individuals by the assemblies, apart from the provisions of general statutes, were forbidden. Such resolutions of the assemblies were called privilegia. Cicero rightly contended that his banishment in 58 B.C., by an act of the comitia centuriata, was unconstitutional. The Twelve Tables also prescribed that no citizen's caput, that is to say, his life or his status as a burgess, should be placed in peril except before the 'greatest assembly' (comitatu maximo), by which we must understand the comitia centuriata. As the principal State crime in the earliest days was perduello, or treason connected with war, it was natural that the assembly which comprised the warriors, past and present, of the nation should constitute the highest criminal court. On the other hand, a man's property could be assailed in either of the two other assemblies, the comitia tributa, which met under the presidency of a magistrate invested with the imperium, or the concilium plebis, which was summoned by the plebeian tributes, and was organized, like the comitia tributa, on the basis of the local tribes. An old statute permitted all magistrates to impose fines without appeal, up to a definite amount; beyond the limit, one of the two assemblies had to decide. No motion in a criminal trial was constitutional which invited the citizens to combine a personal punishment (pana) with a fine (multa).

The inconvenience of using as courts of justice the legislative assemblies, at which hundreds of thousands of citizens had the right to be present, was very great. The criminal trial, for the more important offences, required four meetings at stated intervals before the final verdict could be given; but it may be inferred from a line in Plautus, which describes the burgesses as making a pastime of their duties as judges (Captivi, 475), that there was little ceremony about cases of less consequence. All acts of assemblies were in theory subject to the elaborate rules of veto on which the whole Republican government was based; but custom seems to have restricted within narrow bounds their application to criminal affairs. The tribunes of the plebs acquired a prominent position as prosecutors for high crimes and misdemeanours, though at Rome no burgess was ever in theory debarred from entering on a criminal prosecution, unless he had forfeited the right by some misconduct of his own. The difficulties

- W. J. C. S. T.

attendant on the comitial system led to a new arrangement, and in 149 B.C. the epoch-making lex Calpurnia repetundarum established a special court (questio), with delegated authority to try governors who were charged with robbing the provincial subjects of Rome. As has been stated above, Sulla placed all recognized crimes under the sway of such standing courts, and, though recourse to the more cumbrous process before the comitia was still possible, it was rarely attempted. The quæstiones were exempted by law from the operation of the magistrates' veto (intercessio). Occasionally temporary courts were established to deal with particular offeness. In this way the men who had trafficked with Jugurtha were punished, and Clodius was tried and acquitted by special judges. The jurors were originally drawn from the Senate, for which Gaius Gracchus substituted the equestrian order. Sulla reinstated the Sena-tors, but after 70 B.C. the two bodies shared the privilege with men of a somewhat lower station. Both qualifications and procedure were varied from time to time by legislation. The quastiones continued to exist till the 3rd cent. A.D., but the parallel jurisdictions which the Empire introduced continually impaired their authority until they were extinguished.

There were modes of punishment which did not depend on an arraignment before a criminal tribunal, properly so called. The censors in the time of the Republic could penalize the citizens in many ways, degrading their status, and even inflicting on them pecuniary loss. They were not bound by the criminal statutes, and took cognizance of moral and social offences which were outside the purview of the laws. But succeeding censors were not tied to the decisions of their predecessors. The forms of civil law were employed to vindicate some breaches of public order, and also to provide redress for certain forms of frand which could not be adequately punished by exactions in money. Not only in Rome, but in every municipal community, there were fines which were recoverable by civil process, on the public behalf. In some private suits, the defendant, if condemned, incurred additional penalties which were not pecuniary. The judgment inflicted on him a stigma (ignominia or infamia) which impaired the value of his citizenship and left him under many disqualifications for public life. The circumstances were such that the losing litigant was held to have been specially bound to honourable action, as when one partner in business had cheated another, or a guardian defrauded his ward. Theft, when practised by one citizen against another, without violence, was technically not a crime, but condemnation in a suit for damages in pursuance of theft carried ignominy with it. The same stigma rested ignominy with it. The same stigma rested ignominy bublic auctioneer (praco), or a gladiator.

Roman jurisdiction over offences was exercised at first only as far as the Romanus ager extended, that is to say, in the regions of Italy possessed of burgess rights. Outside this pale foreign law prevailed. After the Social War (90-89 B.C.), Italy was parcelled out among Roman municipalities, and there had to be a division between the local jurisdiction and the central courts in Rome. Little is known of the principles on which the discrimination was based, but we read with some surprise that the statute of Sulla relating to murder restricted the court at the capital to cases arising in Rome. Before the end of the Republican period, the rule was established that a Roman citizen outside Italy could claim to be tried in Italy for any serious offence, and in the provinces the authority of the provincial governor in matters

of jurisdiction tended perpetually to encroach upon the autonomy of the nunicipalities and peoples. As is well known, the Roman government granted special privileges to the Jewish communities.

The advent of the Empire brought about a great transformation in the criminal law of Rome, as in all other parts of Romen polity. The paramount authority of the Emperor, and, in particular, his power of pardoning, led ultimately to a complete recasting of criminal procedure both in Rome and outside it. At Rome new officials, especially the prafectus urbi and the prafectus pratorio, gradually acquired a large jurisdiction; and, in the end, practically all important charges came to be tried by officers who were Imperial nominees. As the world became Romanized, local diversities in privilege disappeared, until the celebrated decree of Caracalla was passed (A.D. 212), which conferred the franchise on the whole Empire, and conterred the franchise on the whole Empire, and led to uniform, or nearly uniform, legal practice all over the Roman dominions. In the early days of the Empire every citizen had a right of appeal to the Emperor, as is exemplified by the case of St. Paul (Ac 25<sup>12</sup>), but by the 3rd cent. each provincial governor received from the Emperor the 'right of the sword' (ius gladii), which enabled him to dispose of the lives of provincial citizens, except in the case of Roman senators and members of the municipal senates (decuriones). After the of the municipal senates (decuriones). After the accession of Augustus to power, the Roman Senate became a high court of justice, trying for the most part senators who were charged with the more serious crimes. But, just as the *quastiones* were ultimately destroyed by the dominance of the Emperor, so the jurisdiction of the Senate was reduced to municipal proportions under the monarchy established by Diocletian and Constantine.

As in Italy, so in the provinces, the extent of local autonomy possessed by the different cities and peoples who were subject to Rome varied greatly while the great process of assimilation was being carried out. The tendency, however, to increase the cutberity of the Rome, respectively. to increase the authority of the Roman governors was strong from the first, and in the end nothing but a limited control in matters of police, and in other minor affairs, was left to the municipal courts, Italy being placed in this respect on the same footing as the provinces. The history of police jurisdiction, at all periods of Roman history, is obscure. During the Republican period, citizens of the criminal class at Rome seem to have been dealt with severely, little regard being paid to their right of appeal. Indeed, the value of the provecatio greatly depended on the willingness of the magistrates—in the last resort, of the tribunes —to secure it to the burgess, while to the red-handed assassin or the thief taken in the act the leges Valeriæ and Porciæ were of little avail.

The nature of the punishments inflicted by the Roman State, varied greatly in the course of its listory. We can clearly discern a time when the community, if it interfered at all, inflicted the penalty of death and no other. Under the system of trial before the comition, this was the only variety of the continuation of which the chief recently the continuation. punishment which the chief assembly, the comitiae centurata, could assign. But the custom was early established whereby the culprit, before the final verdict was given, could shake the dust of his country from off his feet and go into exile. In this case, at the final hearing the plea was put in that 'he had changed his soil with a view to exile' (solumvertisse exilii causa), whereupon the assembly passed a resolution known as interdictio aqua et igni (in the full form tecto was added), refusing the offender (now no longer a Roman) the right to receive the chief necessaries of life-shelter, water,

this purpose was never deemed to extend beyond Italy. The quæstiones, in the case of the more serious offences, followed the earlier practice of the centuries. Exile was such a common incident in the early civic community that many treaties made between Rome and other States included a clause between those and other states intended a date binding the contracting parties to give harbourage to outlaws. Until the time of the Social War, which led to the enfranchisement of Italy, a Roman could find a refuge no further away than Tibur (Tivoli); but Milo, condemned for the murder of Clodius in 52 B.C., had to place himself beyond the bounds of the peninsula, at Massilia. Aliens within the Romanus ager could be warned to quit it by the magistrates, unless international agreement stood in the way. This form of removal was called relegatio. But after the Hannibalic War the government readily disregarded treaty obligation, and the repeated indiscriminate expulsion from Rome of Latins and other Italian allies did much to bring on the great Social War. This form of banishment was extended to Roman citizens in the Imperial period. The relegatus was merely ordered to live in a particular place during the Emperor's pleasure. This was the only during the Emperor's pleasure. This was the only restriction on the person's privileges as a citizen, and Ovid, banished to Tomi, was careful to insist that he was only relegatus, not exul.

Cicero laid it down in the year 66 B.C. (pro Cac. § 101) that exilium was not a punishment known to Roman law, but a means of escape from punishment; yet he himself broke through this technical principle three years later, when, as consul, he passed a law to check public bribery. Thereafter exilium was freely used as a penalty, and new forms of it were devised in the Imperial age. The old interdictio aqua et iqui tended to fall out of use, and for it was substituted the *deportatio in insulam*, rendered familiar to us by Tacitus and Juvenal, who describe the islets of the Ægean as crammed with exiles.

The death penalty, except in the military sphere, was, as we have seen, hardly ever exacted in the Republican age, but in the more important cases it could not be so escaped under the Empire. Probably nothing else so fostered the bitterness entertained by the nobles against the Imperial system on its first institution. Yet the infliction of death was exceptional in the first two centuries, and was confined chiefly to the more important crimes which came before the Senate and the Emperor. Both these authorities were, practically, law-making powers, and were not bound by statute, as were the regular courts. From the accession of the Severi (A.D. 193), capital punishment became more and more common, and the number of offences to which it was allotted was continually increased. In the end not only treason and murder, but arson, magic, coining, kidnapping, aggravated violence, and a number of other wrongof execution were also changed and extended. Originally, as a rule, the offender was tied to a stake and flogged, then released and beheaded. This was symbolized by the bundles of rods (fasces), each containing an axe (securis), which were carried by lictors in front of a magistrate invested with the unimpaired imperium. In the city the axe was laid aside. Beheading by the axe was common in the earlier Imperial age (cf. Rev 20%), but was forbidden later, when the sword was substituted. The old formulæ connected with the passing of a death sentence by the comitia centuriata show that, before the time when escape into exile was permitted, the condemned criminal was sometimes flogged and crucified. The practice was revived by the Empire; 'according to the custom and fire—within Roman territory, as technically revived by the Empire, 'according to the custom defined by the phrase Romanus ager, which for of our ancestors' (more maiorum), as the saying

went. During the main part of the Republican period, crucifixion was restricted to slaves, except in rare instances, such as the case of men convicted of misconduct with Vestals. A quaint early method of disposing of one who had slain a near kinsman (parricida) was to sew him up in a sack with a cock, an ape, and a serpent, and then to drown him. The Vestal was walled up, and died of starvation. In both these cases the sentence had originally a domestic character, and we have in them strong evidence of the primitive objection to the shedding of blood within the domestic circle. The Vestals were the daughters of the great State family, and were condenned by the Pontifex Maximus, who stood to them in the relation of paterfamilias. Something of a religious character attached to the spilling of the criminal's blood by the community. But the gods of the family could receive no such offering. Later, when the paterfamilias executed a member of his family, he was regarded as the deputy of the magistrate. The cross was used against free men without scruple by the Imperial administrators, until its employment was abolished by Constantine on religious grounds. The equally cruel death by burning was also familiar to the Empire. It was applied, by a crude sort of homospathic retaliation, in the age of the Twelve Tables, to the citizen guilty of arson, and, later, it was occasion. ally a form of vengeance for military crime. The killing by fire of the Christian martyrs was technically a consequence of treason. Before the establishment of the Empire, the exposure of offenders to death in the arena, by wild beasts, was rare, though we hear of it as inflicted on slaves, deserters, or prisoners of war. But later it became one of the commonest forms of execution, and it lasted into the Christian period, being still in use in the time of Justinian. Malefactors who were executed in prison, like the Catilinarian conspirators, were usually strangled by the carnifes, or public executioner, under orders from the city commissioners of police, the tresviri capitales. We hear also, in Republican Rome, of wrongdoers being hurled from the Tarpeian rock on the Capitoline hill; and the same thing happened occasionally later, by order of the Senate; while the Twelve Tables prescribed this form of punishment for bearing false witness. The application of it in the age of the Empire seems to have been restricted to no particular offences, and to have been irregular. Penal servitude was a novelty introduced by the Empire. Criminals were often condemned to work in the mines, which were mostly the property of the government, or to do other menial services, sometimes in chains, slaves and the lowest class of freemen chiefly being exposed to this kind of suffering. Another kind of penal slavery was enforced enlistment among the gladiators. While the Republic lasted, citizen rights were completely lost only as a secondary consequence of condemna-tion for serious wrongdoing, but such loss was later on bound up directly with deportatio and the more severe forms of penal servitude. In all ages, some particular privileges of the citizen might be taken away while others were left. Imprisonment was not regularly inflicted on criminals either by the early or by the later Roman law. Incarceration was temporary, for purposes of inquiry, or for safe custody, till a sentence was carried out, although, on the other hand, the condemned debtor could be held in bondage by his creditor. Bodily chastisements were seldom imposed in the Republican epoch, excepting in the camp, where mutilation and scourging occurred, until the latter was forbidden by a tex Porcia. In the 2nd cent. p.C. earlier leges Porciæ had protected citizens in their civil capacity against stripes. Yet we know l

that St. Paul suffered the punishment (2 Co 1125) though he was 'born free' (Ac 2228). The so-called lex talionis—'an eye for an eye, and a tooth for a tooth'-seems to have been sanctioned, probably with an order of a court, by the Twelve Tables. Under the absolute monarchy, after Diocletian came to the throne, mutilation of various kinds was permitted for a number of offences, and we often hear that Christian martyrs were subjected to it, and so, a little later, were heretics and worshippers of the old gods. The subjection of free men to torture during judicial inquiry crept in soon after the foundation of the Empire, and in the end became regular in certain cases.

As has been mentioned above, public fines were in early days partly inflicted by the magistrates without appeal, partly ordered by the comitia or questio after appeal, and partly recoverable by civil process. Although the legislation which ensued on the fall of the Decemvirs rendered it

illegal for a prosecutor to propose a personal penalty along with a pecuniary fine, yet in cases of perduellio the condemned man's property was forfeited to the exchequer. When the quastio was substituted for the comitial trial, this penalty ceased. The confiscation of Cicero's property was by special legislative act, and was irregular, but Cæsar introduced forfeiture for aggravated murder (parricidium), and Augustus for treason (maicstas); and, later, it usually followed upon relegatio and deportatio. In the case of other offences there was, under the Empire, as a rule, partial confiscation. The oppressive regulations connected with the Imperial fiscus, and the lex Papia Poppea, which penalized celibacy, led to frequent and extensive deprivations of property.

It only remains to note that, while the Republic, in theory at least, treated all citizens as equal before the criminal law, the later Empire frankly respected persons. Subjects were divided into two classes, the 'more honourable' (honestiores), and the 'more humble' (humiliores) or plebeians (plebeii). The higher class consisted of national and provincial senators, knights (equiles), veteran soldiers, and certain grades of Imperial officials. These were exempt from crucifixion, from death in the arena, from penal servitude, and from scourging and torture; and it was a privilege even of a local senator (decurio), after the 2nd cent., that the governor of the province could not put him to death without a confirmation of the sentence by the Emperor. The regular Imperial courts took a more extensive cognizance of crimes committed by

slaves than was the case earlier.

Slaves than was the case carrier.

Lierature.—The whole criminal law of Rome has been exhaustively treated by T. Mommsen in his Rom. Straffecht (Leipzig, 1899), by which earlier works on the subject are, in the main, superseded. For the judicial system of the later Empire, with its complicated arrangements, the work of O. Karlowa, Röm. Rechtsyesch. (Leipzig, 1885) is most valuable. A brief summary will be found in the art. 'Judicium,' in Smith's Dict. of Antiquities' 1890-1891; more information in the artt. 'Judicium' and 'Præfectus,' in Daremberg-Saglio, Dict. des antiquités' 1896 ff.

J. S. Reid.

CRIMES AND PUNISHMENTS (Tentonic and Slavic).—1. General conceptions of crime and punishment.—(1) Teutonic.—We learn from Tacitus that the practice of blood-revenge was an important element in the legislation of the Teutonic peoples of his time. The word used to express the execution of such revenge appears in nearly all the Teutonic languages: thus, Goth. wriken, gawrikan, A.S. wrecan (Eng. 'wreak'), O.H.G. rehlun (Germ. rüchen), 'avenge,' 'persecute,' 'punish.' The possibility of commuting bloodrevenge to wergeld and fine is also mentioned by

1 Germ. 21: 'Suscipere tam inimicitias seu patris seu propingul quam amicitias necesse est.'

acitus, and, as may be inferred from the affinity A.S. were, M.H.G. were, 'wergeld,' with Skr. vira (cf. Blood-Feud [Aryan], vol. ii. p. 724b), it es back to the primitive history of the Teutonic ice. From that remote age come also the terms H.G. buoza, O.Sax. bōta, O.Norse bot, 'fine,' hich are cognate with Goth. batiza, batists, better,' 'best,' and originally signified 'repair of mage'; likewise Goth. skuldō, skula, 'debt,' mage'; likewise Goth. skuldō, skula, 'debt,' lebtor,' O.H.G. sculd, sculda, A.S. scyld, which ee all derived from Goth. skal, skulum, 'to be wing,' and mean literally 'the obligation to pay' vergeld or fine), and then, figuratively, guilt in meral, whether before God or man (cf. art. RYAN RELIGION, vol. ii. p. 49b). For the Goth. ulgs, 'guilt,' etc., see below.
Even by the time of Tacitus, however, blood-

evenge and its remission by wergeld and fine were eated as something more than the private affairs the families concerned. The injured group, stead of exacting blood-revenge, might, as is aplied in Tacitus, refer its 'cause' (Sache; oth. sakjō, O.H.G. sahha, A.S. sacu[Eng. 'sake'], .Norse, sok) to the public assembly. The comensation fixed by this tribunal was regarded as in me sense a penalty, and the amount was shared etween the injured party (or his relations) on the ne hand, and the chief or (in republican States)

1e community on the other.3

If we regard the intervention of the public ssembly as involving no more than an attempt on ne part of the tribe to bring about a peaceful attlement of such feuds as were especially angerous to the common weal, then the germs the procedure among the Teutons may be ferred to a very remote age. In the main, owever, the offences dealt with by the assembly Joth. mahl, A.S. mædel, O.H.G. mahal, O.Norse, (al) in its judicial capacity would be, alike in ntiquity and in the time of Tacitus, those which re included under a term common to Greek and anskrit, viz.  $d\gamma$ os =  $\bar{a}gas$ , expressing an idea that just go back to the dawn of Aryan history (cf.

of the primitive Teutonic terms applied to times against the community or its tutelary eities, and punishable by the community, special count must be taken of the following three:

O.Sax. sundca, 'misdeed,' O.Fris. sinne, crime,' A.S. synn, 'transgression,' 'wrong,' enmity' (Eng. 'sin'), O.H.G. suntca, 'sin'; (2) oth. frawaurlits, A.S. forwyrht, O.Sax. farwurht, sin,' O.H.G. farworaht, 'sinful'; (3) Goth. wrina, 'ground of accusation,' O.Norse firn, .S. firen, O.H.G. firina, 'crime,' 'sin.' Of these he nearest equivalent to Gr. tryos—Skr. agas are to great the series (O.Sax. sundca, etc., probably le first series (O.Sax. sundea, etc., probably lated to Lat. sons, 'guilty'), and the second roth. frawaurhts originally signifying 'being able'; cf. Germ. eine Strafe verwirken, 'to incur punishment'). In seeking to render the primi-ve connotation of these words, we must, of ourse, guard against introducing Christian ideas; et the fact that the Church selected precisely nese terms to express the conception of sin, i.e. ansgression against God, shows that even in eathen antiquity they must have implied some otion of trespass against the gods. The third eries (Goth. fatrina, etc.) has not as yet been atisfactorily explained. Some connect it with at. per in periuro, perperam, Gr. πέραν, and

interpret it as 'a deed that goes beyond,' i.e. beyond the crimes usually entailing blood-revenge; others connect it with Goth. ferja, 'snarer,' O. H.G. fāra, A.S. far, 'snaring,' and regard it as signifying an offence involving the element of secrecy. It is in any case certain, as appears also from the language of Tacitus, that the Teutons had at an early period drawn relatively fine distinctions within the general idea of wrongdoing. Among the various groups of words thus employed are the forms with the prefixes mein- (esp. O. Norse meineior, A.S. man-ap [cf. O.Eng. 'manswear'], O.H.G. mein-eit [Germ. Meineid, 'perjury']) and missa (Goth. missadēls, O.H.G. missitāt, 'misdeed'), implying respectively the attributes of deceitfulness and perversity in conduct. This deepened ness and perversity in conduct. This deepened conception of wrongdoing is also indicated by the words Goth. skanda=0.H.G. scanta, 'disgrace'; O.H.G. scama, 'sense of shame,' and O.H.G. lastar, O.Norse lostr, 'error,' 'vice,' 'disgrace,' from lahan, 'to blame' (cf. also O.Irish locht, 'error'). The primitive Teutonic word for 'punishment' is found in the series: O.Norse viti, A.S. vitic (M. Eng. and Scots wite), O.H.G. wīzzi; it is related to Goth. frawvitan, 'avenge,' O.H.G. vīzan, 'punish,' and far-vīzan, 'punish,' banish,' and, as connected with the root vid (Lat. video).

and, as connected with the root vid (Lat. video), seems to be equivalent to the Lat. animadvertere in aliquem, 'to proceed against one.' A form peculiar to the Western Teutonic dialects is O.H.G. haramscara, A.S. hearmsceare, i.e. something imposed as a disgrace (O.H.G. haram, A.S. hearm= O.Slav. sramü, Russ. soromü, 'disgrace').
The O.H.G. antōn, anadōn, 'punish,' 'blame' (cf. O.H.G. anto, anado, 'indictable offence') is exclusively German, as are also the much later and still etymologically obscure words M.H.G. strafe,

'punishment, and veime, 'vehme.'
(2) Slavic.—Turning next to the Slavs, we note that, apart from the treaties of Prince Oleg (A.D. 912; Jirecek, no. 1) and Prince Igor (A.D. 945; Jirecek, no. 2) with the Greeks, the earliest Russian document of a legal character is the collection of ancient prescriptive laws, decrees of princes, and Christian Byzantine enactments, known as the Russkaja Pravda. This has been handed down in two forms, a shorter and a longer, and its original draft is attributed to Jaroslav (1019-54), by whose sons it was brought to completion (Jirecek, nos. 3 and 4). We have, accordingly, no direct information regarding the legisla-tion of the earlier centuries, and must fall back upon a posteriori arguments and philological data. From the records of the ancient annalists we infer that in the period before the migration, i.e. in the that in the period before the migration, i.e. in the early centuries of the Christian era, the social fabric of the Slavs was of a character which may be outlined as follows. The Slavic people were a congeries of clans and tribes, each group resting upon a basis of kinship.<sup>2</sup> At the head of each group stood the 'elders' (stareŝina), who are called zupani (from zupa, 'domicile') by some foreign writers,<sup>3</sup> and proper to outlines. In the early centuries of our era the Slavs had borrowed their wood tringer from the Tentons (O H G word kunezi, prince, from the Teutons (O.H.G. kuning, 'king,' etc.). The form of government was purely democratic, and the decision of all questions rested with the public assembly.

1 Germ. 12: 'Distinctio poenarum ex delicto . . . Diversitas supplicii illuc respicit, tamquam scelera estendi oporteat, dum puniuntur, flagitia abscondi.

Nestor, Chronicle, xii.: 'They lived each with his kindred (rodit), and upon his own territory, every one ruling over his own kindred.

Constantinus Porphyrogenitus, cap. 29: 'Principeshi populi

\* Constantinus Porphyrogenitus, senes, seniores, maiores natur' habent nullos practer zupanos, senes, seniores, maiores natur' 4 Maurikios, Ars militaris, xii. (ed. Scheffer, Upsala, 1664, p. 281): πολλοί ρήγες καὶ ἀσυμφώνως έχουτες πρὸς ὰλλήλους. 5 Procopius, de Bello Goltico, iii. 14: τὰ γὰρ ἐθνη ταὐτα, Σκλαβηροί τε καὶ ᾿Ανται, οὺκ ἄρχονται πρὸς ἀνδρὸς ἐνός, ἀλλ' ἐν

<sup>1</sup> Germ. 21: 'nec implacabiles durant [inimicitiae]; luitur im etiam homicidium certo armentorum ac pecorum numero.'

im etam nomicialum erro armenorum as peocram numero. 2 Germ. 12: 'Licet apud concilium accusare quoque et dismen capitis intendere.'

8 Ib.: 'equorum pecorumque numero convicti mulctantur: ars mulctae regi vel civitati, pars ipsi qui vindicatur, vel ropinquis eius, exsolvitur.'

4 Germ. 21: 'periculosiores sunt inimicitiae juxta libertatem.'

As among the Germans, the legal relation of the various clams to one another was based upon the laws of blood-revenge, of which the primitive Slavic designations are found in O.Slav. mixti, Russ. mesti, 'revenge,' and O.Russ. vražida, Pol. wrožida, etc., lit. 'enmity.' That the practice of blood-revenge persisted among the Slavic peoples until the dawn of historical tradition, and among the Southern Slavs, indeed, until recent times, has been shown in BLOOD-FEUD (Slavonic), vol. ii. p. 733 ff. There is no doubt, moreover, that in very ancient times the blood-revenge could be adjusted by means of the wergeld, and this holds good whether the Russ, term for wergeld, viz. vira, is of cognate origin with the above-mentioned Skr. vaira and A.S. were, or was borrowed from one of the Teutonic dialects. If the latter alternative is the right one, the original Slavic term must be looked for in such words as Czech hlava (Russ. golova, 'head'), Pol. wrožda, or Serv. krv (Russ. krovž, 'blood'), all of which mean both 'homicide' and the 'compensation' paid therefor.

In process of time blood-revenge was gradually

abolished, and superseded by ransom (Russ. vykupů). The Russkaja Pravda, which in its older form sanctions blood-revenge only in cases older form sanctions blood-revenge only in cases of murder or serious bodily injury, and confines it within certain degrees of kinship, brings us to this stage, as in other cases it substitutes for blood-revenge the *prodaža*, 'compensation,' 'money-payment for an offence,' lit. 'sale' (of vengeance?). The *prodaža* either fell to the chief alone, or was alexad between him and the injured party. That shared between him and the injured party. That for which compensation was paid was usually called za obidu, but it should be noted that obidu is the common term for doute, and is not limited to its modern sense of 'insult.' The classical tongues were then drawn upon for words to express the idea of compensation; thus we find Gr. epitimia, originally 'penance imposed by the Church,' then 'compensation for any offence,' while from the sphere of Latin culture comes

penja (Lat. pæna). The question arises, however, whether in the case of the Slavs, as in that of the Teutons, the conceptions of crime and punishment in general did not spring from the narrower ground of transgression against the community and its tutelary deities. Of Slavic terms for 'crime' there is only one which is represented in all the various dialects, viz. O.Slav. grčchů, 'sin,' a word etymologically obscure (cf. Berneker, Slav. etym. Wörterb., Heidelberg, 1908 ff., p. 350 f.). It is certainly the case that this word, as used in a literary tradition under Christian influence from the first, is, in general, practically equivalent to 'sin against God,' precisely like the O.H.G. suntea and Goth. frawairhts (see above); it always signifies a transgression in the ecclesiastical sense, while a civil offence is called prestuplenie. It should be borne in mind, however, that, as green't is found in all the Slavic dialects, it must go back to heathen times; and it is natural, therefore, to see in this word the Slavic (as in suntea or frawaurhts the Tentonic) equivalent of the Gr. dyos=Skr. agas. And since, as we saw above, all matters were referred for decision to the public assembly, and as there is also evidence for a primitive Slavic word signifying 'tribunal' (O.Slav. sadu), it will hardly be counted rash, the present writer thinks, to assume that here too, as among the Teutons (for the concilium, see above), and also the Macedoniaus, the tribal assembly was a

δημοκρατία εκ παλαιού βιοτεύουσι και διὰ τοῦτο αὐτοῖς τῶν πραγμάτων ἀεὶ τὰ τε ξύμφορα και τὰ δύσκολα ες κοινὸν (public assembly) αγετα.

1 Christos, vi. viil. 25: 'De capitalibus rebus vetusto Macedonum modo inquirebat exercitus, in pace erat vulgi.' Cf., further, O. Hoffmann, Die Maksdonen (Göttingen, 1908), p. 21.

court which might deal inter alia with offences (grechi) against the community and its gods. That such infringements of the public interest are not mentioned in the Russkaju Pravda is explained by the fact that the latter is not, and does not purport to be, a complete legislative code.

In the Slavic languages there are two distinct groups of words signifying 'punish,' 'punishment':
(1) the derivatives of a root kur- (O.Slav. and O. Russ. karati, Czech kárati, Pol. karati, 'punish'); and (2) those of a root kaz- (cf. Russ. nahrzáti, 'punish,' kazni, 'heavy civil penalty,' kázniti, 'punish,' Czech kázati, kazniti, etc.). The fundamental meaning of the latter seems to be somemental meaning of the latter seems to be something like 'banish,' perhaps in the sense of Gr.  $\delta(\kappa\eta)$ ,  $\delta\epsilon(\kappa\nu\nu\mu\mu)$ , 'law,' 'punish' (cf. Russ. pokazáti). The first-named group goes back to a primitive form \*kara, which is found, with or without derivatives, in many Aryan languages, and means 'army' and 'war' (O.Pers. kāra, 'army,' Lith. kāras, kare, 'war' and 'army,' Goth. harjis, O.Pruss. karjis, Irish cuire, 'army'). If this series be correctly interpreted as originally denoting 'the national army drawn up for war' (O. Schrader, Reallexicon, Strassburg, 1901, p. 349 f.). one is tempted to take the further step of 349 f.), one is tempted to take the further step of connecting karati, 'punish,' with the judicial functions which we have conjecturally ascribed to the Slavic 'assembly' (cf. also κάρνη=ζημία in Hesychius).

2. Particular crimes and punishments.—As it cannot be expected that the present article should deal with the entire criminal law of the ancient Teutons and Slavs, the writer proposes simply to emphasize such aspects of the subject as may be judged of special importance for the readers of this work.

A. CRINES.—Here it will be the writer's special object to determine which of these first developed

a definite terminology. There is, unfortunately, a great lack of preparatory works in this field, particularly on the Slavic side, so that only a few

of the more important points can be referred to.
We saw above that the Teutonic and Slavic races from the very first drew a distinction between those offences which, as directed against the community, had to be punished by the community (i.e. the public assembly, and subsequently the State), and those which, bearing merely on the individual, were subject to the laws of blood-revenge or the private feud. Even at a very early period, however, we find that penal offences coming under the latter category, such as murder or flagrant theft, were really assigned to the former, so that it is impossible to make the distinction in question the principle of an exact classification of crimes. But we can hardly doubt that the species of crime referred to by Tacitus (Germ. 12), viz. cowardice in war and treason, was always clearly discriminated from that which embraced personal assault, ordinary homicide, robbery, etc. The original Teutonic word for 'cowardice' would seem to be found in the O.Norse argr, A.S. earh, Lombard arga (a term of abuse), O.H.G. arag, 'cowardly'; while an old term for 'treason' appears in O.H.G. herisliz, 'desertion from the appears in O.H.G. her touce, described from the army.' An O.Russ. term for a related crime was perevetit (cf. Russ. otvětě, 'answer,' O.Russ. věce, 'public assembly,' O.Pruss. waitidt, 'speak'), 'secret treasonable communication of intelligence. for which, of course, as for the crimes mentioned by Tacitus, the penalty was death (*Pskovskaja Gramota*, Jirecek, ix. 14).

We shall, therefore, treat of the various offences. apart from those against honour, under the follow-

For the Teutons, Grimm, Deutsche Rechtsaltertinner, p. 623 ff., is still the best work available.
 'Ignavi et imbelles, proditores et transfugae.

ing heads: (1) crimes against the person, (2) crimes against property, and (3) crimes against morality.

(1) Crimes against the person.—It is creditable to the Teutons that they discriminated between to the Teutons that they discriminated between killing in general and murder, i.e. (according to the ancient point of view) the wilful and secret (or, at least, stealthy) taking of human life—a crime denoted by the following series of words: Goth. maxirpr, O.Norse moro, O.H.G. mord, cognate with the Lat. mors, mortis, 'death,' though it should be observed that Ulfilas (Mk 15") uses the term in conveying with Barachea who is said to term in connexion with Barabbas, who is said to have committed a maûrpr ( $\phi b \nu o s$ ) in the insurrection ( $\dot{e}\nu \tau \hat{\eta} \sigma \tau \dot{a}\sigma e \iota$ ), and, therefore, not in secret. The idea of secrecy receives its first distinct expression in the exclusively German forms compounded with mūhh, viz. mūhhilswert, mūhhilāri, meuchelmord; cf. O.Irish formúigthe, 'absconditus.' A somewhat different shade of meaning appears in the Slav. razboj, which is the usual word for 'murder' in several of the Slavic languages, and which in Old Russian means both 'highway robbery' and 'ambuscade.' According to the Russkaja Pravda (Jirecek, iv. 4 and 5), one who Russkaja Pravaa (Jrecek, iv. 4 and 5), one who kills another openly in a quarrel or at a feast may be absolved by money, but, 'if one sets out to commit razboj without any quarrel, the people shall not pay a fine for the razbojniků, but shall surrender him absolutely, with wife and child, to the potoků and the razgrablenie' (for these punishments, see below). Of the numerous Teutonic terms for the infliction of hedily injury only the terms for the infliction of bodily injury only the Frisian dolch need be referred to here. In the Lex Frisionum it is the most comprehensive term for Wissomm it is the most comprenensive term for wounding of all kinds. A familiar phrase is dath und dolch, 'killing and wounding'; cf. also the O.H.G. noch tolk noch tolk. Dolch comes from Goth. dulgs, 'debt,' related to O.Slav. dlügü, 'debt,' and O.Irish dliged, 'duty,' 'law,' 'right.' There was thus a term signifying 'debt,' 'obligation,' common to all the languages of Northern Express and this sequired the special meaning of Europe, and this acquired the special meaning of 'obligation to pay compensation for bodily injury, and eventually that of the 'injury' itself. Beyond this, however, no rigid distinction was made between homicide and wounding, and O.Norse words like vig, sár, and drep may signify either. In the Russkaja Pravda the only difference is that the fine for homicide is termed vira, while that for wounding is termed prodaža (see above): 'Should any one strike with the sword, but not cause death, he shall pay [to the prince] three grivennicks, and to the person injured one grivennick, and money for the doctor; but, if he does cause death, the vira must be paid' (Jirecek, iv.

(2) Crimes against property.—Of all crimes the first to acquire a precise terminology was theft; this takes us back to primitive Aryan times—cf. Skr. stend- and tāyū-, 'thief,' O.Iran. tāyū-, 'thief,' O.Slav. tati, O.Irish tājā, 'thief,' and also Gr. κλέπτω, Lat. clepere, Goth. hlifan, and Gr. φώρ, Lat. fur. A form common to all the Teutonic dialects is represented by Goth. stilan, while all dialects is represented by Goth. stilan, while all the Slavic languages have terms corresponding to O.Slav. krada, krasti, 'steal.' The fact that in all these languages the words connoting secrecy are related to the terms for 'thief,' 'theft,' 'steal' (e.g. Skr. stāyát-, 'secret,' to stena-; O.Slav. taj to tati; O.Pruss. aukliptas, 'concealed,' to Goth. hlifan, etc.) clearly shows that it was the element of concealment which distinguished theft. ment of concealment which distinguished theft from open robbery (Goth. biraubön, A.S. réafian, O.H.G. roubōn; and O.Slav. grabla, Russ. grabliu, O.H.G. roubon; and O.Slav. grabla, Russ. grabliu, by peasant criminal law upon the female thief. Pol. grabic, etc.). As robbery, however, was not in primitive times counted dishonourable (cf. Schrader, Reallex. s.v. 'Raub'), and as, even in historic times, theft was often punished more phrase per virtuitem moschari, 'to violate by force,'

severely than robbery, it is obvious that the ethical ideas of later ages must have undergone a complete transformation. The horse-thief was punished with signal severity by Teutons and Slavs alike. It is recorded, e.g., in the Vita Ludgeri, i. 26 (ed. Broner), that by order of Duke Wittekind of Saxony a that by order of Duke Wittekind of Saxony a horse-thief was put to death by stoning, while the above-cited passage of the *Pskovskaja Gramota* puts the horse-thief (konevoy tati) and the incendiary (zazigalniku, cf. O.Fris. morthbrond) on a level with the perevitniku (see above): they are all liable to the penalty of death. In the ancient Teutonic codes the general term 'theft' comprises a large number of subordinate species with distinct names, for which, so far as the present writer is aware, the Slavic codes furnish no equivalents. Thus we have O.H.G. walaroupa, A.S. wælreaf, 'stripping of corpses,' and O.H.G. herireita, etc., ravaging, i.e. 'the perpetration of crime—especially robery—in bands,' Closely allied to this is Heimsuchung (O.Fris. hemseke; in Scots Law, hamesucken), 'domus invasio in aliquam familiam,' which, however, may be committed by a single person, and in that case resembles the modern Hausfriedensbruch (Lombard 'curtis ruptura, quod

est oberos facere'). (3) Crimes against morality.—In marked contrast to the class of crimes against property, the class embracing what would now be reckoned crimes against morality has a singularly meagre vocabulary. This is, of course, explained by the great change that has taken place in men's ideas regarding sexual morality (see also art. CHASTITY [Teut. and Balto-Slav.])—a change for which, alike in Teutonic and in Slavic countries, the way was prepared by the Christian Church. With reference, first of all, to incest, the Teutonic family of languages, so far as the present writer knows, has but one specific term applicable to this crime, viz. A.S. sib-leger, 'lying (i.e. cohabitation) within the family,' which points unmistakably to family family,' which points unmistakably to family exogamy. In Anglo-Saxon glosses the Lat. incestum is rendered hæmed, which, however, means coitus simply—lawful or unlawful, or even adulterous. No O.Russ. term for 'incest' (modern Russ. krovomešenie, 'blood-mixing') is known to the writer. Any such term would, of course, bear the stamp of the Church. We find, for instance, that the metropolitan Johannes II. imposed penance upon marriages between persons as far apart as the fourth degree. In northern Europe, however, even in pre-Christian times, marriage within the family-group would doubtless be prohibited on economic grounds, although a moral repugnance to

consanguineous unions would not then exist. consanguineous unions would not then exist.

The crime of adultery, as was shown in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. pp. 499–503, could be committed only by a wife, a married man being held culpable only in case of intercourse with the wife of another. The terms applied to this offence are of very general comnotation; e.g. O.H.G. huor, O.Norse and A.S. hor, signify any kind of illicit intercourse; similarly O.H.G. ubarligida, 'adulterium.' A higher degree of precision belongs to A.S. forliges, 'adulteress,' it. 'she who lies amiss.' The oldest Russian designations are smiling, zastavanie, liobodējamie, designations are smilinoje, zastavanie, liobodžianie, etc.—all, of course, of ecclesiastical origin. The vernacular name is izmena, 'treason,' 'unfaithfulness.' The punishment of this offence among the Russian peasantry—the primitive vyvodu—is described in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. p. 501; it is identical with that inflicted

is rendered by thinuerofen, theorofu, 'womenstealing'; cf. also O.H.G. notzogon, 'to abduct forcibly,' notnumft, notneman, A.S. nydnæme, O.Norse nothtekt (not is lit. 'force'). In Old Russian the term nusilie, 'violence,' is also used

for the crime of rape.

It would be interesting to know the Teutonic name for the corpore infumes, who, according to Tac. (Germ. 12), were punished by being submerged in a marsh. It seems probable that the reference is to sodomy (O.Norse sorvinn, strovinn, 'muliebria passus'). There seems to be no recorded evidence regarding the Slavic practice in this

B. PARTICULAR PUNISHMENTS.—Here we distinguish (1) capital punishment and outlawry, (2) corporal punishment, and (3) abridgment of

personal freedom.

(1) Capital punishment and outlawry (banishment).—That the penalty of death, as decreed by the public assembly, was known to the Teutons is shown by Tac. (Germ. 12). The commonest form of execution was hanging, and the root-word denoting this penalty is common to all the Teutonic languages: Goth. galga, O.Norse galga, A.S. gealga (Eng. 'gallows'), O.H.G. galgo. In ancient Russia likewise, according to the passage already cited from the Pskovskaja Gramota, the perpetrators of more atrocious crimes were executed by order of the public assembly (všce) or of the chief, and in this case also resort was usually had to the gallows (Sreznevskij, s.v. 'Povešenije, Povešati se').

Among the Teutons, 'outlawry' (banishment, exile), i.e. expulsion from the tribe, was in its effects practically equivalent to capital punishment. The most ancient word applied to a person so proscribed is retained in the Lex Salica as wargus, 'hoc est expulsus de codem pugo' (cf. as varyus, not est exputsus at evatem page (ct. Goth. gawargjan dauluu, 'to condemn to death,' O.Norse vargr, 'wolf' and 'outlaw,' A.S. wearg, 'the malefactor sentenced to the gallows or to outlawry,' etc.). He was altogether outside the law (O.Norse útlagr, A.S. útlagh), and any one who met him might kill him, and was, indeed, bound a de a "White realth and was, indeed, bound a deag." bound to do so. This penalty was often combined with 'laying waste' (O.H.G. mostan); i.e. the members of the judicial community assembled together in order to burn or demolish the criminal's house and property. The term 'outlawry,' supplemented thus by the idea of ravage, corresponds with the potoku or potoku and razgrablenie of the oldest Russian legal documents. The latter word means 'plundering'; the former should possibly be translated 'expulsion,' 'banishment' (Russ. tociti, lit. 'to cause to flow,' tekit, 'flow'). The penalty affected not only the criminal, but his wife and children also, and was inflicted for murder and children also, and was inflicted for murder with robbery, horse-stealing, arson (see above, p. 303b, and Sreznevskij, s.v. 'Potoku'), and similar grave crimes.

For the special objects of this article it is a

question of great importance whether the execu-tion of criminals among the Teutons was—as the foregoing observations regarding their conceptions of crime suggest—a religious ceremony, i.e. whether at bottom it was designed to operate like a sacrifice in appeasing the wrath of the gods. The affirmative has the support of such distinguished writers on the history of law as H. Brunner (Deutsche Rechtsgeschichte, i.2) and R. Schröder (Lehrb. d. deutschen Rechtsgeschichte<sup>5</sup>), though E. Mogk (ASG xxvii. [Leipzig, 1909] 17) has recently called in question the practice of human sacrifice among the Teutons. In any case there is the

evidence of a passage in the Vita Wulframi' to show that among the Frisians executions were performed at the testivals of the gods (cf. Mullenhoff, Deutsche Altertumskunde, Berlin, 1870-1900, iv. 244). As regards the Slavic practice the

present writer has no evidence to ofler.

(2) Corporal punishment.—Punishments involving mutilation of the body—cutting off the nose or ears, severing the hands or feet, blinding the eyes, or even severe flogging-in so far as they were not simply preliminary to the death penalty, were in all likelihood introduced at a relatively late period. In primitive times, among Slavs and Teutons alike, even the infliction of bodily injuries was dealt with by private revenge, and the practice survived till the time of the Russkaja Pravda (cf. Jirecek, iii. 2: 'or if he has been beaten till blood comes or till he is blue, it is not necessary for him—this man—to seek an eye-witness. . . If he cannot avenge himself [mistiti], he shall receive for the crime [za obidu; see above] three grivennicks, but the doctor [receives] the wages'). Such vengeance would, of course, be carried out according to the principles of the lex talionis, and cannot, therefore, be regarded as punishment in the technical sense. In course of time private revenge for wounding was superseded, both among the Teutons and among the Slavs, and partly in consequence of their mutual relations, by a regular system of fines. A more difficult question to decide is when and

how corporal punishment found its way into the ancient codes. On the one hand, such penalties were probably first of all inflicted upon slaves and serfs, who, of course, could not pay the regular fine. The Lex Frisionum, for instance, recognizes corporal punishment only in two cases, viz. (a) as merely antecedent to the penalty of death, for those who had been taken in the act of robbing a temple (cutting off the ears and castration), and (b) as meted out to a delinquent serf whose master refused to pay the fine. Similarly the Russkaja Pranda (Jirecek, iii. 16): 'if a serf (cholopu) strikes a free man, but takes refuge in the house, and his master refuses to give him up, then let a[nother] serf be taken, and the master shall pay twelve grivennicks for him. But if afterwards the man who was struck finds him, he shall beat him' (da bijuti ego). So far as the present writer knows, this is the earliest record of beating as a legal penalty in Russia. On the other hand, the credit of introducing corporal punishment must be assigned to the clergy, as is proved with special clearness in regard to Russia. In point of fact, the clergy suffused the conception of punishment with new ideas, such as, e.g., that it amends the evil will, deters others, and the like. For the attainment of these ends they believed—after the example of the Byzantine legislation, which had elaborated this system with great fullness—that such bodily penalties as blinding, severance of hands, etc. (many of them on the Mosaic principle of 'an eye for an eye'), and flogging formed the appropriate means. According to Jaroslav's Ustavů, —the ecclesiastical counterpart to the Russkaja Pravda,—a sorceress, e.g., must be punished (kamiti) after conviction, and she must further pay a fine (penja) of six grivennicks to the metropolitan. The nature of the kazniti appears from a warrant of the Russian metropolitan Johannes II. (1080-89), according to which the officers shall 'smartly chastise' (jaro kazniti), i.e. flog her, 'but

<sup>1 &#</sup>x27;Proditores et transfugas arboribus suspendunt, ignavos et imbelles et corpore infames coeno ac palude, iniecta insuper crate, mergunt.'

<sup>1 &#</sup>x27;Mos crat . . . ut corpora hominum damnatorum in sucrum 

not to death, nor cut off her limbs.' It is a well-known fact that under the power of the clergy, the Czars, and the serf-holders, flogging became the recognized mode of punishment in Russia, and it is curious to note how a punishment so degrading, and, originally, quite unknown, should in time come to be practically a public requirement.

is curious to note how a punishment in tussia, and it is curious to note how a punishment so degrading, and, originally, quite unknown, should in time come to be practically a public requirement.

Less than a generation ago a Russian village would furnish a scene like this: a sedate and well-to-do peasant, the head of a house and the father of a grown-up family, unshrinkingly lays shimself on the ground in order to receive his tale of lashes, and when the business is over, he trudges homewards, conversing upon trifles with his companions in punishment (of whom there might be thirty on a court day) and smoking eigarettes (cf. diebū Uspenskii, \*Vassti zemti, 1882, p. 50 ft.). It is also recorded that a Russian peasant actually asked for twenty-five strokes of the rod, and that, when he had got them, he said: 'Thank you, that did me good. I was drunk yesterday, fooled away fourteen roubles—all I had—in the kabak, and ill-used my wife. I have now got my deserts' (V. Hehn, \*De moribus Ruthenorum, 1892, p. 214). Another, who had just been beaten and was asked why, answered: 'For a good reason, butjuška. A man is not punished for trifies in our place. No such thing occurs here—no, Heaven forbid! We have not a master of that kind. We have a master: Such another master is not to be found in all the district.' 'Old Russia!' comments Turgeniev, who relates the incident (Zapiski, 1898, xiii.).

(3) Punishment by abridgment of personal freedom.—The law-breaker might have his liberty restricted either by enslavement or by confine-

(3) Punishment by abridgment of personal freedom.—The law-breaker might have his liberty restricted either by enslavement or by confinement. The former method was resorted to at an early date, but for the most part only as the concomitant or sequel of other penalties, and need not, therefore, be further considered here. Imprisonment, on the other hand, alike in the Teutonic and in the Slavic area, is of relatively late origin, as is evident from the fact that Goth. karkura, O.H.G. charchāri, A.S. carcern, are derived from Lat. carcer, and the Russ. tjurima, 'prison,' from Germ. Turm. In Russia the introduction of penalties involving the abridgment of personal freedom was likewise due to the influence of the Church. The most ancient mode of restraint was 'putting in the stocks'; cf. the Russ. kolodka, denoting two boards with a hole for the foot; kolodnika, 'convict,' and Pol., Russ., and Little Russ. duby, 'shackles for the feet,' from dubu, 'oak,' 'oak-log.'

involving the abridgment of personal freedom was likewise due to the influence of the Church. Dijakonov on the historical development of the general conceptions of crime and punishment in ancient Russian law; and one by V. Necayev on the criminal law of the peasantry, with an ample bibliography); J. J. Screzuevskij, Materials for a Dictionary of Old Russian Russian, St. Petersburg, 1893ff.; L. K. Goetz, 'Das russische Recht,' Zeitzschr. f. veryleichende Rechtsgesch. xxiv. [1910] 2, 3. C. SCHRADER.

extent to which any penal codes.—The actual extent to which any penal code may be made to contribute to the repression of crime depends much more on the justice and equity of the principles on which it is founded, and the firmness with which it is administered, than on the severity of its provisions. Those who are familiar with the history of crime in Great Britain will remember that in the 18th cent., when capital punishment could be inflicted for a hundred offences other than murder, crime flourished exceedingly. Similarly, in the early part of the 19th cent. crime was rampant, and a further impetus was given to its growth by the uncertainty of the death penalty. Thousands of death sentences were passed, but only a small proportion of them were carried out, so that offenders came to regard the sentence with contemptuous indifference. Again, in the latter

half of the century the long and severe sentences of penal servitude, which seemed to prisoners them-selves, as well as to many others, vindictive in aim and effect, had no repressive influence on crime, the numbers of those in penal servitude at that time being more than three times as great as in 1910. No real and steady fall in crime took place till in 1879 the Summary Jurisdiction Act put an end to these long sentences. Almost simultaneously a uniform system of prison administration and treatment was inaugurated, and all local prisons were handed over to the State. The coincident fall in crime which began then, and has steadily gone on since, may fairly be ascribed, to a large extent, to these two reforms, which may be said to combine mitigation of penalties with uniformity and certainty of application. From time to time the penal treatment of offenders oscillated between extreme severity and extreme laxity; but, when both these principles were in force at the same time—denoting instability of administration—the very worst results ensued.

About the year 1830, when capital sentences were freely passed and not inflicted, the convict population of Great Britain, with its population of 15 millions, consisted of no fewer than 50,000 persons, some in hulks and prisons at home, others in penal settlements and Colonies. The cost of maintennage which was enoughed was suppressed only by ance, which was enormous, was surpassed only by ance, which was enormous, was surpassed only by the futility of the system of punishment. Subsequently the Penal Servitude Act of 1853, and the refusal on the part of our Colonies to receive convicts, put an end in Great Britain to transportation. The number of convicts meanwhile declined, till in 1852 it was 17,000; and in 1878, when the local prisons were handed over to the State, it amounted only to 10,000. At present (1910) the number is about 3000. number is about 3000.

Recrudescence of severity in punishment occurred now and then, as, for instance, when flogging was freely resorted to in order to put down garrotting; but on the whole the tendency of our criminal law, since the Prison Act of 1865 at all events, has been in the direction of leniency in prison treatment; and the results have been satisfactory. To a large extent this spirit of leniency may be regarded as in itself a reflexion of the improvement in the character and conduct of our people, which, again, depends largely on the general advance in civilization, together with the spread of education, intelligence, temperance, and other influences designed to elevate the people. Such influences have a much larger share in preventing crime than any punitive measures can have in repressing it; nevertheless, a penal code of some kind is an unhappy necessity for every civilized State. Imprisonment in some form, therefore, appears to be the only means at our disposal, short of capital punishment, for the punishment or restraint of those persons whose conduct renders them a danger to society.

2. Foreign penal systems.—A glance at the penal systems in other countries—that of our own being reserved for consideration later on—is of interest in connexion with the subject. England, to her shame, too long neglected the warnings of the far-seeing John Howard. The overcrowding of her gaols, the indiscriminate herding together of criminals of both sexes, and of all ages and varieties, and the total neglect of the authorities to bring any religious or moral influences to bear on the unhappy inmates, produced an inevitable crop of profligacy, moral and physical corruption, wide-spread disease, and death. When at last she woke up, and found that proper sanitary buildings and separation of prisoners were essential to reform, and when Pentonville Prison was built in 1842, an impetus was at once given to sane administration. Since then England has been amongst the foremost of

VOL. IV.--20

the nations in the search for some equitable, moral, and scientific scheme of prison treatment calculated to reconcile the rights of society with the rehabilitation of the criminal so as to enable him to return to a law-abiding life. It is, however, to the United States that the palm must be given for progressive experiments in this direction. No methods of reform and no social experiments appear too costly or troublesome to the indefatigable philanthropists of America who take up this subject, if only they are reasonably likely to reclaim criminals. Starting with the root-idea, which may be over-sauguine, that no one is absolutely irreclaimable, they have established at Elmira, and other prisons, or State Reformatories, a system based on the indeterminate sentence, combined with conditional liberation on parole when the prisoner gives satisfactory evidence of reform. of reform. A somewhat strict discipline, with drill of a military character; instruction in skilled industries; moral, religious, and secular education, united with various kinds of amusement, are expected to alter character, and turn the subjects into good citizens. Further, every one is enabled to profit pecuniarily by his own work, and is expected to demonstrate his fitness for discharge; but he must first find employment. Probation officers supervise and help those on parole, and misconduct leads to forfeiture of licence.

From this sketch of the system, which is a type of others, it will be seen that Elmira is practically a reformatory for adults, who are received up to the age of thirty. All are known as 'inmates,' not prisoners, though they are under sentences of from one to a possible twenty years. Considerable success is claimed for the Elmira system, but statistics are not convincing as to the number of reclaimed cases, originally alleged to be 80 per cent. According to a report of the New York Prison Association, which recently analyzed the cases on parole from Elmira, 'probably not over 70 per cent of men paroled can be classed as reformed,' while some other authorities put the percentage at 50. 'Society is best protected,' they say, 'by the reform of the criminal.' One point emerges, however—the actuality of the incorrigible, of whose too frequent appearance at Elmira they make complaint. The tracing and following up of the reclaimed is difficult in so vast

a country, with unlimited facility for travel.
But, if the United States has some of the best and most progressive prisons, it has also many of the worst in Christendom. Race prejudice against the negro, who is held to be either irrectainable or not worth reclaiming; Labour Laws which, in many of the States, either prohibit altogether or restrict the sale of prison-made goods, and so keep prisoners idle, or employed in unproductive work; constant changes of the wardens or governors as political parties come and go; public apathy and parsimony in regard to prisoners; and a general desire to make prisons pay their way—these are the conditions which make the state of most of the county and city gaols fall very far short of modern ideals. The late Secretary of the Howard Association, Mr. Edward Grubb, made a tour of some of these prisons in 1904, and found them very unsatisfactory, and in startling contrast to the State Prisons and Reformatories. He says:

'These institutions (county and city gaols), designed for the most part for prisoners awaiting trial, and for the serving of short sentences by misdemeanants, are, with little exception, far from satisfactory, even in the Northern States. The best I saw was at Boston. At Indianapolis, and at Cleveland and Mansfield (Ohio), to say nothing of the South, the gaols were, for the most part, far from clean, and the prisoners were shut up together, with full opportunity to corrupt each other. Either they had no occupation (at Mansfield they were engaged in playing at cards), or, if employed (as at the House of Correction at Cleveland), they were working in a very half-hearted

manner.' He describes the state of the convict camps as teeming with abuses—incliscriminate association, negro women constantly having babies,' 'terrible cruelties and even murders,' and bad sanitary conditions (see the pamphlet published by the Howard Association).

Even in the better class prisons, many of the privileges extended to prisoners seem to breathe a freedom which would probably be unsuitable for our class of habitual. Buying and selling, the free use of tobacco for smoking and chewing, cardplaying, cinematograph exhibitions of prize-fights, and so on, are too advanced expedients for moral improvement to appeal to British sentiment.

Like everything else in the United States, crime is on an immense scale. A country so huge in itself, containing such a varied population, black and white, and receiving every year hosts of immigrants from everywhere, is, in the nature of things, a hunting-ground for criminals. Further, it has almost as many penal systems as it has States, so that it is difficult to estimate the general effect on crime of any special penal measures. 'The Americans themselves, however, are drawing public attention to the appalling list of murders committed—not only to the large proportion that go unpunished, but also to the small percentage of cases in which the death penalty is inflicted after a conviction has been obtained. They are also holding an inquiry into their methods of adminis-tering the criminal law, which hitherto have been so slow and uncertain as to lead to the belief that crime is getting out of hand. They seem to be already on the way to find out that a firm administration of criminal law is essential to the repression

The penal systems in force in Continental countries differ very widely from one another. Several, like Russia, France, and Portugal, adhere to transportation as a punishment for the more serious kinds of crime, although Great Britain discarded this penalty as costly and ineffective more than half a century ago. The principle of cellular confinement on the separate system, which was established by law in England in 1865, finds favour with all European nations, as it does with all British Colonies, and with progressive Japan; but in practice it is by no means universally adopted. The magnificent modern prison built by France at Presses has been designed for separation, but there is considerable scope for association also, in order to prevent overcrowding. It may be said generally that all the European nations which have built prisons in recent years have designed them with a view to carrying out separation. In Belgium, where much public attention has been given to prison treatment and the repression of crime, cellular confinement has been carried to its utmost Prisoners have been kept in solitude compulsorily for ten years, after which they have been offered a modified form of association, which many are said to have refused, so that instances are on record of over twenty years of this kind of seclusion. Of late there has been a revulsion of feeling on this question, and the new school of penologists are now working for drastic reform. Russia, too, carries out the Belgian system in several of her prisons. Austria-Hungary was said to have had only 15 per cent of her prisoners under the separate system a few years ago, although approving of that system in theory. Many of the new prisons are of a palatial character, but none of them surpasses our own in sanitation, and we possess an underlyted advantage in leaving the whole prison undoubted advantage in having the whole prison system of the country under the single control of the State-an advantage which has been found very difficult of attainment in the other countries

of Europe, and practically impossible in America.

The results of the various systems are very difficult to disentangle from the official statistics

supplied by each country. For purposes of comparison with our own results it has been found impossible to arrive at any definite or valuable conclusions. If murders only were reckoned as a test of the amount of crime, Great Britain would certainly rank high; but this would give a false idea of the extent to which other serious crime prevails. Offences against the person are much more common in some countries than in others, while offences against property form the bulk (as in our own country) of the crime in others. There is, however, one conclusion which can be drawn from the general survey. Recidivism is rampant everywhere. In France it has been specially prevalent, and the recrudescence of crime, particularly amongst the Apaches, or hooligan class of youths, who commit murderous assaults on police and others, is of sinister omen, and has already led to a revival of capital punishment. Whether or not these phenomena are to be regarded as only temporary manifestations of a prevailing state of general social unrest, of which we have had recent examples social unrest, or which we have had recent examples in the strike-riots in France, Germany, and Wales, it is certain that a heavy responsibility rests on those who preach anarchy. It is well they should remember that crime is a much worse social evil than discontent, and that they are probably stimulating the one by encouraging the other.

than discontent, and that they are probably stimulating the one by encouraging the other.

3. No universal system of punishment practicable.—Although the study of crime has already attained to the doubtful dignity of an 'ology,' and learned experts of most of the civilized nations have been laying their heads together in congress for several years with a view to investigating its causes and devising remedies for an evil from causes and devising remedies for an evil from which they all suffer alike, it cannot be said that criminology is yet by any means to be reckoned amongst the exact sciences. Human nature with its faults and foibles may be the same all the world over, but the different phases of criminality, the different moral standards, and the different national temperaments which characterize various races, all temperaments which characterize various races, an tend to modify our pre-conceived ideas as to the possibility of repressing crime, as a general evil affecting the world at large, by any remedy, or by any set of remedies, whether preventive, reformatory, or punitive in intention, which can be held to be of universal application. It is well to understand that there is no royal road to the calution of complicated problems of this kind. solution of complicated problems of this kind. We are in the habit, from time to time, of instituting more or less disparaging comparisons between our own methods and those of our neighbours in matters of social reform. Introspection of this kind is undoubtedly a national characteristic that is highly advantageous, tending, as it does, to check complacency and stimulate progress; but we must not lose sight of the fact that many features of the judicial procedure and the penal systems in force amongst Continental nations are utterly foreign to our ideals, and ill-adapted to our use. The well-known practice, for instance, of interrogating accused persons which, in our eyes, amounts to heckling of a particularly cruel and vindictive type, is so foreign to the basic principle of our criminal law, which holds every man innocent until his guilt is proved, that we could not, if we would, fit so incongruous a practice into our scheme of things. In the same way, the life-long periods of solitude and seclusion in vogue with some Continental nations, by the side of which our brief terms of mitigated separate con-finement seem unheroic and contemptible, are so repugnant to our national sentiments of justice and humanity that we decline even to look at them.

It has been said that every country has the government it deserves. The dictum applies with equal

cogency to its laws, to its administrative machinery, and to the penal and disciplinary measures which it deems necessary for the guidance and control of its citizens. We may assume, in fact, that every country knows best the main lines on which its subjects can be kept in order; and it will be found that national habits and customs, national sentiment, and national temperament are factors which have much more to do with the shaping of penal systems and codes of moral discipline for peoples than the degree of civilization to which these peoples have attained. We find, accordingly, that the civilized countries generally differ very widely from one another in the matter of criminal law administration, that the range of variation is almost as great as that which distinguishes civilized from uncivilized methods, and that each country seemingly adopts the practice which to a large extent may be said to reflect the genius and character of its people, just as it selects the guillotine, the electrocution chair, or the rope for the infliction of the death penalty. It is probably for these reasons that International Prison Congresses do not waste their time and market in the families. their time and energies in the fruitless search for an ideal and universal penal system; but seek an ideal and universal penal system; but seek rather to improve existing systems, or to discover some general principles, or some details in working, that may be adapted to those which are already in force, and which are presumably suited, in their main outlines at all events, to the countries in which they have had their origin and development. —all due weight being given, on the other hand, to the consideration that indigenous plants do not always thrive in foreign soil.

It would appear, then, that very little is to be gained by comparing or contrasting one penal system with another when they are not really parallel, and much less by trying to glorify one at the expense of another. We may feel convinced that our own system, which has been evolved from our experience by steps so deliberate that they never can be said to approach reshapes. never can be said to approach rashness, is fairly adapted to our present day requirements; but it is very doubtful whether it would meet the wants of different states of society in other countries, or even in our own under the social conditions that prevailed half a century ago. The criminals of that period would undoubtedly have been attracted, rather than repelled, by the comparative amenities of life in a modern prison. Hosts of them would have taken a long-wished-for rest in so comfortable a retreat, seeking compensation, in a restoration of their health and energies, for any inconvenience or here neutral and energies, for any inconvenience or boredom they might have had to put up with while undergoing moral repairs. It must seem strange to those who are unfamiliar with our British moods of self-depreciation and pessimism that the very confident theorists who are never tired of reminding us that we are on an entirely wrong track, and that our system is a fiasco, should practically all he found in our course of the contraction. practically all be found in our own camp. Outsiders take by no means so disparaging a view. Recognizing, as they do, the enormous reduction that has taken place in recent years in our number of criminals, they look somewhat askance at the rhetorical explanation, which is frequently resorted to in similar cases, that improvement has come 'in spite of the system'; they regard the system, as a matter of fact, with a much more favouring eye. Further, it is a matter of some significance that, after due allowance has been made for the effects of family tradition, our progressive and up-to-date younger brothers in Australia, who are neither younger protners in Australia, who are neither visionaries nor dreamers of dreams, follow very closely our procedure and practice. The fashionable outery against modern penal treatment is really traceable to the fluent pens and forensic accomplishments of ex-criminals, who by their ex parte allegations seem to have captured the greater part of the press and a considerable portion

of the general public.

In Crime and Criminals (1910) the present writer made an effort to stem the tide of delusion and misrepresentation on the subject, but it still advances. The basis of this pessimistic outcry is a complete fallacy. Prison treatment, we are told, is a failure because 'it neither deters nor reforms the habitual criminal.' But all the authorities are agreed that the distinguishing characteristic of the habitual criminal is that he actually prefers his vocation to the humdrum alternative of a steady and active working life. The writer's own intimate and first-hand acquaintance with the living type enables him emphatically to confirm this discouraging conclusion. Whether the habitual criminal's vicious propensities are innate or acquired, it is certain that his habits, when he quired, it is certain that his habits, when he reaches maturity as we find him in prison, are practically ineradicable. The spirit of the road seems to be in him, and his predatory instincts have already developed into fixed habits, so that he is, to all intents and purposes, a hopeless incorrigible. Here lies the difficulty. No system yet invented can fairly be expected to alter a person of this type. To correct the incorrigible appears to be a feat analogous, both in sound and sense, to squaring the circle. We are not, however, without some means for dealing with him. If methods of cure are not feasible, prevention and restraint are still open to us. The Borstal system of treatment for the incipient habitual, and presenting details for the incipient habitual, and presenting details for the restrict the incipient habitual. of treatment for the incipient napitual, and preventive detention for the veteran, typify these two modern prison expedients respectively. For the present, however, the writer is more concerned to point out the fallacious reasoning on which the theory of failure is based. No notice whatever is taken of the important fact that the number of babitual winnings at present in Juniores has been habitual criminals at present in business has been brought within such manageable proportions that it may quite reasonably be said that we have them in a ring fence. The same set pass in and out of prison with apparently unvarying regularity, and, for the most part, for the same kinds of offences. Specialization in crime, indeed, has become so marked in our time that the police authorities of Scotland Yard claim that they can, in most instances, tell, from the manner in which a clever burglary or robbery has been planned, the name of the expert who committed it. One might fairly expect that the reduction of a standing convict population of 10,000 persons in 1880 to 3000 persons in 1910 would be considered a respectable achievement under any system, and would give rise to some doubt, if not disbelief, in the minds of thinking people, as to the truth of the failure theory. The current of general opinion, however, if we are to judge from the press, sets in quite the opposite direction; and we are led to believe that we are going from bad to worse because habituals and invertigibles, although they degree the direction. and incorrigibles, although they decrease steadily and incorrigines, athough they decrease steadily enough in numbers, decline to amend their ways, or to vanish en masse into the obscurity of some honest calling. It is well we should cherish no illusions on this subject. Our repressive measures stand in constant need of tightening up for this intractable class of criminal, and our reformatory methods in like manner need constant widening in score if we are to arrive at better results: but no scope, if we are to arrive at better results; but no conceivable combination of them will ever succeed in totally eliminating those obnoxious persons from the community. In regard to the system itself, it is not claimed that the mere absence of failure denotes the presence of perfection. It is quite conceivable, and perhaps even probable, that more good might be accomplished in other countries by a different set of principles and machinery; but it

is claimed that our own system has produced fair practical results, and that it is better suited to our national requirements than any exotic system with

which we are acquainted.

4. Theories of punishment.—But, if public opinion is unsound in regard to the treatment of the criminal, public sentiment is maudlin and the criminal, public sentiment is maudlin and unhealthy on the theory of punishment. A general tendency to minimize almost to vanishing point individual and personal responsibility, and to set up in its stead the fantastic substitute of a collective and huge unlimited liability company, comprising the whole body politic, is a pernicious feature of our time. Surely a more demoralizing doctrine, destitute alike of the sanction of religion, morality law and common sense has never been doctrine, destitute alike of the sanction of religion, morality, law, and common sense, has never been promulgated for the edification and guidance of a free and self-respecting people. Those who aspire to regenerate society by this egregious piece of social philosophy are hugging a very vain delusion. It abolishes at a stroke the exercise of free will, without which society could not hold together, and it is quite outside the realm of logic. If any sane individual in the community be permitted, even in the name of philosophy, to divest himself of his social and moral responsibility by the simple process of becoming a criminal, it is obviously open to any, or all, of the other individuals of whom society is composed to claim a similar privilege. A premium is composed to claim a similar privilege. A premium is thereby placed on evil-doing, and every man is tempted to become a law unto himself. The practical result of such a relaxation of our moral code would undoubtedly be that the maintenance of social order would be rendered difficult, if not impossible; we should find ourselves retracing our steps in the direction of barbarism; and, incidentally, we should find the world a distinctly unpleasant place to live in.

It is not to be supposed, however, that the theory of personal responsibility is to be applied ruthlessly to those who are, from mental deliciency, actually incapable of fully appreciating the significance of their offences, and who are, to this extent, not answerable for unsocial conduct. It should be the ain of any humane system to apply disciplinary methods very sparingly, if at all, to this unhappy class, who at present amount to 3 or 4 per cent of our prison population. Hitherto these hapless ofienders—'weak-minded, but not insane,' in the language of the Courts—have been a source of much anxiety to the magistrates who have had to deal with them, as well as to prison authorities who are constantly receiving them on short and useless sentences. In prison they have been treated under a very modified form of discipline, and efforts have been made to improve their conduct and con-Medical protection has shielded them from actual physical detriment, but the atmosphere of a penal institution is by no means conducive to their moral improvement, nor is it one in which they should be compelled to live even for short periods. The Royal Commission on the Care and Control of the Feeble-Minded has fully recognized this weak spot, and legislation is now urgently needed to carry out their recommendations.

It will be seen from the foregoing that the principle of vicarious responsibility, if applied in practice, would not tend to the repression of crime. Nevertheless, it is vehemently insisted on at street corners, in the pulpit, and in the press, while the dramatic possibilities of impulsive criminality and temporary irresponsibilities are realisted in several temporary irresponsibilities are realisted. temporary irresponsibility are exploited in sensational drama. Many good and benevolently-minded people seem to get periodically conscience-stricken on behalf of the criminal as a victim of circumstances. Not only are they willing to bear the burden of their own small vices, but also, in their emotional fervour, to take up his larger ones.

and condone his crimes, however heinous. They almost apologize to him for his existence as being a victim of heredity, and palliate his misdeeds on the grounds of his bringing up, so that every vulgar felon comes to think he is in reality a very ill-used person. Criminals are consequently quite ready to adopt the extenuations and excuses which are urged in their behalf, not only by their legal advo-cates, but also by theorists in criminology. In the writer's recollection, twenty or thirty years ago, 'poverty' and 'drink' were the two main causes given by prisoners for their downfall; but now these pleas have gone out of fashion, in favour of unemployment, parental neglect, slum-life, and financial embarrassment. That such social evils eviet to a deployable extent at present—although exist to a deplorable extent at present—although twenty years ago they were much worse and much more common—no candid inquirer can deny; but that they have had any material influence on the manufacture of the *professional* criminal who selects his own calling, or, as he himself might put it, 'chooses his own pitch,' is a very doubtful proposition. A prolonged study of the actual living specimen has led the writer to the conclusion that the professional criminal is possessed of qualities which would enable him to emerge with ease and credit from any, or all, of these alleged social disadvantages, if only he had the will to make the attempt. The inexperienced, occasional offender is much more handicapped by those conditions, and he is not generally gifted with the staying or enterprising characteristics of the old hand. It is much more probable that the genesis and development of the latter type are traceable to a gambling spirit which characterizes his class. In his spells of freedom the race-course is the special scene of his recreation. Familiarity with risks breeds contempt, and he gambles with liberty much more light-heartedly than others do with stocks and shares. But the cure of social evils which are so wide-spread is of necessity a very slow process. Their total extinction, if such a thing were possible, would unquestionably tend to the *prevention* of much crime and human suffering; but there would still be left a substantial residue of crime unconnected with these social evils, and society would be compelled to protect itself from this by the infliction of some kind of punishment. Even in the ideal Socialist community of the future, when it gets into working order, this problem is not unlikely to crop up, and compel attention; but meantime what are we to do with the persistent offender?

Another strange theory which is promulgated by the apologists of the criminal, and which bears on the ethics of punishment, has a somewhat captivating effect on short-sighted reformers. There is, we are told, something immoral, or unfair, or at We are told, something immoral, or unfair, or at least pusillanimous, in inflicting punishment on a guilty person in order to deter others from crime. Except on the grounds that the guilty person is punished with excessive severity, or beyond his deserts, this specious theory cannot be sustained. If we beg this part of the question, as is generally done for the purposes of the argument, the immoral and unjustifiable nature of the proceeding is clear enough. Otherwise the practice is both rational and equitable. The actual criminal suffers no wrong, the strictly non-criminal person is totally unaffected, while the person with dormant criminal person with dormant criminal proclivities, who is tottering on the verge of criminality, is provided with a strong and valuable incentive to virtue. 'Encouraging the others' cannot be considered an immoral expedient in dealing with crime. The deterrent principle, which has always been recognized by law, is in reality a double-edged weapon of the highest value. Its effect on the actual offender may be, and often is,

absolutely negative; but on others its force is incalculable, and invariably many times greater and more far-reaching than on the individual. This fact is too often ignored by those who criticize and under-rate the deterrent effects of penal measures and systems which do not absolutely disclose superficially the indirect effects which they really produce. Statistics show clearly enough that our penal system deters occasional and first offenders, though it has very little deterrent effect on habituals. Present-day conditions of imprisonment are not real punishment to this latter class at all, but merely a form of restraint which removes them from temptation for the time being. most recent device, therefore, which has been adopted for dealing with them in the Prevention of Crime Act of 1908—that is to say, preventive detention for long periods—is really a measure of inhibition and restraint, adopted primarily in the interests of society, although the extension of time that will be at the disposal of the authorities for effecting moral improvement in the prisoners themselves is also expected to yield more encouraging results. In regard to the principle of determent, the only profitable use to which the habitual can be put, until he renders himself more amenable to reformatory influence, would appear to be to make him a warning to other people for whom prison has more terrors. This, after all, is a trifling repara-tion for him to make to a community on which he persistently preys for a living, whether he be in or out of prison.

But these various doctrines which tend to the extenuation, or, it might be said not unfairly, to the encouragement, of crime are quite overshadowed by the much wider and more comprehensive one that we have no right to punish, and no moral justification for punishing, our fellow-creatures at all. Count Tolstoi was the leading exponent in all. Count Tolstoi was the leading exponent in recent years of this impossible creed, and he gained many disciples, who have been attracted, apparently, by the magnetism of his genius. In his novel Resurrection he makes his hero Nehludof, who is really a replica of himself and his own theories, ask the question, 'By what right do some people punish others? Why, and by what right, do some people lock up, torment, exile, flog, and kill others, while they are themselves just like those whom they torment, flog, and kill?' It is obvious to plain people that the latter part of this question embodies the underlying fallacy of the whole theory. The greater part of society is lawwhole theory. The greater part of society is lawabiding, or at all events non-criminal in conduct. If an individual member is permitted to torment, flog, or kill another individual member with impunity, why should society collectively be denied the same right? Every State or community has an inherent moral right to make laws and regulations for the maintenance of social order. If social laws are merely optional in character, and no penalties are attached to their violation, they cease to have any force outside Utopia, so that every man's hand is against his neighbour. The mind of this gifted philosopher in his latter years seems to reflect the state of chaos and anarchy to which his teaching led him, so that at the last he was utterly weary of the world and its problems. Theories denying the right of society to punish, which have no foundation whatever in the Moral Law (on which the regulations of all civilized States ultiwhich the regulations of all civilized States ultimately rest), have no more than an academic interest for practical rulers. However suitable they may be for the land of dreams in which Tolstoi's spirit seemed to dwell, they are quite unfit for a practical world, in which a mere touch of the actual suffices to shatter them to pieces.

It may be regarded, then, as axiomatic that punishment in some form is essential for the cor-

rection of persons who inflict wrong on society; that the right to punish is in no sense immoral; and that every system of correction should have in and that every system of correction should have in it a penal element. It is true that these principles are strenuously denied by theorists who hold that prison treatment should be purely reformatory; but no one pretends to have devised a working scheme for carrying out this beneficent intention with full-grown criminals. All prison treatment must be, in the nature of things, to some extent penal, since it deprives persons of their liberty. Even Elmira imposes this restraint. To a large number of criminals, moreover, deprivation of drink is penal, while others find regular work a kind of punishment. It cannot be contemplated that the ideal prison is to abolish these restrictions on liberty under any coming régime. It is already on record that a prison without work existed some years ago under a local authority, and the results were found to be neither reformatory nor deterrent. It came to be known as a 'Reading Reading Reading Gaol,' and one prisoner explained his return to it by saying he had come back to finish his book. Many sanguine persons are too ready to assume in this connexion that a kind of 'Free-Library' treatment, combined with musical enter-tainments, will alter the nature and habits of even hardened criminals; but those who live outside doctrinaire circles know that much deeper moral and spiritual influences are needed for those who persistently covot and desire other men's goods. It the present time it is the fashion to decry, or

o ignore, much of the silent work of prison chaplains. This work is very often carried on under the most disheartening of conditions, especially amongst the habituals. The writer knows, however, that prisoners themselves, who show any wish to do belier, get an enormous amount of encouragement, guidance, and help from the chap-lain; and that they appreciate the unadvertised work of his department much more highly than do the general public, or those who write on prison

reform.

5. Penalties a necessity.—Although reformatory treatment is an essential element of every good prison system, it is nevertheless lacking in two important respects. It is inapplicable in practice to the prisoners with very short sentences, who constitute the bulk of the whole prison population; and it embodies none of that deterrent principle which is necessary not only for the repression, but also for the prevention, of crime. It is obvious, the prevention of the prevention o therefore, that pains and penalties of some kind must be resorted to in order to check or restrain habits of crime; and it is very important that these penalties should bear some proper and adequate relation to the nature of the offence, the character of the offender, and the general sense of public justice as between injurer and injured. No longer is it necessary to brand, or mutilate, or in-flict permanent injury on those whom it is our interest to cure. Society has, however, the right to seek redress (not revenge) at the hands of wrong-doers, and it is compelled to take this course if it would prevent the substitution of private venge-ance for public justice. Now, the only medium through which this redress can be exacted at present is the purse or the person of the offender, so that in the last resort we are driven either to the in-fliction of capital punishment or to some form of imprisonment. The offender, in fact, is confronted with the footpad's usual alternative, 'Your money or your life,' or at least a part of it. If any one could invent a less objectionable form of punishment which would restrain the criminal, and at the same time reform him, and deter him and others from the committing of crime, he would merit public gratitude, and lay our penal code less

open to even a suspicion of inhumanity. But. as this is merely a visionary possibility, we can only look meantime for such a mitigation of the conditions under which these two measures are ordered, or carried out, as will meet with the approval of a humane and just public. Much has already been done in this direction. Capital punishment is now practically reserved for the worst cases of wilful murder, though it is still on the code for a few other offences, such as treason, setting fire to public

arsenals, etc.

6. Capital punishment.—Without entering into the merits or demerits of capital punishment, we shall note some facts in connexion with the subject which tend to justify us in the use of it. A return haid before the House of Commons in 1907 shows that most of the chief European States, and most of the States in America, retain the death penalty in their codes, though many of them use it spar-ingly. Baron Garofalo, the President of the Appeal Court at Naples, in his book on Criminology (see Lit. at end of art.) tells us that in Italy, where, since 1876, there have been no executions except under military law, homicides average 3814 a year, compared with about 300 in England. He notes similar results in Belgium and Prussia, where few executions take place. In Switzerland, when the death penalty was abolished, murders increased 75 per cent in five years, so that several Cantons re-introduced the penalty. In France, in 1824, juries were allowed by law to add 'extenuating circumstances' to their verdicts, with the result that the annual average of executions fell to 1.8 in 1901–1905. Homicide was meantime increasing, but in 1906 Government brought in a Bill for abolition. Soon after a brutal murder occurred— 'l'affaire Soleilland'—and public feeling was so of the death penalty being abolished, it became much more common. In America, Mr. Hugh C. Weir tells us (in The World To-Day, in regard to a recent census of American crime) that 'in to a recent census of American crime) that 'in only 1'3 per cent of our homicides do we secure a conviction.' Further, he states that Chicago averages 118 murders a year. London, which has four times the population of Chicago, has only 20. It is notorious that the death penalty is seldom carried out in the United States by law, though lynching is often practised mercilessly. Since 1868, abolition has been discussed eight times in the House of Commons, and negatived on each occasion by large majorities. Several committees and commissions have decided in the same sense. opinion of the Scottish Judges at one of the Inquiries was :

'It would not be for the interests of humanity that the wellconducted and useful members of the community should be
more exposed to deprivation of life by murder in order that the
lives of the murderers may be saved.'

A French Professor of Law put the same idea pithily, when he
said that if abolition were sanctioned it should be announced
that—'henceforth the law in France will guarantee the lives of

none but murderers.

An incidental justification of the death penalty would seem to be that, under it, the newspaper bero of a sensational crime passes quickly into oblivion; whereas, if he is left in prison, his career furnishes endless opportunities for the dissemination of unauthentic, unwholesome, and demoralizing gossip in the press, which makes a direct appeal to the perverse imitative faculty of other criminals. Lastly, it is the opinion of Lacassagne, and many other observers, that the English statistics of crime are probably the most satisfactory in Europe.

With a view to securing a fair trial, and to preventing mistakes in capital cases, both law and custom in England provide elaborate safeguards. An accused person, after having the charge against him investigated successively by coroner, magistrate, and Grand Jury, is tried by Judge and Jury, when he has the option of giving evidence in his own behalf. After conviction he can take his case to the Court of Criminal Appeal. If unsuccessful there, he can lay before the Home Secretary, either in petition or through his legal advisers, any additional evidence that may not have been forthcoming at his trial. Every scrap of evidence in his favour is most carefully examined, and, if there is the slightest suspicion of any mental deficiency, medical experts in criminal lunacy examine him, and report to the Secretary of State before a final decision is made to carry out the sentence of the

7. Penal servitude.—Criminal offenders, other than those who pay the penalty of death, are sentenced in this country either to 'penal servisentenced in this country either to 'penal servitude,' which is mainly served in convict prisons, the sentences ranging from three years to life; or to 'imprisonment,' which is carried out in local prisons only, the sentences ranging from three days to two years. Death sentences are carried out at local prisons. Convicts—that is to say, those sentenced to penal servitude—generally undergo the first part of their sentences in local prisons in separate confinement; the remainder is served in a convict prison, where they work in association, for the most part out of doors, though some work in shops. The length of the period of separation varies at present from three months to one, according to the antecedents of the convict. This part of the sentence is most criticized by reformers, as being inhumane and likely to lead to mental troubles, morbid introspection, irritation, and misconduct. As a matter of fact, results do not bear conduct. As a matter of fact, results do not bear out this a priori reasoning, nor is the treatment as severe as is commonly supposed. The Stage is responsible for a good deal of misconception on the subject. Although 'separate' confinement is, for controversial purposes, called 'solitary,' the two are quite different. Solitary, or, as it is called legally, 'close confinement,' is never resorted to except as a punishment for offences committed in prison, and it is ordered solely by the Governor or superior authority. Under separate confinement or superior authority. Under separate confinement a man works in his cell for the greater part of the a man works in his cell for the greater part of the day, but he gets many reliefs. He is allowed at least one hour's exercise daily, attendance at one chapel service on week days, and generally two on Sundays; he is also unlocked for various sanitary services, and sometimes for school; and he is frequently visited during the day by officials—governor, chief warder, officers serving him with work, meals, etc. Further, he is under careful medical supervision with a view to preventing mental or physical injury. The period of separate confinement, nevertheless, is one of the vexed questions of prison treatment at present. Its effect is penal, in so far as the average convict dislikes it; on the other hand, it does not seem to be without advantother hand, it does not seem to be without advantages in the direction of reformation of character of those who wish to profit by them. Introspection is not necessarily all morbid, and a period of seclusion gives time for reflexion and for a kind of moral readjustment, while it affords many of moral readjustment, while it affords many opportunities to the chaplain for influencing the mind of the prisoner, away from the distractions of association with fellow-prisoners who too often urge him in wrong directions.

When this part of his sentence is over, a convict

When this part of his sentence is over, a convict is drafted to a convict prison, where he works on the land—at reclaiming, tilling, gardening, quarrying, etc.; or at building, with allied industries; or in shops—at tailoring, shoemaking, carpentering, printing, book-binding, moulding, fitting, or other useful employments. He sleeps and takes his meals in a separate cell, which is well warmed,

lighted, and ventilated. He is warmly clad, and has a very good and ample plain diet, without any canteen privileges. His working hours are much shorter than those of outside labourers, and the work, which is not laborious, is very carefully graduated to his physical capacity, while at the same time it is chosen, as far as possible, with a view to utilize any skill he may have, so as to fit him for honest employment on discharge. His education, both religious and secular, is carried on by the chaplains and schoolmasters, and he has an excellent supply of instructive and interesting books to read. By way of stimulating self-help, he is made to pass through successive grades or classes, by earning marks for industry and good conduct. Each step gained entitles him to additional prison privileges, as well as to a considerable money gratuity on discharge, and to a remission of sentence up to one fourth for men and one third for women. On release, he can avail himself of the help of a Discharged Prisoners' Aid Society to get work. He is, of course, kept under close supervision and strict discipline; but no bullying is allowed. Conversation is prohibited except as a special privilege at stated times for exemplary conduct; but under the conditions of associated out-door labour a good deal of talking is carried on, which, though not recognized, is inevitable. Misconduct of any kind renders him liable to forfeiture of the privileges which he may have already gained.

which he may have already gained.

From this necessarily brief sketch it will be seen that the scheme is undoubtedly punitive in effect, but it is also reformatory in intention. Strict discipline conduces to self-control, steady and regular employment to the work-habit, the system of progressive privileges to industry, good conduct, and self-help; while the moral and educational training tends to strengthen character; and the whole scheme is designed to fit the prisoner for

earning an honest living on his release.

The latest device of our penal system for dealing with the habitual criminal is preventive detention. The Prevention of Crime Act (1908) gives power to declare a man who has been leading a persist-ently criminal life to be an 'habitual criminal.' Such a person is to be sent in the first instance to penal servitude for not less than three years, and he may be kept for a further period of not less than detention by order of the Court. A special place of detention is to be provided, in which more indugences and privileges can be granted than in a convict prison, so as to make the general conditions of life less onerous, and to foster habits of industry and self-control in the inmates, and fit them for conditional licence. This new plan for dealing with recidivism is, in fact, a modification of the indeterminate sentence. So much attention has been given in vain to the reclamation of the professional comming that the steam is taken as all the steam as all the steam is taken as fessional criminal that the step is taken mainly for the protection of society, though hopes are entertained that he, too, may benefit under the new conditions, with more time available for effecting cures. Preventive detention does not come actually into force till 1911, but responsible authorities expect good results from it, since they have advocated for years some means of imposing a more permanent kind of restraint on this intractable class of offender. In the United States the indeterminate sentence and the release on parole are worked on such liberal lines that many thoughtful Americans say serious crime is trifled with, under the guise of reclamation; while our Legislature hesitates to entrust the liberty of the subject, even though he be a confirmed criminal, to the discretion of prison authorities, who might keep him for life. Mr. Grubb tells us that the average term of actual detention at Elmira is about one and a half years.

It certainly seems strange to us that a dangerous burglar, or a coiner, or even a murderer of 30 years of age should be set free, cured in so short a time, when we require a year, or two years, to cure Borstal youths of 16 to 21 years of age under a system very similar to that of Elmira. If such things can be done in America, we must either have much to learn from them, or their reputed success must be doubtful, or the subject must be a very different one from the British specimen. Unfortunately, the statistics on the question are not capable of verification, although undoubtedly good results are obtained in many cases. Meantime we adopt such parts of the American system as seem

suited to our national requirements.

8. Imprisonment.—In regard to punishment by

'imprisonment,' as distinguished from penal servitude, local prisoners now enjoy many more advantages in the matter of associated labour than they did when the 'separate' system was established by law in 1865. Associated work in shops or working parties, under strict supervision, is now carried out at all local prisons, but out-door employment, except in the grounds, or at officers' quarters, is limited, as the situation of the prisons in or near large towns does not give much scope for actual labour on the land. The term of separate confinement for local prisoners, which had been fixed at three months by the Prison Act of 1865, was limited by the Act of 1877 to one month, and is now commonly reduced to a still shorter period. Very large numbers of local prisoners are unskilled workers, and are under such short sentences that cell employment of some kind is necessary, unless they are to be kept in idleness, which is utterly demoralizing. The last Report of the Prison Commissioners shows that 61 per cent of males and 62 per cent of females were sentenced to two weeks or less; 93 per cent of males and 97 per cent of females to three months or less; and only 5.62 per cent of males and 1.91 per cent of females to per cent of males and 1.91 per cent of females to six months and over. For prisoners with short sentences the effect of imprisonment is probably penal and deterrent rather than reformatory, since little in the way of training can be accomplished in short periods. The low diet of the short sentence has a like effect, the object being to make the lesson for a petty or occasional offender short and sharp, so that he may not come back. A spell of brief seclusion for this class is surely a salutary provision. Local prisoners are housed in comfortable and sanitary cells of 700 to 900 cubic feet, kept able and sanitary cells of 700 to 900 cubic feet, kept able and sanitary cells of 700 to 900 cubic feet, kept at a proper temperature, and well lighted and ventilated. Daily exercise and chapel service relieve the monotony of the cells. Diet, which is not on so liberal a scale as that of convicts, is graduated according to length of sentence, and is carefully adjusted to the physical requirements of the prisoners, while medical officers have a free hand in ordering extra food in special cases. Like the convict, the local prisoner works his way through the staces of a progressive system, enripe through the stages of a progressive system, earning privileges for industry and good conduct, and forfeiting any he may have already obtained if he is idle or breaks the rules. He can also earn remission of a part of his sentence if it is more than remission of a part of his sentence if it is more than a month; but this, too, is liable to forfeiture. Secular instruction is given him under the direction of the chaplains; and religious ministration is provided for by them and by the clergy of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out generally on liberal lines, so as not to cause individual hardship. There is a gradual relaxation of conditions for the well-

end of ten years are allowed to purchase out of their gratuity some approved articles of extra diet, but not alcohol or tobacco.

9. Borstal treatment.—The tendency of recent legislation has been towards a lenient treatment, respecially of the young and of first offenders. The Probation of Offenders Act gives power to the Courts to release the latter, and order them to come up for judgment if called upon. The Children Act prohibits all children under 14, and practically all young persons under 16, from being sent to prison at all; and the Prevention of Crime Act establishes a new form of sentence and a new type of Institution for offenders between the ages of 16 and 21. The sentence is detention under penal discipline in a Borstal Institution for not less than one and not more than three years. This is intended for those whom, by reason of criminal habit or tendency, it is expedient to detain for long periods under such instruction and discipline as appear most conducive to reformation and the repression of crime. The treatment adopted in these Borstal Institutions closely resembles that of Elmira, already described. It is based on a well-devised scheme of moral, mental, and physical training, combined with specific instruction in some trade or skilled industry designed to fit the inmates for honest living. Rewards are given for industry and good conduct; penalties are inflicted chiefly by forfeiture of privileges; conditional licence is extended to those who are deserving; and work is also found for them on discharge; while an After-Care Association of benevolent workers supervises them, and gives not only encouragement, but moral and material help, so as to enable them to lead useful lives. Over 500 youths are now under training; and the land, buildings, and trainingship of Feltham Industrial School have been purchased from the London County Council for their accommodation. A scheme on similar lines has also been established for girls; also a modified Borstal treatment for youths in prison whose sentences are too short to let them have a full course. Splendid results have already been obtained, and still better are expected when the Institutions become firmly established.

10. Habituals and vagrants.-From the outline given of our penal system, as bearing on the general subject of crime and its punishment, candid readers will see that it is not unjust or unmerciful, and that it does not sacrifice the interests of the criminal to it does not sacrifice the interests of the criminal to those of the community. The general principles on which it is based would seem to be that it should be penal without being vindictive, reformatory without being demoralizing, and deterrent without being inhumane. Administrators who keep a watchful eye on statistics are quite alive to its weak points, in so far as it fails to reform or deter certain classes of prisoners. It is notorious that it does not reform individual professional criminals, who come back time after time to prison, though it reduces the numbers of this class very considerit reduces the numbers of this class very considerably by cutting off the recruits. It is idle to expect that they will ever be totally eliminated; but it is highly probable that the new remedy of preventive detention will considerably limit their depredations, and deter many from entering their ranks. The system, again, seems to be ineffective with vagrants, who have been increasing lately at the rate of 4000 a year. Prison life sits lightly on an idle class, and measures of indulgence in the nature belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out generally on liberal lines, so as not to cause individual hardship. There is a gradual relaxation of conditions for the well-conducted as their sentences proceed. Those convicts who reach the Long Sentence Division at the

o often invoked where energy and self-reliance puld be the more manly remedy; while Society too often called upon to saddle itself with the ses and follies of individuals. To a large extent ese doctrines would seem to be responsible for an e spirit in our lower ranks. According to the st official returns, no fewer than 33,766 persons nd their way to prison in 1910 for offences ainst the Vagrancy Acts. When it is borne in nd that several more thousands of this idle class e in workhouses and at large, it will be obvious at the question of dealing with them is becoming ry urgent. No economic remedy for mere uniployment will meet their case, since the work-bit in practically all of them has been lost. A mmittee appointed in 1905 to investigate the bject made recommendations that such persons ould be dealt with otherwise than under the agrancy Acts—that they should be treated, not criminals, but as persons requiring detention on count of their mode of life. The object aimed is to train and compel them to do some kind work, so as to aid the solution of the problem ich they themselves present. Legislation is now gently wanted to carry these recommendations to effect.

11. General results of our penal system.—Recent actments in reference to inebriates, first offends, habituals, and youthful delinquents, together th the recommendations of committees for furer legislation for weak-minded prisoners and grants, suffice to show that our penal system s by no means reached perfection or finality. it how far has it served its purpose in the reession of crime? Some general considerations ve to be taken into account in deciding this We have no trustworthy data for estiestion. ating with any approach to accuracy the sum tal of crime committed in the country. Unde-cted and unproved crime still flourishes, and we n judge the proportion it bears to detected crime ly by general indications. We know, however, at our methods of detection and identification of iminals have improved, so that it is at least probde that less crime goes undetected now than in rmer years. Further, we know that life and operty are as secure with us as elsewhere, and at respect for human life is certainly greater in is country than in most civilized countries. But, though we can base no conclusions on figures presenting the total criminality of our populaon, we have, in the daily average population of ir prisons, a statistical basis for estimating com-continuous progress or retrogression. The figures are nple; they have been arranged on the same lines are the local prisons were handed over to the ate in 1878; and they include all the proved crime the country, both minor and grave. If, then, we mpare the daily average population of the prisons England and Wales in 1880 with that in 1910, 3 get the following results:

## [ENGLAND AND WALES.]

Year.		Daily Average Population.		Population
		Convicts.	Local Prisoners.	Country.
1880		10,299	19,835	25,708,666
1910		3,189	18,521	85,756,615

he outstanding feature of these statistics is the ry conspicuous decrease in serious crime indited by the fall in the convict population, in the coportion of ten to three, during the last thirty ears. The general shortening of sentences, which

followed on the passing of the Summary Jurisdiction Act in 1879, accounts for a certain proportion of this decrease, but cannot altogether explain it away, since the missing convicts are not found in the local prison population, which has also declined considerably, despite the addition of many minor offences to the statute book since 1880. If we take the two sets of figures-those of convicts and local the two sets of figures—those of convicts and local prisoners—together, and place beside them the increase of ten millions in the general population, it will be seen that the criminality of the country must have declined very substantially to show these results; and, although we look for still better things in the future, it must be admitted that our penal system has, on the whole, served us well. It would, however, be very erroneous to infer that the decrease of crime is due solely to our infer that the decrease of crime is due solely to our methods of punishment, although it is also very doubtful whether such marked decrease could take place under an inefficient penal system. progress, of course, accounts for much of it. The training and discipline of the schools are conducive to moral improvement, self-control, and law-abiding habits; while the steady progress of temperance is probably one of the most important factors of all. Bank holidays have long ceased to be carnivals of drunkenness, and the statistics of crime show a

steady decline in this offence.

12. Drink.—The latest returns show that in 1910 the total number of prisoners, male and female, received in the prisons for drunkenness had been less than the total of 1909 by 5852 cases. These figures are satisfactory as showing progress, but there is still room for much improvement in a list which reaches the enormous total of 57,418. Without any desire to minimize these figures, which represent an appalling amount of human misery and degradation, we would point out that much misconception prevails as to the actual connexion between drink and crime. Exaggerated statements that 80 or 90 per cent of crime is caused by drink depend to a large extent on the statistics of minor crime, which do not justify such sweeping conclusions. Many thousands of offences tried summarily have no connexion with drink. It should be re-membered that the relation of cause and effect existing between drink and the major kind of crime, which entails a long sentence, is by no means so direct or clear as it is in the case of minor crime, since drunkenness is in itself one of the minor crimes, and one which figures most prominently in the statistics, and is also the exciting cause of several such offences. The commission of serious crime, on the other hand, is very often inconsistent with drunken habits, which are by no means so constantly found amongst professional criminals as amongst minor offenders. None the less, drink is, without doubt, both a direct and an indirect cause of all kinds of crime, and the spread of temperance is the most hopeful means we can employ for limiting its perils. Although the drink evil is pre-eminently one which is best dealt with at its source, and before it attains large dimensions, supplementary measures, both curative and penal, are also necessary at the later stages. Here our system has been somewhat weak and ineffective. Abuse of alcohol is certainly the most potent factor known to us in the production of crime, and yet the steps we have hitherto taken to suppress this predominant cause of criminality have been slow, unscientific, and uncertain. Up till 1898, when the Inebriates Act was passed, our measures when the theoristics act was passed, our measures for dealing with drunkenness were for the most part penal, and the penalties were much the same as they had been for fifty years previously. Fines and short imprisonments were the stock remedies, although they had long been known to be practically useless. Occasional drunkards were regarded too much in the light of social 'sports,' instead of anti-social offenders and public nuisances. An attempt was made by the Inchriates Act to stem the evil by applying curative treatment to cases of inebriety, and placing them under control and medical care for prolonged periods. The intention of the Act was good, and it was based on scientific teaching, but, unfortunately, it did not work well in practice. No legal obligation had been placed on the local authorities, who were expected to cooperate in the scheme, to provide accommodation and maintenance for patients, and the Courts were and maintenance for patients, and the Courts were reluctant to deprive of liberty, for the long periods necessary for cure, any persons except the most confirmed inebriates. These, as might have been expected, quickly relapsed into their former habits on discharge, and the Act was thereby discredited. For those who were less confirmed in drinking habits, and who might have gained benefit from the Act, it became a dead letter. The liberty of the subject in their case amounted to liberty to ruin themselves, and to inflict trouble, anxiety, and expense on their friends. Further, disputes arose between the local authorities and the Treasury as to the cost of maintaining the Homes, which led to further deadlock. A Committee of Inquiry has already recommended that, in order to meet these difficulties, the State should take over the control of the Homes. Whether or not this proposal be carried out, the Act requires stiffening in some way, if it is to fulfil its object. The occasional drunkard also needs more attention. If he is to be restrained from drifting into the habitual class before his will-power disappears under continued indulgence, cumulative penalties must be dealt out to him more freely, and the risk of becoming an inebriate under the Act must be constantly kept before his eyes.

CRIOBOLIUM .- Like the taurobolium (wh. see) the *criobolium* was a sacrifice performed in connexion with the worship of the Great Mother of the Gods and Attis, with the difference that the victim was a ram instead of a bull, and was slain in honour of Attis. When the criobolium was given in conjunction with the tuurobolium, the alter was, with rare exceptions, inscribed to both delties; whereas, when the taurobolium alone was given, the inscription was usually to the Mother only, though symbolic decorations on the altar even then often indicated the participation of Attis.

Unlike the taurobolium, which, if not an original feature of the worship of the Great Mother in Asia, was borrowed by her priesthood at Rome from the Cappadocian religions which were brought there in the early 2nd cent. A.D., the criobolium seems to have been a special sacrifice instituted after the rise, and on the analogy, of the tauro-bolium, for the purpose of giving fuller recognition to the duality of the Great Mother and Attis, which had recently become more prominent through the rise of Attis to greater importance. There is no-

Italy before its first celebration in honour of the Mother and Attis.

In the absence of direct evidence, we may suppose the *criobolium* to have been similar to the taurobolium both in details of ceremony and in spiritual effect. Its celebration was wide-spread, and its importance such that it could be an alternative to the taurobolium (CIL vi. 505, 506), though the latter was held in greater esteem. It was inevitable that the ancients should draw a comparison between the pagan doctrine of purification and regeneration through the taurobolium and criobolium and the Christian doctrine of redemption through the blood of the Lamb (Firmicus Maternus, de Error. 27-28).

LITERATURE.—See references under TAUROBOLIUM.

GRANT SHOWERMAN. CRITICISM (Old Test.).-Criticism is the art of estimating the qualities of literary or artistic work. M. Arnold defined it as 'a disinterested endeavour to learn and propagate the best that is known and thought in the world' (Ess. Crit. i. 38). It is not to be mistaken for censure or dispraisethe expression of hostile or unfavourable opinions. Realizing that the word verges on this adverse significance, Pater and others have preferred to speak of literary 'appreciations'; and certainly the true Bible critic desires chiefly to share his admiration with his reader. But 'criticism' and the allied terms should be used without prejudice, to signify the effort of the mind to see things as they are, to appraise literature at its true worth, to judge the records of men's thoughts and deeds impartially, without obtrusion of personal lites or Realizing that the word verges on this adverse impartially, without obtrusion of personal likes or dislikes. In distinction from 'lower' (a term seldom used), or textual, criticism, which aims at ascertaining the genuine text and meaning of an author, 'higher' (a term apparently first used by Eichhorn), or historical, criticism seeks to answer a cries of greating of a previous of a series of questions affecting the composition, edit-ing, and collection of the Sacred Books. The higher critic's task is to show how the ideas of any particular writing are related to the environment in which they grew, to the spirit of the age, to the life of the people, to the march of events, and to the kindred literary productions of other times or, it may be, of other lands. It is a scientific method of 'searching the Scriptures.' It substitutes the inductive for the a priori mode of inquiry, observation and experiment for tradition and dogma. It is a new application of the Socratic principle that an unexamined life-of man or book-is not worth

The critical movement, which has shed a flood of light on the OT, and given the Church a new and more human conception of the mode of revelation, did not begin till the middle of the 18th century. The traditional view of the composition of the Sacred Scriptures was a bequest from the Jewish to the Christian Church, which no one ever thought of closely examining. There were, indeed, a few of closely examining. There were, indeed, a new sporadic attempts at literary criticism, which ran to the received opinion. Theodore of counter to the received opinion. Theodore of Mopsuestia relegated some of the 'Psalms of David'—such as the 51st, 65th, and 127th—to the period of the Exile. Ibn Ezra, the acutest Jewish scholar of the Middle Ages (1070–1138), detected a number of the Middle Ages (1770-1135), detected a number of anachronisms in the Pentateuch, but advised the reader who understood these things to be discreet and hold his tongue. Luther was a fearless critic of both the OT and the NT. He asked what it would matter if Moses was not the author of the Pentateuch; he saw that the Book of Kings was more credible than that of Chronicles; he surmised that some of the Pentateic beater received their that some of the Prophetic books received their final form from redactors; and he would have pre-ferred if the First Book of Maccabees instead of thing to indicate its existence either in Asia or in Esther had been included in the Canon. Spinoza's

philosophical acumen anticipated not a few of the modern critical results. 'Ex his omnibus,' he says, modern critical results. 'luce meridiana clarius apparet, Pentateuchum non a Mose, sed ab alio et qui a Mose multis post saeculis vixit, scriptum fuisse' (Tract. theol.-polit. vii.). Richard Simon, the French Oratorian, observed some double accounts of events in the Pentateuch, and suggested a diversity of authorship. But the critical opinions of these and other individual writers were mere obiter dicta, which made little impression upon the mind of the Church, and never disturbed her dogmatic slumber. inaugurated no critical movement.

It was reserved for one who was neither a scholar nor a theologian, but a man of science, the Frenchman and court-physician Jean Astruc, to discover the critical secret, and to forge the novum organium which was 'to destroy and to overthrow, to build and to plant.' His study of the Pentateuch was the parergon of a busy life chiefly devoted to the writing of books in his own special department, and his supreme merit was that he brought to the search of the Scriptures a mind thoroughly trained in the methods of science. In this pioneer work he left a perfect example for the imitation of all his followers. As a devout Catholic believer—he takes his readers into his conditions in the life and of the search of takes his readers into his confidence in a beautiful preface-he refrained for a while from publishing his book, fearing that he might, much against his will, put a weapon into the hands of the freethinkers—les esprits forts—of his time. He could not doubt, however, that his discovery would serve to remove some serious difficulties from the pages of Scripture, and in his seventieth year he was constrained to give his book to the world (1753). The very title of the work at once gave expression to the characteristic modesty of a true seeker after truth. He merely offered Conjectures seeker after tituth. He literally district Conjectures sur les mémoires originaux dont il paroit que Moyse s'est servi pour composer le livre de la Genèse. He did not know whether they would be accepted or rejected, but in either case nothing could ever after the could be accepted of the could be accepted or rejected. his 'love of Truth and of Religion.' It is worth while to state his argument in his own words-here slightly abridged.

slightly abridged.

'In the Hebrew text of Genesis, God is designated by two different names. The first is Elohum, for, while this name has other meanings in Hebrew, it is especially applied to the Supreme Being. The other is Jehovah, min', the great name of God, expressing his essence. Now one might suppose that the two names were used indiscriminately as synonymous terms, merely to lend variety to the style. This, however, would be an error. The names are never intermixed; there are whole chapters, or large parts of chapters, in which God is always called Elohim, and others, at least as numerous, in which he is always named Jehovah. If Moses were the author of Genesis, we should have to ascribe this strange and harsh variation to himself. But can we conceive such negligence in the composition of so short a book as Genesis? Shall we impute to Moses a fault such as no other writer has committed? Is it not more natural to explain this variation by supposing that Genesis was composed of two or three memoirs, the authors of which gave different names to God, one using that of Elohim, another that of Jehovah or Jehovah Elohim?

That Astruc was conscious of leading the students

That Astruc was conscious of leading the students of Scripture into untrodden paths is proved by the motto from Lucretius (i. 926 f.), which he put on his title-page:
'Avia Pieridum peragro loca, nullius ante
Trita solo.'

In the 500 pages of his book he carried his critical analysis through the whole of Genesis and the beginning of Exodus, as far as the point where the distinction of Divine names appears to cease (Ex 6). He discovered some passages which he could not attribute either to the Elohist or the Jahwist. He displayed his results by arranging the whole text in four parallel columns. His attempt had the inevitable defects of all pioneer work, and he was far from dogmatizing as to the details of his criticism. But, with a true scientist's confidence at once in the precision of his methods and in the

general accuracy of his conclusions, he wrote at the end of his prefatory exposition:

'So we must either renounce all pretence of ever proving anything in any critical question, or else agree that the proof which the combination of these facts affords amounts to a complete demonstration of the theory of the composition of Genesis which I have propounded.'

Astrong Content of the composition of the co

Astruc's Conjectures received but a cold welcome in his own Catholic communion. No single compatriot of his inherited the critical mantle, and it was destined to be the work of a long succession of patient German scientific theologians to continue and complete the process of literary analysis which the brilliant Frenchman had begun. The great Hebraist Eichhorn came to know Astruc's theory at second-hand, and deliberately refrained from reading the book till he had independently, and reading the book thin he had independently, and still more thoroughly, gone over the same ground, with the same general results. He had no difficulty in finding a good many criteria besides the Divine names to differentiate the original documents, and, instead of pausing at the beginning of Exodus, he carried his investigations to the end of the Pentateuch, expressing the opinion-long since antiquated—that the last four books were compiled from separate writings of Moses and some of his contemporaries. Eichhorn's results were published in an *Einleit. in das AT* (1783), and, as he had some of his friend Herder's gift of style and love of the Bible as literature, his book made almost as profound an impression on his age as Wellhausen's

Prolegomena has made on ours.

The only contribution which Britain offered to the solution of the critical problem in its earliest phase was the work of Alexander Geddes, a Scottish priest, educated in Paris, where he had had the privilege of studying Hebrew at the Sorbonne. His Holy Bible faithfully translated from corrected Texts of the Originals, with Various Readings, Explanatory Notes, and Critical Remarks (1792), followed by a separate work entitled Critical Remarks on the Hebrew Scriptures (1800), gives vigorous expression to his views. He was a remarkable man and no mean scholar, who certainly deserves to be remembered among the pioneers of criticism; but by excess of zeal—the perfervidum ingenium Scotorum—he led criticism astray, and tended on the whole to discredit the movement. Scorning the timid theory of Astruc and Eichhorn,—that Moses used only two fundamental documents in the composition of Genesis,—he launched the hypothesis that the whole Pentateuch was nothing but a collection of loose scraps, of various age and worth, probably compiled in the time of Solomon. He had no difficulty in pointing out an immense num-ber of these originally independent fragments, in the conjunction of which he saw no orderly plan or leading motive. He thus became the author of the Fragment Hypothesis,' which was introduced into Germany by Vater, who translated or paraphrased a large part of Geddes's Critical Remarks. Vater thought the Book of Genesis was composed of thirty-nine fragments. The theory made much noise for a time, but received its death-blow at the bands of the greatest OT subplay of last conture. hands of the greatest OT scholar of last century, Heinrich Ewald of Göttingen, in his Die Composition der Genesis britisch untersucht, which he wrote when he was a youth of nineteen (1823). Geddes's opinions cost him his priestly office. Aberdeen consoled him with a doctorate of laws.

Meanwhile a real and important advance, from which there have been nulla vestigia retrorsum, was made by Ilgen, Eichhorn's successor at Jena. This fine scholar—who afterwards acquired a scholastic fame similar to that of Arnold of Rugby scholastic fame similar to that of Alabaman Genesis, each with an unmistakable style of his own, who habitually use the Divine name Elohim. This discovery did not receive much attention at the

time of its publication (1798), and it was not till it was independently made again by Hupfeld, more than half a century afterwards, that its significance was recognized by the foremost scholars of Germany. It is now accepted as one of the assured results of criticism. As the second Elohist is devoted to the ideas and institutions of the Levitical system, he is usually known as the 'Priestly Writer,' while the name 'Elohist' is reserved for the earlier author, who, like the

Jahwist, is more akin to the prophets.

Still another step in advance was taken at Jena, this time by one of Hgen's most brilliant pupils. As a candidate for the doctor's degree (in 1805), de Wette presented a Dissertatio Critica on the Book of Deuteronomy, which proved to be epochmaking. He argued, from the individual qualities of style and the definite circle of ideas which he observed in this book, that it stands by itself, distinct in origin and purpose from the rest of the Pentateuch; and he identified it with the law-book which was at once the manifesto and the programme of the reforming party in the reign of Josiah (621 B.C.). This brilliant theory brought the critical movement for the first time into direct contact with Israel's national history. intense light upon the record of a great spiritual erisis. Criticism thus ceased to be merely literary, and became the handmaid of the history of religion. De Wette's hypothesis has now been tested by the scholarship of a century, and Deuteronomy is universally regarded as the key to the interpretation of the spiritual evolution of Israel.

Attention was next directed to the Book of Joshua, which the Jewish canon sharply separates from the Pentateuch and places at the head of the 'Former Prophets.' Already, in 1792, Geddes had joined it to the Pentateuch, regarding it as 'compiled by the same author.' Careful and minute investigation convinced de Wette and Bleek that this procedure was correct. The real affinities of Joshua are with the writings which precede, not with those which follow, it. Of the 'Five Books of Moses' it forms the necessary continuation and completion, taking up the various threads of the narrative and recording how the promises were fulfilled and the laws enforced. Subsequent critieism has confirmed this view, by proving that each of the Pentateuchal documents, with its favourite phrases and formulæ, reappears in the Book of Joshua. Hence it is now the established practice to speak and write of the Hexateuch, or 'Six Books' (reixos, 'a weapon,' being post-Alexandrian Greek for a book), instead of the Pentateuch.

For the next half century there was one inspiring name which dominated the study of the OT. Wellhausen, who dedicated his *Prolegomena* 'to my unforgotten teacher, Heinrich Ewald, with gratitude and honour,' was one out of many who felt the spell of this scholar's genius. It must be admitted, however, that Ewald lent his authority to a hypothesis which for a considerable time retarded rather than furthered the progress of retarded rather than furthered the progress of criticism. He began where Astruc and Eichhorn left off, and neglected ligen's discovery of the two Elohists. Regarding an undivided Elohist document, which he called the 'Book of Origins,' as the 'groundwork' of the Hexateuch, and finding order than the libert and formula divine order. its unmistakable ideals and formulæ giving order and unity to the whole structure, he maintained that the Jahwist sections were merely added to supplement the work of the Elohist. This was the ismous 'Supplement Hypothesis.' Defended by Bleek, Schrader, and many other scholars, it was riewed for long as the citadel of criticism; but it would not permanently stand the cross-fire to which it was subjected, and it has now no more than a historical interest.

In 1834, Eduard Reuss was lecturing on OT theology at Strassburg, and applying his strong, keen intelligence to the critical problem, which he approached from the historical rather than from the literary side. He found it psychologically inconceivable that a nation should begin its history with a fully developed code of laws. He thought it inexplicable that a whole succession of prophets should ignore their country's laws, which they of all men ought to have reverenced. How was he to solve the enigma? The critical movement, at the point which it had then reached, did not help him much, for Deuteronomy was the only book of the OT, apart from the Prophets, which had yet been replaced in the historical environment out of which it grew. Reuss's problem was to determine the age and origin of the 'Law of Moses' and the 'Psalms of David.' The answer came to him, as he told long afterwards, rather as an intuition than as the result of a careful and exhaustive investiga-It was this—that in the true historical sequence the Prophets are earlier than the Law, and the Psalms later than both. In the following year (1835) practically the same theory was in-dependently propounded by Vatke in his Bibl. Theol. wissenschaftlich dargestellt, and by George in his Die alteren jud. Feste. If neither of these books commanded any great attention, the reason was that they were too theoretical. They did not present a thorough analysis of the language and ideas of the Books of Scripture. Vatke's work was, indeed, a very remarkable instance of the successful application of Hegelian principles to the study of a national and literary development. But it was intended only for the initiated, who were sealed of the tribe of Hegel. The author warned off the very threshold of his book all who did not understand the master's terminology. Reuss, who tried to read it and failed, deferred the publication of his own conclusions for nearly half a century. His L'Histoire sainte et la loi appeared only in 1879, and his Geschichte der Schriften des AT in 1881. One of his most brilliant pupils, K. H. Graf, professor at Leipzig, had forestalled him by a dozen years in his Geschichtl. Bücher des AT (1866), and consequently the theory is known to all the world as the Grafian Hypothesis.

Hupfeld, one of the eminent Hebraists of Halle, where he was the successor of Gesenius, brought a fresh mind to the problem of the literary composition of Genesis, and was rewarded with more success than almost any previous scholar. Indeed, it was he who most nearly read the riddle of the sphinx, and it is a remarkable fact that his book, Die Quellen der Genesis (1853), was published exactly a century after the famous Conjectures of Astruc. Having shaken off the obsession of Ewald's 'Supplement Hypothesis,' he had the good fortune to repeat ligen's almost forgotten discovery of the two distinct Elohist writers in the Pentateuch. He laid bare the work of the Priestly Writer (the second Elohist). He demonstrated the close affinity of the first Elohist to the Jahwist, He demonstrated and the wide difference between both and the writer of the Grundschrift. Under his spell each of these ancient writers seemed to come forth a living personality, with a style which revealed the man. He showed that the additions by which J was alleged to have supplemented P were often entirely out of harmony with the latter's circle of ideas. His own theory was that the productions of three originally independent writers (now known as J, E, and P) were at length combined by an editor, who—fortunately for us—left his sources much as he found them, being content to establish a merely superficial unity.

The literary problem of the authorship of the Hexateuch was thus solved. But the vitally im-

portant historical question of the date of the several writers, and of their relations to the other authors of the OT, still left much work to do. Graf, as we have seen, was inspired by the teaching of Reuss, and developed his master's theory (op. cit. supra). Taking the date of the publication of Deuteronomy (621 B.C.) as his first starting-point, he worked backwards and forwards from it. By careful comparisons he proved that D is, on the one hand, much more fully developed than the law-book—small in size but great in value—known as the 'Book of the Covenant' (Ex 2022-23), and, on the other hand, much less fully developed than the Priestly Code. The inference was inevitable that these three strata of legislation belong to three widely separated ages. The Priestly Code, however, is partly historical, partly legal, and Graf felt constrained to divorce these two elements, ascribing the historical to a pre-exilic, and the legal to a post-exilic date, with some centuries between them. But this part of his theory commended itself neither to the right nor to the left wing. As the Priestly Code is a compact and indivisible whole, and as the style of its narrative portions differs in no way from the style of its legal sections, it must as a whole be either pre-exilic or post-exilic. Now, this was one important question as to which the most eminent critics remained for while divided among themselves. Nöldeke, Riehm, and Dillmann were on the one side; Reuss, Kayser, and ultimately Graf himself, on the other. Then came a new generation of scholars, with Duhm, Kuenen, and Wellhausen at their head, who vigorously attacked the problem once more, and almost unanimously declared in favour of the post-exilic theory, thereupon proceeding to adjust their conceptions of the whole OT literature and history to this revolutionary conclusion.

Duhm in his Theol. der Propheten (1875) chose a

new point of view. The work of the prophets gave him the sure historical vantage-ground from which he could look both before and after, and a keen scrutiny of all the conditions of the problem convinced him that the phenomenon of prophecy is independent of every Mosaic law but the moral law written in the heart. To him the great prophets are not the children of the Law, but the inspired creators of the religion of Israel. Prophecy is the supreme initial fact which transcends explanation. The Levitical system, which gave the death-blow to prophecy in the post-exilic age, could never have been its nursing-mother in earlier times. inner expansion of the prophetic spirit nowhere requires the Law for its explanation or illustration. The traditional succession—Mosaism, Prophecy, Judaism—cannot, therefore, be maintained. Judaism—cannot, therefore, be maintained. ism is not a mere revival of antiquity; it is a new fact. The post-exilic poems sung in fervent praise of the Law have a freshness of feeling which betokens something other than an artificial restora-On the assumption that Ezra, working on the basis of Ezekiel, was the real creator of Juda-ism, everything becomes clear. While the whole previous history of Israel, internal and external, can be traced out independently of the Priestly legislation, the whole subsequent history is just the history of the Law. The study of the Prophets thus proves that the Grafian hypothesis is both psychologically and historically superior to the traditional one. For it is less likely, as Kuenen says, 'that the so-called "Grundschrift" dropped from the sky some few centuries before any one wanted it . . . than that it grew up in its own historical environment when its hour had come? (Histor.-Crit. Inquiry, etc., Eng. tr. 1886, p. xxxvii f.).

Wellhausen's Gesch. Israels appeared in 1878, and of its reception in Germany Pfleiderer says:

'The arguments for the new hypothesis, derived from the parallel development of law, ritual, and literature, were exhibited with such cogency that the impression produced on German theologians (especially of the younger generation) was almost irresistible. . . It was a special merit in Wellhausen's book to have excited interest in these questions outside the narrow circle of specialists by its skilful handling of the materials and its almost perfect combination of wide historical considerations with the careful investigation of details, and to have thus removed OT criticism from the rank of a subordinate question to the centre of theological discussion' (Development of Theology, Eng. tr. 1890, p. 259).

Edite centre of the congression (Levelopment of Incougy, Eng. tr. 1890, p. 269).

Kuenen was perhaps justified in regarding the publication of Wellhausen's book 'as the 'crowning fight' in the long campaign' (op. cit. p. xxxix). The work of criticism was not yet ended. But, at any rate, its methods were vindicated, and its main results assured. The subsequent history of the critical movement is, therefore, outward rather than inward, supplying matter for an interesting chapter of general Church History, a record of the spread of criticism to one country after another, of the opening of the doors of colleges and schools to critical teaching, and of the gradual leavening of the modern mind with a new conception of the Sible and of revelation. Of the direction of the current of educated opinion there cannot be any doubt.

For, while the tired waves, vainly breaking,
Seem here no painful inch to gain,
Far back, through creeks and inlets making,
Comes silent, ilooding in, the main '(A. H. Clough).

It would be strange if traditionalism did not

make a brave fight for life, and the battle has often waxed hot. Critical freedom has sometimes been purchased at a great price. Those who are born free have a sacred heritage. The cause of the scientific study of the OT has been championed and won for England by Colenso and Stanley, Cheyne and Driver; for Scotland by Davidson, Robertson Smith, and G. A. Smith; for America by Briggs and Harper, Toy and Brown—to name in each instance but a few scholars out of many. Criticism is represented in modern Judaism by Montefiore, and the writers of the JE; in the Rom. Montenore, and the writers of the LE; in the hom. Cath. Church by the Abbé Loisy, Baron von Hügel, Père Lagrange, and Salvatore Minocchi. It has become, as Sanday says, international and inter-confessional. And, since all light and truth are of God, Biblical science can bring to Churches and nations nothing but good. It is inevitable that the art of criticism should sometimes be mattical by more of little faith or of rotation. practised by men of little faith, or of no faith, and that in their case the critical spirit should be captious rather than sympathetic, the critical weapon destructive rather than constructive. The fault is not in the instrument but in the user. two scientists who study the open book of Nature, one sees only a strange adjustment of the atoms of dead matter, while the other has a vision of the living garment of God. And of two critics of the Bible, which is 'literature and not dogma,' the one is merely conscious of the pathetic upward strivings of the human spirit, while the other bows in reverence before a revelation of the immanent God of truth and love.

God of truth and love.

Appeal is often made from criticism to archeology. Exploration is called to be the handmaid of revelation. The spade is taken to confirm the pen. Many confident statements have been circulated in the name of this romantic young science, which is bringing so many old things to light. Wherever archeology has been able to test the negative conclusions of criticism, they have dissolved like a bubble into the air 'Sayce, Monument Facts and Higher Critical Famies, p. 25). Assyriology 'has for ever shattered the "critical" theory which would put the Prophets before the Law '(p. 87). From buried pulaces, from monuments, from long-lost libraries, 'a voice has gone up rebuking the scorner' (J. Orr, The Bible under Trial, p. 121). But is criticism really opposed by the facts of the monuments, or only by illegitimate inferences deduced from these facts? On many points archeology is certainly quite neutral, and on many others it is in perfect accord with the views of the critics. While it has to some extent confirmed the Bible tatements regarding Shishak, Ouri, Ahab, Jehu, Sargon, and Sennacherib; while it has proved that the art of writing was wide spread in the East long before the Hebrew invasion of

Canaan; while it has found in Hammurabi a law-giver far older than Moses: it has not hitherto appreciably affected a single critical conclusion as to Israel's historical and literary development. 'Archæology has refuted only the argument which Prof. Sayce has imaginatively attributed to critics: the arguments which they really use, with, of course, the entire position which depends upon them, it has left absolutely untouched' (Driver, LOT's, p. xx). Sayce, Hommel, and Winckler have rendered splendid service as archæological specialists, and every discovery they have made has been welcomed; but science would prefer to receive their facts neat, instead of having them diluted with cheap anti-criticism. Prof. Orr is the ablest opponent of criticism in this country, but he has personally accepted a good many of its results; and, when he still contrasts the traditional with the modern position by saying that 'the one scheme is naturalistic; the other is positively Christian: there must in the long run be a more decisive choice between them (ExpT<sub>1</sub>xviii, [1907] 125), he is needlessly confusing the issue.

The progress of criticism has been slow. The

The progress of criticism has been slow. The labour has been spread over a century and a half. Every critical theory that had ever been advanced has been severely tested and strenuously contested. Criticism is bound to be self-critical, proving all things and holding fast that which is good. It is not to be imagined that finality has been reached on every minor detail of criticism. All along the line there are matters that still await adjustment. In the improvements which it is receiving at the hands of a new generation, the Grafian theory resembles the Darwinian.

nands of a new generation, the Grahan theory resembles the Darwinian.

Allusion can be made to only a very few points. (1) The Jahwist and Elohist have often been called 'prophetic' writers, as if they had come under the influence of Amos and Hosea; but Gunkel has made it appear very probable that the stories of J and E, which in his view represent the work of schools rather than of individuals, had taken shape in all essentials by 1200 g.c. While, on the one hand, 'we must assume their existence in order to account for the appearance of the Prophets,' they have, on the other hand, 'much that must needs have been exceedingly offensive to the Prophets' (H. Gunkel, The Legenils of Genesia, Eng. tr. 1901, p. 1401.). (2) While scholars like Baudissin and Kittel hold that the Law of Holiness (Lv 17-20) precedes Deut., and Driver and Ryle that it is later than Deut., but prior to Ezekiel, Addis has argued very ably for placing it after both these writings (Hok. Rel. p. 241 ft.). (3) The division of Isaiah into two parts at ch. 40 is indisputable, but in both parts inere are sections that require to be removed into different historical settings, and in nearly all the Prophets some later additions and redactions have been discovered. (4) The Psalter as a whole is probably post-exilic, but it is in the nature of things scarcely possible to determine the precise environment into which each poem should be filted, and the theory that many of the Psalms reflect Maccabaen and Ptolemaic conditions has not met with much acceptance. (5) The Wisdom literature and the relation of its later developments to Greek thought still need much attention. While Job is recognized as post-exilic, and Ecclesiates may be little older than Daniel (which belongs to the great field of Apocalyptic literature), it still remains probable that the kernel of the Book of Proverbs represents the oral wisdom of Israel in the time of the monarchy.

Some gains obtained by the criticism of the Old

Some gains obtained by the criticism of the Old Testament may be mentioned. It has established the broad principles that 'God never spoke a word to any soul that was not exactly fitted to the occasion and the man'; and that 'separate... from this context, . . . it is no longer the same perfect Word' (Robertson Smith, O'I'JC', 1892, p. 10 f.). It has reconstructed the history of Israel in the light of that other modern principle-'there is no history but critical history.' For the incredible dogmas of verbal inspiration and the equal divinity of all parts of Scripture, it has substituted a credible conception of the Bible as the sublime record of the Divine education of the human race. It has traced the development of the religious conceptions and institutions of Israel in a rational order. Moving the OT's centre of gravity from the Law to the Prophets, it has proved that the history of Israel is fundamentally and essentially the history of Prophecy. It has made a sharp and clear distinction between historical and imaginative writing in the OT, and so enhanced the real value of both. It has appreciated the simple idylls of Israel's folklore, pervaded and purified as they are by the spirit of the earliest prophets, and used by them to transfuse the devotion of a higher faith into the veins of the people. It has thrown light—as Astruc saw that it would—on the many duplicate, and even 

contradictory, accounts of the same events that are found in close juxtaposition. It has explained the moral and theological crudities of the Bible as the early phases of a gradual religious evolution. It has denuded the desert pilgrimage of literary glory, only in order to enrich the Exile. For the 'Psalms of David' it has substituted the 'Hynnbook of the Second Temple,' into which are garnered the fruits of the religious thought and feeling of centuries. To the legendary wisdom of one crowned than it has preferred the newless wislescales. head it has preferred the popular philosophy of many generations. For a religious history which looked like an inverted pyramid, it has given us one which is comparable to an ever-broadening stream—the record of a winding but unwavering progress in the moral and religious consciousness of a people. Instead of crowding the most complex institutions and ideals into the infancy of the nation, it has followed the order of nature-'first the blade, then the ear, then the full corn in the ear.'

the blade, then the ear, then the full corn in the ear.'

Prof. B. D. Eerdmans, Kuenen's pupil and successor, is regarded as the leader of a reaction. He begins his Alttest. Studien (Giessen, 3 parts, 1908-10) by announcing that he has quitted the Graf. Wellhausen. Kuenen School. Criticism has been wrong from the outset. 'Astrucked her into false tracks' (p. iv). 'The theory which uses the Divine names as a guide through the labyrinth of the traditions is an error, and must be set aside' (p. 94). Instead of taking these names as literary criteria, let us have an historical-religious investigation of their meaning. In the 'Book of the Covenant' (Ex 20<sup>22</sup>-23<sup>23</sup>), 'Elohim' cannot refer to the God of Israel. It is a real plural. The 'judges' (Ex 218 223-9) are gods. This is the key with which the new critical school opens the door. Polytheism is to be found not only in the 'Book of the Covenant,' but in the narratives of Genesis. 'For the knowledge of the history of Israel it is of great importance to see clearly that the legends which have been gradually collected in Genesis have received but a faint monotheistic colouring.' Round the figures of the partiarchs have gathered (1) stories in which the polytheism is undisturbed, (2) others which recognize Jahweh as one of the gods, and (3) others in which the polytheism has been alapted to monotheistic faith. Some parts of P—which to Eerdmans is 'a fiction'—are much older than the Exile, and round all the ancient legends there have gradually accumulated many additions and redactions, dating from the earliest to the latest times.

Eerdmans has failed to take account of the fact that for the recognition of J and E in the Hexateuch there are many other important criteria—language, style, point of view, religious tendency—besides the Divine names. It will be found that the difference between him and his master is after all not very great. His vigorous and suggestive criticism is a trumpet-call to all OT scholars to re-examine their position, and they are cheerfully resp

to all OT scholars to re-examine their position, and they are cheerfully responding; but it does not appear that the solid walls of P have been shaken.

CRITICISM (New Test.).—The criticism of the NT may be treated in two divisions—that of the Gospels and Acts, and that of the remaining books. In the Gospels and Acts we are dealing with narrative material, which may, therefore, be approached from the standpoints and methods of (a) literary, (b) historical, criticism. But in the Epistles and the Apocalypse we have to do with books where the historical element is subordinate and the literary predominant. Consequently, literary methods of criticism will find further scope than historical methods, and there is likely to be less divergence of opinion on the results obtained.

I. CRITICISM OF THE GOSPELS AND ACTS.—
To the dispassionate inquirer the present state of this department of investigation must be strangely bewildering. This is not due to variation of opinion in the region of literary criticism, for there it has long been seen that the possibility of obtaining sure results is very limited in scope, and agreement has been largely reached on all points where agreement is possible. But, in the region of historical inquiry, results are surprisingly contradictory, and there seems at present to be no likelihood of agree-

ment being reached.

I. Literary criticism.—So far as the Synoptic Gospels are concerned, important results have been reached by the methods of literary criticism. These may be briefly summarized as follows. (a) It has been shown that the Second Gospel was used in the compilation of the First and Third Gospels.1 (b) It has been further shown that behind the First and Third Gospels lies a compilation of the Lord's Sayings (=Q) which directly, or after passing through intermediate stages, was used by the editors of these later Gospels.<sup>2</sup> (c) It has also been made probable that the editor of the Third Gospel used, in addition to Mark and Q, at least a third written source; but no agreement has been reached as to its scope.<sup>3</sup> (d) Some recent attempts to analyze the Second Gospel into two or more documents which were originally distinct rely more upon bit and applications of the property of the p historical considerations than upon purely literary methods, and are too recent to have been fully considered.4

In the Fourth Gospel literary critical methods have recently found much play. Wellhausen 5 has attempted to find traces of composite authorship, and he has been followed by Spitta, who endeavours to distinguish between a Grundschrift, to which he assigns a very high historical value, and a Bearbeiting. But it may be questioned whether the unity of the book is not too apparent to be

lightly shaken.7

The attempt to analyze the Acts into its original sources finds ever new disciples. The latest is Harnack,<sup>8</sup> who finds in Ac 2-15 a compilation of three documents. But the grounds alleged do not seem adequate to support the conclusions. On the other hand, the identity of the editor of the Acts with the writer of the 'We' sections and

with the editor of the Third Gospel has received the weighty support of Harnack himself, and on purely literary grounds is hardly deniable. Those who dislike this conclusion have to fall back upon historical considerations.

So far we have been dealing with literary criticism in its efforts to determine or to detect underlying sources in the narrative literature of the NT. It will be seen that the most important and assured results have been reached in those cases where the data are the fullest. The use of Mark in Matthew and Luke has been rather observed than discovered; and, if Mark did not exist, literary analysis certainly could not reconstruct it out of the later Gospels. For that very reason, attempts to reconstruct Q can be at the best but tentative. The attempted analysis of these books into sources which are not now extant is a matter of great difficulty, arising from the fact that the writers have so re-cast any sources which they may have used that reconstruction of them is now almost impossible. It is for that reason that attempts on purely literary grounds to re-discover sources used in the Acts are little likely to succeed.

2. Historical criticism.—It is, however, in the region of historical criticism that the variety of opinion spoken of above chiefly exists. And the reason of it is not far to seek. Inquirers into the Gospels and Acts are divided, broadly speaking, into two classes, guided by different conceptions as to the right method of approaching the narratives, and consequently employing dilarent standards or criteria in estimating their value as historical

material.

(1) Investigators of the first class start from the assumption that the facts of history which lie behind the narratives are purely natural facts, similar in nature to other facts known to us. In particular, they take it for granted that Jesus was a man, whose personality underwent the normal process of gradual development, so that the growth of His intellectual conceptions can be traced on psychological lines. Inquirers who are guided by principles like these are, of course, bound to apply to the material before them such criteria as the following. (a) Does a writer state as fact an event which lies outside the range of the known laws of Nature? Then, not only did the alleged event not happen, but some account must be given of the nature of the process which enabled the writer to state as fact what is incredible. Under this head the whole of the so-called miraculous element in the Gospels and Acts is senoved from the sphere of history, and translated into the real of myth, legend, popular exaggeration, symbolism, allegory, or transference of the miraculous from other departments of tradition into the life of Jesus. the early days of criticism this generally led to the transference of the Gospels into the 2nd cent., 2 in order to allow time for the growth of legend round the few traditional facts of the life of Jesus. More recently it has been argued that such growth may have been very rapid, and is consistent with a 1st cent. date for the Gospels. (b) The mental develop-ment of Jesus must be similar to our own, and it

1 Luke the Physician, Eng. tr., Lond. 1907; see also J. C. Hawkins, Horæ Synopticæ, Lond. 1899.

2 The Second Gospel is now most generally assigned to A.D. 60-70, the Third to c. A.D. 80, and the First to varying dates between the publication of Mark and the end of the century. The tendency nowadays is to push the Synoptic Gospels and the Acts backwards rather than forwards. This is illustrated by Harnack's admission that the Acts may have been written 'so early as the beginning of the seventh decade of the first century' (Acts. p. 297).

(Acts, p. 297).

3 Harnack now (Newe Untersuch. zur Apostelgeschichte, Leipzig, 1911) places Acts before the death of St. Paul, St. Mark and St. Luke earlier, and St. Matthew shortly before or after A.D. 70. The present writer has argued for a date about A.D. 50 for St. Matthew (ExpT., July 1910).

resembles the Darwinian.

Allusion can be made to only a very few points. (1) The Jahwist and Elohist have often been called 'prophetic' vriters, as it they had come under the influence of Amos and Hosea; but Gunkel has made it appear very probable that the stories of Jand E, which in his view represent the work of schools rather than of individuals, had taken shape in all essentials by 1200 s.c. While, on the one hand, 'we must assume their existence in order to account for the appearance of the Prophets,' they have, on the other hand, 'much that must needs have been exceedingly oftensive to the Prophets' (H. Gunkel, The Legands of Genesis, Eng. tr. 1901, p. 140 t.). (2) While scholars like Baudissin and Kittel hold that the Law of Holiness (N. 17-20) precedes Deut., and Driver and Ryle that it is later than Deut., but prior to Ezekiel, Addis has argued very ably for placing it after both these writings (ILDs. Rel. p. 211ft.). (3) The division of Isaiah into two parts at ch. 40 is indisputable, but in both parts there are sections that require to be removed into different historical settings, and in nearly all the Prophets some later additions and redactions have been discovered. (4) The Psalter as a whole is probably post-exilic, but it is in the nature of things scarcely possible to determine the precise environment into which each poem should be fitted, and the theory that many of the Psalms reflect Maccabasa and Ptolemaic conditions has not met with much acceptance. (5) The Wisdom literature and the relation of its later developments to Greek thought still need much attention. While Job is recognized as post-exilic, and Ecclesiates may be little older than Daniel (which belongs to the great field of Apocalyptic literature), it still remains probable that the kernel of the Book of Proverbs represents the oral wisdom of Israel in the time of the monarchy.

Some geains obtained by the criticism of the Old

Some gains obtained by the criticism of the Old Testament may be mentioned. It has established the broad principles that 'God never spoke a word to any soul that was not exactly. It are only a occasion and the majous stream of evidence to a l'erson, ue au yet living, human yet more than human. In view of this deepest and most profound fact of human experience, we cannot, they urge, apply to the Gospel evidence those rough and ready tests of the historical which critics of the first class are so eager to use. Christ is reported to have worked a miracle. The critics of the first class say at once: (a) 'The miracle did not happen'; therefore (b) 'the narrative is very late,' or (c) 'it is to be explained as due to one of the causes summarized above,' and (d) 'it is worthless' as evidence of historical fact.' Christ is reported to have worked a miracle. The miting of the second to have worked a miracle. The critic of the second class will say at once, 'Why not?' 'What does this mean save that from the inexhaustible treasure-house of the Personality of Jesus flowed some influence or power which so dazzled the minds of the witnesses that they recorded their impression in the simple words that have come down to us? Or, again: Christ is reported as having taught moral principles which presuppose

1 But see A. Schweitzer (The Quest of the Historical Jesus, Eng. tr., Lond. 1910), who rightly refuses to eliminate the eschato-logical element from the life of Christ, but over-emphasizes it.

contradictory, accounts of the same events that are found in close juxtaposition. It has explained the moral and theological crudities of the Bible as the early phases of a gradual religious evolution. It has denuded the desert pilgrimage of literary glory, only in order to enrich the Exile. For the 'Psalms of David' it has substituted the 'Hynnbook of the Second Temple,' into which are garnered the fruits of the religious thought and feeling of centuries. To the legendary wisdom of one crowned head it has preferred the popular philosophy of many generations. For a religious history which looked like an inverted pyramid, it has given us one which is comparable to an ever-broadening stream—the record of a winding but unwavering progress in the moral and religious consciousness of a people. Instead of crowding the most complex institutions and ideals into the infancy of the nation, it has followed the order of nature-'first the blade, then the ear, then the full corn in the

the blade, then the ear, then the full corn in the ear.'

Prof. B. D. Eerdmans, Kuenen's pupil and successor, is regarded as the leader of a reaction. He begins his Alttest. Studien (Guessen, 3 parts, 1908-10) by announcing that he has quitted the Graf. Wellhausen. Extenen School. Criticism has been wrong from the outset. 'Astructed her into false tracks' (p. iv). 'The theory which uses the Divine names as a guide through the labyrinth of the traditions is an error, and must be set aside' (p. 91). Instead of taking these names as literary criteria, let us have an historical-religious investigation of their meaning. In the 'Book of the Covenant' (Ex 20:2233), 'Elohim' cannot refer to the God of Israel. It is a real plural. The 'judges' (Ex 219 223 9) are gods. This is the key with which the new critical school opens the door. Polytheism is to be found not only in the 'Book of the Covenant,' but in the narratives of Genesis. 'For the knowledge of the history of Israel it is of great importance to see clearly that the legends which have been gradually collected in Genesis have received but a faint monotheistic colouring.' Round the figures of the patriarchs have gathered (1) stories in which the polytheism is undisturbed, (2) others which recognize Jahweth as one of the gods, and (3) others in which the polytheism has been adapted in monotheistic faith. Some parts of P—which to Eerdmans is 'a fection'—are much older than the Exile, and round all the ancient legends there have gradually accumulated many additions and redactions, dating from the earhest to the latest times.

Eerdmans has failed to take account of the fact that for the recognition of J and E in the Hexateuch there are many other important criteria—language, style, point of view, religious tendency—besides the Divine names. It will be found that the difference between him and his master is after all not very great. His vigorous and suggestive criticism is a trumpet-call to all OT scholars to reexamine their position, and they are cheerfully responding

LITERATURE (chiefly additional to books cited above).—J. W. Colenso, Pentatench and Book of Jushua critically examined, 7 parts, London, 1862-79; Th. Nöldeke, Die AT Literatur, Leipzig, 1868, also Untersuchungen zur Kritte des ATs, Kielles (1869; A. Kuenen, Histor. Krit. Onderzoek?, Leyden, 1886-93 (Eng. tr. Valo Humas of the Witnesses of Little? 1880): that a dead person had been brought back again to life. What 'death' and 'life' here involve can never be known to us. The substantial fact is that the force and power of the Personality of Jesus effected this astonishing thing that the girl, who otherwise would have been numbered with the dead, took her place, through His influence, once more in the world of living men and wonien.

The question of the necessity of approaching the Gospels as historical witnesses, with some sort of presuppositions in favour of, or against, their testimony, has not yet been treated in a serious scientific manner. Yet nothing is more certain than the fact that historians approach all ancient documents with certain presuppositions. These are, in large part, inferences drawn from our experience of life treated as a whole. The question concerning the Gospels takes the form whether there is in our experience any element which should influence us in the case of these books which is absent when we are dealing with other ancient literature. historian who answers No will necessarily approach the Gospels with a presupposition against their evidence. And this presupposition seems to be due to a denial on his part of an element in life which

CRITICISM (New Test.).—The criticism of the NT may be treated in two divisions—that of the Gospels and Acts, and that of the remaining books. In the Gospels and Acts we are dealing with narrative material, which may, therefore, be approached from the standpoints and methods of (a) literary, (b) historical, criticism. But in the Epistles and the Apocalypse we have to do with books where the historical element is subordinate and the literary predominant. Consequently, literary methods of criticism will find further scope than historical methods, and there is likely to be less divergence of opinion on the results obtained.

I. CRITICISM OF THE GOSPELS AND ACTS .-To the dispassionate inquirer the present state of this department of investigation must be strangely bewildering. This is not due to variation of opinion in the region of literary criticism, for there it has long been seen that the possibility of obtaining sure results is very limited in scope, and agreement has been largely reached on all points where agreement is possible. But, in the region of historical inquiry, results are surprisingly contradictory, and there seems at present to be no likelihood of agreement being madely

ment being reached.

I. Literary criticism.—So far as the Synoptic Gospels are concerned, important results have been reached by the methods of literary criticism. These may be briefly summarized as follows. (a) It has been shown that the Second Gospel was used in the compilation of the First and Third Gospels. (b) It has been further shown that behind the First and Third Gospels lies a compilation of the Lord's Sayings (=Q) which directly, or after passing through intermediate stages, was used by the editors of these later Gospels.<sup>2</sup> (c) It has also been made probable that the editor of the Third Gospel used, in addition to Mark and Q, at least a third written source; but no agreement has been reached as to its scope. (d) Some recent attempts to analyze the Second Gospel into two or more documents which were originally distinct rely more upon historical considerations than upon purely literary methods, and are too recent to have been fully

In the Fourth Gospel literary critical methods have recently found much play. Wellhausen has attempted to find traces of composite authorship, and he has been followed by Spitta, who endeavours to distinguish between a Grundschrift, to which he assigns a very high historical value, and

a Barokai ite appear to them as at one of whether Lake. He was henceforth to be with them in another sense. And He was to come again. What if some strange experience of fact lies behind this narrative? Need it then be so late in date? What prevents it from being one of the earliest traditions of the Christian Church? St. Paul is witness to

such a tradition.

Criticism of the Gospels and Acts which is based on quite unscientific presuppositions—that is the point—introduces hopeless confusion into NT criticism. It condemns offhand certain narratives as fictitious, and then invents the most improbable causes to account for their genesis and growth.
This is not criticism based on principle, but arbitrary and captious rejection of evidence. We want, if possible, some sort of scientific method or principle, and this can be reached only by a pre-liminary investigation of all the facts. Christ as presented in the Gospels, Christ as experienced in history, Christ as experienced in modern life,—is this all of a piece, one long consecutive witness to a supernatural Christ? If so, whatever other

1 Harnack actually makes the presence in the Acts of the narrative of the Ascension an argument against ascribing the book to a date before A.D. 78, though on other grounds he inclines to an earlier date (p. 291). But see now his more recent treatment of the date of Acts (cf. p. 319b, note 3, above).

with the editor of the Third Gospel has received the weighty support of Harnack himself, and on purely literary grounds is hardly deniable. Those who dislike this conclusion have to fall back upon historical considerations.

So far we have been dealing with literary criticism in its efforts to determine or to detect underlying sources in the narrative literature of the NT. It will be seen that the most important and assured results have been reached in those cases where the data are the fullest. The use of Mark in Matthew and Luke has been rather observed than discovered; and, if Mark did not exist, literary analysis certainly could not reconreason, attempts to reconstruct Q can be at the best but tentative. The attempted analysis of these books into sources which are not now extant is a matter of great difficulty, arising from the fact that the writers have so re-cast any sources which they may have used that reconstruction of them is now almost impossible. It is for that reason that attempts on purely literary grounds to re-discover sources used in the Acts are little likely to succeed.

2. Historical criticism.—It is, however, in the region of historical criticism that the variety of opinion spoken of above chiefly exists. And the reason of it is not far to seek. Inquirers into the Gospels and Acts are divided, broadly speaking, into two classes, guided by different conceptions as to the right method of approaching the narratives, and consequently employing dillerent standards or criteria in estimating their value as historical

material.

(1) Investigators of the first class start from the assumption that the facts of history which lie behind the narratives are purely natural facts, similar in nature to other facts known to us. In particular, they take it for granted that Jesus was a man, whose personality underwent the normal process of gradual development, so that the growth of His intellectual conceptions can be traced on psychological lines. Inquirers who are guided by principles like these are, of course, bound to apply to the material before them such criteria as the following. (a) Does a writer state as fact an event which lies outside the range of the known laws of Nature? Then, not only did the alleged event not happen, but some account must be given of the nature of the process which enabled the writer to state as fact what is incredible. Under this head Part of the so-called miraculous element in Fourth Gospel is rearly semoved from the sphere draws the conclusion that in the conclusion that logy, apart from the Prologue, there is nothing essentially Hellenic' (p. 119). If this is true, and if the date assigned to the Odes is right, a great many arguments for a 2nd cent. date for the Fourth Gospel, and a large number of objections to the Johannine authorship, cease to have any validity. It is possible that the 'Odes of Solomon' will prove as epoch-making for the Johannine question as was the publication of the Book of Enoch for the Synoptic Gospels.7

Gesettsch. a. r resentation as Communication and the second and seco

in MITICISM OF THE EPISTLES AND APOC-ALYPSE.—I. The Pauline Epistles.—The movement of criticism in recent years with regard to the Pauline Epistles has been in the direction of a return to tradition. With few exceptions, critical writers are disposed to admit as Pauline 1 and 2 Thess., Gal., I and 2 Cor., Romans, Philippians, and Philemon. Of these, 2 Thess. is the most doubted. It is argued that, viewed as literature, it reads like an imitation of the First Epistle, whilst from a theological point of view the second chapter presents us with an eschatology different from that found elsewhere in St. Paul. Harnack 1 has recently attempted to meet this second objection, and to preserve the letter for St. Paul by the novel argument that the First Epistle was written to the Gentile converts at Thessalonica, whilst the Second was written for the Jewish converts there.

The Epistle to the Galatians has been the subject of much controversy with respect to the date of writing and the people addressed. theory revived and advocated by Ramsay, that the Churches addressed are to be found in the southern part of the Roman province of Galatia, would make it possible to date the letter at any time after St. Paul's visit to these Churches on his second journey. Thus Zahn adates it from Corinth on the second journey. Ramsay himself prefers a somewhat later date, from Antioch, between the second and third journeys. Against this it may second and third journeys. Against this it may be urged that St. Paul would probably have preferred to make a personal visit from a place so near to Southern Galatia as Antioch, instead of writing a letter. Others still prefer the older chronology, which placed the letter in close connexion with 1 and 2 Cor. and Romans. A comparison of Ac 16<sup>6</sup> with 18<sup>23</sup> favours the view that the aditor of the Acts believed that St. Dayl visited the editor of the Acts believed that St. Paul visited the old kingdom of Galatia; but that does not, of course, settle the question of the locality of the churches to which the letter was written. The strongest argument in favour of the later date is the close resemblance in tone between Galatians and Romans.

The return to a traditional position spoken of above is illustrated by the present state of critical opinion with regard to the Epistle to the Colossians. A generation ago it was assigned to the 2nd cent. by a majority of critical writers, the arguments alleged being that the Epistle contained a Christology too developed for the age of St. Paul, and that the false teaching was a 2nd cent. form of Gnosticism. But, although some of the more advanced critical writers still believe it to be post-Pauline, the view is gaining ground that the Christology is not necessarily un-Pauline, and that the teaching, if in any sense Gnostic, is an early form of Gnosticism, which there is no reason to place out-

side the life of St. Paul.

Denial of the authenticity of Ephesians is more wide-spread. Its theology is said to be too advanced for St. Paul, especially in respect of the Person of Christ, and the doctrine of the Church; whilst the difficulty of reconciling the address to Ephesus with the entire lack of local colour has never been quite satisfactorily explained. But, if Colossians be admitted to be Pauline, these

Hymns dating from the time of Justin Martyr]; Menzies, Interpreter, Oct. 1910 [the Odes regarded as written bysGentiles impressed with the truth of the Jewish religion]; Splita, in ZNTW xi. (1910] 193 ff. and 259 ff. [holds strongly to Jewish character]; Gunkel, ib. p. 291 ff. [maintains Gnostic origin].

2 Instod. to the NT, Eng. tr. 3, Edin. 1909, i. 190.

3 Historical Com. on Gulatians, Lond. 1890, p. 242.

4 The Epistle is regarded as Pauline by Harnack, Jülicher, Clemen, von Soden, von Wrede, Abbott, Peake, and Moffatt.

arguments lose their force. In view of the fact that all the elements of the Christology of these letters can be found in St. Paul's undoubted Epistles, it is quite arbitrary to argue that he would not have written them, if the circumstances necessary to the development of his thought on these lines had arisen. And to argue that they could not have arisen is mere dogmatism about the unknown.1

The Pastoral Epistles are regarded as post-Pauline by a number of critical writers, on the

following grounds:

(1) The style and language are not those of St. Paul. This is true if stated in the form that style and language differ from those of the other Epistles. But, if genuine at all, the letters clearly date from a later period of St. Paul's life than any other of his extant writings. And it is not at all clear why changed circumstances should not have caused a corresponding change in the Apostle's expression of his thought.

circumstances should not have caused a corresponding change in the Apostle expression of his thought.

(2) The nature of the false teaching combated is said to be that of a period which lies outside the probable limits of St. Paul's life. This is pure conjecture. There can be no evidence that teaching of the kind presupposed, whether it be an early form of Gnosticism or a debased Judaism, had not begun to affect the Churches at a very early date.

(3) The Church, as described in these letters, has a developed organization. The main point here is the status of the ἐπόσκοπος. If, as seems probable, this term is here synonymous with πρεσβότερος, the Epistle must not be brought down too late—not, that is to say, into the 2nd cent.—and would suit a date at the end of St. Paul's life.

(4) There is a lack of other testimony to support the evidence of these letters that St. Paul was released from his imprisonment at Rome. There are, however, hints elsewhere in the NT that the Apostle was so released. Cf. Ph 22¹, Philem 2², and Ac 28³0, which, as Harnack² has recently urged, implies that St. Luke was acquainted with the fact that St. Paul was released. If the evidence of the Pastoral Epistles on that point be admitted as historical, the other objections to their authenticity lose much of their weight. For it is not difficult to suppose that the Apostle, feeling that his departure could not be long delayed, might well see the necessity of making provision for the future organization of the Churches, which were soon to be deprived of his guidance. In any case it is difficult to believe that any one but St. Paul could have written 2 Timothy.³

In the case of the last Epistle ascribed by tradi-

In the case of the last Epistle ascribed by tradition to St. Paul, the Epistle to the Hebrews, modern critics are almost unanimous in their verdict that the letter cannot be Pauline. But none of the ancient or modern conjectures as to the authorship is more than a shrewd guess. Tertullian thought of Barnabas; Luther, of Apollos; Harnack, followed by Rendel Harris<sup>7</sup> and Peake, favours Priscilla and Aquila; Ramsay and Canon (now Bishop) Hicks 10 prefer Philip the Evangelist.

2. The Catholic Epistles.—Here, too, opinion is divided into two main classes. On the one hand are the writers who defend the traditional authorship of most of these documents, on the ground that they can find no reason for rejecting it. On the other are the critics who seem to be possessed at the outset by the feeling that it would be treasonable to admit that tradition can ever be right in its ascription of these writings to Apostolic authors. And yet, how little probable it is that none of the earliest Apostles except St. Paul should have left behind them any written record! How very probable it is that others besides St. Paul should have written letters! How improbable it

<sup>1</sup> The authenticity of Ephesians is denied by the majority of German writers and by Moffatt, but is asserted by Abbott and Peake: Harnack and Jülicher think the question an open one.

2 Acts, p. 40. 3 An infermediate position is taken by those who believe that genuine Pauline fragments have been worked into those Epistles by a later writer. So Harnack, McGiffert, McHatt, knoke,

Feake.

4 de Pudicitia, 20. So recently Weiss, Bartlet, Ayles, and Dibelius (Der Verfasser des Hebreweis, Strassburg, 1910), who regards Hebrews as originally a Sermon, not an Epistle.

5 Ezarr. in Gen. 48. 20.

10 Interpreter, Apr. 1909.

is that the Church should have failed to preserve some such writings, and should rather have let them slip into oblivion, and preserved instead 2nd cent. writings which went by false names! There is an a priori probability in favour of the traditional authorship, and something approaching to overwhelming proof of its impossibility is required before it can be set aside. From the perusal of the objections repeated, with as much certainty as though they were axioms of Euclid, by successive critics of the advanced type, the candid reader rises with the feeling that they are forced conclusions from evidence which is capable of more than one interpretation. 'If there were no tradition as to authorship,' he will say, 'I could only conclude that these writings were composed within the first 150 years of the existence of the Christian Church. But within that period I find no reason why some of these writings should not have been written by the men to whom tradition assigns them. On the other hand, I do see reason to suppose that the early Church would have preferred to preserve Apostolic rather than later documents.'

Apart from 2 Peter, where the argument from literary dependence on Jude seems fatal to the Petrine authorship, the arguments against the authenticity of the other members of this group seem insufficient to outweigh the tradition in their favour. They are of the following nature:

seem insufficient to outweigh the tradition in their favour. They are of the following nature:

(a) Against James.\(^1\)—The writer is arguing against St. Paul's teaching about Justification by Faith, or against a corrupt form of it; the Greek of the letter is too good for St. James; the writer does not refer to early controversies such as that about the admission of Gentiles into the Church; he makes no reference to, or use of, cardinal doctrines of the primitive Church, such as the Messiahship of Jesus, His death and resurrection; the reference to healing through the 'elders' is a mark of late date; the condition of the Christians addressed is that of a late and decayed Christianity.

(b) Against Peter.—The chief question here has turned on the nature of the persecution implied in the letter and the hearing of that upon the date of the authorship. Ramsay? has tried to show that the references to persecution imply a date about Ad. St. Others prefer the reign of Trajan? (on the ground that the references to persecution in the Epistle accord well with the account given by Pliny to Trajan) or of Domitian.\(^4\) But there is really no ground for so pressing the language of the letter as to make it impossible to suppose that it was written during the Neronian persecution.\(^5\) Then, as afterwards, there may have been reason to urge Christians converts to let it be known that they were suffering as Christians, and not for moral offences which would have been inconsistent with their profession. The other main ground for rejecting the Petrine authorship of the letter is its alleged Paulinism. But we may admit a certain amount of Pauline influence upon the writer without necessarily denying that St. Peter can have been the author. Arguments against the authenticity on this and other grounds seem to be captious and arbitrary, such as 'This is unlikely,' or 'That is improbable in the case of St. Peter.' After all, how very little we know of the Apostle's life after A.D. 44 And how are we to determine what he may or may

(e) The question of the authorship of the Johannine Epistles

is so closely connected with the complicated question of the authorship of the Fourth Gospol that it is best to pass them over in a cursory survey of NT criticism like the present. They are widely regarded as by the same writer as the Fourth Gospel, though some would separate the Second and Third Epistles from the First, and attribute them to a different author.

These arguments may be divided into two classes: (1) literary, and (2) those which rest upon the supposed background of ideas and of ecclesiastical development suggested by the writings in question.
The arguments of the first class are the most likely to lead to positive conclusions, and in one case they do so, as is recognized by most critical writers, including some who in other respects come to conservative conclusions. It is generally admitted that the literary dependence of 2 Peter on Jude rules out the Apostolic authorship of the former. Here, then, we have one case where the Church has admitted into its Canon a writing of a later date, because it bore an Apostolic name. But how does it stand with the other writings? Here the literary argument leads to no such positive result. 1 Peter may depend on Romans and Ephesians, but St. Peter may have written it nevertheless. Jude shows acquaintance with St. Paul's Epistles, but why may not the Jude to whom the letter has generally been assigned have been so acquainted? When we turn to the arguments of the other class, they fail to carry conviction to minds which are not prepossessed with the conception that none of

these writings can be Apostolic.

3. The Apocalypse.—Modern investigation has done much, and will do more, to rescue this book from the fetters of traditional lines of interpretation, and to reconstruct the atmosphere in which it was written, and in which therefore it ought to be read and interpreted. The following are the main points at issue :-

(1) The authorship. It is now very widely held that Apocalypse and Fourth Gospel cannot be by the same author. This is, of course, not a new, but an ancient critical inference (cf. Dionysius of Alexandria, ap. Eus. HE vii. 25. 15). (2) The date. Was the book written in the reign of Nero, or of Domitian? The majority of recent writers favour the later date. (3) Dependence upon earlier literature. Attempts have been made to show that the book in its present form is a Jewish Apocalypse re-edited by a Christian, or a composite work into which fragments of Jewish Apocalypses have been loosely incorporated. These attempts at analysis of the structure of the book may be said to have failed. The unity of purpose and idea is too obvious. No doubt, the writer was deeply read in the OT, and very probably also in current Jewish Apocalyptic literature. But the book is no mere compollation of fragments of earlier writings. In another form, however, attempts to prove dependence of the writer upon the past have met with success. Since the publication of Gunkel's Schopfung und Chaos (1895) it has become increasschopfung una Chaos (1895) it has become increas-ingly clear that the writer has made very large use of ancient myth, and of language and symbol long current in Apocalyptic writings. Not, of course, that such borrowing is peculiar to him. The long stream of Prophetic and Apocalyptic speakers and writers from Isaiah downwards, not excluding our Lord Himself, have this in common, that they do not entirely create a new language as the vehicle of their teaching, but largely adopt and borrow the words and symbols of an earlier ago. To take a simple example, the writer of the Apocalypse, like all the writers of the NT where they are dealing with the future, borrows very largely

<sup>1</sup> The latest commentator, Oesterley (Expositor's Gr. Test. iv. [1910]), thinks that the arguments for and against an early date are equally balanced. He suggests that the Epistle may have been written by St. James, but that it was originally a great deal shorter than it now is.

2 Church in the Roman Empire 5, Lond. 1897, p. 282.

3 So Pfeiderer, Jülicher, Oone, and others.

4 So von Soden, Harnack, and recently Gunkel (Die Schriften des NT, 1909).

3 So the most recent commentator, Hart, in Expositor's Gr. Test. v. (1910).

<sup>&</sup>lt;sup>1</sup> So Swete, The Apocalypse of St. John<sup>2</sup>, Lond, 1907; and he latest commentator, Moffatt, in Expositor's Gr. Test. v.

<sup>(1910).</sup>That the author may have employed and worked into the scheme of his book portions of earlier writings is, of course, quite probable, but difficult to prove.

324 CROSS

from Daniel. That, of course, will be readily admitted. But modern investigation has penetrated behind this simple handing on of phrase and symbol from writer to writer, and has sought to show that much of the common symbolism so transmitted goes back to a primitive mythology, the origin of which is hidden in the speculation of peoples whose history lies on the border line where history fades into the obscurity of legend. This is, no doubt, largely true, and, if true, is of great importance for the right interpretation of the Apocalypse. If the author is making use of an ancient myth, which has passed through a long course of transmission, it is probable that much of the detail which forms part of it will be repeated by him because it is already there, and therefore it has no particular significance for him. We shall, therefore, look for the outstanding ideas behind his pictures, and not seek to press a historical allusion, or a forecast of some detail of future history, out of every phrase and symbol.

history, out of every phrase and symbol.

Summary.—If we turn now from this survey to a forecast of the future, there is reason to think that the NT criticism of the days to come will, if we may judge from the general tendency of the more recent writings, more and more emancipate itself from those prejudices which have made it a byword in the past. There is much that is hopeful. On the one hand, there is a readiness to admit that the larger part of the NT writings have quite correctly been assigned by tradition to the 1st century. On the other, there is not the same eagerness to maintain the correctness of tradition in all its details that once inspired writers of the conservative school. Such a popular Introduction as that of Peake (1909) may be taken as a good example of the newer spirit, which is anxious neither to affirm nor to deny traditional positions, but only to come to the conclusions to which the evidence points, and to keep an open mind where the evidence is inconclusive. Of course, prejudices die hard, and the determination to keep the Catholic Epistles out of the 1st cent. has still much life in it in Germany. But, speaking generally, there seems to be growing up a school of critical writers who are freeing themselves from the axiomatic dogmatism, whether theological or anti-traditional, of the past century. As this school increases, it may be hoped that, even with regard to the Gospels, something like a really scientific method of inquiry may be reached. At present it must sadly be confessed that the Prolegomena for such an inquiry have yet to be written.

LITERATURE.—This is given in the footnotes. J. Moffatt's Introduction to the Literature of the New Testament (Edinburgh, 1911), which appeared too late to be used in this article, should be specially referred to, as the most complete survey of the field of NT criticism. See also reviews of the book by the present writer in ExpT, May and June, 1911.

W. C. ALLEN.

W. C. ALLEN.
CROMLECH.—See DEATH AND DISPOSAL OF
THE DEAD (European).

CROSS.—The cross (Lat. crux) is the figure produced by two lines intersecting one another, usually at right angles. This figure gives rise to numerous varieties according to the direction of the limbs and the form of their extremities. W. Berry in his Encyclopedia Heraldica mentions no fewer than 385 different crosses, but the greater number have scarcely any interest except for decorative art and the science of heraldry. From the point of view of religious symbolism the only important types are the following: the equilateral cross, called also the Greek cross (a in illustration); the socalled Latin cross (crux immissa or capitata), in which the lower limb is longer than the three others (b); the Tan-shaped (potencée or commissa) cross

(c); the crux ansata or handled cross (d); the crux decussata or St. Andrew's cross (c); the gammate cross (f); the Maltese or tayed cross (g); the Lorraine cross, with double or triple traverse (h); the cross perronnée, that is to say, mounted on steps (i).

Fig. 1.

I. Non-Christian crosses.—r. The equilateral cross.—The equilateral cross, like the straight line, the curve, the circle, the crescent, the triangle, etc., forms so simple and natural a geometrical figure that in many instances it could not fail to present itself spontaneously to the imagination in quest of a sign to indicate anything that extends in the principal directions of space—the sky, the earth, rays of light, the wind-rose, etc.—and, by an extension of meaning, to stand for the abstract notion of space itself. It is easy to understand how, in the symbolism of some peoples, the cross may have served as a conventional representation of certain material objects whose contour it suggests—birds on the wing, men with outstretched arms, a double-headed hammer, the bow and drill apparatus for producing fire, etc. But, everywhere, it may be said to have been used, above all, to represent radiation or space.¹

Thus we find that the equilateral cross was

Fig. 2.2

adopted by the Chaldeo-Assyrians as the symbol of the sky and of its god Anu (see fig. 2, a). The

Fig. 3.8

same peoples represented the sun and its eight regions by a circle from which eight rays pro-

Fig. 4.4

ceeded (2, b). By coupling these rays in pairs there was produced the radiated cross which the king of

1 At the same time it must not be forgotten that the cross, like the triangle and other geometric figures, is sometimes merely ornamental in origin, with no symbolic significance whatever.

Whatever.

2 See Rawlinson, WAI, vol. ii. pl. 48.

3 See Perrot-Chipiez, i. 308; cf. Layard, Monuments of Nineveh, 1849-53, pl. iv.

4 See Schliemann, Ittes, Paris, 1895, No. 1959.

Assyria wore suspended round his neck, like the cross worn by a Commander in our orders of

knighthood (see fig. 3).

Schliemann has noted the presence of the cross upon the pottery and the whorls of the Troad. The solar meaning of this symbol is attested by its alternating with the rayed disk. At times the two emblems appear in juxtaposition (see

fig. 4,  $\alpha$ ).

Among the Greeks the sceptre of Apollo assumes at times the form of a cross (cf. coin of Gallienus reproduced in Victor Duruy's Hist. des Romains, Paris, 1885, vol. viii. p. 42), fig. 4, b. The cross is associated with the representation of Castor and Pollux, perhaps in order to emphasize their stellar character (so on coin of Caracalla).

In India likewise the equilateral cross alternates with the rayed disk. On an ancient coin reproduced by General Cunningham (Bhilsa Topes, 1854, pl. xxxi.) the branches of the cross terminate in

arrow-heads (see fig. 5).

Among the Gauls, as well as among the peoples belonging to the Bronze period, the cross appears frequently on pottery, jewels, and coins (see G. de Mortillet, Le Signe de la croix avant le christianisme, Paris, 1866, p. 44 ft.). Here again the emblem is clearly solar (see fig. 6). On the

Fig. 6.1

statuette of a Gaulish deity, discovered in France in the department of Côte d'Or, we see the tunic covered all over with crosses. The god, who is Sucellus (on whom cf. Renel, Religions de la Gaule avant le christianisme, Paris, 1906, pp. 252-257), holds in one hand the mallet which symbolizes the thunderbolt, and in the other a jar or olla (see fig. 7).

Fig. 7.2

The cross is found in like manner in Mexico, in Peru, and above all in Central America, where its

See Flouest, Deux stèles de laraire, Paris, 1885, pl. xvii.
 See Revue Celtique, 1870, p. 2.

presence upon religious monuments did not fail to astonish the companions and the successors of Columbus, who saw in it a trace of a visit paid by St. Thomas, the apostle of the Indies (see Congres internat. des Americanistes, vol. i., Brussels, 1879, p. 501 ff.). We know nowadays that these crosses are designed in allusion to the four quarters from which rain comes, and consequently to the winds that blow from the four cardinal points (see G. Mallery, in 10 RBEW, 1893). The cross of pre-Columban America is a veritable 'wind-rose,' and we can perceive how it thus became, among the Toltees, the symbol of the god who dispenses the celestial waters, Tlaloc (see A. Réville, Religions du Mexique, Paris, 1885, p. 91 [also in Eng. tr.]). According to Réville, the Mexican closs was called There has been found in the ruins of Palenqué a bas-relief representing persons in the act of adoration before a cross, on which rests a fan-tastic bird, more or less resembling a parrot. Perhaps this was the symbol of the god Quetzal-coatl (the feathered serpent), who himself also, according to Réville, stands for a god of the wind (op. cit. p. 82; see also Thomas Wilson, The Swastika, 1896, p. 933 ff.). For a cross, representing the four winds, as thought of by the Dakotas, see

Frg. 8.1

The arrow at the top of this cross marks the piercing blast of the north wind. Once the north wind is located at the head of the cross, the east wind will be symbolized by the heart, which in the human body is placed under the left arm. The south wind is pictured by the sun, as it shines from the region of light and warmth, and the west wind by a star, as it blows from the region of the night.

But the American cross may have assumed also a solar or stellar character, if one may judge from

Fig. 9.2

the above figure (9), which has been met with on shells found in the mounds of New Mexico; and

Fig. 10.8

from those, not less significant (10), which have been found among the Dakota pictographs. See, further, following article.

See 10 RBEW, 6g. 1225.
 See Holmes, in 2 RBEW, p. 282.
 See Garrick Mallery, in 10 RBEW, figs. 1118-1126.

Among the Chinese, the equilateral cross inscribed within a square, , stands for the earth.

According to Samuel Beal (Indian Antiquary, 1880, p. 67) there is found in China even the dictum God fashioned the earth in the form of a cross. It is curious to meet with an analogous symbolism in a Church Father. 'The aspect of the cross,' writes Jerome (Com. in Marcum), 'what is it but the form of the world in its four directions' I have precious and est aim formed. tions? [Insu species crucis, quid est aist forma quadrata mundi?]. The east is represented by the top, the north by the right limb (looking from the cross), the south by the left, the west by the

lower portion.'
2. The handled cross and the cross potencie.—The potences form 7, produced by suppressing the upper limb of the Latin cross, is called also the Tau cross, because it reproduces the form of the Greek letter Tuu. The magical virtue which down to our own day has been attributed to this sign owes its origin unquestionably to the veneration paid by the Egyptians from their pre-historic days to the handled cross, or key of life, represented by a cross potencie surmounted by a handle (see fig. 11). This cross, which is met with on the

most ancient monuments of the Egyptian monarchy, is frequently to be seen in the hand of a god, a priest, or a king. Archaeologists have maintained by turns that it represents a Nilometer (Plucke), the key of a canal-lock (Zoega), a jar (Plucke), the key of a canal-lock (Locga), a jar upon an altar (Ungarelli), a degenerate form of the winged globe (Layard), a phallus (Jablonski), the loin-cloth worn by the Egyptians (Sayec). In the paintings on the tombs it appears to be employed by the divinities to awaken the dead to a new life. The following inscription may be read upon a bas-relief of the 12th dynasty, where the coddess Anuki, is seen holding the extremity the goddess Anukit is seen holding the extremity of the handled cross to the nostrils of the king Usertesen III.: 'I give thee life, stability, purity, like Ra, eternally.' Elsewhere the ideogram formed by the handled cross in the hieroglyphic (E. M. Coemans, Manuel de lungue égyptienne, Ghent, 1887, pt. 1, p. 46). Whatever may be the material object of which the handled cross is the representation, its abstract sense is not doubtful: it is a symbol of life, of the vital germ, and it is not without reason that it has been called the key of life.1

From Egypt the key of life, now become a magical and propitiatory sign, spread to the Phonicians and then to the whole Semitic world.

1 Ise, however, Wiedemann, Religion der alten Ägypter, Münster, 1890, p. 157 f., who maintains that the ankh connotes merely a band or fillet, and is only homonymous with ankh, 'life,' so that 'it has nothing to do with a cross,' # From a coin of Paphos (CIS, vol. i. fasc. i. p. 6). # From a coin of Carthage (Barclay V. Head, Coins in the British Museum, London, 1881, pl. xxv., No. 38).

4 From intaglies of Sardinia (J. Menant, Pierres gravées de la Haute Asis, Faris, 1838-85, vol. ii. pp. 256, 258).

Its presence has been noted on bas-reliefs, tombs, pottery, jewels, coins, from Sardinia to Susiana, along the shore of Africa, in Phrygia, Palestine, and Mesopotamia. Upon monuments of Phoenician or Hittite origin it is held in the hands of kings or priests, as with the Egyptians, and is associated with the tree of life and the lotus flower. Its extreme symbolical importance led the peoples who horrowed it from the Egyptians to combine it with such emblems of their own as presented an analogous form or suggested a cognate idea. Thus the Phonicians derived from it a mixed emblem, in which the handled cross is grafted upon the cone representing the goddess Astarte or Tanit, 'she who gives life' (see fig. 12).

The theeks anthropomorphosed it so as to reproduce the features of their goddesses of life—Aphrodite, Harmonia, Artemis of Ephesus, etc.

(see fig. 13).

Fig. 13.

With the Gauls the T comes to stand for the hammer of Thor, which was regarded not only as an engine of destruction, but also, after the manner of the storm, as an instrument of life and fecundity. Even with the Egyptians the two-headed mallet,

', became in the hicroglyphs a Latin cross, T, with the meaning of 'crusher,' 'avenger' (de Harlez, 'Le Culte de la croix avant le christianisme' in La Science catholique, 15th Feb. 1890,

p. 163). In Egypt there have been found a whole series of signs which mark the transition from a handled cross, or cross ansata, to the chi-rho, or mono-

gram of Christ (see fig. 14).

The handled cross or a similar sign is met with also in India (see fig. 15), and in America, where

Frg. 15.4

it is found engraved on monuments in the ruins of Palenqué, as well as on the pieces of pottery. recovered from the mounds.

1 Lenormant, in GA, 1876, p. 68,
2 P. Decharme, Mythologie de la Grèce antique, 1879, fig. 145.
3 Chi-rhos of Phila (Letronne, 'La Croix ansée a-t-elle été employée pour exprimer le monogramme du Christ?' in MAIBL, vol. xvi. pl. i. figs. 47, 48, 49).
4 On a silver ingot (Edw. B. Thomas, in the Numismatic Chronicle, vol. iv., new series, pl. xi.).

CROSS 327

In a Maya manuscript two persons appear to be in the act of adoration before a tree which affects the form **T**, and where a parrot-like bird has taken the place of the upper arm of the cross (see fig. 16).

3. The gammate cross, or gammadion. — This cross derives its name from the fact that it can be resolved into four gammas joined at right angles (see fig. 17). In spite of its apparently

complicated structure, it is, next to the equilateral cross, the form most widely diffused throughout all antiquity. It has been met with on terra-cotta articles at Hissarlik, from the time of the second or burnt city. In Greece proper and the islands of the Archipelago it makes its appearance first upon articles of pottery with geometrical ornaments, which form the second period of Greek ceramics. which form the second period of Greek ceramics. It is frequent upon the ancient vases of Cyprus, Rhodes, and Athens. Upon an Athenian vase, in a burial scene, it appears thrice repeated before the funeral car. Upon a vase of Thera it accompanies the image of the Persian Artemis. Elsewhere it adorns the vulva of an Asiatic goddess. Upon a vase now at Vienna it appears as an ornament on the breast of an Apollo standing upon ment on the breast of all Apolio standing upon a quadriga (cf. Goblet d'Alviella, The Migration of Symbols, London, 1894, pl. i.). It became a favourite symbol on coins, and passed along with the other monetary symbols of the Greeks into the numismatic art of all the Mediterranean peoples. This cross is also found engraved upon those hutband favoured upon which have been due up in the

shaped funeral urns which have been dug up in the terramares of N. Italy. It likewise appears on the jewels and the weapons, not only of Gallic, but also of German and Scandinavian peoples.2 In company with the wheel and the thunderbolt, it adorns the votive altars of the Gallico-Roman period, from Aquitaine to Great Britain. In the Caucasus it has been noted upon weapons and jewels which go back to the Bronze period. In Lycaonia, on a Hittite monument, it is introduced as an ornament on the border of the robe of a person engaged in offering sacrifice.

In India, where it bears the name of swastika (from su, 'well,' and asti, 'it is') when the limbs

1 See 5 RBEW, 1884, p. 32.
2 In the north it has received the name fylfot ('many-footed'), but the assimilation implied in this name is very uncertain. See, further, Renel, op. cit. pp. 217-220.

are bent towards the right (fig. 17, a), and sauvas-tika when they are turned to the left (fig. 17, b), it is already found upon the domino-shaped ingots of silver which preceded the use of coins, and then upon the coins themselves. The Buddhists employed it largely. A notable instance of its use, along with other symbols, is in the classical representation of the Buddhapāda, or footprint of Buddha (see fig. 19), among the bas-reliefs of the

Fig. 19.

famous stūpa of Amaravatī. It passed, no doubt, along with Buddhism, into the iconography of China and Japan, where it occupies a pre-eminent place on the pedestal of Buddhist statues, and even at times adorns the breast of Buddha and the Bodhisattvas. In China, moreover, the swastika found a place among the written characters, where it conveys the notion of 'plurality,' and, by extension, of 'abundance,' 'prosperity,' 'long life' (Thomas Wilson, The Swastika, p. 799). The same is the case in Japan, where, according to de Milloué, it represents the number 10,000, and consequently the idea of abundance and prosperity [BSAL, 1881, p. 191]). The Empress Wu (684-704) of the Tang dynasty decreed that it should be used as a sign for the sun (Yang y Yu, in Wilson's Swastika, pl. 2).

Even at the present day the Hindus make frequent use of this figure, which they may trace in their account books and, on certain occasions, at the threehold of their houses. According to Sir

on the threshold of their houses. According to Sir George Birdwood, they distinguish clearly between the swastika and the sauvastika, the first representing the male principle and the god Ganesa, the second the female principle and the goddess Käll. In an extended sense, the first stands for the sun in his diurnal course, or for light and life; the second for night and destruction. The sect of the

second for night and destruction. The sect of the Jains in India has chosen the swastika as the emblem of the seventh of their twenty-four saints, or Tirthankaras (Colebrooke, On the Jainas, in Asiatic Researches, Calcutta, 1788-1836, p. 308). The gammate cross has been met with sporadically also on bronze articles among the Ashantis of Africa; and also on native implements from Paraguay, Costa Rica, and Yucatan. In the ancient Maya city of Mayapan it adorned a stone slab which bore also the image of the solar disk, exactly as in Gaul, Italy, Asia Minor, East India. In N. America it is seen among the crosses engraved In N. America it is seen among the crosses engraved on shell and copper ornaments from the mounds, and the Pueblo Indians still use it to decorate their

From the circumstances in which the gammate cross has been traced or employed, it follows that, in every instance in which a symbolical meaning has been extended to it it is a symbolical meaning has been attributed to it, it is a sign of good omen,

1 The Buddha Amitābha (Musée Guimet); also in Wilson's Swastika, pl. 1: 2 Old Records of the India Office, London, 1891, p. xf. 3 See d'Alviella, A travers le Far West, Brussels, 1906, p. 160.

328 CROSS

of propitiation and benediction, an emblem of prosperity, of life, of safety [the saurustika, where a distinction is drawn between the two forms of the gammate cross, is an exception which proves the rule]. But whence comes this general function of luck-bringer and talisman? There is scarcely a symbol which has given rise to such diverse interpretations. Men have seen in it, e.g., running water (Waring), the air or the god of the air (R. P. Greg), fire or the low and drill apparatus for producing fire (Emile Burnouf), the lightning (W. Schwartz), the female sex (George Birdwood), the union of the two sexes (J. Hoffman), a Pāli monogram (General Cunningham), the reunion of the form rates of Lolie (Erd Pierst). the four castes of India (Fred. Pincott), the nautilus [Gr. πολύπους, cf. the fylfot] (Frederick Houssay), cranes flying (Karl von den Steinen), the primitive god of the Indo-Europeans (de Zmigrodzki), the sun in his course round the heavens (Ludwig Müller, Percy Gardner, Edw. B. Thomas, Max Müller, Henri Gaidoz, Goblet d'Alviella).

It might even be maintained, on the strength of the monuments, that, after having served as a symbol of the sun in motion, the gammate cross came to symbolize astronomical motion in general. and thus to be applied to the moon, the stars, the sky itself, and to everything that appears to move of itself—water, wind, lightning, fire, etc. In this way it would readily become a symbol of prosperity, fertility, blessing, or the appurtenance of such deities as secured the development of man and of

Nature (see figs. 20, 21).

Lunar gammadion.2 Fig. 21.

The question may be asked whether the gammate cross can be assigned to a single birthplace. Its two most ancient known habitats are: the one in the burnt city of the ruins at Hissarlik, the other among the terramares of N. Italy. It is possible that both of these districts borrowed it from the that hour of these districts horrowed it from the valley of the Danube during the Bronze age. From these two centres it may have spread—while retaining its double significance as a solar symbol and as a sign of life or of blessing—on the one hand, towards the west, to the extremities of the Celtic and German world; on the other, towards the east, by way of the Caucasus, India, China, and Japan.

A main, has the cammate cross of the New World

Again, has the gammate cross of the New World an independent origin? The supposition is by no means inadmissible that it arose spontaneously. But the answer to this question depends in some measure upon whether infiltrations of Asiatic iconography did not make their way across the ocean during the era of pre-Columban civilization. And this is a problem which appears to be yet far

from being solved.

II. The Christian cross.—The cross in the Christian sense is the cravpos or lignum infelix, a wooden post surmounted by a cross-beam, to which the Romans, following the example of the Greeks and the Easterns, nailed or attached certain classes of condemned criminals till they died. The fact that Jesus suffered death on the cross has converted this infamous figure into a symbol of

1 From a Gallo-Belgie coin (E. F. F. Hucher, WArt gaulois, Paris, 1865, p. 160). 2 From a Cretan coin (Numismatic Chronicle, vol. xx. [No. 3] pl. ii. fig. 7).

'I determined to resurrection and salvation. know among you nothing save Jesus Christ and him crucified, writes St. Paul (1 Co 22). The early Christians saw the cross in all the interearly Christians saw the cross in all the inter-secting lines which presented themselves to their view in ordinary life, in art, in Nature. The 'sign of the cross' was their favourite symbol. 'At every step, at every movement, at every coming in and going out,' wrote Tertullian at the beginning of the 3rd cent. (dv. Chrona, 3), 'in putting on our clothes and our shoes, in the bath, at table in the evening, lying down or sitting, whatever in the evening, lying down or sitting, whatever attitude we assume, we mark our forcheads with a little sign of the cross.' Moreover, Christians had to defend themselves against the charge of pagans that they paid adoration to the cross like An idol. 'Craces non colimus nec optamus,' wrote Minucius Felix.' But it is plain that the great mass of Christians attached a magical value to this sign. At all events they used it as a form of exorcism, a means of warding off unclean spirits. One of the most ancient portable crosses, found in a Christian tomb at Rome, bears the inscription: 'Crux est vita mihi; mors, inimire, tibi' ('The cross is life to me; death, O enemy [the devil], to thee'). Soon the cross came to work miracles of itself. People went the length of marking cattle with it to protect them from disease.

The cross, according to a Roman Catholic archæologist, P. Didron, is more than a figure of Christ; it is in iconography Christ Himself or His symbol. 'Thus a legend has been created around it as if it were a living being; thus it has been made the hero of an epopee germinating in the Apocrypha; growing in the Golden Legend; unfolding and completing itself in the works of sculpture and painting from the 14th to the 16th century.' This is an allusion to the celebrated mystical poem of Giacomo da Varaggio (13th century), where it is related how, after the death of Adam, Seth planted upon his turn a branch taken from the planted upon his tomb a branch taken from the tree of life. When the slip had grown into a tree, Moses obtained from it his magic rod. Solomon took from it the wood for his temple. Finally, the executioners of Jesus cut from it the materials for fashioning the cross. This cross, buried upon Golgotha, was disinterred in the time of the empress Helena; and the Church commemorated its discovery by appointing the 3rd of May (13th Sept. in the Eastern Church) as the annual festival of the Inventio Crucis. Carried off by Chosroes, it was miraculously recovered by Heraclius four-teen years later, in honour of which event the Church instituted another annual festival on the 14th of Sept., the Exultatio Crucis. Lost once more after the Muslim invasion, it is to reappear

The Holy Cross had its special churches as it had its festivals; not a few cities even were named in its honour. Thus Roman Catholic writers admit that the cross has become the object of a veritable cult. 'The cross,' writes Didron (loc. cit.), 'has received a worship similar, it not canal, to that of Christ; this sacred wood is added almost equally with God Himself.' Many churches possess, amongst their miraculous relies, alleged fragments of the cross. A legend, intended to explain their abundance, relates that these fragments had the miraculous prerogative not only of healing diseases, but even of reproducing and multiplying themselves indefinitely.

Strangely enough, the early Christians, in spite of the importance they attached to the cross, refrained from reproducing it in their iconography.

Migne, PL iii. 846.
 de Rossi, Bulletino di Arch. Cristiana, 1878, p. 138; sec, further, art. Charms and Anulers (Chr.), vol. iii. p. 426.
 P. Didron, Histoire de Dieu, 1843, p. 351.

During the first three centuries (with possibly a single exception, that of the equilateral cross cut on a sepulchral inscription, which de Rossi believes may be assigned to the end of the 2nd or the beginning of the 3rd cent.) the cross of Christ is invariably dissimulated under the form of an object which recalls its image: a trident, an anchor (see figs. 22, 23), a ship with rigging; or under the forms of the cross already employed by other cults. the cross potencée and the gammate

Figs. 22, 23.1

cross. The cross potencée, according to certain archæologists, is, by the way, the form which most accurately recalls the instrument of crucifixion employed by the Romans.

At the close of the 3rd cent, the Christians decigned learn Christ Paragraphy.

designated Jesus Christ by a monogram composed of the first two letters of Ίησοῦς Χριστός, χ, or of XP1070s, The addition of a transverse bar, or the exhibits the cross or, better still, Christ upon the cross, especially when, by an after process of simplification, the chi-rho becomes or . Further, the Latin cross already appears upon certain coins of Constantine, although this upon certain coins of Constantine, atthough this emperor, true to his policy of religious eclecticism, shows no scruple about introducing on the same coins representations of Mars or Apollo as gods. Julian, of course, suppressed both cross and chi-rho. But, after his time, the cross finally takes its place upon coins and even upon the Imperial diadem. At the same time it asserts itself under its proper form in funeral inscriptions, upon alters, reliquaries, lamps, jewels, and even upon altars, reliquaries, lamps, jewels, and even upon the façades of houses and the tops of basilicas, where it takes the place of the monogram; and before long it may be seen furnishing the ground plan of churches. In the 5th cent. the employment of the cross potencée becomes rare except in Celtic countries, where it continues to show itself in inscriptions. In like manner the gammate cross now appears only sporadically, in the west and the north of Europe, upon tombstones and sacerdotal vestments.

The so-called Latin cross and the equilateral cross were at first employed without discrimination.

cross were at first employed without discrimination. Only gradually did the equilateral come to be the specialty of the East, and the form with unequal limbs that of the West.

As to the crucifix, i.e. a cross with the body of Jesus nailed to it, this representation does not make its appearance till the 7th century. The art of the Middle Ages was not slow to heighten its realism still more. But at the same time a distinction was drawn between the cross of the Passion, which is accompanied by all the imple-Passion, which is accompanied by all the implements of crucifixion, and the cross of the Resurrection, with which Jesus ascends to heaven. The first is painted sometimes green, because it was cut from a tree; sometimes red, because it was stained with the blood of Christ. The second is painted sometimes blue, the colour of the sky; sometimes white, as symbolizing the invisible Divinity. It is this last which is carried at the head of processions.

The cross became a hierarchical symbol in the <sup>1</sup> See T. Roller, Les Catacombes de Rome, Paris, 1881, vol. i. pl. xix, nos. 8 and 11. Church. Thus the Pope has the privilege of having carried before him a cross with three bars, while cardinals and archbishops have to be content with two, and bishops with one.

Finally, the cross served also in the prime of the Middle Ages as a symbol of certain popular rights. Such were the market crosses in Germany, which such were the market crosses in Germany, which implied the municipal jurisdiction; the perrons, or crosses mounted upon a column, which in certain towns of Belgium and Germany were regarded as an emblem of jurisdiction, and even as the palladium of local liberties. When Charles the Bold wished to punish the inhabitants of Liège, he carried away their nervan and set it up for six years at Brucos. their perron and set it up for six years at Bruges.

For a number of centuries the phrase to take the cross' meant to devote oneself to fight the infidels. Hence the orders of knighthood and the crosses of honour, the bestowal of which has now nothing to do with religion.

After all that we have said, it is needless to stop to examine theories, ancient or modern, which seek to claim a pagan origin for the Christian cross, on the ground that earlier cults had cruciform signs among their symbolism, while others would discover in pre-Christian crosses prefigurations of the Crucifixion. We must content ourselves with referring the reader to the respective supporters of these theories (e.g. Emile Burnouf, Gabriel de Mortillet, Mourant Brock, Abbé Ansault, etc.).

Ansault, etc.).

CROSS (American).—The appearance of the

CROSS (American).—The appearance of the cross symbol among the semi-civilized and savage peoples of America in all probability admits of a genuine two-fold interpretation. It amalgamates in all likelihood two cognate ideas: (1) that of the cross as a symbol of the four winds belonging to or emanating from the four cardinal points; (2) that of the world tree, 'tree of life,' or 'tree of our flesh' (Mexican Tonacaquahuitt), analogous in some ways to the Scandinavian Ygydrasil, or cosmic tree, whose roots surrounded the universe. The first, in its pictorial and mural form, was probably evolved from the second as an art convention. There can be no question of the genuine aboriginal character of the cross symbol as found in America. Its origin appears to have been analogous to that of the symbol in use in the Old World—evolution from a symbol of the four cardinal points; but any hypothesis of its importation from Europe or Asia would require much weightier proof of European or Asiatic colonization than has yet been advanced, and is easily discounted by the unquestionable signs of its wide-spread aboriginal

use throughout the American continent.

On the discovery of Yucatan, where the lieutenants of Cortes found crosses at Cozumel and elsewhere, the wildest theories were propounded to account for their appearance in the New World. These crosses were about 3 ft. in height, and were usually found in an enclosure called topan, or the buildings surrounding a temple. The Spanish missionaries believed that they had been introduced by the apostle St. Thomas, or that early Spanish refuge in America, and had brought with them the sacred symbol. The missionaries then proceeded to inquire after representations of the Crucifixion itself, and it was discovered that one had existed in pictorial form on a manuscript which had been buried to prevent its destruction by the invaders, but which had sub-equently rotted underground. This figure undoubtedly represented a human sacrifice to the Sun, always intended in Mexico when the word 'God' (Tcotl) was employed, as in the present instance, without any indication of the particular deity which the

figure was meant to represent.

1. As a symbol of the four winds.—As a symbol of the four cardinal points from which the winds, and therefore the rains, came, the cross was well entitled to the designation of 'tree of our life' in the arid climate of Yucatan. To each quarter of the heavens a quarter of the ritual year belonged. The Aztec goddess of rains, Chalchihuitlicue, bore a cross in her hand, as most of the principal deities of Tennitien mulliplements, according to the principal deities. of Egyptian mythology carry a cognate symbol, the ankh, or 'key of life'; and, in the feast celebrated in her honour in the early spring, victims were nailed to a cross and shot with arrows. Quetzalcoatl, as god of the winds, is represented as carrying a species of cross, and his robes were decorated with cruciform symbols. The form which we find, for example, in the famous basrelief of Palenqué, and which was also discovered upon the temple walls of Cozumel, Popayan, Cundinamarca, and elsewhere, was undoubtedly a conventional form evolved from that of a tree, consisting of the lower part of the trunk and two cross-branches. The Mayan designation of the cross was indeed Vahom che, the tree erected or set up.' In the Palenque cross, at the ends of the branches knobs appear, which are probably intended to indicate leaves or fruit. On the summit is perched a bird, probably a turkey, decked out in the brilliant plumage of more brightly-feathered fowl. The cross in question was probably regarded as in some measure the pedestal of the living turkey-fetish. The fiesh of the turkey was a staple of Mexican diet, and in this way, it may be, the bird had become associated with the idea of subsistence and the 'tree of life' itself. In any case the cross of Palenqué was known as Quetzalhuexoloquahuitl, or 'tree of the plumed turkey.' A priest stands on the proper right of the bas-relief, offering as a sacrifice a small human figure made from maize paste, and not a newly-born child, as some authorities state. On the proper left stands an acolyte, offering up a stalk of maize. At the roots of the cross a hideous head appears. It is that of Cihuaco-huatl (female serpent), or Tonantzin (our Mother), to give her her Mexican designation—the earthgoddess, the most bloodthirsty of the Central American deities in her lust for human flesh, and the one from whom the 'tree of life' has its being and nourishment.

Many American peoples believe in the efficacy

obtained. The rain-makers of the Lenni Lenape draw the figure of a cross upon the ground, with its extremities towards the cardinal points, and on this they place a gourd, some tobacco, and a piece of red material, afterwards invoking the rain-spirit. The Creeks, at the ceremony of 'the Busk,' celebrated to the four winds, dispose four logs in the shape of a cross, the ends of which are set to the cardinal points, and in the centre of these they kindle the New Year's fire. The Blackfeet used to arrange large boulders in the form of a cross, on the prairies, in honour of Natose, 'the old man who sends the winds.' The Muyscas of Bogota, in order to sacrifice to the goddess of waters, extended ropes across a lake, thus forming a gigantic cross, at the point of intersection of which they cast in offerings of precious stones, gold, and odoriferous oils. In the State of Wisconsin many low cruciform mounds are found, exactly orientated. These were probably altars to the four winds. In the mythology of the Dakotas the winds were always conceived as birds; and the name of the cross in the Dakotan language signifies 'the mosquito-hawk spread out.'

2. As the 'world tree.'—In those Mexican and Mayan pictures which deal with cosmology the world tree is depicted as standing in the centre of the universe, its roots deep in the waste of waters, its branches among the clouds, as if in search of rain. The Mexicans worshipped the tree as Tota (our Father), whom they further described as 'god of the waters and of vegetation,' although he also appears to have some connexion with fire. Among the Kiche (or Quiché) of Guatemala, women desirous of children sought out a tree overhanging a pool, to which they prayed as the emblem of fertility; and this indicates the possible phallic origin of the tree of life. The vax che, or ceiba tree, is still an object of veneration in many ham-lets of Central America. The sacred pole of the Omalias typifies the cosmic tree, the centre of the four winds, and the dwelling of the thunder-bird; and tree-burial among the western tribes of North America probably bore some mythical relation to placing the dead in the tree of life. The Mbocobis of Paraguay believe in a tree by which the dead once climbed to Paradise, and the Yurucares of Bolivia in one whence mankind originally emerged. The sacred tree also appears symbolically throughout America in the form of the poles and stakes which surround the prayer-houses and kiras of many American tribes.

LITERATURE.—Ixtilixochiti, Historia Chichimeca (ed. A. Chavero), Mexico, 1891—92; Las Casas, Hist. Apologetica, Seville, 1652; Sahagun, Hist. gen. de. .. LEWIS SPENCE. CROSS-ROADS.—Cross-roads are very generally regarded as the dwelling-place or resort of evil spirits, ghosts, etc., and hence are considered unlucky or even dangerous, while various expedients are resorted to in order to ward off their dangers. On the other hand, they are sometimes associated with a divinity—probably, in the first instance, because images of the divinity were placed there to counteract the powers of evil, and a cult of the divinity was observed at the cross-ways. Or they may be regarded as sacred in themselves. Thus in the Avesta a formula runs: 'We sacrifice . . . to the forkings of the highways and to the meeting of the roads' (SBE xxxi. [1887] 291). In ancient India they were not to be defiled or obstructed (ib. xxii. [1884] 182, xxxiii. [1889] 158). But the reverence for such a divinity of cross-roads was of the cross as a symbol whereby rain may be soon mingled with the fear of the demoniac influences, and we find the divinity often regarded as sharing in the characteristic evil and horrible traits of the very demoniac beings which he or she was supposed to hold at bay. The association of evil beings or of a divinity with cross-roads is an extension of their association with roads in general, and is already found among some lower tribes in connexion with the rough paths leading through forest or jungle, and with their intersections.

I. Burial at cross-roads.—(a) There is evidence that the dead were sometimes buried at cross-roads, and this would be one reason for their being belief which is certainly ghost-haunted places—a belief which is certainly very remote and wide-spread. Among the ancient Hindus there was a practice of creeting a dagoba or stupa (a mound in which the bones and ashes were placed) at crossroads. These were to be erected there in honour of a king of kings or a Tathāgata (Mahāparinibbāna Sutta, v. 26, vi. 33=SBE xi. [1881] 93, 125; cf. Oldenberg's remarks, Rel. des Veda, Berlin, 1894, p. 562). In Slavic lands, cairns and tumuli are often found at cross-roads, and the older litera-ture sometimes refers to a cult of the dead there (Grimm, Kleinere Schriften, Berlin, 1865, ii. 288). Other instances are reported among the Greeks, Germans, etc. (Lippert, Rel. der europ. Cultur-völker, Berlin, 1881, p. 310; Wuttke, Deutsche Volksabergl. der Gegenwart, Berlin, 1900, § 108; Winternitz, Denkschr. der kais. Akad. der Wis-sensch., Vienna, xi. [1892] 68). In Hungary, per-sons believed to have succumbed to the malice of a witch or demon were sometimes buried at crossroads, to deliver them from this influence, as witches had no power there—an unusual belief (FLJ ii. [1884] 101). This is an instance of the riddance of evil at cross-roads (see § 5). It is not impossible that one reason for honourable burial at cross-roads was the desire for re-incarnation. Among the Mongols, among many N. American tribes, and in W. Africa, children are often buried by the side of a path or road, in order that the ghost may have an opportunity of entering some woman passing that way, and so being re-born of her (Letourneau, Sociology, 1893, p. 239; Owen, Folk-lore of the Musquakie Ind., 1902, pp. 22-23, 86; Dorman, Prim. Superstitions, Philadelphia, 1881, p. 35; Kingsley, Travels in W. Africa, 1897, p. 478). As more women are likely to pass a cross-way than on any single path, the chances of re-incarnation would be greater there.

(b) But in the case of persons whose ghosts are regarded as dangerous, another reason for burial at cross-roads must be sought. Among such persons are those who have committed suicide, and occasionally murder. Custom and law in England prescribed that the suicide should be buried at a cross-road, with a stake driven through his body. A stone was also placed over the face (Stephen, Hist. of Crim. Law, 1883, iii. 105; FL viii. [1897] 199. The custom was abolished in 1823). Criminals also were executed at cross-roads, e.g. Tyburn, the meeting-place of the London, Oxford, and Edgeware roads. Stake and stone were intended to prevent the restless ghost from wandering and troubling the neighbourhood. It has also been suggested that the constant traffic over the grave would help to keep the ghost down, or that the number of roads would confuse it, and so prevent its finding its way home, or that the cross would act as a disperser of the evil energy concentrated in the body or the ghost, or that sacrificial victims (these being frequently criminals) were formerly slain on the altars at cross-roads, which were therefore regarded as fitting places for the execution and burial of criminals, after the introduction of Christianity (FL viii. 264; Westermarck, MI, 1908, ii. 256; EBr<sup>11</sup> vii. 510). To this it

should be added that suicides were generally buried in out-of-the-way places; and the cross-roads, being a place of evil repute, would naturally be selected for the grave. The underlying thought is that of riddance of the contagion of evil, and in no better place could this be effected than at the cross-roads (see § 5). A parallel custom of burying at the cross-roads the bodies of children still born or born feet-foremost (a mode considered unlucky) is found in Uganda, where also the bodies of suicides, with the tree on which they hanged themselves or the hut in which they took their lives, were burned at cross-roads. And it is noticeable that women who pass that way throw a few blades of grass, or sticks, or stones, on the grave to prevent the spirits from entering them and being re-born (Roscoe, 'Manners and Customs of the Baganda,' JAI xxxii. [1902] 30, and Frazer, Totemism and Exogamy, 1910, ii. 507, iii. 152). In Greece, persons who murdered father, mother, brother, or child were slain at a place out-side the walls where three roads met, and their bodies were exposed naked (Plato, Leg. ix. 873).

2. Ghosts, spirits, and demons at cross-roads. Cross-roads are universally believed to be the common resort of evil spirits. As places of burial, cross-roads would naturally be haunted by the ghosts of the dead; but also, as ghosts would be often passing along the roads from other places of burial to their former homes, they would be more numerous at cross-roads. The ghostly train is often seen on roads, but more particularly at their intersections; hence, to see them one would naturally go there, as in the Abruzzi, where, at the festival of the dead, the thronging ghosts can be seen at the cross-ways by any one standing there with his chin resting on a forked stick (Finamore, Credenze, ust, e costumi abruzzesi, Palermo, 1890, pp. 180-2). But, besides ghosts, all kinds of evil powers frequent the cross-ways. This is a wide-spread belief in India, one particular class of demoniac beings— bhuts—being usually found at cross-roads, while other 'waylayers' lurk there also (Oldenberg, 267; Crooke, PR i. 290; FL viii. 330; SBE xxxx. [1892] 49). Among the Muhammadan peoples, crossroads are one of the numerous resorts of the jinn (Lane, Arabian Society, 1883, p. 37). In Russia, vampires are thought to lurk by night at cross-roads, ready to attack the belated traveller (Ralston, Russ. Folk-Tales, 1873, p. 311). In Europe generally, witches were associated with the cross-ways. There they gathered up money scattered by the devil; there, too, they met, and, in some cases, the Sabbat was held at the junction of roads, especially on Walpurgis night, when they might be seen by him who put on his clothes inside out and crept backwards to the place; while the ringing of conservated hells on that right hindered their denoing crated bells on that night hindered their dancing with the devil at cross-roads (Grimm, Teut. Myth. [Eng. tr. 1880-8], 1074, 1115, 1799, 1803, 1824; Stewart, Superstitions of Witchcraft, 1865, p. 128). On the other hand, witches are occasionally regarded as having no power at cross-roads. In Naples it is held that they must go round them on their way to a meeting, as they cannot pass them; and in Hungary cross-roads are believed to neutralize and in Hungary cross-roads are believed to neutralize their evil powers (FL viii. 3; FLJ ii. 101). Here, probably, the form of the cross acts as a prophylactic. Sprites, kobolds, and fairies are also sponadically associated with cross-roads (Grimm, 338, 1115; Goethe, Faust, III. i. 40). In mediaval superstition there was no better place than a cross-road for the purpose of evoking evil spirits, especially the devil, and making a compact with them. The magical treatises then current explicitly set this forth: thus the Clavicula Solomonis says: set this forth; thus the Clavicula Solomonis says: For magical operations a secret, remote, deserted, and uninhabited place is necessary, but best of all are the cross ways.

This notion is found in the 6th cent. story of Theophilus, and in the old tradition it was et a cross-road near Wittenberg that Faust sold himself to the devil. The custom was to go to the cross-way by night, and there make a magic circle in which cabalistic signs were inscribed, and then to call up the devil. Similarly, witches made their compact with Satan at cross-ways. In the case of the Swedish witches in the 17th cent., they first put on a garment over their heads and danced near a cross-road. Then, going to the cross-road, they thrice called on the devil to come and carry them to the meeting glound. When he appeared they promised to serve him body and soul, and he then conveyed them to the Sabbat (Grimm, 1074; Baring-Gould, Curious Myths, 1888, p. 630; Hist. . . . de Jean Fauste, Amsterdam, 1674; Gorres, Die christl. Mystik, Regenshurg, 1842, bk. vi. ch. 16; Wright, Narratices of Sorcery and Magic, 1851, i. 134, ii. 219 t).

For these reasons, wayfarers took precautions at

For these reasons, wayfarers took precautions at the cross-ways. In India, mantras must be said; e.g. at a bildal procession the bridegroom had to say, 'May no waylayers meet us!' They should not be stopped at, and the traveller should pass with his right hand turned to them (SBE) ii. 226, vii. 200, xxv. 135, 150, xxx. 40). Similarly, in Sweden, no bridegroom will stand near a cross-road on his wedding-day—a precaution against 'envy and malice' (Chambers, Book of Days, 1863, i. 45). See

also § 5.

The origin of the belief in the presence of evil agencies at cross-roads may be found in the simple fact that, as people were more numerous at crossroads, so naturally would all evil powers be, such at least as were so often associated with roads or paths. Men always fear demons and spirits which they believe lurk on the edge of the forest path or rude roadway, ready to pounce upon the belated traveller, and in many cases roads are believed to be infested by them (Monier-Williams, Rel. Thought and Life in India, 1883, p. 216; Maspero, Dawn of Civilization, 1894, pp. 632, 636). Hence they would be regarded as lurking at the intersections of roads, especially by night, when wayfarers were uncertain of the direction in which they ought to go (cf. Ovid, Fasti, v. 3). A further reason may be sought in the fact that paths and roads often form boundaries, as is shown by the fact that images and altars of boundary-gods often stood on roadways (MacPherson, Khonds, 1865, p. 67; cf. § 3). Rites of riddance and aversion intended to drive evil powers off the fields or tribal lands would, in common belief, have the tendency to force them on to the boundaries—a kind of neutral ground (for such rites, see Frazer,  $GB^2$ , 1900, iii. ch. 3, §§ 13, 14, 15, passim; Ralston, Songs of the Russian People, 1872, pp. 211, 396). And, as boundary so frequently signified road, or was marked by a pathway (as in Samoa [Brown, Mclanesians and Polynesians, 1910, p. 339]; see other examples in this art.), there would here be another reason for evil spirits haunting roads. Hence the cross-ways, where boundaries or paths met, for the reason given above, would again be more open to their presence and influence. Evil powers associated with cross-roads are, in fact, often stated to be also found on roads and boundaries, or a boundary-stone is found at cross-ways (cf. Grimm, 1051, 1113, 1804, 1821; Crooke, PR i. 290). Hence magical rites which are effective on roads are still more effective at cross-roads, as many instances of their use in both cases show.

3. Divinities at cross-roads,—Divinities are frequently associated with cross-roads. This is sometimes with the intention of repelling those evil powers which otherwise would throng them, though, as examples show, there is a tendency for the protective divinity to take on some of the aspects of those evil powers, as in the case of Hecate. Or again, since evil powers are connected with cross-roads, divinities whose character is evil rather than good are often worshipped or propiti-

ated there.

In India, from early times, the cross-ways were the abode of sinister gods, especially of Rudra, lord of ghosts and of evil powers generally, who

was propitiated at the yearly festival of the dead by a sacrifice of cakes—the offering to Rudra Tryambaka, for the deliverance of descendants from his power, and for the securing of his beneficent action. This was offered at cross-roads, because Rudra roves on the roads, and 'the cross-road is known to be his favourite haunt' (Satapatha-Brāhmana, SBE xii. [1882] 408, 438 f.). The cross-road is also the halting-place of the Agnis (ib. 439, n. 1). Travellers addressed both paths and crossroads with mantras: 'Adoration to Rudra, who dwells on paths; adoration to R., who dwells at cross-roads' (ib. xxix. 366, xxx. 180). In the yearly ritual the connexion of ghosts with the cross-ways is also apparent. Lesser evil divinities also had their cult at cross-ways, but usually for specific purposes—the repelling of disease or demoniac influence, or the contagion of evil. To get rid of disease, one should go by night, naked, to a cross-way, and there make an offering of rice with a mantra, returning in silence without looking back. This must be repeated until the evil spirit (Piśacha) appears and says, 'I will end your ailment' (Kothā-sarit-sāgaru, Tawney's ed., 1895, i. 256). The sacred writings also ordain that a student who has broken a vow of chastity must offer an ass to Nirriti, goddess of destruction, at a cross-way, then put on the skin and proclaim his sin (SDE ii. [1897] 289; cf. xxix. 361). Elsewhere he is directed to light a fire at the cross-ways, and to offer an ass to the Rākṣasas and an oblation of rice to Nirriti (ib. xiv. [1882] 117 ff.).

In Japan, phallic symbols, chimata-no-kami, or 'road-fork gods,' were set up on roads, and worshipped at cross-roads and waysides, as protectors of travellers. They were said to have been pro-duced from the articles thrown down by Izanagi in his flight from Hades, or at his purification (see vol. ii. p. 700°). Their festivals were held at crossroads outside the capital, or at the frontier, at the end of the 6th and 12th months, or in time of pestilence, while offerings took place at other times. Other phallic symbols, sahi-no-kami, or 'preventive deities,' were also worshipped at roads and cross-roads, and hence came to be regarded as guides and friends of wayfarers. Their cult was popular, they were inquired of in divination, or prayed to before a journey; or an offering was made to them by travellers on their journey. Accidents on a journey were the result of neglecting them. But the primitive function of all these deities seems to have been that for which they are still addressed in the liturgies, viz. protection against the unfriendly beings and evil spirits of pestilence from Hades.

beings and evil spirits of pestilence from Hades.

'Whenever from the Root-country, the Bottom-country [= Hades], there may come savage and unfriendly beings, consort not and parley not with them, but, if they go below, keep watch below; if they go above, keep watch below; if they go above, keep watch above, protecting us against pollution with a night guarding and with a day guarding.'

Three of these are mentioned in one norito—Yachimata-hiko, the Eight-road-fork princes, and Kunado, whose name, 'Come-not place,' is suggestive of his functions as a repeller of evil beings. The first two are represented as male and temale figures with sexual organs, the last as a simple phallus. Another phallic god, Saruta-hiko, dwells at the eight cross-ways of Heaven, and is said to have acted as guide to Ninighi on his coning to earth. He is also called Dosojin, or 'Road-nocestor deity,' and is found at cross-waysin the form of a phallic boulder, over which is stretched a rope supported by bamboos. Jizo, the Buddhist children's god, now occupies his place at cross-ways (Aston, Skinto, 1905, pp. 306, 187, 189, 191, 197, 340).

The phallic origin of these gods, in accordance with the well-known property ascribed to the sexual organs as warders off of evil spirits, their protective powers against demoniac and pestilen-

protective powers against demoniac and pestilential influences, and their ultimate position as gods of travellers recall the position of the Greek Hermes and the Hermæ (cf. p. 333b).

Among the Toutonic peoples occurred a yearly

procession of the image of a god or goddess (Frey,

Nerthus, Holda, Berchta, etc.) round each district, for the purpose of promoting fertility (Tac. Germ. 40; Grimm, 213, 251, 268, 275). In later tradition the remembrance of this procession was mingled with the myth of the Furious Host or the witches' jaunt, headed by one of those divinities—a myth which in pagan times told of an aerial course of the god or goddess with their subordinates, corresponding to the course of their images followed by the jubilant crowd on earth. It was connected with the latter, and perhaps in part originated from it, as an ætiological myth (cf. Grimm, 1055-56). These processions, doubtless, went round the boundaries, and the divinity would then be associated with boundaries, and so with roads and cross-In some of the later traditions, cross-roads appear to be unlucky to these wandering hosts, now become demoniac and associated with sorcery, with the devil and witches. Berchta's waggon breaks down at the cross-roads, so also does that of Frau Gauden, and the help of a mortal is necessary to repair it (see the traditional tales in Grimm, 275, 926). Perhaps there is here a distorted reminiscence of a halting of the procession of the image and waggon at cross-roads, either for a sacrifice to the divinity, or for the performance of some rite by which his or her protection would be secured against the evil powers of the cross-roads. Later, when the divinity became a more or less demoniac being, the folk-memory of the halting of the waggon produced the story that the waggon broke down. The divinity no longer repelled evil influences at cross-roads, but was now subject to these influences, cross-roads being unlucky to him or her, as in the case of witches (cf. § 2). On the other hand, it is not impossible that offerings were laid at cross-roads for the divinities to partake of in their aerial wanderings, as in the case of Hecate. As her images stood there, so probably images of some of these Teutonic divinities may have been set up at cross-roads. This is suggested by traces of a cult to gods or ghosts of the dead at cross-roads (the haunt of souls), anathematized by the Church. Prayers, offerings, and the consumption of such offerings, votive offerings (vota; pedum similitudines quas per bivia ponunt), and the ritual lighting of candles and torches at cross-ways (bivia, trivia) are all forbidden, and the prohibitions probably apply to Celtic as well as to Teutonic custom (S. Eligius and Burchard, in Grimm, 1738, 1744; de la Saussaye, Religion of the Teutons, Boston, 1902, p. 290; Grimm, Kleinere Schr. ii. 288). Sitting on a bull's hide at cross-ways in order to consult the future is also forbidden. The hide was probably that of an animal sacrificed there (Grimm, 1744, and cf. his comment, 1115, and the common ritual use of the skins of sacrificial victims elsewhere). Divini-ties were also sometimes seen at cross-roads by their worshippers (Grimm, 1202). The cult of divinities, Teutonic and Celtic, at cross-roads is further borne witness to in the occasional references in witch-trials to ghastly offerings made to demoniac powers (their successors) at cross-roads, as in the trial of Alice Kyteler and her accomplices at Ossory in the 14th cent., in which there is reference to a sacrifice of living animals torn limb from limb and scattered at cross-roads, or of nine red cocks and nine peacocks' eyes (Wright, i. 28, 30).

Among the Greeks, Hecate, a goddess whose cult was probably introduced from the north, and who had several varying aspects, was associated with cross-roads as Hecate τριοδῦτις. Her primitive connexion with these and also with roads and doorways was probably that of an averter of ill. Her images or symbolic figures stood before doors and at crossways, to keep out ghosts and to counteract the

of the ghosts of the dead. These images were called έκάταια, and frequently represented her in triple form. Through her connexion with roads and cross-roads, she, as Hecate ἐνοδία, was the helper and guide of travellers who sought her aid (schol, ad Theorr. ii. 12). But she was also regarded in a more sinister light. As an infernal goddess, she was ruler of ghosts, phantoms, and demons, causing them to appear on earth to frighten travellers, associated with sorcery, and seen often on moonlight nights with her ghostly train and baying hounds, like the Teutonic Holda. In this character she was more particularly Hecate  $\tau \rho \mu \nu \rho \phi \sigma$ , of a malicious and dangerous nature. Hence she had to be invoked and propitiated, lest she should send harm on men. The triple form of the goddess has been variously explained, but, in all probability, it arose from the fact that her images at cross-ways had faces looking down the converging roads, so as to watch over each. In her we see a goddess who, at first regarded as an averter of ills, is later associated with those very ills which she averts. She can keep them at bay, or she can cause them to appear, and she hersell is imaged in their sinister forms. Offerings were made to Hecate at crossroads, and her images there were consulted for divination. Monthly offerings were made to her at cross-roads by rich people, in order to get rid of evil influences and to render her favourable. These were called Εκάτης δείπνα, or 'suppers of Hecate,' and included cakes set round with candles, fish, eggs, cheese, honey, etc. These dishes of food were often consumed by the poor. They were connected with the rites of riddance performed in her name. Houses were swept and funigated, and the sweepings taken away in a potsherd to a cross-road, and there thrown down, the bearer going away without looking back. It would be natural also to get rid of the food remaining in the house before the purification. Thus the evils, or the ghosts which had infested the house, were sent away, and the ceremony may only accidentally have been connected with the goddess of cross-roads. It resembles other rites of riddance cross-roads. It resembles other rites of riddance at cross-roads, primitive in character, and usually unconnected with a divinity (see § 5). These purifications were called δξυθύμα (see Harpocrat, and Suidas, s.v.; schol. on Æsch. Choeph. v. 96; Plut. Quæst. Rom. iii., Quæst. Conv. 708 F; schol. on Arist. Plut. 504; Lucian, Dial. Mort. i. 1; Athenæus, vii. 125, 127, viii. 57, xiv. 53; Porph. de Abstin. ii. 28). Travellers also deposited offerings at cross-roads. An ætiological myth told how Hegate as a newly born infant, was exposed at a cross-way, but rescued and brought up by shepherds (schol. on Lycophron, 1180). This probably points to an actual custom of exposure at cross-roads (found also in Chaldea), made use of to explain Hecate's connexion with them.

Hermes, as god of roads and boundaries, and of travellers, was also associated with the cross-ways as an averter of ills. On roads and boundaries, but especially at cross-roads, stood a heap of stones with a pillar, later rudely shaped in human form. The passer-by added a stone to the heap, as a rite of riddance and in order to avert the evil influences associated with the place. These became the more shapely Hermæ of later times, used as boundary and mile and direction posts, and placed at cross-roads as well as on streets, roads, and at The phallus was a prominent object upon them (Herod. ii. 51), in accordance with the belief in phallic emblems as averters of ill. As in the case of the Hekataia, these Herme had often several heads, and for the same reason. Offerings were made to them, and were sometimes eaten by hungry wayfarers. Theophrastus in his *Characters* describes the pious man pouring oil on the gloomy influences prevailing at cross-ways. In both acters describes the pious man pouring oil on the cases the chief evil influence to be averted was that sacred stones (Herme) at cross-roads, falling on

his knees and saying a prayer before passing on his way. Cf. ARYAN RELIGION, vol. ii. p. 36 f.

Christianity replaced the divine images at crossways by crucifixes or images and shrines of the Madonna. At the latter, especially, flowers and candles are offered and prayers said, exactly as in the case of the Hermæ and Hekataia (Trede, Das Heidenthum in der röm. Kirche, Gotha, 1891, iv. 205, 208).

An example of a cult of a divinity at crossroads from a lower level of civilization is found among the Yaos of the Shire Highlands who, when on a journey, offer a little flour to the god Mulungu at a place where two ways meet, exactly as in the case of Greek and Roman travellers, to Hecate, Hermes, or the Lares (see

vol. ii. p. 358<sup>a</sup>).

4. Omens at cross-roads.—The connexion of supernatural beings, divine or demoniac, with crossroads caused these to be regarded as places where omens might be sought. In East Central Africa a traveller who comes to a cross-way lays two a travelier who comes to a cross-way lays two roots, carried for the purpose of divination, against the blade of a knife laid horizontally. He points to one road saying, 'Shall I take this one?' If the roots remain still, he takes it. If they fall, he takes the other (Macdonald, Africana, 1882, i. 215). This resembles the rite used by the king of Babylon, probably to discover whether he should proceed on the way to leave the restart it. the way to Jerusalem to attack it. He 'stood at the parting of the way, at the head of the two ways, to use divination: he shook the arrows to and fro, he consulted the teraphin, he looked in the liver (Ezk 2121). In Germany it was a custom to listen at a cross-way on Christmas or New-Year at midnight. In this way the seeker heard or saw what would befall him during the year. Or, if he heard would betain him during the year. Or, it he heard horses neigh or swords rattle, there would be war (Grimm, 1113, 1812, 1819). The listening was intended to catch what the spirits were saying as to coming events. In Japan a method of crossroad divination (tsuji-ura), used by women and lovers, is to place a stick representing the god Kunado at a cross-way at dusk, and to interpret Runado at a cross-way at dusk, and to interpret the words spoken by passers-by as an answer to the question put by the inquirer. Another method is to sound a comb three times at a cross-road by drawing the finger along it, then, worshipping the sahi-no-kami, to say thrice, 'O thou god of the cross-roads-divination, grant me a true response.' The answer is found in the words spoken by the next or the third passer-by (Aston, 340). With this or the third passer-by (Aston, 340). With this may be compared a Persian custom of sitting at cross-ways by night and applying to oneself as an omen of good or evil all that is said by passers omen of good or evil all that is said by possible (J. Atkinson, Women of Persia, 1832, p. 11). In Germany a girl went to a cross-road to discover whether she would be married during the year, or she shook out a table-cloth there. Then a man whether she would be married during the year, or she shook out a table-cloth there. Then a man appeared and saluted her. The future husband would be of the same height and appearance (Grimm, 1115, 1797). An old Hindu custom for a man to discover whether a girl will make a good wife is to let her choose one of several clods taken from lucky and unlucky places, one of the latter being a cross-road (Oldenberg, 510). In India the balance for ordeals was erected at a temple or in a

balance for ordeals was effected at a temple or in a cross-road—a favourite abode of Dharmarāja, the god of justice, when he appears on earth (SBE xxxiii. [1889] 104).

5. Magical rites at cross-roads.—The sinister character of cross-roads made them particularly efficacious as places to perform charms and magical rites, especially of aversion or riddance of demoniac influence (of x 221) better in these of ellipse the second control of the control of th influences (cf. p. 331b, bottom: 'best of all are the cross-ways'). Evil powers, or perhaps the divini-

ties whose images stood there, lent their influence to the success of the rite. A few examples of general magical rites may be cited first. Sitting out or magical rites may be eited list. Sitting out or working spells at cross-ways was used among the Teutons as an evil kind of magic, for raising tempests, etc. The details are not known (Vigfusson-Powell, Corpus Poet. Boreale, Oxford, 1883, i. 413). In the Hindu Grhya Sütra, visiting a cross-road at twilight, lighting a fire there, offering rise and veneting observes together with other rice and repeating charms, together with other ritual observances, is recommended to those who desire gold, or companions, or a long life, or who wish to be rulers, etc. (SBE xxix. 481, xxx. 119, wish to be rulers, etc. (SBE xxix. 431, xxx. 119, 124, 125). A charm for recovering lost property is addressed to Pūshan, the sun, who watches over the ways, and the rite includes placing 21 pebbles at a cross-way. They are symbolic of the lost property, and counteractits lost condition (Atharva-Veda [SBE xlii. 159, 542]). In Kumaon, to cause rain to cease, a harrow is fixed perpendicularly at a cross-way. The god of rain, seeing it in this unusual condition at such a place, learns that injustice is being done, and makes the rain cease. justice is being done, and makes the rain cease. Or sugar, rice, and other objects used in ritual are placed at a cross-way and defiled, till the rain is a shamed to fall on them (PR i. 76-77). At Naples, to detach a husband from his mistress, a wife goes barefoot and with unbound hair to a cross-way. There she takes a pebble, places it under her left armpit, and repeats an incantation. This is done at a second cross-way, with the pebble under the right arm, and at a third, having it between the chin and breast. Returning home, she throws it into a cesspool (Andrews, FL viii. 7). This is an example of the belief that all things at cross-ways are charged with the meria or evil energy concerns. example of the belief that all things at cross-ways are charged with the magic or evil energy concentrated there, or are unlucky. Plants growing on boundaries or on cross-ways are believed to possess magical power (see Reiss, 'Aberglaube,' in Pauly-Wissowa, i. 47). In Bombay a charm against the evil eye is to carry seven pebbles picked up at the meeting of three ways (Campbell, Spirit Basis of Belief and Custom, Bombay, 1885, 200)

In the case of rites of riddance and aversion the underlying idea is that the evil powers lurking at the cross-ways are compelled to take over the evil (disease, ill-luck, etc.) which is of demoniac origin, or is impure and a source of danger. In some of or is impure and a source of danger. In some of these cases the powers of the cross-way are propitiated by an offering. Or the rite takes place there, because the place is one where the contagion of evil is more likely to be got rid of or transferred to another, while Oldenberg suggests (p. 287) that the cross-way was used because, after the rite, the performer would go one way, the evil or unlucky influence the other. A simple example of riddance of fatigue is found among the Guatemplan Indians of fatigue is found among the Guatemalan Indians, who, on passing the usual pile of stones at a cross-way, gather grass, rub their legs with it, spit on it, and then lay it with a stone on the pile, thus recovering their strength (Frazer, GB<sup>2</sup> iii. 4). Rites for riddance of disease at cross-ways are wide-spread. To rid themselves of any disease of demoniac origin, hill-natives of N. India plant a stake in the ground at a cross-way and bury some rice below it. The rice (prob. the vehicle of transference) is disinterred and eaten by crows (PR i. 290). In Bihār, during sickness, certain articles are placed in a saucer and set at a cross-road (Grierson, Bihār Peasant Life, Calcutta, 1885, p. 407). Similarly, in ancient India, such rites were commonly performed at cross-ways, as specific instances in the sacred books show. A patient possessed by demons was to be anointed with the

the cross-ways (FLJ ii. 101). It would thus be used as an act of imitative magic, producing the effect obtained by the crossway itself.

<sup>&</sup>lt;sup>1</sup> Kozma is of the opinion that the use of the sign of the cross in charms has no reference to Christianity, but to the form of

remains of a sacrifice of ghī and fragrant substances (probably because the latter are obnoxious to demons 1) and placed on a cross-road. A wicker basket with a coal-pan was set on his head, and some of the sacrifice was sprinkled on the coals (Ath.-Veda [SBE xlii. 32, 519]). In another charm for riddance from hereditary disease, the patient is set on a cross-road, and there washed and sprinkled. The charm includes the words, 'May the four quarters of heaven be auspicious to thee!' (ib. 292). In other cases not only riddance but the transference of disease to another person is effected. Thus an ancient Hindu charm to avert evil runs: 'If, O evil, thou dost not abandon us, then do we abandon thee at the fork of the road. May evil follow after another (man)!' The commentary explains this as a charm to remove all diseases, and the rite includes the throwing of three rice-puddings at the cross-road (ib. 163, 473). In modern India, to get rid of smallpox, some of the scales from the patient's body are placed in a pile of earth decked with flowers at a cross-way. The disease may then be transferred to some passer, the original patient recovering (PR i. 165). Or, at an outbreak of smallpox, a pot of wine, bangles, money, cakes, incense, and a cloth with the image of the goddess of smallpox, are offered to her, and then left outside the village at a cross-road. Any one touching these or meeting the priest who carries them out will take the disease and die at once. The goddess Here offering and vehicle of aversion are combined, and the articles are called nikasi, 'averters.' Probably the poor, in eating Endarys Scarrows,—at once an offering and a vehicle of aversion,—ran the risk of transference of evil to themselves rather than starve. In Bohemia, to get rid of fever, an empty starve. In Bonemia, to get rin of lever, an empty pot was carried by the patient to a cross-road, and thrown down. He then fled. The first passer who kicked it would get the fever, and the patient would be cured  $(GB^2)$  iii. 22). In Suffolk a cure for ague is to go by night to a cross-way, turn round thrice as the clock strikes twelve, drive a tenpenny shall up to the head in the ground, and then regime heatwards before the clock is devo then retire backwards before the clock is done striking. The next person passing over the nail will get the ague (County Folk-lore of Suffolk, 1895, p. 14). For other European instances, see Wuttke, op. cit. passim.

Lustral rites of riddance at cross-ways are also common. In India one who had committed a crime had, after other rites, to go to a cross-way and repeat the formula, Simhe me manyuh. Then he was free from all crime (SBE xiv. 330). In E. Africa, when a child is able to speak, it is taken to a cross-way, washed and rubbed with oil, and given to the father, who may then, but not till then, cohabit with his wife, else the child will die (FLR [1882] v. 168). Riddance of the contagion of death is also effected at cross-roads, by carrying there the thing or things which have suffered impurity. In India, at a death, the fire became impure, and with the receptacle was carried out and placed on a cross-way with the words, 'I send far away the flesh-devouring Agni.' The bearer then walked round it three times, keeping his left side towards it, beating his left thigh with his left hand, and returning home without looking back (SBE xxix. 247). In the orthodox death-rites of modern Brahmans, lamps are set at cross-ways (Colebrooke, Life and Essays, 1873, iii. 180). All over E. Africa, at a death, the water used in washing the body, the shes of the dead man's food, are buried at a cross-way (malekano), or deposited there with broken pots, egg-shells, etc. (Maedonald, Africana)

<sup>1</sup> Cf. D. W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, p. 301 f.

i. 109; FLR v. 168). Other rites of riddance or aversion also occur at cross-ways. In Nijegorod, the Siberian plague is kept off by stakes driven into the ground at a cross-way (Ralston, Songs, 395). In Bali, at the periodical expulsion of devils, offerings of food are placed at a cross-road for the demons, who are summoned to partake of them and then go out of the houses to this feast (GP3 iii. 80). In Bohemia, in order to get rid of witches, youths meet on Walpurgis night at a cross-way and crack whips in unison. The witches are thus driven off (ib. iii. 92). With the monthly purifications in Greece (§ 3) may be compared a custom in Gujarāt of sweeping houses and laying the refuse at a cross-road as a rite of riddance of evil (Campbell, 329). For other rites at birth among the Chams, see vol. iii. 347a, 350a.

The custom of burying suicides at a cross-way has thus in all probability some connexion with rites of riddance at cross-roads. The danger brought about to the community was in this way got rid of. Images of diseased limbs hung at cross-ways were perhaps less votive offerings than magical means of ridding the limb of the disease by transferring it to the spirits of the cross-way or to a passer-by.

the spirits of the cross-way or to a passer-by.

6. Cross-roads and the four quarters.—Not improbably the sacredness of cross-roads may be connected in some cases with that of the four winds, coming from the four quarters of the heavens or the four corners of the earth, which were worshipped as gods and creators, and gave a sanctity to the cross (g.v.) among pre-Christian races, especially in North America (see art. AIR). Hence ceremonies for scaring evil spirits were efficacious at cross-ways, because they looked approximately to the four sacred quarters. Thus, in the Gujarāt marriage-ritual of the Bharvāds, balls of flour are flung to the four quarters as a charm to frighten off evil spirits (BG ix. [1901] 1. 280). In Peru a yearly rite of riddance in connexion with the four quarters took place at the square of each town, out of which ran four roads leading to the four cardinal points. Four Incas of the blood royal, with lance and girded mantle, stood in the great square, till another ran down from the temple of the Sun, carrying a message that the Sun bade them as his messengers drive all evils from the city. They separated and ran down the four roads to the four quarters of the world. Relays of runners received the lances from them, and finally set them up at a boundary, which the evils might not pass (Garc. de la Vega, Royal Comment., 1869-71, ii. 223; Rites and Laws of the Yucas, Hakluyt Soc., 1873, p. 20ff.; cf. vol. iii. p. 308b). The Yorubas have a cult of the four winds, and a figure with four heads called Olori merin is usually found on a mound near the centre of the town, so that each head faces one of the four points. Thus he protects the town, and no pestilence brought by the four winds or hostile force arriving by the four roads can attack it. Formerly these roads passed out of the city by the four chief gates on each side (Dennett, Nigerian Studies, 1910, pp. 70, 85). This connexion of cross-ways with the four quarters does not universally hold good, more especially in the case of the meeting of

LATERATURE.—This is mentioned throughout the article. There is no special work on the subject.

J. A. MACCULLOCH.

CROSS-ROADS (Roman).—It was a custom of the Roman peasant, in order to ensure the prosperity of his crops, to make a procession round the marches of his land, praying the while to Mars for protection against visible and invisible disease, ravage, and storm (Cato, de Agricult. 141). In ancient times these various evils were regarded as

demons who gloated over suffering, and this explains why Fever (Febris) was worshipped in Rome as a goddess (G. Wissowa, Rel. u. Kult. der Römer, Munich, 1902, p. 197). But, if such noxious spirits were prevented by the invocation of Mars from intruding upon the tilled land, they would tend to haunt the boundaries; and, as the latter were often formed by roads, it came to be believed that the roads were traversed by demons as well as by human beings. Now, the place where several roads converged—whether by the bifurcation of one thoroughfare (ambivium, bivium), or by the intersection of two (quadrivium or trivium, according as the way by which the traveller approaches is counted or not; see H. Usener, 'Dreiheit,' in Rhein. Mus. lviii. [1903] 339)—was naturally a focus of human intercourse; as every one must pass the trivium, trivialis came to mean 'common,' known to all.' For corresponding reasons, cross-roads were regarded as the special resorts of demons. The Romans believed that things connected with the cross-ways had magical powers, and this supersti-tion doubtless rests upon the idea that demons haunted the spot, and infected the surroundings with their supernatural influence. Thus, for inwith their supernatural influence. Thus, for instance, frogs boiled at the cross-way were a cure for fever (Pliny, HN xxxii. 113); a person who by night sets his foot upon filth at the cross-way is thereby bewitched (Petronius, 134); while the perplexity and anxiety which fall upon the traveller in a strange district as he comes to the cross-road, and heatters as to the way he should take (Out). and hesitates as to the way he should take (Ovid, Fasti, v. 3; Minucius Felix, Octavius, xvi. 3), would be ascribed to the haunting demons, as would also the actual choice of the wrong way (Roscher, vol. i. p. 1890). Again, the cross-way was occasionally the site of the special object revered by the fetishworshipper (Tibullus, r. i. 11 f.: 'habet . . . vetus in trivio florida serta lapis'). The fetish was decorated with wreaths; and by such homage, as also by prayers and votive offerings, it was hoped that the demonic powers would be induced to re-

the dispensers of grace and sure guidance.

Anthropomorphic deities of this character had likewise a place in the Roman religion, but the cult was not indigenous. Some of the deities were simply taken over from foreign religions; others, simply taken over from foreign religions; others, while of native origin, became the tutelary spirits of cross-roads only at a later period. To the former group belongs the goddess Trivia, who, from the time of Ennius (Scen. 121 [Vahlen]), is often mentioned in Latin poetry, and sometimes, though more rarely, in inscriptions (ULL x. 3795 [Capua]: 'Dianae Tifatinae Triviae sacrum'). She was in reality the Hecate Trioditis of Greek mythology, and, like the triviaion was of trivile form (Usener. loc. cit. like the trivium, was of triple form (Usener, loc. cit. pp. 167f., 338 f.). Hecate was a gloomy and malirecourse was had Graco ritu to every possible expedient, such as loud nocturnal invocations (Virgil, Æn. iv. 609: 'nocturnisque Hecate triviis ululata' and offerings of food at the cross-roads. The latter fact explains why the trivium was a resort of dogs (Ovid, Fasti, v. 140) and famished people (Tibullus, I. v. 56, with the comments of Dissen). In the Imperial period we find quite a system of goddesses Imperial period we find quite a system of goddesses of the cross-way, all of non-Roman origin, and for the most part linked together in groups as Bivize, Trivize, or Quadrivize, especially in Upper Germany. They were apparently indigenous to that region, and their cult forced its way thence into Lower Germany and the countries about the Danube (M. Ihm, in Roscher, iv. 1 ff.). In some districts we find also male deitics of the cross-way (CIL xii. 5621 [Gaul]: '(de)is dea(bus) Bivis Trivis Quadrivis'; vii. 163 [Britain]: 'Deo Trivii Bellicus donavit aram'). donavit aram').

Our knowledge of these deities is derived from votive offerings, principally small altars with in-scriptions, which throw no light, however, upon the character of the associated cult. In many cases the dedication was made in fulfilment of a vow, and the donors were mostly soldiers. The vow would, no doubt, be made for the purpose of winning the protection of the deity during a journey or throughout a campaign, and so ensuring a safe return therefrom; for by this time such deities were regarded, not merely as local guardians of particular cross-ways, but as divine patrons of all roads.

Similar ideas were current regarding the genuinely Roman deities to whom was latterly assigned the tutelage of the cross-roads. These were known as the 'Lares compitales,' and were worshipped mainly at the place 'ubi viae competunt' (Varro, de Ling. at the place 'ulli viae competunt' (Varro, de Ling. Lat. vi. 25; G. Wissowa, in Pauly-Wissowa, iv. 792 ft.), i.e. the cross-way. But the word compitum must have had a further meaning, for Cicero (de Lege Agr. i. 7) explicitly distinguishes between it and trivium; as is rightly observed by Wissowa (Rol. v. Kult. d. Komer, p. 148 f.), it also signified the point at which the boundaries of the fields converged. The worship offered to the Lares at the compita was an expression of the belief that they were the guardians of the soil (Tibullus, I. i. 19 f.: 'agri custodes'). Originally, therefore, the Lares were invoked as patrons of field-boundaries, while their association with cross-roads was a later development, due to the circumstance that boundary and path frequently coincided. In this acquired character they are known to us from such dedica-tions as are found in CIL xi. 3079 (Falerii): 'Lari-bus compitalibus vialibus semitalibus,' and xiii. 6731 (Mainz): 'Laribus compitalibus sive quadri-vialibus sacrum.' The next stage was that the Lares became the gods of roads in general, as likewise of travellers, who therefore made to them the same kind of dedications as were offered *Deabus* Quadriviis. The dedicated objects were placed in shrines, and, as these shrines of the Lares were set up at the cross-roads, they too bore the name Compita (Persius, iv. 28).

We must not confound such erections at the cross-way with fabrics reared over the cross-way. The rectangular towers which we find surmounting two passages intersecting at right angles suggest the thought that they were originally built over cross-ways. Of such towers, nine in all are known (Baumeister, Denkmäler d. klass. Altertums, iii. [Munich, 1889] 1867). The most famous of them is the Janus Quadrifrons in the Forum Boarium, dating the Janus Quadriffons in the Forum Boarium, aging from the 4th cent. A.D. (H. Jordan, Topographie der Stadt Romim Altertum, I. ii. [Berlin, 1885]471); but its original purpose was that of a monument of honour, and it is impossible to say whether the ancient Roman ideas regarding cross-roads were present to the minds of its builders. In any case, these ideas were by no ways write the thinks. these ideas were by no means extinct at that time, for, even as late as the Middle Ages, it was still frequently necessary for the preacher to castigate the practice of lighting candles and offering sacrithe practice of lighting candles and oliving sacrifices at the cross-roads (see, e.g., C. P. Caspari, Kirchenhist. Anecdota, Christiania, 1883, i. 172, 175, 199)—a practice which is undoubtedly a vestige of heathen, in some cases perhaps of Roman, ritual. Even at the present day, in Italy, the cross-way is the favourite site for the chapels of patron saints (Th. Trede, Das Heidenthum in der römischen Kirche, Gotha, 1891, iv. 205).

Interature.—This has been given throughout the article.
R. WÜNSCH,

CROWN.—As a preliminary to this article it may be advisable to cite Selden's words distinguishing between 'diadem' and 'crown':

'However those names have been from antient times confounded, yet the diadem strictly was a very different thing from

what a crown now is or was; and it was no other than only a fillet of silk, linen, or some such thing. Nor appears it that any other kind of crown was used as a royal ensign, except only in some kingdoms of Asia, but this kind of fillet, until the beginning of Christianity in the Roman Empire' (Titles of Honors, 1672, c. 8, § 2).

The Gr. διάδημα, Lat. diadema, was a fillet of linen or silk, sometimes adorned with precious stones, or occasionally a flexible band of gold. This was the true emblem of royalty, the βασιλείας γνώρισμα (Lucian, Pisc. 35), or insigne regium (Tac. Ann. xv. 29). On the other hand, the Gr. στέφανος, Lat. corona, a wreath or garland of real or artificial corona, a wreath or gartand or real or artificial (usually gold) leaves, was not a distinctive royal emblem, and was applied to the victor's, the bridal, the festal 'crown' (see also Trench, Synonyms of the NT, s.v. στέφανος, διάδημα). The same distinction occurs in other languages, e.g. German Krone, the royal crown, Kranz, a garland. The English word 'crown' comprehends all kinds of coronal head-dresses, royal and other.

1. Coronal head-dresses—A distinctive head-

1. Coronal head-dresses.—A distinctive head-dress of persons of high degree, but especially of

kings and princes, originated from the custom of wearing various kinds of head-dresses, coronal, etc., on festal or other occasions, or by particular classes of people-men as contrasted with women, or, vice versa, rich as contrasted with poor, chiefs, medicine-men, members of a mystery society, and the like-or at festival dances such as are found among savages and European peasants (cf. Abbott, Macedonian Folklore, Camb. 1903, p. 31), or, again, from royal personages wearing a more ornate and valuable form of the customary head-dress. The crown, as a distinctive head-dress, may thus be traced back to very early times. Following upon elaborate methods of dressing the hair, such as are found among Polynesian and African tribes, the next step is to decorate the hair with bones, teeth, shells, feathers, leaves, flowers (see § 2), or other ornaments. Or a band or fillet of fibre, skin, leather, ivory, or metal serves to prevent the hair from falling over the face. This is found among the lowest tribes (Andamanese, Australians, Bushmen Engeling, Andamanese, Australians, Bushmen Engeling, Andamanese, Australians, Bushmen Engeling, Andamanese, Australians, Bushmen Engeling, and Park 1988. men, Fuegians, etc.), but, from being merely useful, it soon becomes also ornamental or has ornaments of various kinds affixed to it-tufts of feathers, fur, or wood shavings, teeth, shells, etc.; or it may be worn only on special occasions, like the coils of wire bound round the forehead and nape of the neck by Mukamba youths at dances (JAI xxxiv. [1904] 139). The fillet, thus widely worn, would have a distinctive character, or would be more decorative or formed of more precious material, when worn by persons of higher rank; and it is a direct forerunner of the royal fillet or diadem worn by kings as an emblem of sovereignty, either with or without some other distinctive headdress. The gold lunulæ with the characteristic chevron decoration of the Bronze Age, found in the Celtic area, may be classed with ornaments of this kind, and were perhaps worn by chiefs (Déchelette, Man. Carch. pre-hist. celt., Paris, 1910, p. 353; Romilly Allen, Celtic Art, Lond. 1904, p. 39 f.). More elaborate crowns are derived from the simple fillet or diadem by the addition of decorations around its circumference, as, e.g., by fixing upright feathers in it (Fuegians, American Indians). Other elaborate head-dresses, combining the fillet and crown, or evolved from the former, are often worn by special classes or at special

Thus a Tibetan female head-dress (chief's wife) consists of a crown of large amber disks, in each of which is a coral head, with similar ornaments on satin bands, holding the hair platis together (Rockhill, Land of the Lanas, 1891, p. 184). Among the Kabyles rich women wear a coronal head-dress of highly ornamental open metal work, with numerous pendent ornaments open metal work, with numerous pendent ornaments and chains; and a female head-dress in Java consists of a richly adorned head-band with star-like ornaments stuck round the upper edge (Hutchinson, Living Races of Mankind, VOL. IV.—22

n.d. i. 78, ii. 393-4, 390). A circle of jewelled gold, the upper edge heightened to four or more points, surrounding a jewelled cap, was formerly worn by Arab ladies of high rank (Lane, Arab. Society, 1883, p. 218). A Samoan head-dress worn by chiefs, and by girls at certain dances, consists of a triple band of teeth or shells on the forehead surmounted by an imposing head-dress (b. i. 12; Brown, Melanesians and Polynesians, 1910, p. 58). Among the natives of Torres Straits are found head-dresses of feathers, of fish teeth, or dog's teeth coronets, or the dri, a fanshaped arrangement of white feathers of the egret (JAI xix. [1890] 369). Among the tribes of Brazil the men at feasts wear a coronet of bright red and yellow toucan's feathers, disposed in regular rows and attached to a circlet of plaited straw. These feathers, being specially prepared, are very rare, and the coronets are never parted with (Wallace, Amazon, 1895, pp. 194, 202). Chiefs in Haiti wore a gold circlet similarly decorated (Stoll, Geschlechtsdebet in der Volkerysych, Leipzig, 1908, p. 457; and, for a similar head-dress worn by chiefs among the Lacandones, NR i. 702).

(Stoll, Geschiechtsleben in der Volkerpsych., Leipzig, 1908, p. 457; and, for a similar head-dress worn by chiefs among the Lacandones, NR1. 702).

As an emblem of royalty such a crown was worn by the Incas of Peru. It consisted of a turban with a tasselled fringe, in which were set upright two feathers of a very rare bird, the peculiar emblems of the Inca, which no one else might wear. This head-dress was buried with him, and two new feathers had to be procured for each coronation. The heir-apparent wore a similar fillet or fringe of a yellow colour as his insignia (Prescott, Peru, 1890, p. 111; Stoll, 457). Among the Mayas the king's crown was a golden diadem wider in front, surmounted by a plume of feathers which no one else might wear under pain of death (NR ii. 635). Mexican kings were crowned by the kings of Tezouco with a diadem higher in front and running up there to a point, and adorned with beautiful feathers. The diadem was made of thin gold plates or woven of gold thread, and it hung down behind over the neck. Noble Aztec warriors wore head-dresses of feathers set in gold fillets (bi. ii. 148, 275-6, 405, 441). All such crowns have followed the line of development which has produced the European crown from the diadem (§ 8). For savage head-dresses, see Spencer-Gillenb (87; E. Grosse, Anjange der Kunst, Freiburg, 1894, ch. 5; Stoll, 119; Johnston, Uganda Protectorate, 1902, pp. 729, 787, 843, 868, 883; Deniker, Races of Man, 1900, pp. 178, 371, 502, 522; Mary Kingsley, Travels in W. Africa, 1897, p. 224; and for the head-dresses seenlant to the higher classes in Bab., Assyria, and Persia, see Rawlinson, Anc. Monarchées, 1862, i. 133, ii. 199, iv. 191, 333.

The huge or elaborate masks and head-dresses worn at the performance of totemic or tribal ceremonies or in mystery-dances by Australians, Melanesians, Africans, etc., sometimes assuming a form more or less coronal, need only be referred to here as decorations reserved for certain persons, and worn only on specific occasions and at no other time. T

the hair with flowers on festal occasions as a method of betokening joy, arose the use of chaplets or wreaths (στέφανοι, coronæ), though these may be also connected with the simple fillet or hair-band into which flowers are sometimes stuck. Among savages, it is with the Polynesians and occasionally the Melanesians that the general wearing of flowers or regular chaplets is found most extensively. or regular chaplets is found most extensively. Among the former, women at dances wore wreaths interwoven with their hair, and garlands and wreaths on forehead and breast. This custom has been largely given up since the introduction of Christianity (Ellis, *Polynes. Researches*, 1831, i. 134, 216; cf. also Brown, 317; Hutchinson, i. 6, 9, 11, 17, 18, and fore given by the province of the province 11, 17, 18; and, for a similar practice of wearing wreaths of grass and leaves among the Sakais, ib. i. 90). The custom was sporadic in America; thus the Nahuas wore garlands at banquets and dances (NP) ii 984 2000. Among property of artistic than the same property of the sa (NR ii. 284, 290). Among peoples of antiquity the wearing of wreaths on festive occasions was wide-spread. From an early time in Egypt chaplets (meh) of lotus, myrtle, etc., were worn by the guests at banquets (Wilkinson, ii. 38, 330), and the custom was also in use among the Greeks and Romans. Perhaps under the influence of Greek usage it spread to the Hebrews, and is often referred to as a common practice at times of rejoicing, especially in the Apocryphal books (Wis 2<sup>8</sup> 'Let us crown ourselves with rosebuds'; Ezk 23<sup>28</sup>, Ca 3<sup>21</sup>, Jth 15<sup>28</sup>, Sir 32<sup>2</sup>, 2 Mac 6<sup>7</sup>, 3 Mac 4<sup>8</sup> 7<sup>26</sup>; cf. Acts of Thomas, crowns of myrtle and other flowers at a banquet, in W. Wright, Apoc. Acts, Lond. 1871, ii. 149).

Wreaths and crowns were also worn ritually at factivels of the code and at servitings (see part art.

festivals of the gods and at sacrifices (see next art.; cf. Ac 1418, 2 Mac 67). Tertullian writes that, besides the wreaths offered to the gods or their

VOL. IV .-- 22

images, 'the very doors, victims, altars, servants, and priests are crowned' (de Cor. 10). The sacrificer wore them (cf. the wreaths worn by Persians over their tiaras at sacrifices [Herod. i. 132]), and they were placed on the heads of the victims (Teutons [de la Saussaye, Rel. of the Teutons, Boston, 1902, pp. 368, 377], Hindus [Monier-Williams, Rel. Thought and Life, 1883, p. 247], Mexicans [NR iii. 350]; for other instances, see Tert. de Corr., Pausan. ed. Frazer, v. 7. 7, vii. 20. 1, viii. 48. 2, x. 7. 8, and notes; Granger, Worship of the Romans, 1895, pp. 287, 306). Animals were adorned with them on festal occasions (Celts [Arrian, Oyneg. 34. 1], Persians [the crown royal on the horse's head, Est 68]). Garlands and crowns are also worn at sacred dances (Mexico [NR iii. 392], Melanesia [Haddon, Head-Hunters, 1901, pp. over their tiaras at sacrifices [Herod. i. 132]), and are also worn at sacred dances (Mexico [Mx III. 392], Melanesia [Haddon, Head-Hunters, 1901, pp. 113, 187]; see also above). They were placed on city gates (Jos. BJ IV. iv. 4), on temples (crowns of gold on the Jewish temple, 1 Mac 4<sup>57</sup>), or were worn by conquering armies (Jth 3<sup>7</sup> 15<sup>13</sup>), or given as much coveted prizes at the games. In the last inclose from the metals are sufficient to the second of t instance, from the myths associated with the origin of the custom and from the ritual used in origin of the custom and from the ritual used in the making of the wreaths, their religious aspect is evident. Crowns were also worn by the pilgrims to the temple of the Syrian goddess at Hierapolis (Lucian, de Dea Syria). In the Taurobolium the candidate was crowned with gold and wreathed with fillets before undergoing the baptism of blood (Frazer, Adonis<sup>2</sup>, 1907, p. 229); and in the Mithraic initiations one of the rites was the presenting of a crown on the point of a sword to the candidate, who put it on his head and then transferred it to his shoulder with the words, 'Mithras is my crown' (Tert. de Cor. 15, de Præse. Hær. 40). Wreaths were also worn by those initiated into the mysteries of Isis (Apul. Metam. xi. 24). In the baptismal ceremonies of the Mandæans a crown was used (W. Brandt, Die mandäische Religion, Leipzig, 1889, pp. 108, 113).

Wreaths are also worn at the end of harvest in European folk-custom. They are made of the last ears of corn, sometimes with the addition of flowers and tinsel, and are worn often by the person who has cut them. He or she represents the corndivinity, and is drenched with water as a fertility charm. In this case the wreath is the direct link between the corn and the human representative of the divinity of the corn (Frazer, Adonis<sup>2</sup>, 195f.; Ralston, Songs of the Russ. People, 1872, p. 250). At the Jewish feast of Tabernaeles—a festival of ingathering of fruits—it was customary for the Jews to sit in booths with wreaths on their heads (Jub. 1420). Booths and wreaths suggest a former cult of vegetation. Hence also divinities associated with fertility or with the crops were wreaths of corn: e.g. lsis, who was said to have discovered corn (Tert. de Cor. 7; Aug. de Civ. Dei, viii. 27; cf. also the wreaths of corn worn by the children sacrificed to Artemis [Pausan. vii. 20. 1]). In European May-day customs, besides the hoops covered with garlands and carried in procession, girls wear chaplets, as do also the May or Whitsuntide queen, and the May king or Jack-in-the-Green, besides being dressed in or adorned with leaves. These chaplets are an important part of the symbolic dress of a former anthropomorphic representative of the vectoring spirit (FT or 1000) 210. wilde, Anc. Cures, Charms, etc., 1890, p. 101f.; Wilde, Anc. Cures, Charms, etc., 1890, p. 101f.; Frazer, GB<sup>2</sup> i. 196 ff., 213 ff., Early Hist. of the Kingship, 1905, p. 166 f.).

3. Bridal chaplets and crowns.—These are already found in antiquity worn by the bride or bridegroom, or by both (Tert. de Cor. 13). They marked an occasion of iov. but may in some cases.

marked an occasion of joy, but may in some cases have had a magical purpose, in warding off evils from the head. Being used by pagans, they were

at first rejected by the Church, as it rejected generally all wearing of flowers on the head. But the custom was already found among the Jews, the bridegroom wearing a garland or crown (Is 6116, Ca 311), the bride a 'beautiful crown' (Ezk 1612). The custom was in abeyance from the time of Vespasian, but was resumed later. Among Christians also it became usual, the bridegroom wearing a garland of myrtle, the bride of verbena (Sid. Apoll. Carm. 2, 'ad Anthem.'); and it was regarded as improper for the unchaste to wear them (Chrysos. Hom. 9 in 1 Tim.). The wearing of bridal garlands and crowns is still customary over a great part of Europe—Switzerland, Germany, Rumania, and in the north.

Europe—Switzerland, Germany, Rumania, and in the north.

In the Greek Church ritual of marriage the bridegroom crowns the bride in Nomine, and the bride the bridegroom, while the priest blesses them and says, 'O Lord, crown them with glory and honour.' The service is hence called ἀκολουδία του στοφανάματος. In Macedonia the bridal wreaths are made of real or artificial flowers, or are silver garlands belonging to the church (τὰ στόφανα). They are exchanged in church at the crowning ceremony στοφάνωμα—applied to the whole wedding rite (Abbott, ορ. cit. pp. 168, 173). Ralston (ορ. cit. p. 270) describes a local ceremony in Russia. In church, over the heads of the bridal pair the groomsmen hold crowns, and must press them on the heads, but not hurriedly, else ill·luck and misfortune would follow. The rite is called vyenchanie, 'crowning.' In Servia, when a youth dies, a girl representing a bride comes to the grave carrying two crowns. One is thrown to the corpse, the other she keeps for some time. This is part of the old ritual of the 'death-wedding' (Ralston, 310; see O. Schrader, Totenhochzett, Jena, 1904, and Arvan Remeion, vol. ii. p. 22.1. In Germany and Switzerland the bridal wreath of myrtle is made by the bridesmaids, but occasionally elsewhere more elaborate crowns are worn, formed, ε.g., of a series of diminishing circlets, one above the other, to which are fixed flowers, beads, figures in metal, some of which are probably intended as amulets. They are not worn by girls known to be already enceinte (see Stoll, 455 f., 459; Kossmann-Weiss, Mann und Weib, Stuttgart, 1890, ii. 184, 185). Among the Letts the hride wears a crown of gold paper and silk, on a framework of wire and pasteboard. She receives it from an honourable matron, who keeps it for the use of the brides of the district (ib. ii. 190). The elaborate Norwegian bridal crown is handed down as an heirloom in well-to-do families, but in each village it, as well as a set of bridal ornaments, is kept for the poor bride's temporary use (Chambers, Boo

4. Funeral chaplets and crowns .-- Among the Greeks and Romans the dead were crowned with chaplets, or these were placed as offerings on tombs (Lucian, de Luctu, II; Tert. de Cor. 10; see next art. § 2). In Egypt it was customary to place chaplets of flowers or leaves on the head of the mummy at the funeral ceremony, and these sometimes remained on the head in the coffin. They were called 'the crown of the true voice,' and assured to the deceased, through the power of Thoth, the right intonation, without which the magic formula were useless, or perhaps signified that he would be crowned triumphant and justified in the other world. Special gardens were set Greeks and Romans the dead were crowned with in the other world. Special gardens were set apart for the flowers used in making these wreaths. The statue which represented the mummy was also crowned with flowers, and the funeral ritual concluded with a prayer in which it was said of the deceased, 'Thou wearest the crown among the gods.' Part of the ritual also consisted of brandishing the oirhikau over the statue, and repeating a formula, part of which ran: 'Nut has raised thy head, Horus has taken his diadem and his powers, Set has taken his diadem and his powers, then the diadem has come out of thy head and has brought

the gods to thee.' This referred to the myth of Nut raising the head of Osiris, and the gods Horus and Set placing the crowns of the north and the south upon it. This would be done to the dead, and the magic virtue in these crowns, or in the ureus which adorned them, would bring the gods into his Garlands and wreaths decked the tombs, just as the tomb of Osiris was said to have been crowned with flowers; and wreaths were also worn by guests at feasts in honour of the dead before the by guests at feasts in honour of the dead before the final burial (Maspero, Études de myth. et d'arch. ég., Paris, 1893, i. 218, 306, 316, 318, 358 f.; Pleyte, 'La Couronne de Justification,' Actes du 6me Cong. intern. des Orient., Leyden, 1884, pt. vi. 1-30; Wilkinson, i. 403, iii. 396, 430, 432; Plut. de Isid. 21; see Charms and Amulets [Egyp.], vol. iii. p. 431, on models of diadems of Osiris buried with the dead, who. assimilated to the god. would wear those who, assimilated to the god, would wear those crowns in the other world). Flowers and garlands are also carried to the graves in modern Egypt.

In the Brahmanic funeral ritual the bodies of the dead are decked with wreaths and flowers. Wreaths are also offered in the funeral rites and wreaths are also offered in the luneral lites and given to Brāhmans (Colebrooke, Lifz and Essays, 1873, ii. 173, 175, 178, 193; cf. STE i. [1900] 137, xi. [1900] 93, 122-3). Among the Nahuas, a statue was placed beside the body of a dead king, with a garland of heron's feathers on its head (NR ii. 606). Wreaths and garlands were also used in Polynesia and Melanesia to decorate the dead, or the altars in the houses used as denositories of their bodies in the houses used as depositories of their bodies (Brown, 387; Ellis, i. 404). The early Christians refused to make any use of funeral chaplets (Tert. de Cor. 10; Min. Felix, 12, 37; Clem. Alex. Pad. ii. 8), but it was not long before the prejudice against them was overcome. As a symbol of the martyr's death a crown is found among the emblems on tombs, and chaplets or wreaths became a common adjunct of Christian funerals. In modern Greece dead maidens and children even are crowned with

flowers (Abbott, 193).
5. Crowns and chaplets as offerings.—Crowns and garlands being so intimately associated with cult, they are a common species of sacrificial offering, besides being placed on the heads of victims (see next art.; Pausan. ii. 17. 6, v. 12. 8; Lucian, de Dea Syria). At the feast of Ceres Lucian, de Dao Syria). At the feast of Ceres women presented corn-wreaths as an offering of firstfruits to her (Ovid, Met. x. 431 ff.). In India, wreaths, garlands, and flowers are frequent objects in most sacrifices. The Egyptians offered chaplets and wreaths to the gods and laid them on the altars, and presented golden diadems with the ureus at the shrine of the statue of a king (Wilkinson, iii. 356, 417). Of great interest are the votive crowns of early mediaval times. These were offered by monarchs to shrines or churches. were offered by monarchs to shrines or churches, and dedicated by them to God on some particular occasion. There is no doubt that, besides imitation crowns, the actual crowns were often dedicated in this way and occasionally used for coronations. They were suspended by chains over the altar, and from the inner side usually hung a richly-jewelled cross. Other ornaments were suspended from the lower edge, or the dedicatory inscription was some-times formed of separate letters depending from it, e.g. in the crowns of Svintilla and Reccessinthus the pensile letters form the inscriptions, 'Svintilla Rex offert' and 'Reccessinthus Rex offeret.' Besides the cross a lamp often depended from these crowns, and from them the pensile coronæ lucis of churches have originated.

Examples of such votive crowns are numerous. examples or such volve crowns are fittingerous. The fron crown of Lombardy is a band of iron (said to have been hammered out of a nail of the cross) enshrined in a circlet made of six gold plates, richly enamelled and jewelled, and hinged together. This crown is known to have been used at the coronation of Agilulfus in 591, and it was in all probability a votive crown (Fontanini, de Cor. ferrea, 1717; Labarte, Arts indust. au moyen age, Paris, 1872-5, ii. 56f.; Chambers, Book of Days, 1. 678). Eight magnificent votive crowns of Reccesvinthus, king of the Spanish Visigoths, his queen, and family, dating from the 7th cent., were found in 1888 at La Fuente de Guarraz near Toledo (Labarte, i. 499; F. Lasteyrie, Deser. du trésor de Guarrazar, Paris, 1860; Chambers, ii. 659). Another beautiful specimen is that of Svintilla, king of the Visigoths (621-631), now at Madrid. On the whole subject, see the works cited, and Way, Arch. Journ. xvi. 258 ff.; DCA i. 400, 506.

Crowns or wreaths of gold formed a species of tribute presented by subject peoples to kings, an example being found in the tribute of crowns commuted to a money payment, the crown-tax paid by the Jews to Demetrine and Artiochus (1 Mac 10<sup>29</sup> 11<sup>25</sup> 13<sup>27-29</sup>, 2 Mac 14<sup>4</sup>; Josephus, Articleus XII. iii. 3).

6. Priestly crowns. — The practice of special head-dresses hang used to mark off certain classes led to the noof these by medicine-men or priests, and no recently they tech a several priests, and no' requently they took a coronal form, or. as in Greek and Roman ritual, chaplets were worn

by priests.

and the requently they took a coronal form, or, as in Greek and Roman ritual, chaplets were worn by priests.

Among the Buriats the shaman formerly wore a crown consisting of an iron ring with two iron convex arches crossing it at right angles—an elaboration of the simple fillet or band (ERE iii. 16b). In Mexico the chief priest of the great temple wore a crown of green and yellow feathers, his assistants merely having their hair plaited and bound with leathern thongs. The priest of Tlaloc at the festival of the god wore a crown of basket-work closely fitting below and spreading out above, with many plumes rising from the middle of it. The Toci priest, in offering sacrifice to the Mother-goddess, had a square crown, wide above, with banners at the corners and in the middle (NR ii. 307, iii. 341, 356). In Japan part of the distinctive dress of the Shinto priest is a black cap (2bosht) bound round the head with a broad white fillet (Aston, Shinto, 1905, p. 204). Among the Teutons the Gothio priests belonged to the nobility, the pileati, those wearing a cap, as compared with the common people, the capillati, with flowing hair; garlands were also worn (de la Saussaye, 366; Grimm, Teut. Myth., 1880-81, pp. 91, 900). Tibetan priests at their ceremonies wear a species of helmet mitre, fitting over the back and crown of the head, and of a red or yellow colour, according as the wearer belongs to the one or the other great Buddhist sect (Rockhill, op. cit. p. 851). Sculptures in Cappadocia show the ancient priest or priest-king of that region wearing a high round head-dress encircled with fillets and ornamented in front with a rosette or bunch of jewels; the god beside him wears a high pointed head-dress (Frazer, 111). The high-priest of the Syrian goddess at Hierapolis wore a golden tiara, the lesser priests a hat (m\lambda of Frazer, 111). The high-priest of the Syrian goddess at Hierapolis wore a golden tiara, the lesser priests priests wore high conical head-dresses (Stoll, 463), and Assyrian priests a kind of high-t plate is also called 11, 'diadem' or 'mark of separation' (Ex 298, cf. 393-31 'the plate of the holy crown of pure gold'), and is on the mitre. This suggests a fillet rather than a plate, worn round the mitre (cf. Sir 4512 'gold crowns,' and 1 Mac 1028, where Alexander sends to Jonathan 'a crown [orthoror] of gold.' In Is 281 the P's is parallel to rhyp, 'diadem'). If the P's was a fillet of gold, there would then be a close correspondence to what Josephus (BJ v. v. ') says of the golden crown or fillet (orthoror) with the sacred characters, which surrounded the mitre of fine linen, encompassed by a blue ribbon. The descriptions suggest a head-dress like the royal Persian klashatram, a cap swelling out to the top, and surrounded by a fillet or diadem (see § 8).

Josephus gives a different description of the high-priest's mitre in Ant. v. vii. 6, which is not reconcilable with the description in the other passage, and which is far from clear (see HDB and EBi, s.v. 'Mitre').

Occasional references are made in early ecclesiastical writings to a head-dress worn by the clergy during service. The mitre of a bishop, a head-dress cloven above into two erect tongue-shaped parts, 4.74 

Eastern head-dress, especially characteristic of Phrygia, and hence formerly called 'Phrygiam.' It is rarely alluded to before A.D. 1000, but in 1049 Leo IX. placed a mitre on the head of Eberhard, Abp. of Treves (PL exhii. 595). The place of the references become much more than the references become much more From this time the references become much more head of Eberhard, Abp. of Treves (1) head of Eberhard, Abp. of Treves (2) head of Erom this time the references become much more becomen, showing that the use was spreading. The common, showing that the use was spreading. The mitre is usually made of fine or rich material, is mitre is usually made of fine or rich material, is mitre is usually made of fine or rich material, is mitted and often studded with gems. From the back depend two fringed bands hanging over the back depend two from Episcopal bishe. H. Marrioto, established to wear it. Its work below the back depended to the back depended in the back de

Persian origin, signifying a high head-dress) is a swelling pointed and closed head-dress, which has varied much in shape (in the 14th cent. it was dome-shaped and oval). To this was added, at some date unknown, a single crown (symbolizing the temporal sovereignty of the Popes) encircling the lower part, and, probably in the 12th cent., a second crown was set above this. The third crown was added by Urban v. (1362-70). At the top is fixed a small ball and cross of gold, and, as in the case of a mitre, two bands hang down behind

(Hefele, op. cit.).

7. Divine crowns and chaplets.—As various plants were sacred to the gods, chaplets of such plants were often associated with them. Tertullian (de Cor. 7) cites a work on crowns by Claudius Saturninus, which described how every flower, branch, or shoot was dedicated to the head of some divinity. Hence the custom of offering chaplets to the gods, of crowning their images with those or of convergence that the state of the custom of the c with them, or of representing them wearing chaplets. They also wear crowns (Pausan ii. 17. 4, 6, v. 11. 1; Granger, 251, 305; see next art.). In many cases the crowns with which images are represented are replicas of the kingly crown, or, where a king was held to be divine, he often wore the head-dress peculiar to the god with whom he was identified. The god was naturally regarded as a heavenly king who wore the royal insignia; and, contrariwise, the divine king wore the insignia

In Mexico, at the festival of Huitzilopochtil his image was crowned with a paper crown, wide at the top and set with plumes. Many other Mexican images wore crowns, or were adorned with them at festivals, and crowns were also worn by their human representatives (NR ii. 322, 387, iii. 344, 382, 369, 385, etc.). The images of the snake-goddess found in the Ægean area wear a high tiara, over which a snake rears its head (see fig. in vol. 1. p. 1481. On the head of the god sculptured on the rocks at Ibreez is a high pointed cap adorned with a fillet and several pairs of horns, and the goddess of the Hittite sculptures at Bophaz-Keui wears a flat-topped head-dress with ribbed sides; this is also worn by her female worshippers (Frazer, Adonis, 1005). The goddess Cybele wore a turreted crown, and so also did the Syrian goddess, Atargatis (Lucr. ii. 606; Lucian, de Dea Syr. 31). Persan divinities wear a tiars allec that of the kings or that worn by court officials (Rawlinson, iv. 333), and on the monuments of the Mithraic cult the god is frequently represented wearing an Oriental tiara (Toutain, 'La Légende de M.,' Études de la myth, 1909, p. 281 ft.). The crown of gold and precious stones which David captured and placed on his head belonged to an image of the Ammonitics (2 S 1230). Bab. and Assyr. divinities are usually represented wearing the characteristic to an image of the Ammonitics (2 Kawlinson, ii. 244, iv. 384, Maspero, Dawn of Civitization, 1894, p. 659). Bab. divinities are also said to have been crowned with golden crowns Ep. Jer. 9. In the Descent of Istar, at the first gate of Hades the keeper

deprives Istar of 'the mighty crown of her head.' In Egyptithe statues of the gods were often crowned with chaplets and the statues of the gods were often crowned with chaplets and the statues of the gods were often crowned with chaplets and the statues of the gods were often crowned with chaplets and the some symbolic head-dress—the sun, and horns, or plumes, or the crown of the north, or both together, enclosed or sid or the red crown of the north, or both together, enclosed or sid or the red crown of the north, or both together, enclosed or sid or the red crown of the north, or both together, enclosed or sid or the red crown of the switch long plumes, or the feetival of the month Choial, or is frequently represented, e.g. in the small golden images of the fudgment scenes, wearing the white crown flanked by two god. The atef crown is also worn by some gods, which is gudge, Gods of the Egyptians, 1903, passim; Dook of the 13; Budge, Gods of the Egyptians, 1903, passim; Dook of the 13; Budge, Gods of the Egyptians, 1903, passim; Dook of the 13; Budge, Gods of the Egyptians, 1903, passim; Dook of the 13; Budge, Gods of an image.

Its in the rn by their round a respective to the company of the gods (Wilkins, Hindu Mith.) Calcutta, 1900; the common of the gods (Wilkins, Hindu Mith.) Calcutta, 1900; stoll, of Bodhisativas, and (no Tibet) of the divinities of the Buddhism the figures of Buddhism the figu

a diadem, and later with the regal or imperial crown or the Papal tiara; to this is sometimes added the crown of thorns, which, by itself, is figured in many other representations, especially of the Crucifixion. Where the Trinity is represented as one Person with three faces, the head is often adorned with a single crown or tiara (A. N. Didron, Chr. Iconography, Lond. 1886, passim). The Virgin is also represented with a crown, or is depicted in the act of being crowned by the Father or the Son or the Trinity with the crown of a queen or empress, or the Trinty with the crown of a queen or empress, reference being made to the texts Ps 218 85, as in the case of the crowning of the Son by the Father after the Ascension. This was in accordance with the legend of the Virgin's coronation in heaven after her Assumption. Angels and Christian virtues, and even the figure of Death, are often represented with a gayrar (Didron pages). sented with a crown (Didron, passim). Some of the Gnostics crowned their sacred images (the Carpocratians [Iren. adv. Her. i. 25. 6]), and from this or from the similar pagan practice the custom passed into the Christian Church, and images or pictures were crowned with special ceremonies when they were dedicated (Trede, Das Heidenthum in der röm. Kirche, Gotha, 1891, i. 104, 283, ii. 343 ff., iv. 245-48, etc.; for the modern Roman usage, see Cath. Encyc. vii. 670). Images of the Madonna on waysides are also crowned with chaplets (Trede, iv. 208).

8. Royal crowns.—We have seen (§ 1) that the royal crown originated from the wearing of a special head-dress by special classes, or it is a specialized form of the ordinary head-dress. Among the higher savages, some such head-dress is worn by chiefs, like the band of cloth worn round the temples as a kind of crown by some chiefs in E. Africa, or the frontlet or crown with a wig of woman's hair worn by chiefs in Samoa (Macdonald, Africana, i. 16; Brown, 316; cf. also the other instances in § 1). We turn now to the higher nations of antiquity. In Assyria the royal crown consisted of a head-

dress of felt or cloth, shaped as a cone rising in a gracefully curved line, and truncated at the apex. The upper part receded into the lower, so that the top alone was visible and projected above the former. It was ornamented with red and white bands with embroidery or plates of gold. Round the lower edge was a band or diadem rising in front with a large rosette, with the ends hanging down behind the ears to the shoulders. Sometimes such

a fillet, higher in front or uniform in width, is worn alone, and in the earlier sculptures the tiara is lower than in the later. The queen wore a diadem with turrets like the crown of Cybele (Rawlinson, ii. 100, 108; Stoll, 210, 459, 463). In Babylon the kings were the horned cap, the symbol of divinity -a kind of rounded cone with a double pair of horns surrounding the sides and front, or a tower-shaped head-dress with or without these horns, terminating in a coronet of feathers. The lower space was decorated with rosettes, etc. made of richly coloured felt or cloth. The higher dasses, both in Assyria and in Babylonia, wore a distinctive head-dress (Rawlinson, i. 133, iii. 433; Maspero, 719; Stoll, 459). The royal crown of Persia, the khshatram, was a high cap of bright coloured felt or cloth, swelling out slightly towards the flat top, and terminating in a projecting ring. Round the bottom ran a fillet or 'band of blue' spotted with white—the diadem strictly so called. It was adopted by Alexander and his successors. In some cases the kings are represented wearing more or less ornamental diadems or radiated crowns, or a head-dress resembling that of the Medes—a high-crowned hat, with ribbed sides, called tiara or kidaris (= khshatram), the latter word being applied to the royal tiara (Rawlinson, iii. 86, iv. 155). In Egypt, diadems were worn by princely personages, but that peculiarly symbolic of royal authority was the uraus-serpent, of metal or gilded wood, the coiled body forming the diadem, and the head poised above the forehead of the monarch. It was also affixed to other head-dresses worn by the king in common with the gods.

worn by the king in common with the gods.

Of these the most important were the white crown of Upper Egypt, a tall conical head-dress swelling out slightly in front and terminating in a rounded knob; and the red crown of Lower Egypt, cylindrical in form but widening out upwards, and with the back part carried higher than the front. The combination of the two crowns, the white worn within the red, was called pshent. They were put on at the coronation; and on bas-reliefs, female figures symbolic of the two Egypts, each crowned with the respective crown of her district, stand on either side of a king wearing the pshent. In other cases, Nutti or Set and Horus crown the king, and goddesses invest the queen with her insignia—two long feathers and the globe and horns of Hathor. These crowns were also worn in battle and on other occasions, and they, with other forms, were common to gods and kings. Thus the king is described as 'son of the Sun, decked with the solar crowns' (Wilkinson, ii. 227, iii. 361; Maspero, 205; M. Brimmer, Egypt, Camb. U.S.A., 1892, p. 12; A. Moret, Du Caractère rei. de la royauté pharaonique, Paris, 1902, p. 310).

In religious ceremonies the king wore a striped

In religious ceremonies the king wore a striped linen head-dress, descending in front over the breast, and terminating in a queue fastened by a ribbon. Fillets of gold and, occasionally, radiated crowns were worn by the Ptolemys. Among the Hebrews a common word for crown is yn, which signifies 'consecration' or 'mark of separation, and is applied both to the gold plate or fillet of the high priest's mitre (Ex 296 3936), and to the royal diadem or fillet, which may have been of gold or of embroidered silk decorated with jewels (2 S 110, 2 K 1112—the only reference to coronation; cf. Zec 2 K 11.12—the only reference to coronauon; ct. Zec 916 'the stones of a crown'). Another word, προς, is also used, both for the royal crown and for the crown in a symbolic sense (2 S 12.30, Ezk 21.20, Is 28.1, Job 19.9, Pr 4.9 etc.). This word may signify a diadem, since in Ca 311 it is applied to the bridegroom's garland, but in Job 31.30 the προς can be bound to the head. This may refer to a head-dress of a turban form. Possibly the diadem proper of a turban form. Possibly the diadem proper surrounded another head-dress of a turban shape, or like the Persian or Assyrian examples.

The crown of a conquered monarch was sometimes set on the head along with the conqueror's own diadem. In 1 Mac 11<sup>13</sup>, Ptolemy set the crowns of Egypt and Asia on his head when entering Antioch in triumph (cf. Diod. Sic. i. 47; Rev. 19<sup>13</sup>).

The early Christian emperors were fillets or diadems of gold adorned with jewels, or of rich

silk (the latter finally disappearing in the time of Justinian [Labarte, ii. 39]). The diadem is sometimes worn alone, or it surrounds a cupola or jewelled cap, the combination of cap or tiara and diadem resembling that of the Persian kings. In antiquity the fillet or diadem easily passed over into a crown by the addition of a row of ornaments or symbols to the upper edge of the circumference of a metal diadem. This is already seen in the corona symbols to the upper eage of the corona ametal diadem. This is already seen in the corona muralis, navalis, vallaris, etc., or in the radiate crowns of the Persian kings, the Ptolemys, and Nero and later Roman emperors. The form of these radiate crowns is also connected probably with the radiate nimbus with which kings were often represented, and which was the adornment of the sun-god as well as of other divinities in art. Such crowns were thus a symbol of the monarch's divinity (Dieterich, Nekyia, Leipzig, 1893, p. 419; Didron, i. 34 ff.). Crowns, as distinct from diadems, appear in early mediæval Europe. In England the diadem soon gave place to the crown. William the Conqueror and other Norman kings wore diadems ornamented on the upper edge with trefoil uprights, and the crown form soon became more elaborate. The first English example of an arched crown dates from the reign of Henry IV. The coronets of English peers are circlets of gold, variously ornamented according to rank (like the crowns of Continental nobles), and enclosing a crimson velvet cap edged with ermine. The earliest is the ducal coronet, 1362; the latest that of barons, 1660 (see Legge, English Coronation Records, 1901).

9. Sacred and magical aspects of the crown.-We find, sporadically, medical or magical virtues ascribed to wreaths and chaplets (Athen. xv. 16, and cf. the magical efficacy attributed to bridal and to funeral wreaths in Egypt, §§ 3, 4). This would be a natural result where garlands were made of the flowers or leaves of sacred plants or trees. Wherever the king is honoured as divine, the crown, as the peculiar symbol of royalty, will have a magical character, more particularly as it is so frequently worn also by the gods.

The golden wreaths and chaplets of oak leaves worn by early The golden wreaths and chaplets of oak leaves worn by early Greek and Italian kings, as well as by other persons in later times, are supposed to have originally marked the wearer as vice-gerent of a god of whom the oak was the sacred tree, and in which as well as in the wearer of the wreath he was supposed to be incarnate (Cook, FL xvii. [1906] 315; Frazer, Kingship, 198fl.). While this is not impossible, and while, generally speaking, wreaths of leaves or flowers may denote a connexion with divinities, it is probable that the diadem of a monarch did not necessarily denote his divinity, though, as representing the highest sovereignty, it was natural that gods should also be represented with it. The god was represented under the highest forms known to men, and these were generally royal.

The regalia of kings tend always to be regarded as peculiarly sacred. In some quarters possession of them 'carries with it the right to the throne,' and they have wonder-working properties, as among the Malays (Frazer, Kingship, 121, 124; Skeat, Malay Magic, 1900, pp. 23, 59). Generally speaking, the word 'crown' comes to be used figuratively for all that the monarchy implies. In Egypt the unceus diadem, emblem of sovereignty, had a magical power, and could execute the king's secret purposes or inflict vengeance. It is said to 'burn his enemies with its flames'; it threw itself upon those who approached it, and choked them in its coils. The supernatural virtues thus communicated to the crown gave it an irresistile force, and the royal crown was also regarded as having divine power (Erman, Die ägyptische Rel., Berlin, 1905, p. 40; Maspero, 265, Etudes, i. 78-79; cf. also Etudes, ii. 134, for other magical crowns; and for the magical powers of the crowns of the dead, see § 4). Crowns may have been occasionally used as instruments of divination, e.g. in the choice of a king. In a Transylvanian folk-tale the crown is

laid before the assembly on a hillock. It rises, floats in the air, and lights on the head of the destined king (J. Haltrich, Dcutsche Volksmärchen<sup>4</sup>, Vienna, 1885, p. 195). The Yorubas of W. Africa look upon the royal crown as possessing magical powers, and sheep are occasionally sacrificed to it by the king himself (MacGregor, Jour. Afr. Soc., no. 12 [1904], p. 472). Crowns are sometimes mythically said to have descended from heaven upon the king's head (Bousset, *Gnosis*, Göttingen, 1907, p. 147). There may also have been current 1907, p. 147). There may also have been current an idea that the life of a king depended on the safety of his crown. In the Mandæan myths of the conquest of the dark powers Ur and Ruhâ by Mandâ d'Hajjê and by Hibil Ziwâ, Ur is deprived by both heroes of his crown 'of living fire,' in this but the character lies and in this way. which his strength lies, and in this way he loses all his might (W. Brandt, Mandäische Schriften, Göttingen, 1893, pp. 131, 175, 178). These myths are certainly based on some current belief in the magical virtue of the crown.

10. The crown in early Christian thought.-In the NT the victor's crown at the games (στέφανος) is used symbolically of the reward of a faithful Christian course, the incorruptible στέφανος being contrasted with the corruptible (1 Co 923; cf. 2 Ti 25). It is a 'crown of righteousness' (2 Ti 48), the 'immortal crown of glory' (ὁ ἀμαράντινος τῆς δόξης στέφανος, 1 P 5<sup>4</sup>), the 'crown of life' (Ja 1<sup>12</sup>, Rev 2<sup>10</sup>; cf. 311). Hence in visions of heaven the crowns are prominent. The elders in Rev 44 wear crowns (στέφανοι) of gold; in the Ascension of Isaiah the prophet sees crowns laid up in the highest heaven for the saints; in Barlaam and Josaphat, Josaphat for the saints; in Barlaam and Josephat, Josephat sees the people of the heavenly city with crowns in their hands (J. F. Boissonade, Anec. Græca, Paris, 1829-31, iv. 360). Christ has on His head 'many diadems' (διαδήματα πολλά, Rev 1912), one fillet bound above the other, signifying different sovereignties (cf. 131, where the dragon has ten diadems). This conception is already found in later Indiam . This conception is already found in later Judaism; the faithful receive crowns and palms (2 Es 243.45). The wearing of garlands and crowns on earth being obnoxious to the early Christians on account of pagan associations, stress was therefore laid on the worth of the symbolic heavenly garland (στέφανος), and of s. Polycarp, 17; Tert. de Cor. 15, 'Why do you condemn to a little chaplet, or a twined head-band, the brow destined for a diadem?'). Lactantius (de Mort. Pers. 16) describes the martyr's garland of victory as 'an unfading crown laid up in the kingdom of the Lord.' In Hermas (Sim. viii. 2) the angel commands garlands of palms to be brought out for those in whose rods he found branches with fruit (cf. also Euseb. HE v. I [Letter of the Churches of Vienne and Lyons]). Such references to the crown of immorphism of its original to the crown of immorphism of the crown of the cro the crown of immortality or joy or to the martyr's crown are copious in early Christian literature, and the symbol of the crown also appears in Christian archæology. Hands stretched from heaven present crowns to the martyrs, or angels descend and crown them (Didron, i. 95). The crown by itself, or with a palm branch or other symbols, is also symbolic of the eternal reward in heaven offered to the victor.

LITERATURE.—L. F. Day, 'The Orown, its Growth and Development,' Magazine of Art, vol. xi. (1888); W. Jones, Crowns and Coronations, 1888; J. Labarte, Histoire des arts industriels au moyen dgs, Paris, 1872-5; O. Stoll, Das Geschlechtsleben in der Völkerpsychologie, Leipzig, 1908, p. 452 ff., and other works cited throughout the article.

J. A. MACUTLLOCH.

CROWN (Greek and Roman).—The words ort-pares, corona, and their variants are used by Greeks and Romans of circular ornaments that could be placed on the head, carried in the hand, or hung on a support as offering or decoration, either made of, or artificially representing, or by their decoration more or less remotely suggesting, and the remaining of less remotely sugge

flowers, leaves, or fruits of the field. The origin of the custom of wearing such ornaments lay pro-bably in the mere instinct of decoration rather than in any notion of a symbolical significance in the plants used. Such decorations are a natural expression of a joyful state of mind, and, as the primitive worshipper attributes to his deity feelings like his own, they would be considered acceptable to the gods. As expressing joyfulness, they would in time become customary or de riqueur on all festal occasions, whether sacred or profane.

1. The use of crowns for religious purposes is not mentioned in Homer; nevertheless the use of sprays of foliage for dedicatory purposes seems to have prevailed very early in the Ægean; at Cnossus was found a spray of foliage made of thin gold plate and wire in a flat bowl (BSA viii. [1901-02] 25), and the employment of natural sprays probably preceded that of metal imitations by long ages. Now the most convenient and decorative way of carrying such sprays, or of attaching them to cultus-figures, was to twine them into wreaths, which could be worn on the head of the worshipper or placed on the figure of the deity.

As early as the 7th cent. such garlands were essential in practically all sacrifices (Sappho, quoted by Athen. xv. 674e). In Aristophanes (Thesm. 446 ff.) a widow who had supported her five children by making wreaths complains that more than half her business has gone since Euripides persuaded people that there are no gods.

Being part of the furniture of cultus, the wreath imparted sacredness to the wearer for the time being; the slave in Aristophanes considers that, while wearing a wreath, he cannot be beaten by his master (Plut. 20 f.).

2. The essentially joyful associations of the wreath are proved by the fact that mourners did not wear them at funerals. Xenophon, while sacrificing, heard of the death of his son; in sign of mourning he took off the crown that he was wearing. But when he heard that his son had died like a brave man, he resumed his crown and proceeded with the sacrifice (Val. Max. v. 10). At mournful ceremonies, such as the Spartan Hyacinthia (Athen. iv. 139), the crown was not worn; the Sicyonians used flowers only, instead of wreaths, in sacrificing to the Eumenides at Titane (Paus. II. xi. 4). Where we see wreaths, fillets, etc., deposited at a tomb, these are brought as offerings to be sometimed at the deceased, not as tokens of mourning. Such wreaths the Christians regarded as essentially offerings to a deity, and therefore to be condemned (cf. Justin Mart. Apol. i. 24: 'The Christians do not worship the same gods as the heathen, or offer up libations or incense, or bring them crowns or sacrifices'; so, too, Minucius Felix, them crowns or sacrifices; so, too, Minucus Feix, p. 43, ed. Ouzel, 1652, 'nec mortuos coronamus'). Typical of the Greek custom is the beautiful Attic teleythos (JHS xix. [1899] pl. 2), showing a tæniæ tied round the tombstone, oil-flasks and wine-jugs, some with wreaths laid over them, ranged on the steps, and a woman bringing a tray full of wreaths and tæniæ. Sometimes combstones were made with a recentuele switch for tray full of wreaths and tæniæ. Sometimes tombstones were made with a receptacle suited for holding a crown of leaves (Arch. Zeit. 1871, pl. 42). The dead body itself was crowned (καταστέφειν τὸν νεκρόν, Eur. Phæn. 1632), as part of the last honours, in keeping with the washing and anointing of it, and dressing it for its last journey (Lucian, de Luctu, 11). Members of some associations, such as the Iobacchi, were entitled to a crown at their death, provided out of the common funds (E. S. Roberts, Introd. to Gr. Epigr. ii. Cambridge, 1905, pp. 91, 160). Inscriptions of the Phrygian Hierapolis often mention the στεφανωτικόν, a sum left by the deceased, the interest on which a sum left by the deceased, the interest on which was devoted to the annual renewal of wreaths on his tomb (Humann, etc., Altertümer v. Hierapolis, Berlin, 1898, p. 129). At a Roman funeral there

were carried not merely crowns offered by the mourners, but such as the dead might have won by his own deeds. In later times, the idea of the propitiation of the dead gradually dying out, the wreath came to be laid on the tomb merely as a mark of honour; but it would be hard to say where the primitive significance of the usage merged into the modern. By far the greater number of the crowns actually preserved come from tombs; but this is only because the conditions in tombs are more favourable than elsewhere for the preservation of them, as of other antiquities

3. In ritual the use of wreaths was manifold. They might be used, as tania were used, to decorate the image of the god (see Schreiber-Anderson, Atlas of Classical Antiquities, London, 1894, xiv. 3). They could be worn by those who performed the sacrifice. They could be offered up (Daremberg-Saglio, fig. 1984). They could be used to decorate the victims (Lucian, de Sacr. 12); thus was Iphigenia decorated (Eur. Iph. in Aul. 1477). The garlands brought by the priest of Zeus at Lystra to Barnabas and Paul (Ac 1413) were either offerings to them or decorations for the oxen which he proposed to sacrifice. Garlands were used to decorate the shrine, the altar, sacred trees, and all sorts of instruments and vessels employed. The whole scene was thus made at once cheerful and solemn, the objects so adorned being brought into intimate relation with the god. Woollen fillets intimate relation with the god. Woollen fillets served the same purpose, whether made up into circular form, or merely hung on the victim or object, or used to attach it to the figure of the deity.

The lover's practice of hanging garlands on the door of the object of his affections is explained by Atheneus (xv. 6702) as inspired by his desire either to honour the beloved one (just as the doors of temples were garlanded), or to honour Eros (the beloved being regarded as his image, and the house therefore as his temple), or, having been robbed of the ornament of his soul, to give to the robber his body's ornament in addition. In speculations such as these we see the idea that these garlands were, at any rate, a semi-religious kind of offering.

Probably the most important crowns from a ritual point of view were the 'priestly coronets' (cf. above, p. 339b) worn by the officiating persons, whether professional priests or not. When the whether professional priests or not. When the crowns were made of flowers or leaves, these were usually of the kind sacred to the deity served, although in a very great number of cases the plant used seems to have been laurel. This may have been owing to its purifying property, although in many monuments the appearance of laurel may be The wreaths due to defective representation. worn by priests were sometimes, especially in later days, decorated with medallions appropriate to the cult. A priest of Cybele (relief in Capitoline Museum [Baumeister, Denkm., Munich, 1885–88, p. 801]) wears on a laurel wreath three medallions representing the Idean Zeus, Attis, and another deity. Domitian, when presiding at the Capitoline Games, Domitian, when presiding at the Capitoline Games, wore a crown decorated with images of the Capitoline triad—Juppiter, Juno, and Minerva; the flamen dialis and the high priest of the Flavian dynasty, who supported him, had crowns also containing the image of the Emperor himself (Sucton. Domit. 4). Recent discoveries have further illustrated this practice. The crowns worn by high priests of the Imperial cultus were not by high priests of the Imperial cultus were not merely of bronze but of even more precious metal, elaborately decorated with busts of the Emperors. In Epictetus (i. 19) the prospective priest of the Augustan cult says, 'I shall wear a golden crown'; and Tertullian speaks of the golden crowns of the provincial priests (de Idol. 18, with Oehler's note). Busts of such priests, and an actual bronze crown from Ephesus, as well as representations of such crowns on coins of Tarsus, make this clear, and throw light on such a title as lepeds των Σεβαστων καὶ στεφανηφόρος του σύμπαντος αυτών οίκου (Jahres-

hefte d. Oest. Arch. Inst. ii. 245 f.). Another peculiar form of ritual crown is the 'archieration' Another crown shown on certain coins of Syrian Antioch (Brit. Mus. Catal. Coins, 'Galatia,' etc., p. 167).

So essential was the crown in the cult that λαβεῖν

(ἀναδέξασθαι, etc.) τὸν τοῦ θεοῦ στέφανον is equivalent to assuming the priesthood (Dittenberger, Orientis to assuming the priesthood (Dittenberger, Orientis Græci Inscriptiones Selectæ, vol. ii., Leipzig, 1905, no. 767, note 14), and στεφανηφόροι include all professional priests and all magistrates who in virtue of their office take part in public rites (ib. 332, note 24). The right to wear a crown at all public festivals is expressly included in the privileges of the priest of Poseidon Heliconius at Sinope (στέφανος ἐν ἀπᾶσι τοῖς ἀγῶσιν [Michel, Recueil, Brussels, 1896-1900, p. 734]). Such official crowns are to be distinguished from those awarded to priestly officials by their grateful fellow-citizens on their retirement from office or even after their death their retirement from office or even after their death (Dittenberger, op. cit. 470). These are analogous

to the crowns awarded to other officials.

4. The wearing of crowns by deitics is closely connected, as we have seen, with the custom of offering crowns to them at sacrifices. When special plants were associated with certain deities, a wreath of such a plant was a natural attribute and a convenient means of identification, although the latter feature would appeal less to the ancient worshipper than to the modern archæologist. The associations of vegetable crowns are in many cases quite clear. Demeter and Persephone wear barley; the Dodonean Zeus wears oak; Apollo has laurel; Athene, olive (which she wears as a rule round her helmet); Aphrodite, myrtle; Heracles, poplar or styrax; Dionysus and his train wear ivy (seldom, if ever, vine-leaves); Poseidon on coins struck by Antigonus Gonatas or Doson, and on a rare coin of Aradus of 174 B.C. (Brit. Mus. Catal. Coins, 'Phoenicia,' pl. iii. 18), has a curious marine plant (Fucus vesiculosus?); a bust from Puteoli representing alocal water-deity is crowned with grapes and vine-leaves (Roscher, Lex. i. 1686). But these appropriations are not exclusive: Zeus, for instance, is usually laureate; as we have already seen, the laurel seems to have been the plant most commonly used for wreaths. Various deities are represented in Greek art wearing crowns of a more elaborate kind. That of the Hera of Polycleitus at Argos was decorated with figures of the Graces and Seasons, probably in high relief; and on coins (of Argos, Elis, Croton, etc.) and other works of art Hera is usually shown wearing a somewhat elaborate crown with floral designs in relief. On coins of Mallus, Cronus wears a metal diadem; and Cybele is commonly represented as Citygoddess wearing a walled crown (see Cirry). The Cyprian Aphrodite, in statues, terra-cottas, and coins of Cyprus, wears a richly decorated crown, obviously meant to be of metal; on some coins of Salamis and on a stone head from Dali she has a peculiar crown made of semicircular plates (Brit. Mus. Catal. Coins, 'Cyprus,' p. exi). Often she seems to be identified with the City (ib.). At Paphos she wears a combination of the Oriental raphos she wears a communition of the Oriental polos, decorated with palmettes, and the walled crown (ib. pl. xxii. 10). On some Cypriote terracottas we also find a decoration of palmettes or sphinxes (Brit. Mus. Catal., 'Terra-cottas,' A 275). These rich crowns are characteristic of the Oriental element in her cult; nevertheless the ordinary Greek Aphrodite often wears an elaborate metal crown, and sometimes, though descended from the early polos of the queen-goddesses, it is in form curiously like a modern royal crown' (JHS xxv. [1905] 78). A variety of the metal orthoros worn by various goddesses is known as the orthorn; it rises to a point in front, and narrows as it passes to the back of the head, which it does not completely

One of the most widely distributed surround. forms of crown in art is the crown of rays, which, like the nimbus, represents the divine light emanating from the persons of deities or heroes. But such a halo was probably not represented by a concrete crown until comparatively late times.

5. The giving of crowns as prizes probably had a religious origin. The material rewards offered in reingious origin. The material rewards dielect in heroic times seem to have been replaced at a fairly early date—in the 6th cent. at latest—by crowns of leaves, etc. (Paus. X. vii. 3, of the Pythia; Marm. Par. 38=588 B.C.; note that the palm, being unsuitable for a crown, was carried as a branch). The festivals at which crowns were given were under the special patronage of the local deity, and the material for the crown would be gathered from the local sacred enclosure, although in the case of the Pythia the laurel was brought all the way from Tempe (Frazer on Paus. x. vii. 8). It was only in later days that the crown of foliage-olive, laurel, pine, etc.—was replaced by a metal crown, so that in the 2nd and 3rd cents. of our era the decoration carried by the victorious athlete was an elaborate structure more like an urn without a bottom than anything else (Dressel in CIL xv. 2, no. 7045). The crowns thus won were often dedicated in the temple; in the case of a tie, which was for this reason called *ispá*, the crown remained the property of the god (*JHS* xxv. 17 f.). But the rewards might also be carried away by the winners, and the entry of such a winner into his native city was a solemn function, as when Pausimachus brought home to the Carian Antioch the crown of the Delphic Soteria (Dittenberger, Or. Gr. Inscr. 234. 31). At Elæa in Asia Minor, when Attalus III. (138–133 B.C.) was received in state by the citizens, he was met by all the state officials and by the winners in sacred festivals carrying their crowns with them (ib. 332. 34).

6. From the use of crowns as rewards in actual the tie and other contests, such as musical or literary (an ordinary term for being victorious with a tragedy is στεφανοῦσθαι, cf. Bacchylides, frag. 33, Jebb), is probably derived their use as marks of honour generally. They could be given as rewards for good service to the community; and decrees of Greek communities rewarding their officials or private members are among the community of the community. private members are among the commonest of ex-

tant official documents.

tant official documents.

Thus the Athenian council and people in 151 g.c. vote a laurel crown to Protagoras the priest of Asklepios for his services to the shrine (Michel, 689); at Lissa in Asia Minor in the 3rd cent. B.c. a similar crown is voted to Menekrates for his general good services to the community (Dittenberger, 57); at Ptolemais in Egypt the artists of the gild of Dionysus and the Brother Gods grant a crown of ivy, to be given at the Dionysia, to their life-president Dionysius, son of Museus (55. 50). At Delphi services to the shrine and State are rowarded with 'a crown of laurel from the god's grove, according to the traditional Delphic custom' (55. 345; Sylloge², Leipz. 1898, p. 215). An Athenian decree of 100 g.c. records the crowns conferred on the ephebi and their kosmetes by the Council and Assembly, and by the Salaminian demos, and on their kosmetes by the ephebi (Roberts, Ergir, ii. 65). A list of the eighteen crowns (of gold or laurel) conferred on Cassander, son of Menestheus, was inscribed on a marble slab in the temple of Apollo Smintheus in the Troad (Michel, Rec. 1812).

Such honorific crowns were presented not merely

Such honorific crowns were presented not merely to individuals or associations, but to a whole people or their official representatives; thus the Athenian people received crowns from various States, such as Paros, Andros, Cnossus, etc. (IG ii. 700, 701). The mural, rostral, and civic crowns of the Romans were special developments of the crown as reward for services to the State.

7. From employing the crown as a reward, it was but a step to presenting it as tribute, often with a sense of favours to come.

Strato, son of Gerostratus, king of the Phoenician Arvad, went to meet Alexander the Great and crowned him with a golden crown, at the same time laying his father's dominions at the conqueror's feet (Arr. Anab. il. 18. 8). Machares, son of Mithradates, offered a crown to Lucullus worth 1000 gold pieces,

begging for an alliance with Rome (Plut. Lucull. 24). Simon the Hasmonæan sent a golden crown and palm as tribute to Demetrius of Syria (I Mac 13<sup>37</sup>). Plutarch (Æm. Paul. 34) says that at the triumph of Æmilius Paullus were carried 400 golden crowns which the conquered States had sent to him as the prize of his victory.

Thus the crown became the symbol of victory, even more than the palm-branch. It is the most common attribute of Victory in art; and Christianity, in spite of certain protests (cf. Tert. de Cor.), adopted it whole-heartedly as a symbol of spiritual

victory.
8. The crowns received as civic rewards or 8. The crowns received as civic rewards of honours were, like athletic decorations, frequently dedicated at shrines (Rouse, Gr. Vot. Offerings, Camb. 1902, p. 266). At Athens those conferred by a foreign State had to be dedicated in the Parthenon, perhaps to prevent υβρις (Æschin. in Ctes. 46). Crowns of less importance were usually kept by the recipients. When the semi-barbarian princes Spartocus and Pærisades of Bosporus were voted golden growns by the Athenians the degree voted golden crowns by the Athenians, the decree laid down the very form of words which was to be inscribed on the crown when dedicated (Hicks, Gr. Hist. Inscr., Oxf. 1901, p. 140). To judge by the lists in inscriptions, vast quantities of such crowns must have been in the temples. Sometimes the lists record the terms of the dedication; e.g. from the Delian treasure-list (Dittenberger, Syil. 2588. 102) a golden laurel-crown bearing the inscrip-tion 'Publius son of Publius Cornelius consul of the Romans' (i.e. Scipio Africanus, who probably

made the dedication in 194 B.C.).

9. The crown, being part of the apparatus of religious service, was worn not only at sacrifices, but also at other ceremonies, such as musical or literary contests, which were under the patronage of a deity. Such were the sacred contests at which Pliny says it was originally the custom to wear crowns of natural leaves (HN xxi. 4), the use of crowns variegated with flowers being later, and the use of artificial crowns later still. Demosthenes (in Mid. 16) describes golden crowns among the 'sacred vestments' worn by the chorus which he provided at the *Dionysia*. Musicians are often represented wearing crowns (Schreiber-Anderson, *Atlas*, vii. 9, lxxviii. 7; Baumeister, *Denkm.*, fig. 591). The use of crowns at bridals Denim., 1g. 591). The use of crowns at dright was undoubtedly religious, and therefore condemned by Tertullian (de Cor. 13). It is the bridal crown that is carried or worn by Eros and Hymenæus. Religious also must have been the origin of the decoration hung outside the housedoor at Athens after the birth of a child; an oliverance the for a how a weeller filet for a girl. On wreath for a boy, a woollen fillet for a girl. On the other hand, we may well hesitate to see any direct religious significance in the use of crowns at banquets. They were connected especially with banquets. They were connected especially and drinking, and were probably first used to promote cheerfulness. It may be doubted whether the theory that they mitigated headache (an ancient theory mentioned by Aristotle ap. Athen. xv. 674) was more than make believe. Whatever may have been the original significance of the use of crowns on such occasions, it was doubtless included in the general condemnation of the custom of wearing crowns on the head which was uttered by more than one Christian apologist (Minucius Felix, Tertullian). The Christians used flowers both Tertullian). The Christians used flowers both loose and in garlands, but not on their heads, doubtless because the wearing of them was so intimately associated with pagan cultus.

10. The diadem worn by monarchs, though possibly its resemblance to the tania with which the heads of deities were often adorned may have given it a suggestion of Divine significance, was probably not religious in origin. In any case it was adopted by Alexander the Great from the Persian king, so that its original significance must

be sought in the East. The plain round decoration seen, e.g., on the portrait-head in the Louvre called Antiochus the Great (Bevan, House of Seleucus, Lond. 1902, frontisp.), or on heads of Seleucus and Philetærus on early Pergamene coins, is probably not a diadem, but a sacred fillet. The laurel crown is rarely, if ever, represented on the portraits of living Greek kings. It is worn by the dead and divinized Philetærus, sometimes intertwined with a diadem, on coins of Pergamum. It was worn by Julius Cassar and by practically all the Emperors from Augustus onwards, while, until the time of Constantine, they eschewed the royal diadem. It was a symbol, despite its origin, of honour, but not of divinity. Even the crown that is being placed on the head of Augustus by a female figure, herself wearing a walled crown and veil, on the famous Vienna cameo (A. Furtwängler, Ant. Gemmen, 1900, pl. 56) representing the Emperor's apotheosis, is a sign of honour merely, not of divinization. This crown is of oak leaves. When the early Emperors wished to express divinity by a crown, it took the radiate form. The same thing could be expressed by placing a star over the Emperor's head. On coins struck after his death, Divus Augustus is frequently represented wearing a crown of rays. The use by a king of this radiate crown, properly the head-dress of the sun-god, is found on coins representing Ptolemy III. of Found found on coins representing Ptolemy III. of Egypt (247-222 B.C.). In Syria it appears first on coins struck by Antiochus Epiphanes (175-164 B.C.), who expressed his godhead thus, as well as by placing a star over his head. It may be doubted whether this radiation, so far, represents any concrete crown, and not merely an imaginary halo. Nero was the first living Roman Emperor to wear it, so far as the evidence of coins goes. But it was not until the time of Caracalla, who introduced a silver coin called the antoninianus, on which the Emperor's head is radiate, that the radiate crown became common in representations of monarchs. It was apparently not worn by the Emperors after Constantine the Great, obviously because of its religious significance.

CRUSADES .-- I. CAUSES OF THE CRUSADES. The Crusades may be defined as the technical name given to certain special events in the long struggle between the Muslim and the Christian. For the immediate or special causes of any particular Crusade, see below. Of general causes, whether political or religious and ethical, the following may be noted.

r. The decay of the Eastern Empire.—The reader even of liberal culture is often ignorant of the fortunes of the great Empire that continued at Constantinople the name and authority of Rome. He fails, therefore, to recognize the debt which the common civilization and Christianity of Europe owe to it (cf. F. Harrison, *Meaning of History*, 1894, chs. 11 and 12). Charles Martel saved the West at Tours (Oct. 732) from the Saracen involved but his efforts would have been farilless. vaders, but his efforts would have been fruitless

had not Constantinople for centuries presented a secure barrier against all attacks from the side of The first shock of Muslim conquest had Asia. The first shock of Muslim conquest had found her unprepared (first Saracen siege of Constantinople, 674-6; 2nd siege, 716-8; deliverance chiefly through 'Greek fire'); but under the great Emperor Leo the Syrian (718, often mistakenly called the Isaurian) and his son Constantine v. (740), the Eastern Empire recovered her strength (J. B. Bury, Later Roman Empire, London, 1889, vol. ii. bk. 6). As part of his general programme for driving back the Saracens, Leo endeavoured to abolish the 'eikons,' and tried to develop a strong yeomanry by reforming the land laws and emancipating the serfs. As a result, the Basilian dynasty (867-1057) regained much lost territory in both Asia and Europe, through the conquests especially of John Zimisces (963-75; Antioch recovered, 969).

But, with the close of the 11th cent., the powers

of resistance of the Eastern Empire were becoming exhausted. The Iconoclastic controversy and, above all, centuries of pernicious land laws had sapped her vitality. The provinces of Asia Minor consisted of vast domains cultivated by serfs under consisted of vist domains cultivated by seris under absentee landlords at Constantinople, or belonging to ecclesiastical corporations exempt from military burdens. The result was inevitable. One by one the provinces which had hitherto stood out against the Muslim succumbed. The respite which Constantinople had provided had been invaluable. The Greek Empire had saved Europe in her hour of weakness. But now missionaries had subdued the barbarians, and under Charles the Great had welded Europe, in idea at least, into one great Christian commonwealth, under one leader of the faithful at Rome (Xmas Day, 800). Whatever its internal weakness, the idea of the Holy Roman Empire was of tremendous power for dealing with a non-Christian foe. The conflict between Crescent and Cross was bound to be renewed under a new form, should not be laid) must be regarded as a new form of the old struggle. A clear recognition of this fact, and not the belief once fashionable that the Crusades were a sort of 12th cent. outbreak of madness or chivalry, lies at the root of a right

madness or chivalry, lies at the root of a right understanding of history.

2. The rise of the Seljük Turks.—In the 9th and 10th cents, the powers of resistance of Constantinople had been assisted by the disunion of the Muslim. There were rival Khalifates of East and West (Western Khalifate inaugurated by 'Abd al-Raḥmān III, in 929); the struggles of Sunnites and Shi'ites (qq.v.), and of the dynasties and subdynasties of Umayyads, 'Abbāsids, Fāṭimids, Idrīsids, etc. (see, for complete lists, S. Lane-Poole, Mahommedan Dynasties, 1894); and the revolt of the 'Carmațians' (q.v.) at Kūfa under Ḥamdān ibn Ashat or Qarmat, and the pillage of Mecca by these Mahdists in 929. But, with the rapid rise of the Seljük Turks, all this was changed, and these Mahdists in 929. But, with the rapid rise of the Seljūk Turks, all this was changed, and Constantinople was separated from the Muslim merely by the Dardanelles, and threatened by a Turkish fleet constructed by Greek captives. So, in the spring of 1088, Alexius Comnenus in a letter (Recueil, iv. 131 ff.; or, better, Hagenmeyer, Kreuzzugsbriefs, Innsbruck, 1901, p. 12) to Robert of Flanders besought the aid of the Latins. In 1039 the Turkomans defeated Masūd, the Ghaznavid, at Damghan, subdued Persia, and elected as their head Abū-Tālib-Tughril Beg, the grandson of Seljūk b. Yakāk of Samarqand

<sup>1</sup> For the controversies over the genuineness of this letter, see Bury's Gibbon, vi. 251 n., or, more fully, Hagenmeyer, op. ctt. pp. 10-44. The date is from Hagenmeyer, whose defence of its genuineness (against P. E. D. Blant, Alex. Com. Ep. Spuria, deneva, 1879) may be accepted.

(a pervert, possibly, from Christianity to Islām). In 1055, through his deliverance of Baghdad from the Buyids, Tughril was constituted 'sultan' or captain of the bodyguard of the 'Abbāsid Khaliis. Ilis son Alp Arslân (1063-72) conquered and ruined the Nestorian kingdom of Armenia (1004) and Georgia, and after three campaigns defeated and captured the Greek Emperor Romanus Diogenes, at Manzikert near Lake Van (26th Aug. 1071); and, as a result of the consequent weakness and dissensions, the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān won Anatolia and Antioch, the seat of the Seljūk Sulaimān and Antioch, the seat of the Seljūk Sulaimān and Antioch, the seat of the Seljūk Sul

3. The pilgrims and the Holy Places.—The influence of the Holy Places upon the Middle Ages was not due to historic-the historic sense was not yet born—but to religious and psychological sentiment. The Middle Ages were powerless to realize an idea without turning it into the concrete. Of Christ and His saints men must have visible images. By a sort of logical inversion they went one step further. Where the image was, there was the spirit. Thus the image, or material realization, became the vehicle of grace, possessing not only sanctity but life, while the spiritual was constantly assuming form and colour. Hence, to the mediaval assuming form and colour. Hence, to the mediaval mind the Holy Places were far more than religious or historical memorials. They were themselves sacramental—an essential part of the spiritual provision of the age. The early origin of pilgrimages to Jerusalem is seen in the journey of Helena in 326, the foundation by her son Constantine of the Church of the Holy Sepulchre (Socrates, HE i. 17; Euseb. Vit. Const. iii. 30, 34-40), and the record in 333 of the Bordeaux pilgrim (see Him. Ann. Burdinglenes. in CSEI. pilgrim (see *Itin. Anon. Burdigatense*, in *CSEL* xxxix. 1 ff.; Eng. tr., A. Stewart [London, 1887]). On the conquest of Jerusalem by Omar (638), the Christians had been assured of their religion; a quarter was assigned to the patriarch and his people; and the Holy Places were left in their hands. The 'Abbāsid Khalīf Hārūn al-Rashid even presented Charles the Great (23rd Dec. 800) with the keys of the Sepulchre (Eginhard, de Vita with the keys of the Sephichre (Eginnard, as vita Carol. Mag. ch. 16). On Jerusalem lapsing to the Faṭimid Khalifs of Egypt (969–1076), special concessions were granted to the republic of Amalfi for the transport of pilgrims. But the era of tolerance was changed when the famous Ḥākim (al-Ḥākim Abū-ʿAlī al-Manṣūr), the Fāṭimid Khalīf (996–1020), burnt the Church of the Resurrection and destroyed the Holy Sepulchre (27th Sept. 1010; for date, see Röhricht, op. cit. 9 n.). On his assumption of divinity (1017), in his new hatred of the Muslim, al-Hākim once more granted toleration, and the al-rakim once more granted toleration, and the pilgrimages recommenced, greatly stimulated by the new outburst of piety in Europe which marked the 11th cent., and by the re-opening (see Röhricht, in Hist. Taschenbuch, Leipzig, 1875, v. 5), through the conversion of Stephen of Hungary (997-1038), of the old land-route which was followed as early as 333 by the Bordeaux pilgrim. But under the rule of Ortuk the cruelties inflicted upon, and the exactions from, pilgrims, hitherto fixed at two gold pieces a head, became excessive (William of Tyre, Hist. i. ch. 10; Urban II. at Clermont in Guibert, Gesta Dei per Francos, ii. 4 [Recueil, iv. 140]). Either a way of redress must be found, or the pilgrimages must cease.

the pilgrimages must cease.

4. The new Europe.—The wrongs of previous

1 For the battle, see Finlay, Hist. Greece, iii. 32-4; Oman,
Hist. of the Art of War, 217-9.

2 For date, see Robricht, Erst. Kreuz., 233 n., from Mujir-alDin's Hist. de Jérusalem, tr. Suvaire, 1876, p. 69 f.

4 For date, see Robricht, Le.

4 There is a comprehensive study of the German pilgrims in
R. Robricht, Extruge z. Gesch. d. Kreuz. vol. ii.; cf. also
P. E. D. Rient, Expediations et pilerinages des Scandinaves en
Terre Sainte, Paris, 1865-9, and H. Raynaud, Itinéraires à
Jérusalem, Paris, 1877.

ages, including the desecration by al-Ḥākim, had appealed to a distracted Europe in vain. But, by the close of the 11th cent., a new Europe had arisen, instinct with religious chivalry, conscious of its spiritual unity, no longer distracted by heathen Huns and Northmen. By the recital of the wrongs of the pilgrims 'a nerve was touched of exquisite feeling; and the sensation vibrated to the heart of Europe' (Gibbon, vi. 258). Politically Europe was ready. Gregory VII., as part of his immense plans, first conceived (Dec. 1074) the idea numense plans, first conceived (Dec. 1074) the idea of arming Europe against Asia (Epp. ii. 31), and the two expeditions of his Norman ally and protector, Robert Wiscard—who had already conquered Sicily from the Saracens—into Greece (1081-2, 1084) might have established as a preliminary step the Normans at Constantinople, and the Papal supremacy over the Eastern Church, but for the death of Robert at Bundicia in Epirus (17th July 1085), leaving his Eastern dreams to his son Bohemond. The diversion of these into the Crusade was easy and natural, while in the Fourth Crusade we see the reversion to Robert's original plan. Nor must we forget that, in addition to the religious motives—to the strength of which the utmost importance should be attached—the East was to the 11th and 12th cents, what the New World was to the Elizabethan sailors. Motives of commerce, wealth, adventure, and religion were united (cf. the six camel-loads of Tancred's spoils

commerce, wealth, adventure, and religion were united (cf. the six camel-loads of Tancred's spoils [Alb. Aq. vi. 23; Recueil, iv. 479], or the letter of Hugh de Reitaste [i.e. Rethel] boasting of the 1500 marks rental he had won [in Guibert, Gesta Dei per Francos, vii. 38; Recueil, iv. 254]).

The drift of the times is clearly seen in the popularity of the romance Vita Caroli Magni et Rolandi (ed. Ciampi, Florence, 1822), assigned to John Tilpinus or Turpinus, Archbishop of Rheims, 773. In this romance, which was accepted everywhere as history, Charles achieves the conquest of the Holy Land Gaston Paris, s.v. 'De Pseudo-Turpino' (in Hist. Poet. de Charl., Paris, 1865; or enlarged, 1905), shows that the first part was composed in the 11th cent. by a Spaniard; the second part c. 1110 by a monk of Vienne. There is an Eng. metrical tr. by T. Rodd, 2 vols., 1812.

5. The system of Penance.—A powerful motive both to the pilgrimages to the Holy Places and to the consequent Crusades may be traced in the current Penitential system of Europe. In the 11th and 12th cents. this system was in full operation. We see the effect when Urban II. at Clermont proclaimed a plensry indulgence to all who enlisted for the Crusade (Mansi, xx. 827; cf. Girald. Camb. de Princip. Instruct. 238 [ed. G. F. Warner, in Rolls Series, 1891]; see also Röhricht, Erst. Kreuz. 21, n. 5). To this should be added the temporal advantages. The cruce signati were freed from arrest for debt, and from usury; they were guaranteed justice; the Pope was the guardian of their wives, families, etc. In consequence the crusaders were a mixed company, debtors and criminals abounding.

II. HISTORY OF THE SEVEN CRUSADES.2—1.

criminals abounding.

II. HISTORY OF THE SEVEN CRUSADES.<sup>2</sup>—I.

First Crusade.—To the general causes already detailed no special cause need be added save—though very doubtfully—the preaching of Peter

the Hermit.

the Hermit.

Peter (b. 1053) of Amiens (Guibert, Gesta Det per Francos, ii. 8), stirred by the wrongs he witnessed in 1090 and 1094 at Jerusalem (Alb. Aq. Hist. i. 2-4), on his return to Europe is said, according to the well-known story, to have addressed the Council of Bari and aroused Urban II. to a sense of the need of a Crusade. The last part of this story, to the doubtful character of which von Sybel first drew attention, appears in Albert of Aachen (Hist. i. 5; cf. Anna Comnena, Alex. x. 284), and is otherwise unknown (cf. Bernard's contemptuous reference, Ep. 363. 8). Thence it was copied into the Chanson d'Antioche of the pilgrim Richard (a romance without historical value, written c. 1145; first ed. by A. P. Paris, 2 vois., 1848, tr.

<sup>&</sup>lt;sup>1</sup> Cf. the letter of Sylvester II., May 984 (Epistolæ Gerberti [ed. J. Havet, Paris, 1889], p. 22), which is, however, of very doubtful value and authenticity.

<sup>2</sup> Divisions into seven or nine of what was in reality a continuous struggle are arbitrary but useful.

1862). Peter is not mentioned by Guibert or others as present 1802). Peter is not mentioned by Guibert or others as present at Clermont. Of Peter's preaching in Picardy and Berry after Clermont there is, however, little doubt (see Guibert, op. cit. ii. 8; Anna Comn. t.c.), but Urban II, a disciple of Gregory VII., would use rather than follow his preaching. For Peter, see the critical monograph of Hagenmeyer, Peter der Eremite (Leipzig, 1879), which traces the genesis of the myth.

At the Council of Placentia (7th March 1095) the ambassador of Alexius Comnenus pleaded the peril of Constantinople (Mansi, xx. 802; Guibert, op. cit. ii. 1), but Urban II. postponed the decision until after a second Council at Clermont (18th-27th Nov. 1095; Mansi, xx. 821ff.). There, amid cries of 'Deus vult,' the undertaking was commenced, a red cross (hence the title 'Crusade') being sewn on the breast or shoulders.1 So far as the Muslim world was concerned, the times were opportune, the great Seljūk Empire of Malik Shāh having broken up, at his death (1092), into four warring portions. Egypt had recovered its possessions, and in 1096 the Fāṭimid vizier Aphdal conquered Jerusalem from Ortuk. While the main expedition was preparing, a vast mob, chiefly from the Rhine districts, under Peter, Walter the Penni-less, and Walter de Poissy, with a goose at their head (Alb. Aq. i. 30; Guibert, op. cit.; Recueil, iv. 251), after massacring (May 1096) the Jews in Spires and Worms (Salomo bar Simeon, in Neubauer and Stern's Quellen zur Gesch. der Juden in Deutsch., Berlin, 1892), crossed Hungary, and, with thinned numbers, arrived at Constantinople (30th July 1096). On crossing into Asia, they were overwhelmed (21st Oct. 1096), near the river Dracon and at Civitot, by Kilij Arslān, the son and successor (1092-1106) of Sulaimān (Anna Comp. Alex. x. 274; there is an excellent account of this Crusade in Röhricht, Erst. Kreuz. chs. 2, 3, or in Hagenmeyer, Peter d. Eremite, chs. 4-6).

The main Crusade was under Godfrey of Bouillon,

Hugh of Vermandois, Robert of Normandy, Robert High of Vermandors, Robert of Normandy, Robert of Flanders, Raymond of St. Gilles and Toulouse, Bohemond, and his nephew Tancred (see lists in Alb. Aq. ii. 22. 3), with a vast host of barons, etc. Marching through Hungary, the various forces converged on Constantinople (Godfrey, 23rd Dec. 1097; Bohemond, c. 10th April 1097), and were carried over the Bosporus by the anxious Greeks. After Alexius had secured their homage (Alb. Aq. ii. 16-18, 28) and reviewed the hosts (of whom Fulcher of Chartres enumerates nineteen nations, or about 60,000 armed horsemen [see Alb. Aq. ii. 41] plus a vast mob of pilgrims and camp followers), they captured Nicæa, the capital of Rūm (19th June 1097), defeated the Turks at Dorylæum (Eski-Shehr, 1st July 1097), crossed the desert in a burning summer, captured Antioch after an exhausting siege of nine months (21st Oct. 1097–3rd June 1098), during the dire famine of which many deserted for home (Alb. Aq. iii. 50-52, iv. 34) until stopped by the discovery of a Holy Lance, and defeated the vast relief forces of Kerbugha of Mosul (28th June). After ten months' delay, the remnant of the crusaders, reduced now to less than 40,000 all told (Röhricht, op. cit. 183 n.), disdaining the proffered terms of the Egyptians, marched on Jerusalem (13th May-6th June 1099), the capture of which (15th July 1099) was followed by the massacre of 70,000 Muslims and Jews, women and children included (Alb. Ag. vi. 20-23). women and endered metaded (AID. Aq. VI. 20-20). Eight days later Godfrey was elected king (real title, 'advocate of the Holy Sepulchre') of Jerusalem (22nd July 1099; William of Tyre, op. cit. ix. chs. 1-12). His overthrow of the Egyptians at Ascalon (12th Aug. 1099) was followed by the disaster of his death (18th July 1100). The two

Baldwins, his brother and cousin, who succeeded him, slowly extended the limits of the kingdom (Tripoli, 1109; Tyre, 1124), which began to decline after 1143.

At its widest extent, the four fless of the kingdom of Jerusalem were: (1) the principality of Jerusalem; (2) the county of Edessa, which fell to Baldwin the brother of Godfrey, who had detached himself from the main host for the purpose in 1097; (3) the principality of Antioch claimed by Bohemond, and always inclined to independence; 1 (4) the country of Tripoli. The settlement of the kingdom on a feudal basis was arked by the gradual compilation (see Bury's Gibbon, vi. App. 16; Stubbs, *Itin. Reg. Ricard.*, Introd. p. xc) of that most interesting code of feudal customs, etc., the 'Assize of Jerusalem,' sas also by the foundation, for its defence, of the various

orders of military knights (see below, p. 351).

inderesting code of fetidal customs, etc., the 'Assize of Jerrisalem,' 3 as also by the foundation, for its defence, of the various
orders of military knights (see below, p. 351).

Literature.—The original sources for the First Crusade are
to be found for the most part in the ponderous though incomplete Recueil des historiens des croisades [Hist. occident.],
b vols. (Paris, 1844-95)—a collection which supersedes that of
J. Bongars, Gesta Dei per Francos (Hanover, 1611), used by
Gibbon. In vol. i. (1) there is a good litnerary of the various
Crusades, by S. Jacobs. Of the sources the following are the
most important: (1) Gesta Francorum, by an unknown S.
Italian knight who book part in the First Crusade. He deposited his book at Jerusalem, possibly in the Holy Sepulchre,
where it was frequently consulted by other writers, of several
of whom it forms the basis. (2) Guibert of Nogent (b. 1053),
Gesta Dei per Francos; almost entirely dependent on (1),
Guibert was present at Olermont, and writes down to 1104.5
(3) Raymund of Agiles, Hist. Francorum qui ceperunt Jerusalem; also dependent on (1). a narrative by a Provençal eywitness. (4) Fulcher of Chartres, Hist. Hierosolymitana;
the only eye-witness of the events in Edessa; continues down to
1127; also depends on (1).7 (5) Baldric, Archbishop of Dol,
Hist. Hierosolymitana, written in 1108; entirely founded on (1).8
(6) Albert of Aachen, Hist. Hierosolymitana—a vivid narrative of the First Crusade, written after 1120; really copied from
an unknown crusader from Lorraine, together with use of (1),
(7) Ralph of Caen, Gesta Tanoredi; a friend of Tancred, for
whose exploits he is of great value, 10 (8) Ekkehard of Aura,
near Kissingen (d. 1125), Hierosolymita. He went to Palestine
in 1101, and was there about six weeks. 11 (9) Cafaro di
Caschifelone, de Liberatione civitatum Orientis. The writer
(b. 1080) went out in Aug. 1100, returning in July 1101 (see
Recueil, v., Introd. p. xvii). It is of special value for Genoese
matters up to 1109, 12 Other minor sour to her bing 13

to her bias. 13
Of modern works dealing with the First Crusade (see also below) the first critical study was H. v. Sybel, Gesch. desersten Kreuzzugs? Dusseldorf, 1881. Two German historians have since spent a lifetime in the preparation of a series of important monographs: H. Hagenmeyer, Peter der Eremite, Lepzig, 1879 (for First Crusade, see ch. 5 and 6), with a good 'Chronology' (1094–1100) in Appendix, and his Die Kreuzzugs-

<sup>1</sup> For its history, see E. G. Rey, 'Résumé chron de la hist. d'Antioche,' in Revue de l'orient latin, iv. 321 ff., 1896.

<sup>2</sup> On the limits of these fiefs, see Jacobs, in Revuell, i. [1] Introd. ch. 2; or Lane-Poole, Suludin, New York, 1898, p. 26f. For tables of kings, dynasties, rulers, etc., see Lane-Poole,

To the hims of these heis, see Jacobs, in Retter, i. 11, Introd. ch. 2; or Lane-Poole, Studain, New York, 1898, p. 28f. For tables of kings, dynasties, rulers, etc., see Lane-Poole, op. cit.

3 Best ed. by de Beugnot, 2 vols., 1841 and 1843; for a critique, see Gaston Dodu, Hist. des institutions monarchiques dans le royaume latin de Jerusalem, Paris, 1894.

4 Best ed. by H. Hagenmeyer, Heidelberg, 1890, with introduction and notes; also in Rawetl, iii. 121 ff.

5 In Recueil, iv. 113-263.

6 See C. Klein, Raimanad v. Aguilers (Berlin, 1892), and v. Sybel, Erst. Kreuz, 15 ff. In Recueil, iii. 231-310; Migne, PL clv. 581-606.

9 See Hagenmeyer, op. cit. 62-68, or B. Kugler, Albert v. Aachen, Stuttgart, 1885, who maintains his value as against v. Sybel's doubis; Recueil, iv. 265-713.

10 Recueil, iii. 587-716; Migne, PL clv. 489-590, or Muratori, Script. ver. Ital. v. 285-533. On Ralph, see v. Sybel, op. cit. 54; Hagenmeyer, op. cit. 69.

11 Best ed. by P. E. D. Riant, in Recueil, v. [1805] 1-40, or, separately, by H. Hagenmeyer (Tübingen, 1877), with valuable introduction. The ed. in Martène (Amplèss. Collect., 1729, vol. (MGH vi. 265 ff.) is scarcely complete. For many events Ekkehard is our only source (see Recueil, v., Pref. p. vii).

12 Recueil, v. 48-73; or Pertz, MGH xviii. 40-8; or, separately, ed. by L. T. Belgrano, Rome, 1890.

13 Of her Alexias (complete ed. in Migne, PG exxxi.; or 2 vols. in Corpus script, hist. Byz. (Bonn, 1828-97); or ed. Reifferscheid (Teubner), 1834, the books dealing with the First Crusade (x.-xiv.) are in the Recueil des historiens des croisades [Historiens grees], i. 1-204 (2. vols., Paris, 1875, 1831, with Lat. paraphrase; the 2nd vol. contains annotations only).

<sup>1</sup> For critical examination of this Council, see Röhricht, Erst. Kreuz. 235-9. For Urban's other Councils after Clermont, at which also he preached the Crusade, see *ib.* 22.

2 On this incident, see Raymund of Agiles, 'Hist. Francorum,' in Receich iii

briefe (1088-1100), Innsbruck, 1901, with complete bibliography of all minor sources, magazines, etc.; R. Röhricht, Gesch. des erst. Kreuz., Innsbruck, 1901 (perhaps the best single work), and Beitrage z. Gesch. d. Kreuz., 2 vols., Berlin, 1874, 1878. P. E. D. Riant must not be overlooked among those who have done good work (cf. Recueil, v.). His Invent. crit. des lettres (768-100), Paris, 1880, is of value for advanced work. 2. Second Crusade.—For many years the Latin kingdom had been threatened by the growing power of the Atabeg amir of Mosul, Imād-al-Dīn Zengi, or Zanghis, twisted by the Latins into Sanguineus (1127-14th Sept. 1146), to whom must be attributed the first stemming of the tide of Latin conquest. His capture and massacre of Edessa (25th Dec. 1144) was followed by the successes of his great son, Nūr-al-Dīn Maḥmūd. The fall of Edessa aroused the West, chiefly through the preaching of St. Bernard (see art. Beinard), vol. preaching of St. Bernard (see art. Bellnard, vol. ii. p. 530), first at Vézelay before Louis VII. (31st March 1146), then later in the Rhine valley, where March 1146), then later in the Rhine valley, where the persecution of the Jews which usually attended a Crusade had broken out. As a result of his meeting with Bernard at Spires (27th Dec. 1146), the Emperor Conrad III., with reluctance, took the cross (E. Vacandard, S. Bernard, Paris, 1895, ii. 288 ff.). Conrad started from Bamberg (May 1147) by the overland route, with about 100,000 followers, including many women, and, after a disorderly journey, reached Constantinople, followed closely by Louis, who set out from Metz (11th June 1147). An attempt of Conrad to push on was followed by the loss of 30,000 Germans, and he was forced back upon Nicæa to await Louis. he was forced back upon Nicæa to await Louis. From there the armies marched, though in two divisions, to Ephesus, whence the wounded Conrad returned, after Christmas, to winter at Constanreturned, after Christmas, to winter at Constantinople. Louis, however, and a part of the Germans under Otto of Freising, continued their march. Otto's force was cut to pieces near Laodicea, and Louis was disastrously defeated in the defiles of Phrygia (Odo, op. cit. vi.: a remarkable story), but managed with diminished forces to reach Antioch (19th March 1148). Meanwhile Conrad set sail from Constantinople (10th March 1148), and reached Acre in April. The two armies mustered at Palma, near Acre (24th June 1148). But the attack on Damascus failed (Bernhardi. on But the attack on Damascus failed (Bernhardi, op. cit. 563-78), and Conrad sailed home (8th Sept. 27. 503-78), and Conrad saned nome (but Sept. 1148), followed by Louis (Easter, 1149). Bernard and Suger thereupon planned a second expedition, and at a Council at Chartres (7th May 1150) dependent was actually elected commander-in-chief—an office which he refused (Bernard, Ep. 256). The miserable termination of the crusade led to a reaction of anger against St. Bernard (de Consid. ii 1). As an important enjage in the Crusade was ii. 1). As an important episode in the Crusade we may note the undesigned conquest, by an English fleet, of Lisbon from the Moors (Bernhardi, op. cit.

579-90).

LITERATURE.—For the Second Crusade the chief sources, in addition to William of Tyre (see below), are Odo de Dioglio (Deuli), de Profectione Lud. VII. (in Migne, PL Clxxxv. 1205 ff.), and two anonymous writers, Gesta Lud. VII. and the Hist. gloriosi Lud. For Conrad, see Otto of Freising, de Gest. Frid. i. 34-39, 43-45, 58-59 [in Pertz, MGH xx.]. Of Greek writers, Nicetas Acominatos continues the work of Anna Comnena from 1118-1206 with more fairness (see Recueit [Hist. grees], Paris, 1875). Of modern works, B. Kugler, Analekten z. Gesch. des zweit. Kruz., Tübingen, 1875, 1885, and Neue Analekten, Tübingen, 1885; W. Bernhardi, Conrad III., 2 vols., Leipzig, 1883 (esp. pp. 591-684).

3. Third Crusade. —In 1164 and 1167 the Turkish amir Shiracouah (Asad al-Din Abū-l-Ḥārith

18h amir Shiracouah (Asad al-Din Abū-l-Ḥārith

Shīrkūh) attacked the Fātimids of Egypt and their Frank allies. But the treacherous designs of the advisers of Amalric of Jerusalem (1162-73) to seize Egypt led the Fāṭimids to turn to the Turks for help. After the burning of Cairo (i.e. Fustat, 12th Nov. 1168), Amalric was forced to return; but Saladin, at the command of Nūr-al-Dīn, destroyed the Fāṭimid dynasty (Sept. 1171), restoring Egypt to the allegiance of the Abbāsid Khalīfs of Baghdad (William of Tyre, xix. 5-7, 12-31, xx. 5-12). On the death of Shiracouah (23rd March 1169), his nephew the Kurd Saladin (Salāh-al-Dīn: b. 1137) without delay (26th March) was recognized as his successor as vizier of Egypt. their Frank allies. But the treacherous designs was recognized as his successor as vizier of Egypt. The disunion due to the death of the Sultan Nüral-Din (15th May 1174) was not taken advantage of by the Latins, who allowed Saladin to extend and consolidate his dominions (Syria, 1174-6). The inglorious expedition of Philip of Flanders (Aug. Ingiorious expedition of Philip of Flanders (Aug. 1177-Easter 1178), and the great defeat of Saladin at Ramleh by 375 knights under Reginald of Châtillon (25th Nov. 1177), led in 1180 to a truce for two years. The violation of the truce by Reginald of Châtillon's seizure of Karak, and subsequent plunder of Arab caravans (1179, 1182, 1182). 1186), and the rapid decay of the kingdom of Jerusalem through dissensions, finally issued in a determined attack by Saladin, whose soldiers were now trained in Frank methods. His great victory at Tiberias or Hattin (4th July 1187) was followed by the siege (20th Sept.) and capitulation of Jerusalem on 2nd Oct. 1187. Saladin's siege of Tyre (Nov. and Dec. 1187) was thwarted by Conrad of Montferrat, but the rest of the country was over-run, and a conditional promise was made of the surrender of Antioch if not relieved within seven

Meanwhile Europe once more armed, being terrified by the tidings which reached it (end of Oct. 1187 [Girald. Camb. de Princ. Instr. 239]) of the loss of Jerusalem. The first to move was the great Emperor, Frederick Barbarossa, who as a young man had taken part in the Second Crusade. Starting the Second Crusade. man had taken part in the Second Crusade. Starting from Regensburg (11th May 1189), Frederick crossed Hungary and Bulgaria, and wintered at Adrianople, sore harassed, as usual, by the treachery of the Greeks. Soon after Easter 1190 he crossed the Bosporus, avoiding Constantinople, and struggled through the deserts of Cilicia. On the darth, by droughing of the greek France (10th)

struggled through the deserts of Cilicia. On the death, by drowning, of the great Emperor (10th June 1190) in the Saleph (Geuk Su or Calycadnus, Itin. Ric. 55), the Germans made their way, in part, to Antioch (June 21st), in part to Tripoli.

LITERATURE.—For this expedition we have the narrative of two spectators: Tageno of Passau, Descript. Expedit. Frid. I. (in M. Freher, Germ. Rev. Script. i. 400-16, cd. Struv, Strassburg, 1717), and the anonymous Exped. Asiatica Frid. I. (in Canisius, Lect. Antiq. iii. (2) pp. 498-526, ed. J. Basnage [Amsterdam, 1725]). For modern works, see A. Chroust, Tageno, Ansbert, and d. Hist. Peregrinorum, Graz, 1892.

Richard of England (Nov. 1187) and Philip

Ansbert, and d. Hist. Percyrinorum, Graz, 1892.

Richard of England (Nov. 1187) and Philip Augustus of France (Jan. 1188) had been the first to take the cross. But, owing to their quarrels, they did not start from Vézelay until June 1190. They journeyed together to Marseilles, and by separate fleets (Genoese and English) to Messina (23rd Sept.), where they wintered. Sailing in the spring, and on the way conquering Cyprus in a fortnight (Him. Ric. 183 ff.), Richard arrived at Acre (8th June 1191), which Guy de Lusignan had sat down to besiege (28th Aug. 1189) and Saladin to defend, both sides passing through the extremes sat down to besiege (28th Aug. 1189) and Saindin to defend, both sides passing through the extremes of pestilence and famine. Richard had been preceded by Philip (20th Apr.), and on 3rd July a united assault was made on the town, which surrendered on the 12th of the same month. The quarrels of Philip and Richard were, however, 1 See Ernoul, in L'Estoire de Ernoles, xxii, 55 ff. (Recueil, ii. 82ff.), for interesting narration. For the events of the years 1187-9, see R. Rörricht, Betirdge z. Gesch. d. Kreuz. i. 115-208.

disastrous, and, on 31st July, Philip set sail home. Richard with 100,000 men marched down the coast to Jaffa, protected by his fleet, and on 7th Sept. inflicted at Arsuf a great defeat upon Saladin (good narrative in *Itin. Ric.* p. 259). After six weeks' delay in re-fortifying Jaffa, Richard twice marched within sight of Jerusalem (Jan. and June 1192), but was forced to fall back on Ascalon. Dissensions, treason, luxury, and immorality (cf. Itin. Ric. pp. 284-5) among the crusaders, and trouble at home (ib. p. 334), led Richard to come to terms with Saladin (2nd Sept.). The Christians were to retain the coast from Tyre to Jaffa, and to have free access to the Holy Sepulchre. On 9th Oct. 1192, Richard left Palestine. Such small successes as this Crusade had accomplished were wholly due to his marvellous skill and daring (of the latter the most remarkable illustration is in Ralph Coggeshall, *Chron.*, Rolls Ser. 1875, pp. 41–51). On the death of Saladin at Damascus (4th March 1193) his dominions were divided, and the Christians obtained a respite, a great victory being won by German crusaders in 1197, which led to the recovery of the coast towns.

won by German crusaders in 1197, which led to the recovery of the coast towns.

Literature.—For Richard's Crusade the following are the chief sources. (1) The anonymous Itin. Regis Ricardi (ed. by W. Stubbs, with valuable Introd. in Rolls Ser. 1884). The old ascription (due to Gale's ed. 1687) to Geoffrey Vinsual is incorrect. Stubbs (Introd. op. cit. xliff.) advocates the authorship of Richard, a canon of the Holy Trinity in Aldgate, by whom it was published 1200-20 (ib. p. lxx). It is now generally agreed (in spite of Stubbs, Le. p. Iviii) that it is a free Lattu translation of a French poemof a Norman knight called Ambroise, the minstrel of Richard (ed. by F. Liebermann and R. Fauli in Pertz, MGH xxvii. [1885] 532 ff., also ed. Gaston Paris, L'Estoire de la guerre sainte, 1837; the poem was discovered in 1873). (2) Sundry references in the Chronicles of Roger Hoveden (ed. Stubbs, in Rolls Ser., 4 vols. 1863-71); 1 Matthew of Faris (ed. H. R. Luard in Rolls Ser., 7 vols. 1872-83); and Ralph de Diceto (ed. Stubbs in Rolls Ser., 7 vols. 1870-83); and Ralph de Diceto (ed. Stubbs in Rolls Ser., 2 vols. 1870). (3) Two contemporary narratives; the anonymous Libelius de expugnatione (Ampliss. Coll. v. 544, 1729). I and the crusader's journal (Stubbs, Itin. Ric., Introd. p. xxxviii) in Benedict of Peterborough's Gesta Henrici II. et Ric. I. (ed. Stubbs, in Rolls Ser. 1867). (4) The great Arabic work of Bohadin (Bahā-al-Dīn, b. 1145, d. 1234), the friend of Saladin (ed. with French tr. under title ens, Leyden, 1732). The tr. of C. W. Wilson, published by the Palestine Pilgrims Text Society (London, 1897), is said by Lane-Poole to be unscholarly. 3 Of modern works, S. Lane-Poole speaks in high terms of F. L. C. Marin's Hist. de Saladin, 2 vols., 1898, may also be consulted.

4, Fourth Crusade.—As the so-called Fourth Crusade in suit of Innocent III 's intention never

4. Fourth Crusade. - As the so-called Fourth Crusade, in spite of Innocent III.'s intention, never became a Crusade at all, but simply a successful attempt by the Latins to seize Constantinople and the Eastern Empire, for our present purpose it may be dismissed. Note should, however, be taken of the ancient hatred thus accentuated between Greek and Latin; of the evidence the Crusade affords of the fatal dissension between the Eastern and Western Churches, the existence of which was one great cause of the failure of the Crusades (cf. below, p. 350b); of the indifference of the great trading towns of Italy, especially Venice, to all motives except gain; and of the terrible weakening in powers of defence of Constantinople which the Latin conquest and pillage (12th-13th Apr. 1204) and subsequent Latin rule (1204-61) produced.

From the first, the Crusade, which Innocent III.

From the first, the Crusade, which Innocent III. had preached immediately on his accession, was betrayed by Venice, which had agreed to provide <sup>1</sup> For the Crusades these works can also be read in the convenient ed. by F. Liebermann and R. Pauli, in Pertz, MGH xxvii. (1885).

<sup>2</sup> The above have been extracted and translated by T. A. Archer, Crusade of Richard L. London, 1888 (in 'Eng. Hist. by Contemp. Writers' series).

<sup>3</sup> Bohadin's panegyric can be corrected by the works of Ibnal-Athir (1160-1283), History of the Atabegs (the enemies of Saladin) and Al-Kanal, or the Perfection of History (both in Recueil [Hist. crient.], vols. 1. ii., Paris, 1872-87).

sea-power (March 1201). The ostensible object was Egypt, the centre of Muslim power; but, while the crusaders were assembling at Venice, the Republic concluded a treaty with the Sultan of Egypt (13th May 1202) to divert the Crusade, in return for valuable commercial privileges in Alexandria and Jerusalem (see Bury's Gibbon, vi. 385 n., 528). The price the Republic wrung out of the crusalers was four marks a horse, two per man, or £180,000 (Pears, Fall of Constantinople, p. 234). As they had nothing wherewith to pay, the crusaders were then disgracefully used by the doge Henry Dandolo, and Boniface of Montferrat, for their own purposes. Until recent investigations, historians, including Gibbon, were successfully misled by the official narrative of Villehardouin, who seems himself to

narrative of Villehardouin, who seems himself to have been in the plot.

LITERATURE.—Of G. de Villehardouin, Conquête de Constant., the best editions are by N. de Wailly, 3rd ed. (1882), who still maintains V.'s candour, and E. Bouchet, 2 vols., Paris, 1891. Other sources are (I Gunther's Historia (ed. P. E. D. Riant, 1875; also in Canisius, Antiq. Lect. iv.); (2) the eye-witness Robert de Clary, Li estoires de chiaus qui conq. Const. (MS privately published by P. E. D. Riant, 1868; ed. by Ch. Hopf, Chron. gréco-rom., Berlin, 1873, p. 1ff.); (3) the anonymous Devastatic Constant. (another recent discovery; ed. in Pertz, MGH xvi., and, better, in Hopf, op. ct. p. 86ff.). Of modern writers, E. Pears, Fall of Constantinople, London, 1835, should be specially studied for its clear survey; see also G. Finlay, History of Greece from its Conquest by the Crusaders, etc., Edinburgh, 1861.

burgh, 1851.
5. Fifth Crusade.—At the Lateran Council (Nov. 1215), Innocent III. unfolded his plans for a new Crusade. The cross was taken, among others, by Andrew II. of Hungary, who arrived at Acre (1217), but accomplished nothing. In May 1218 some Northern crusaders under John de Brienne sailed from Acre to Damietta. After a siege of seventeen but, owing to discord, was lost again (8th Sept. 1221). months, Damietta was captured (5th Nov. 1219);

At his coronation in Rome (Dec. 1220), and on his marriage with Yolande of Jerusalem (Nov. 1225), Frederick II., 'the wonder of the world,' had taken the crusaders' oath. Finally, after excommunication for delay by Gregory IX., Frederick landed at Acre with only 600 knights (7th Sept. 1228); but, owing to his excommunication, the Military Orders refused to serve under him. By treaty, however, with the Sultan al-Kāmil Muham. treaty, however, with the Sultan al-Kāmil Muhammad (1218–38), but chiefly through the dissensions of the Turks, Frederick obtained (24th Feb. 1229) the cession of Jerusalem (save the Temple), Bethlehem, and Nazareth; and on 18th March 1229 crowned himself in Jerusalem. Hearing that in his absence Gregory IX. had instituted a Crusade against him, Frederick returned from Acre and landed at Brindisi (10th June 1229).

In August 1239, on the appeal of Gregory IX., an abortive French Crusade, under Theobald, king of Navarre, set sail from Marseilles; followed (June Navarre, set sail from Marseilles; followed June 1240) by Richard, earl of Cornwall, who had taken the cross at Winchester (June 1236), and Simon de Montfort. Richard reached Acre on 11th Oct. (Matt. Paris, iv. 71), and by purchase secured the release of many captives (ib. iv. 141-3). Nothing, however, was accomplished, and on 3rd May 1241 he returned home (ib. iv. 144). In 1243, by negotiation, Jerusalem was once more restored. But the calling in of the Charismians (an Eastern tribe driven from their homes by Genghis Khan) as allies by the Sultan of Egypt led to the annihilation of the Templars and Hospitallers at Gaza (14th Oct. 1244), the sack of Jerusalem, and the massacre of 30,000 of its inhabitants.

DOUGOU OI LOS HILLEDIDARIOS.

LUEBRATURE.—FOR the Fifth Crusade, in addition to Ernoul, we have as special sources: (1) James of Vitry, Hist. Hierosolymitana (in Bongars, Gesta Dei, 1. 1047ff.), who was an eyewitness of the siege of Damietta (see his Epistola de capita Damiata [ed. J. Gretser in his Hortus S. Crucis, Ingolstadt,

<sup>1</sup> The treaty is hinted at by Ernoul (Recueil, ii. 250). 2 There is an Eng. br. by A. Stewart, London, 1896.

1610, or in his Op. Omn., vol. 3, Regensburg, 1734]); and the continuation of William of Tyre by Bernard the Treasurer (see below, p. 351b). (2) The Gesta obsidionis Damiatæ (Muratori, Rerum Ital. Script. viii. 1084 f.). (3) de Quinto bello Sacro Testimonia Minora (ed. R. Rohricht, Geneva, 1882, for Soc. de l'orient lat.). This work contains a most useful collection of all the smaller Belgian, English, French (including Ernoul), German, Italian, Scandinavian, and Spanish sources; also Quinti belli Sacri Script. Min. (ed. R. Rohricht, Geneva, 1879-82, for the same Society). (4) For Frederick II. we have Richard de S. Germano, Chron. (1189-1248), in Muratori, op. cit. vii. 1002-18; Pertz. MGH xix. 823 ft. Of modern writers, for the Crusade of Andrew and the capture of Damietta, see R. Röhricht, Studien zur Gesch. d. Jünften Kreuz, Innsbruck, 1801, ch. 2. For Frederick II., Röhricht, Die Kreuzfahrt Fr. II., Berlin, 1872 (printed also in his Beitrage z. Gesch. d. Kreuz, 1874).

6. Sixth Crusade.—The fall of Jerusalem before the Charismians led St. Louis IX. to take the cross. He sailed from Aigues-Mortes (25th Aug. 1248)

the charismians led St. Louis IX. to take the cross. He sailed from Aigues-Mortes (25th Aug. 1248) with 1800 ships and at least 50,000 men, wintered in Cyprus, and reached (5th June) Damietta, which the Saracens abandoned. After six months' delay the French pushed on towards Cairo, but were almost annihilated (8th Feb. 1250) at Mansurah (see almost annihilated (8th Feb. 1220) at Maisuran (8ec Oman, op. cit. 338-50). Compelled to retreat, Louis was captured (15th Apr.-6th May 1250), but secured his freedom from the Mamluks by a ransom of 400,000 livres and the surrender of Damietta. After four years in Palestine, spent in the fortification of the seaports, Louis departed without having reached Jerusalem, arriving home 11th 1212 1154 July 1154.

LITERATURE.—For this Crusade, see the narrative of the eye-witness J. de Joinville, *Hist. de S. Louys IX*, (most convenient ed, is that of Natalis de Wallly with Fr. tr. [1868, 1874], or the Paris ed, of 1761); E. J. Davis, *Invaston of Egypt in 1247* (1897),

ed. is that of Natalis de Wallly with Fr. tr. [1808, 1874], or the Paris ed. of 1761); E. J. Davis, Invasion of Egypt in 1847 (1807), is a good modern account.

7. Seventh Crusade.—In 1263 the sultan Bibars (Baybars al-Bundukdārī) of Egypt began the systematic conquest of Palestine (Arsuf [1265], Safed [1266], Jaffa [1268], and Antioch [12th June 1268]). In July 1270, Louis IX., provoked by the loss of Antioch, set off from Aigues-Mortes with 36,000 troops, but was induced to turn aside to Tunis, in the siege of which he died (25th Aug. 1270). Edward of England (afterwards Edward I.) reached Tunis (9th Oct.), and, after wintering there, reached Acre (9th May 1271) just in time to save the city from the Muslims. Owing to his father's failing health, Edward was driven to patch up a ten years' truce, and return (14th Sept. 1272). Throughout his life he, however, cherished the hope of further Crusades. Meanwhile the growing quarrels of the Military Orders, and the rivalry of Genoese, Venetians, and Pisans, led to renewed. denoese, Venetians, and Pisans, led to renewed disasters, in the strip of the Latin kingdom still left—by the capture of Tripoli (1289), and finally of Acre (18th May 1291), when the massacre of 60,000 Christians closed 'the World's Debate.'

In a sense the Crusades, as the struggle of Muslim and Christian, may be said to have been continued by the slow conquest of Spain from the Moors, by the war of Sigismund with the Turks (1896), by Muhammad II.'s capture of Constantinople (1453), by the great naval victory of Don John at Lepauto (1571), and that of John Sobieski at Vienna (Sept. 1688). But all motive of rescue of the Holy Sepulchre, etc., was now lost, and the sole idea was political—to roll back the invasion of the Turks from Europe.

LITERATURE.—For the Seventh Crusade, the expedition of St. Louis is in William de Nangis (ed. H. Géraud, 2 vols., Paris, 1843). For Edward we have T. Wykes in Annales Monastici ([Rolls Ser.] ed. Luard, vol. iv., 1869); and the Chronicon of Walter Gisburn or Hemingburgh (ed. H. C., Hamilton, 1848, vol. i. pp. 329-37). For the final siege of Acre the anonymous de Excidio urbis Accounts, in Martène, Amplies. Collect. v. 767-84; and Abull-Fida's account in Recueil [Hist. or.] vol. i.

III. CAUSES OF FAILURE OF THE CRUSADES. -1. Lack of sea-power.—This applied especially to the early Crusades. The long march overland from Germany or France through Hungary, the Eastern Empire, then across the deserts and mountains of Asia Minor, would have tried the ability of Alexander or Napoleon at the head of their seasoned leaves. mountains of Asia Minor, would have tried the ability of Alexander or Napoleon at the head of their seasoned legions. It was fatal to Godfrey of Bouillon and Louis VII. and, of course, to the

undisciplined thousands who followed Walter the Penniless.<sup>1</sup> With sea-power, Barbarossa might have won. On the field of battle the crusaders were irresistible. But entangled among mountains and deserts their numbers became their ruin. The lack of sea-power, the possession of which would have led to success, was the effect of a still deeper cause. Sea-power in the Mediterranean was in the hands of the Greeks, or of the cities of Italythe hands of the Greeks, or of the cities of Italy—Venice, Genoa, and Pisa. Of these, Venice, once the subject, was now the ally of Constantinople (see Bury's note, Gibbon, vi. 381), and Genoa was chiefly intent on guarding its trade with the Crimea. The sea-power of England and North Europe was used advantageously at Jaffa in 1102 and 1107, but was not available for the transport Europe was used advantageously at Jaffa in 1102 and 1107, but was not available for the transport of the Continental crusaders. After the First Crusade the West woke up to the advantage of a sea-power. But the Greek Empire had now become bitterly antagonistic to all Crusades (see below, § 2), and so sea-power was denied by the Greeks and Venetians, except on exorbitant terms (cf. above, 'Fourth Crusade').

2. The division of Christendom.—But the chief cause of failure was undoubtedly the disunion of

cause of failure was undoubtedly the disunion of cause or faithfe was undoubtedly the distintion of the crusaders, and the deep hatred between the Greek and Latin Churches. A united Christendom would have been invincible: it recoiled broken and dispirited by its own divisions. The disunion was of a double nature—national and religious. Of the national dissensions the Third Crusade will serve as an example; or, better, the fact that at Acre, when it fell, there were no fewer than seventeen independent commands. From the first the Crusades were a French rather than a German movement; and the Germans—the Empire, in fact
—in consequence did little. Of the religious
dissensions—largely also national—the antagonism
between the Greek and Latin Churches and
Empires was even more fatal. The Greeks after the First Crusade rarely did anything to assist the

Crusaders, and often secretly thwarted them.

3. The bad organization of the Latin kingdom.

—The conquests achieved by the First Crusade were organized on a feudal basis. Latin in characters in the conduction of the conduction acter, by over-taxation and intolerance it hopelessly estranged the natives (H. G. Prutz, Kulturlessly estranged the natives (H. G. Frutz, Kulturgesch. d. Kreuzzüge, p. 167), especially the native Churches (Nestorians, etc.). There is some evidence that Jerusalem was betrayed to Saladin by Christian Melchites (Recueil, ii. 85 n.). One result of the feudal system, when worked in connexion with a country of enervating climate and constant warfare, was the number of heiresses, and, in consequence, of disputed and changing successions. The only sound element in the country in this The only sound element in the country in this matter was the organization of the Military Orders, with their constant succession of new blood from Europe.

IV. RESULTS OF THE CRUSADES.—I. Political.
—The immediate political effects have been dealt with under the several Crusades. Other con-

(1) Increased importance of the Papacy, as the embodiment of the unity of Christendom, and the leader in the call to war, in spite of the fact that leader in the call to war, in spite of the fact that Urban II. in his summons left out those great ideas of military method and politico-ecclesiastical conquest upon which Gregory had impressed the stamp of his character. But the crusaders were the soldier of the Pope, who alone could remit their vows. By the 'Saladin tax' a tenth of the revenues of the clergy were poured into the Papal coffers. The increased importance attached to

indulgences through the Crusades, and the effect on the Papacy, must not be overlooked. How completely the Papacy was identified with the conception of Crusades is seen in the disastrous extension of the idea to all the wars engineered or encouraged by the Papacy against its enemies, e.g. the Albigenses; against Frederick II. and Manfred; or against the Hussites. In the long run this power of inaugurating a Crusade told by its misuse against the Papacy, and was one cause of its fall.
(2) Weakness of the Eastern Empire.—Un-

(2) Weakness of the Eastern Empire.—Unfortunately, one result of the Crusades, especially of the Third Crusade, was the weakening of Constantinople,—this altogether apart from the fatal Fourth Crusade,—and thus of the barrier of Europe against the Muslim (see Pears, op. cit. ch. 5). This result—the exact opposite of the intention—was the direct outcome of the religious found heaven the Crusade Pears, Churches feud between the Greek and Roman Churches.

(3) Rise of the Military Orders.—An important consequence was the foundation of the various Orders of military monks, whose influence and history overleap the narrow limits of the Crusades (see also Hospitality [Christian], Monastricism). (a) Of these the oldest, the Hospital of St. John of Jerusalem, was in existence as a hospital for pilgrims at an early but unknown date. On the institution of the Templars the hospital was turned into a Military Order. (b) The famous Order of the Temple was instituted about 1118. But its real start was not until Bernard at the Synod of Troyes (Jan. 1128) lent it his advocacy. To Bernard was assigned the composition of its Rule, the greater part of which, however, is by a later hand.<sup>2</sup>
(c) The *Teutonic Order of Knights* was founded in 1190 at the siege of Acre. Its vast importance for European history by its conquest of Prussia from the heathen must not be forgotten. (d) There was a fourth Order, Knights of St. Thomas of Acre, of interest as almost purely English.<sup>2</sup>

2. Commercial and social.—(1) Growth of liberty.

The expenses of the crusaders led to the sale of —The expenses of the crusaders led to the sale of estates, advowsons, town-rights, manorial rights, etc., to merchants, burgesses, and others; and so, to the growth of liberty. The sales to the Jews led by reaction to an outbreak against them (W. Cunningham, Growth of Eng. Industry and Commerce, vol. i. [5th ed., Cambridge, 1910] p. 205). In commerce we see the opening up of the East to the West (H. G. Prutz, Kulturgesch. d. Kreuz.), especially to Venice and Genoa (Cunningham, op. cit. 147, 198). As the monks did not go on crusade, the sales of estates ministered much to their wealth, and to that of the Church generally. (2) Introduction of Aristotle to Europe.—The

(2) Introduction of Aristotle to Europe.—The contact of East and West led James of Venice to bring back and translate (1124) the books of Aristotle, including the Physical Works, previously known only in imperfect translations. The effect known only in imperfect translations. The effect of this was one of the causes of the rise of Scholasticism (see H. B. Workman, Christian Thought to the Reformation, London, 1911, ch. 9).4

3. Theological.—Through the realization of the

3. I heological.—Inrough the realization of the sufferings of the Savieur—powerfully aided by the Crusades (cf. the Crusaders' Hymn, 'Salve, caput cruentatum')—the idea of the historical but dying Jesus was formed side by side with the growing mediæval conception of the sacramental

I See Robricht, Erst. Kreuz. 11 n. Recueil, v., Pref. cix., dates about 1060, from William of Tyre, xviii. 4 and 5. W. Heyd, Gesch. d. Levantehandels im Mittelatter (2 vols., Stuttgart, 1879, French tr. by F. M. Raynaud, Paris, 1885, 103-6), argues against the accepted view that it was founded by merchants of Amalfi (Recueil, v. 401).

2 See Bouquet, Recueil, xiv. 232; Labbe, Conc. xxi. 360; Op. Bernard. ii. 543, in PL clxxxii. 910.

3 For its history, see Stubbs, Lin. Ric., Intood. p. cxii n.

4 The influence of the Arab philosophers upon Western thought must not be put down to the Crusades, as it came through Spain.

[1899] 9).

Cospens (Harmack, Hest. Dogna, Eng. V. VI. [1899] 9).

Literature.—Original Sources.—The particular sources for the several Crusades have already been noted under each. It remains to add the more general works. The best work covering the whole period is William of Tyre (b. 1127), whose intimate acquaintance with Palestine was supplemented by a knowledge of Arabic. His Hist. rerum in partitus transmarinis gestarum (Recueil [Hist. occid.], i. [1844]) is one of the great works of mediewal history, and should be studied even by those who cannot afford time for research. Until recent years it was the basis of all histories dealing with the Crusades. Books i.—xv. (to 1144) are indebted to earlier writers, esp. Albert of Aachen; xvi.—xxii. (to 1184) to his own observation. It was continued in French by Ernoul, who was present at the battle of Hattin and the capitulation of Jerusalem, down to 1220; by Bernard the Treasurer, down to 1221; and by anonymous writers, down to 1277 (see J. M. de Mas Latrie, Chronique d'Ernoul et de Bernard le Trésorier [Paris, 1871]; or A. P. Paris, G. de Tyre et ses continuateurs, 2 vols. [Paris, 1879-80]). The whole was translated into French before the publication of the continuation (de Beugnot, Recueil [Hist. occid.], i. pref. p. xxv) under the absurd title of UEstoire de Ernales Empereur (i.e. Heraclius), the opening words of the Historia; in Recueil, vols. i. and in. For the charters, etc., of the kingdom of Jerusalem, see R. Robricht, Reyesta regnt Hierosolymitani, Innsbruck, 1893, 1904. Of the general Oriental sources, 'Ali-Ibn-al-Athir's (b. 1160) history from 1098-1190 will be found in Recueil [Hist. or.], i. 180 fl.

1904. Of the general Oriental sources, 'All-Ibn-al-Athn's (c. 1160) history from 1098-1190 will be found in Recueil [Hist.or.], i. 128 ff.

MODERN AUTHORITIES.—Special monographs, including the valuable works of Hagenmeyer and Rohricht, have been indicated under the several Crusades. Of general Histories the following may be noted: E. Gibbon (ed. Bury [new ed. in prop. 1911), with appendixes, corrections, and notes by S. Lane-Poole is valuable for the First Crusade, poor for the others, and misleading for the Fourth, on which, however, when the main idea is corrected, he is full and good. The best summary for the general reader is T. A. Archer and C. L. Kingsford, The Crusades, London, 1894, but without notes. Oomplete surveys are found in Bernard Kugler, Gesch. der Kreuzzüge, Berlin, 1880, and L. Bréhier, L'Eglise et Porient au mogen Age, Paris, 1907. The older F. Wilken, Gesch. d. Kreuzzüge, 7 vols., Leipzig, 1807-32, and J. F. Michaud, Hist. des croisades, 6 or 6 vols. (Paris, 1812-17, 1825-9; also new ed. Brussels, 1857, Eng. tr. in 3 vols. by W. Robson [1852], may be neglected without much loss. For the kingdom of Jerusalem the most accurate account is in R. Röhricht, Gesch. d. Konigreichs Jerus., Innsbruck, 1898. The reader may also consult C. R. Conder, The Lattin Kingdom of Jerusalem, London, 1897; E. G. Rey, Les Colonies franques de Syrie, Paris, 1833 (social history, etc.). Military matters are dealt with in C. W. Oman, Hist. of the Art of War, London, 1890; S. Lane-Poole, Moors in Spatin, 1837, vols. ii.-iv. Guy le Strange, Palestine under the Moslems, London, 1897; H. G. Prutz, Kullurgesch. d. Kreuzzüge, Berlin, 1833 (in many points exaggerated), deal with important sidematters. For the Children's Crusade, New York, 1898.

H. B. WORKMAN.

CRYSTAL-GAZING.— Crystal-gazing' is the

CRYSTAL-GAZING.—'Crystal-gazing' is the current name for the attempt to provoke the appearance of visions by concentrating the gaze on any clear depth-a crystal, a glass ball, water in a vessel, water in a pond, a mirror, a piece of polished basalt, or anything of the kind. With certain subjects it suffices to stare into the darkness of a funnel; in fact, granting the faculty for being hallucinated in the course of gazing fixedly, say at ink in the palm of the hand, or at ink in an ordinary inkstand—the details are unimportant. In practice the easiest method is to look steadily, for perhaps five minutes, at a glass or crystal ball laid on any dark surface, at the distance from the eyes of a book which the experimenter might be reading. If the gazer has the faculty, he usually reading. If the gazer has the faculty, he usually sees a kind of mist or a milky obscurity cover the ball, which then seems to become clear and black; pictures then emerge. Sometimes the ball ceases to be present to the consciousness of the gazer, who feels as if he were beholding an actual scene. An Arabian author of the 14th cent., Ibn Khaldun, describes the experience in similar terms.

Any one who is fortunate enough to have the command of leisure and solitude for ten minutes on four or five occasions can discover whether or

1 Notices et Extraîts des MSS de la Bibl. Nat. xix. 221 f.; cf. A. Lang, The Making of Religion, Lond. 1898, p. 368 f.

not he or she has the faculty of seeing 'crystal visions.' The gaze should not be prolonged when the eyes begin to feel fatigued, or if a sense of somnolence appears to be approaching. Solitude is here recommended, because the mind, though it may follow any train of thought, is not the better, in the experiment, for the irresponsible chatter of the frivolous and talkative. In actual life, in the present writer's experience, it is very rare to find any person who has the leisure and the resolution to make solitary experiments of the duration of ten minutes on four or five occasions. None the less, in spite of the scarcity of time and the insistent demands of society, it is now admitted, even by a number of orthodox students of experimental psychology, that hallucinations of sight really are provoked in some sane and honourable and educated persons, by gazing into a clear depth. These people see 'crystal visions' representing persons, events, and places, known or unknown, familiar or unfamiliar, to the gazer, and not summoned up by any conscious attempt to 'visualize.'

This set of facts is quite as certainly authentic as the coloured visions of arithmetical figures, which, as Sir F. Galton has convinced science, arise which, as gar r. Gardon has convinced stelline, this before the 'mind's eye' of many persons on the mention of numbers. In both cases, so far, the 'visions' are attested only by the numbers and personal character of the 'seers.'

A third kind of visionary experience is perhaps less common than we might suppose. Many persons are unacquainted with illusions hypnagogiques -the bright and distinct views of faces, places, persons, and landscapes, usually unfamiliar, which lit before the closed eyes in moments between sleeping and waking. These pictures, like those of crystal vision, come unsummoned, and often represent persons or places which we do not remember ever to have seen. People who have no experience of those illusions are apt to disbelieve that other people have it. In short, all kinds of experiences—visions of numerals in the mind's eye, illusions hypnagogiques, and crystal visions—are 'automatisms,' and are not produced by the action of the conscious intelligence.

Before the experiments of the Society for Psychical Research, in the matter of crystal-gazing, were made (1890-1910), most persons of sense believed that the faculty for seeing such hallucinations was a mere fable of romance-writers, or a delusion of peasants. But, when many experiments had made it certain that the faculty is far from being very rare among members of both sexes, young or old, in all ranks and all degrees of education, attention was drawn to the use of crystal-gazing in many ages and lands as a form of divination. It was ages and lands as a form of divination. It was found that the pictures seen by the 'scryer,' or gazer, were supposed to be sent by spirits, and to indicate events distant in space or destined to occur in the future; or they revealed persons guilty of theft or other crimes. Thus crystal-gazing got a bad name, and was associated with invocation of evil spirits, and even now the average man or woman thinks crystal-gazing synonymous with divination. 'Tell me what horse will win the Derby,' says the average man, 'and if you succeed I'll believe that there is something in it.' Another criticism is, 'What is the use of it?' Savage peoples, almost everywhere, and the people of Greece, Rome, Egypt, the subjects of the Incas in South America, and the magicians of the Middle Ages and later thought they found 'the use of it' to be the gaining of knowledge not accessible by any normal means.

Thus, in Polynesia, when any object has been stolen, the

Thus, in Polynesia, when any object has been stolen, the priest, after praying, has a hole dug in the floor of the house and filled with water. Then he gazes into the water, over which the god is supposed to place the spirit of the thief. 'The image of the spirit.', was, according to their account, reflected

in the water, and being perceived by the priest, he named the individual, or the parties, who had committed the theft.'¹ Père Lejeune, S.J., found that among the American Indians of his flock (about 1660), the medicine-men made their patients gaze into deep water, and, if they saw in it visions of anything edible or medicinal, it was 'exhibited' and was supposed to do them good. Captain Bourke of the U.S. cavalry discovered that among the Apache Indians the medicine-men used quartz crystals, by looking into which they could see everything they wanted to see, 2 Among the Iroquois the phantasm of the person who has bewitched another is looked for in a gourd full of water, in which a crystal is placed. The Huilleche of South America gaze 'into a smooth slab of black stone.' 4 In the 17th cent. the people of Madagascar divined by gazing on crystals, and according to de Flacourt divined successfully. 5 The Zulus and the shamans of Siberia gaze into vessels full of water, 6 The Inca king Yupanqui used a crystal? Australian swages use crystals or polished stones. 8 The Romans used water in a vessel of glass. 9 In Egypt and in India ink is used, whether in a black spot on a piece of paper or in a drop in the palm of the hand. Examples of mediaval and modern practice are collected by 'Miss K.' (Miss Goodrich Freer) in Proc. of Soc. for Psychical Research, v. 486. Research, v. 486.

It is manifest, then, that the production of visual hallucinations by various modes of crystal-gazing is of world-wide diffusion and unknown antiquity; and that the 'use' of the practice has been the discovery of knowledge not otherwise accessible, though knowledge of the future has not perhaps

though knowledge of the future has not perhaps been much sought in this fashion, except in modern Europe, and in a well-known anecdote of the Régent d'Orléans told by Saint Simon.

Miss Goodrich Freer, in her essay already cited, was (after W. Gregory [Animal Magnetism, London, 1851], and H. Mayo [Truths in Popular Superstitions, Frankfort, 1849]) the first author to examine seriously the question of crystal-gazing. She herself possesses the faculty, and she analyzed the phenomena in her own experience. She found that the visions represented (1) lost memories which thus arose into her upper consciousness; (2) ideas or images which might or might not be present to her normal consciousness; (3) visions, possibly telepathic or clairvoyant, implying acquisition of knowledge 'by supernatural means.' The examples of this last class which the author gave were not very striking; but the present writer has known her to be much more successful.

It has been the writer's fortune to meet a large number of very normal persons of both sexes, and often of high intelligence and education, who, on making experiments in a subject entirely new to them, exhibited the faculty in various degrees. In its lowest form figures of persons and objects were seen in black and white; not in the colours of nature. Letters in the printed Roman alphabet were also seen. A higher form of the faculty is the beholding of figures in the costumes of various nations, engaged in various ways, some of them romantic; in other cases they appear to represent some unknown incident in history. Personages known or unknown to the gazer very frequently occur. The figures, wearing the colours of nature, move about in a free natural way, and often remain long in view, even when the crystal, after being laid down, has been taken up again. In some well-attested cases two persons see the same crystal vision simultaneously, or one after the other. But, in the second category, the writer has only once known the vision—novel to the gazer—to be fitted later with a real objective counterpart, discovered .

accidentally. What he saw actually existed in all its details, unknown to him and to the writer, who was looking on at the experiment, made in his smoking-room. In 1897, the writer met at St. Andrews a young lady who was visiting the place for the first time and who had never heard of crystal-gazing. Being presented with a glass ball, she made a number of experiments. The method was that any one who pleased (and all were but very recent acquaintances of the gazer) thought of anything or anybody that he or she chose. The lady then looked into the glass ball and described what she saw. A dozen cases of her success (which included seeing persons unheard of by her, in places unknown to her, persons dressed and occupied places unknown to her, persons dressed and occupied as inquiry proved that they had been clad and engaged at, or shortly before, the hour of the experiments) are published in the writer's The Making of Religion, pp. 90-112, from signed and attested records. Many other successful cases are known to the writer, and, during the course of the experiments already mentioned, it very rarely occurred that the gazer saw nothing, or something not consciously present either to the sitter's mind, not consciously present either to the sitter's mind, or—what is more curious—to the mind of a sceptical looker-on, not the sitter. If telepathy be the cause of such occurrences, they illustrate the casual and incalculable quality of that agency. For example, in some experiments a lady in the south of England was to try to send impressions to a gazer, who had never heard of her, in the north of Scotland. The message, of a very simple kind, did not arrive; what arrived was a vivid picture of certain singular incidents of a private nature which certain singular incidents of a private nature which had much impressed the distant communicator, but which she had no intention of transmitting. fortuitous coincidence could not explain so many successes in the experiments of 1897—the crystal pictures being full of minute details—the writer pictures being tull of minute details—the writer was reduced to supposing that some unascertained cause, going sometimes beyond telepathy as usually defined, was at work. Many other curious examples of the possession of the faculty, apparently accompanied by telepathy, have occurred in experiments by friends and kinsfolk of the writer—healthy, normal men and women. The gazers have never shown any traces of drowsiness or dissociation, or even any tendency to form theories about tion, or even any tendency to form theories about their experiences, except in one instance, when experiment destroyed the theory.

In the writer's opinion experiments of the kind described are more trustworthy than investigations into the hallucinations of professional and trained female hysterical patients in French hospitals. Pierre Janet has published such experiments with professional neurotics at the Salpétrière in his Névroses et idées fiaes (Paris, 1898). His account of the experiences of Miss Goodrich Freer in her paper, already cited, is of the most fantastic character, as becomes manifest when her narrative is compared with the document which, in addition to his own imagination, is his source. In affairs of this sort few people who have not personal experience of unaccountable successes can be expected to believe in them; while few who have been present at such successes, and have had their own thoughts read (of course without physical contact—muscle-reading'—between the sitter and the crystal-gazer), can persist in scepticism. It is plain that in most countries and ages crystal-gazing in one form or another has been practised, and successes would greatly increase the hold in priest, or witch, or medicine-man, over his patrons, Fraud would doubtless be used wherever it was possible; knowledge normally acquired would be presented as of supernatural origin. When fraud is excluded, successful crystal-gazing offers a problem even more difficult than success with other automatisms

such as the so-called 'divining-rod' and the tilting table. These automatisms appear to present to the normal consciousness knowledge within the range of the sub-conscious mind, though we cannot tell how the sub-conscious mind in many cases obtains its information.

LIERATURE.—As this subject has attracted attention only in recent years, the literature of it is very scanty, and most of it has been cited by Miss Goodtich Freer (as 'Miss X.') in Proceedings of the Society for Psychical Research, vol. v. pp. 486, 521, vol. viii. pp. 458-535, 259, 276; reference should also be made to A. Lang, The Baking of Religion, London, 1908, and later editions, pp. 90-113; N. W. Thomas, Crystal Gazing, its History and Practice, London, 1905; E. W. Lane, Modern Egyptians', London, 1800; Quarterly Review, vol. it.; L. de Laborde, Commentaire, Paris, 1841; F. W. H. Myers, Human Personality, London, 1908.

Andrew Lang.

CÚCHULAINN CYCLE.—I. Cúchulainn, the chief hero of the Ulster cycle of romance, is regarded as a re-incarnation, or avatār, of Lug Lamhfada, 'the long-handed,' the solar deity of the ancient Irish; he is considered in his birthstories sometimes as son of Lug, sometimes as Lug himself re-born. His mother was Dechtire, sister of king Conor (Conchobhar) of Ulster; she and fifty young maidens, her companions, were transformed into a flock of birds who disappeared for three years from the king's court, and were found in the neighbourhood of Brugh on the Boyne, where are tunuli traditionally believed to be the burial-places of the Tuatha Dé Danann deities. Here Dechtire gave birth to a babe; in one version of the tale it is revealed to Dechtire by Lug that he himself is her little child (i.e. that the child is a re-incarnation of himself); in another, Lug is the noble young warrior whom she has espoused.

the noble young warrior whom she has espoused. The idea of re-incarnation is not unfamiliar in Irish literature. In the tale called 'The Wooing of Emer' it is stated that the men of Ulster wished to provide a wife for Odohulainn, 'knowing that his re-brith would be of himself,' i.e. that only from himself could another such as he have origin; and in the tale of 'The Generation of the Swineherds,' which explains the origin of the Bulls who take part in the great mythological warfate of the Thim Be Chaluge, we find that these prodicious kine have gone through a series of incarnations before their final appearance as bulls.

Throughout his career, Cúchulainn is watched over by his divine kinsman, Lug, and he points proudly to his connexion with Lug when questioned as to his origin. He has also a father, Sualtach or Sualtam (variously spelt Soaltainn, Soalta, etc.), to whom, according to one of the birth-stories, Dechtire is married by king Conor after her connexion with Lug. The stories are much confused, and there are suggestions in one of them of an incestnous connexion between Dechtire and her brother the king himself. The child is named Setanta by Lug's command. Little is known of Sualtach; though usually regarded as a human being, he is more than once called in Old Irish literature Sualtach stathe or Sualtach statheof, i.e. 'Sualtach of the fairy haunts'; and he is spoken of as possessing through his mother, who was an elf woman, 'the magical might of an elf' (cf. Book of Leinster [LL], 58a, 24; Coir Anmann, Ir. Texte, iii. sect. 282). Like all the personages of the cycle, he is clearly regarded as a mythological being. His name has become curiously mixed up with the genealogies of Fionn mac Cumhall (cf. Brit. Mus. MS Egerton, 1782, in which he appears as Fionn's grandfather). In the Tain Bo Chalnge he comes to his son's aid when he is exhausted by the labours of the war, and arouses the hosts of Ulster to his assistance. He is there called 'Sualtach or Sualtam, son of Becaltach (Becfoltach) mac Moraltach, father of Cúchulainn mac Sualtach' (LL 93a). He was killed by falling accidentally upon the rim of his own shield.

Although Cuchulainn is the prime hero of Ulster, and his feats of heroism are performed and his wars undertaken in defence of that province, he is

96

nevertheless said (in MS Harl. 5280, fol. 53 B, Brit, Mus.) not to 'belong to Ulster'; and, when the whole of the male inhabitants of that province were overtaken by the physical weakness which recurred among them at intervals, and which seems to have been the result of some sort of gets, or 'tabu,' Cúchulainn and his father Sualtach were exempt and able to fight. Though usually and officially described as of splendid appearance and with ruddy and golden hair, Cúchulainn is somewith ruddy and golden hair, Cúchulainn is sometimes spoken of as 'a dark sad man' ('Wooing of Emer' [Arch. Rev. i. 72]), or a 'little black-browed man' (Mesca Ulad, p. 29), which would not suggest descent from the Ultonians; in connexion with Cúchulainn's original name, Setanta, Rhys points out that there was a district between the Mersey and Morecambe Bay once inhabited by a people called Setantii, and refers to Ptolemy's mention (II. iii. 2) of a harbour of the Setantii, the position of which corresponds with the mouth of the Ribble (Celt. Heatle, 455 and note). An obscure Irish poem (Celt. Heath. 455 and note). An obscure Irish poem relating to Cúchulainn alludes to a Setantian stream (curoch fri sruth Setinti, 'a coracle against the stream of Setanta') (Leabhar na hUidhre [LU]

2. Cúchulainn's precocity is abnormal; already at the age of seven years he performs his first feats, and can fight with and destroy warriors of renown; his lengthened war of the Tain Bo Cualnge, sustained single-handed in defence of Ulster against the combined forces of Munster, Leinster, and Connaught, and continued during an entire winter, from before Samhain, or Hallowe'en (Oct. 31st), till after St. Bridget's Festival (Feb. 1), is represented as having taken place when the hero was only seventeen and still a beardless youth; was only seventeen and still a beardless youth; and he is said to have died at the age of twenty-seven (Ann. Tighernach). Among his feats performed when he was a mere child is that from which he received his heroic title of Cúchulainn. Cú (gen. Con), 'hound,' was a title often bestowed to denote a hero of renown, in reference to the use of large hounds in battle and the housens shown in of large hounds in battle and the bravery shown by them. Cúchulainn says of himself:

'I was a hound strong for combat, I was a hound who visited the troops, I was a hound to guard Emania.'

He received this name from his combat with a fierce dog, said to have been brought from Spain (gloss in LU), which guarded the fort of Culann, a smith of Ulster, and which was slain by the boy when he was scarcely six years old. The child himself took the office of the watch-dog until one of the dog's whelps was sufficiently grown to replace him. Henceforth the name Cú Chulainn, 'Hound of Culann,' clung to him.:

Hound of Culann, clung to him.:

It is said in Mesca Ulad that a district extending from Usnech in Meath northward along the coast to Dún Dalgan (Dundalk), and called Conaille Muirthemne and Culange, belonged personally to Cúchulainn (Todd Lecture Series, 1889, i. 2). It embraced the present county of Louth and parts of Meath and Westmeath. At that time the province of Meath, with its overkingship of Tara, had not come into existence, and Uster extended southward to the Boyne, touching the provinces of Leinster and Munster at the Hill of Usnech in Westmeath. This district seems to have been bestowed on the hero by king Conor, and was not his by inheritance. Cúchulainn's own fort was Dún Dalgan (now Dundalk).

His wife was Einer, daughter to Forgall the Wily, a landowner near Luck, in the present county of Dublin. A special tale relates his wooing of Emer. Though she appears to have been his only real wife, she had numerous rivals, of whom the most formidable was Fand, wife of Manánnan mac Ler, a goddess who enticed him away for a time into fairy-land.

3. The Red Branch.—Cúchulainn is the central

3. The Red Branch.—Cúchulainn is the central figure of a group of champions commonly known as 'the Champions of the Red Branch,' so called from one of the three halls in the kingly palace of Emain Macha or Emania (now Navan Fort, S.W. of Armagh, where raths remain to the present day).

18年1月1日

are, besides these longer tales, numerous detached episodes which fill up gaps, so that the career of each hero of importance can be traced from birth to death in a very complete manner. They form to death in a very complete manner. They form a connected whole in, the mind of the story-teller and reader, much as the originally isolated tales referring to Arthurian knights ultimately came to be formed into a complete cycle of stories. The three most prominent champions, who are frequently exposed to tests of strength or prowess against each other, are Conall cernach, 'the Victorious,' Læghaire bùadach, 'the Triumphant,' and Chichulainn, but Cichulainn invariably proves and Cúchulainn; but Cúchulainn invariably proves himself to be the greatest hero of the three.

These tales seem to have originated in, and deal These tales seem to have originated in, and deal largely with, that eastern portion of Ulster which lies between the R. Bann and Lough Neagh on the west and the sea on the east. The capital was Emain Macha, and within this area lay the forts and dwelling-places of most of the chief heroes of the Ulster cycle. The king, who appears in the tales as ruling from Emain Macha, is named Conor (Conchebbar), and his death is symptomized with (Conchobhar), and his death is synchronized with that of our Lord in Jerusalem. The reign of Conor and the exploits of the heroes are thus traditionally laid in the first century. Though king Conor and all the champions are accepted by R. O'Flaherty (Ogygia, Dublin, 1793, pt. iii. c. xlvi.-xlviii.) as historical personages, there is no place found for them in the Annals, though Conor is said, in some versions, to be the son of Fachtna fathach, 'the Wise,' who, according to the Annals of the Four Masters, ascended the throne of Ulster in the year of the world 5042 (152 B.C.).

The entry runs:—'A.M. 5042. The first year of Fachtna fathach in the sovereignty of Ireland'; and fifteen years later we have the entry of his death: 'A.M. 5057. Fachtna fathach, son of Rossa, son of Rudhraigh, after having been sixteen years in the sovereignty of Ireland, was slain by Eochaid feidhleach (i.e. the constant sighing).'

But this attempt to connect king Conor with a king of all Ireland was evidently a late one, and is the less to be taken into account as there is no sign in these tales that the central province of Meath, with its capital at Tara, had at this time been erected into a separate division, or that any over-king (called in Ireland Ard-Rt, or 'High King') as yet reigned over Ireland. Ulster is represented as haughtily independent, and each of the other reas had its own king, who acted with perfect freedom independently of any central authority. The provinces, or 'Four Great Fifths,' of Ireland were, at the time of which we speak, Ulster, Leinster, Connaught, and East and West Munster. Meath, the future central royal province, created for the support of the High Kings of Ireland who ruled from Tara, did not then exist. Nor, considering that Fachtna died 137 B.C., could he have been father to Conor, who reigned in the beginning of the 1st century. Another and probably older version makes king Conor son to the druid and poet Cathbad, by Nessa his wife, a woman warrior. Though Conor's death is synchronized with the moment of

our Lord's crucifixion, the Annals of Tighernach date his death at 48 a.c. O'Flaherty, probably observing some of these inconsistencies, says that 'the king came near committing suicide, but lived fitteen years after.'

We may regard these attempts to fit the career of king Conor and of the Champions of the Red Branch cycle into the actual history of Ireland in much the same light as the connexion of the heroes of the Nibelungen with the early history of the Teutonic peoples or of king Arthur's knights with the history of Britain. The tales sprang up at a time when the power of eastern Ulster was still a living tradition are not at the literature above. tradition among the literary class in Ireland. The raths at many of the sites of the traditional forts, of Armagh, where raths remain to the present day).
The history and feats of these heroes are described in a series of over a hundred distinct tales. There Meave of Connaught, show that the legends were connected with known historical sites, but it is unnecessary on that account to consider the actual personages of the cycle or their careers as historical. They are plainly regarded as mythological, and the chief events and wars in which they were engaged bear a mythological interpretation.

The tales have a close relationship to the legends of the race of gods known as the Tuatha De Danann; a few of them, indeed, both in style and Danann; a few of them, indeed, both in style and subject, belong equally to both cycles. Such are 'The Wooing of Etain' and 'The Dispute of the Swineherds.' The pedigrees of the heroes of the Red Branch are all traced up to the Tuatha Dé Danann, although, according to the Annals, there is a lapse of 1500 years between the two epochs. Rudhraigh, or Rury, is the head of the house, and from him and from the goddess Maga, daughter of Angus na Brugh, by her marriages with Ross ruadh, 'the Red,' and Cathbad the druid, all the chief heroes are descended (see genealogies in E. Hull's Cuchullin Saga, Introd. p. lv). The extraordinary feats and prowess of the champions are supposed to be accounted for by their divine extraordinary leads and prowess of the champions are supposed to be accounted for by their divine origin. According to this descent, Cúchulainn is grandson of Maga, who is mother to Dechtire, which brings him within the kingly line of Ulster, and denies the statement that he 'was not of Ulster' (see above). Probably that statement was merely an effort of the story-tellers to explain what they could not otherwise understand viz what they could not otherwise understand, viz. why Cúchulainn and his mortal father Sualtach or Sualtam were exempt from the curse which prostrated the whole male population of Ulster in sickness at a critical moment in the history of their

4. Cúchulainn as a sun-hero.—Cúchulainn was 4. Cüchulaini as a sun-hero.—Cüchulaini was therefore, on the one side, directly connected with Lug, the sun-god, and, on the maternal side, with Maga, a Tuatha Dé, Danann goddess. King Conor also is called a dia talmaide, or terrestrial god, in LU 101b; and Dechtire, his sister, the mother of Cúchulaini, is called a goddess: Cúchulaini mac dea Dechtire, 'the son of the goddess Dechtire' (LT. 1936)

(LL 123b).

The two marvellous Bulls for the possession of which the great war of the Tain Bo Cualnge was undertaken were of supernatural origin, and had existed under many different forms before they were re-born as bulls; they had been first swine-herds of the gods of the under world, then ravens, warriors, sea-monsters, and insects. Under each of these forms they had lived through vast periods of time; out of them they had come after a terrific struggle which shook the borders of Ireland, only to pass again through some new transformation (Irische Texte, III. i. 230-278). These struggles proved to be preludes to the war of the Tain, in which all Ireland was destined to engage, and to which all Ireland was destined to engage, and to the gigantic struggle at its close between the two Bulls themselves, in which both were torn to pieces. The mythological warfare of these Bulls, the Finn bennach, or 'White horned,' and the Donn, or 'Dark' or 'Brown' Bull, belonging respec-tively to the East and West of Ireland (Chialnge in Co. Down, and Rath Cruachan in Connaught), seems to symbolize the struggle between summer and winter or the struggle between day and night. and winter or the struggle between day and night. The Donn is a terrific creature in strength and in size. On his back fifty little boys could play their games. He moves about accompanied by fifteen (or fifty) heifers. His ferocity and violence are so great that, when he is driven into a narrow pass, he revenges himself by trampling his keeper to death and treading his body thirty feet into the earth. His bellowings strike terror into all who hear him, and those who meet him after his final of the sun's rays when conflict with the Finn bennach are trampled and beneath the ocean waves.

gored to death. This conflict, which lasted a day and a night, and during which the Bulls traversed and a might, and during which the Bulls traversed the whole of Ireland, was ended by the Donn tearing his adversary to pieces and returning, head in air, to his native home in Cúalnge, where, in the madness of his frenzy, he placed his back to a hillock and 'vomited his heart up through his mouth with black mountains of dark-red gore,' and so expired. In like manner Cúchulainn is in warm was almoraed. His read dark-red gore, and so expired. every way abnormal. His rapid development and his prodigious strength and powers are everywhere insisted upon. When he is about to perform any special prodigy of valour, his whole person expands special product of various, his whole person expands and undergoes an extraordinary change; he grows monstrous, terrific, so that his own friends cannot recognize him; he is known as 'The Distorted' (riastartha), or 'The Madman' from Emain Macha. When he puts forth his strength, his appearance is so terrific that none can stand before him; his very look destroys his foes, not by twos or threes but by hundreds; a stream like dusky blood, representing his energy, rises upward from his forehead, and over his head his 'bird of valour' hovers (cf. the light over the head of Achilles caused by Athene, II. xviii. 205 [Butcher-Lang's tr. p. 372f.]). His body gives off a heat which melts the snow around him, or raises to boiling-point three vats of water in which he is successively improved. Yet this fermidally necessaries for immersed. Yet this formidable personage is frequently derided by his enemies for the boyishness and insignificance of his usual appearance. Prime heroes, until they experience his hidden powers, refuse to fight with him; Queen Meave is visibly disappointed when she first comes face to face with the champion who has been holding her forces at bay through weeks of combat, and killing them by the hundred merely by his look; on one occasion he has to blacken a moustache with blackberry juice in order to present a more manly appearance.

If we regard Cúchulainn as the sun-hero, these indications of his unimposing appearance at ordinary times, succeeded on occasions by strange distortions and manifestations, seem aptly to represent the impression which might be produced on the savage mind by the contrast between the orb of the sun on ordinary occasions and its appearance in eclipse. Again, the fine poetic simile of the threefold hues of his hair, and the account of the threefold hues of his hair, and the account of his splendour when he appears before the forces of Meave to display his person in its natural beauty, seem designed to illustrate the glory of the full sunshine of summer; so, too, do the heat generated in his person, the energy of his movements, his wandering habits, and the destructive power of his look. We may also note that 'blindness befell all women who loved him'—which may possibly have reference to the difficulty of gazing directly on the sun. It is possible that Cichalainn's directly on the sun. It is possible that Cúchulainn's fight, from which he so hardly escaped, with the twenty-seven sons of Calatín, hideous and crooked beings, who formed armies out of puff-balls and out of the foliage of the oak, and came furiously riding on the 'wind's swift clouds,' may symbolize the hiding of the sun's face before the 'armies of the hiding of the sun's face before the 'armies of the storm,' i.e. the massive clouds, formed, as it might seem, almost out of nothing. (Cf. a similar sort of incantation in 'The Death of Muirchertach mac Erca,' RCel xxiii. [1902]; the 'Battle of Kat Goden,' Skene, Four Anc. Books of Wales, i. 277f., ii. 138; and 'The Mabinogion of Math, son of Mathonwy,' Lady C. Guest's Mab., Lond. 1877, p. 416.) A remarkable 'tabu,' or gets, of Cúchulaim' was to 'see the horses of Manánnan mac Ler' (i.e. the billows of the ocean-god), which might be a reference to the apparent extinction of the sun's rays when he sinks down at night of the sun's rays when he sinks down at night

shall have power to restore to humanity its lost

unity (ib. 492 f.).

As prophet of the Romantic School, Friedrich Schlegel felt the force of Kant's transcendentalism, but was more inclined to base his culture upon the Ego of Fichte, and, while he appreciated Schiller's æsthetics of the naive, he himself showed a disposition to adopt the sentimental, or romantic, culture of the infinite. In Schlegel's mind, Goethe's culture of the minute. In Schleger's mind, Goethe's Wilhelm Meister, the French Revolution, and Fichte's Wissenschaftslehre were the three greatest tendencies of the age (Jugendschriften, ed. J. Minor, 1882; Athenæum, § 216); from them may be traced a triple Romantik—poetical, political, philosophical, in form. Fichte himself was an ardent believer in culture; coming after the French Revolution and postulating constructive material culture, he contrasts strikingly with Rousseau. In his Beitrage zur Berichtigung über die französ. Revolution, 1793, the term 'Cultur' is of frequent occurrence; it is identified with the inner freedom and rationality of Kantianism. No human sensation or impulse, no action or passion, is esteemed of value unless it makes for culture, or the exercise of all man's powers towards complete freedom as a goal (Werks, Leipzig, 1846-47, vi. 86). In the State, the culture of freedom should be the aim, declares Fichte (ib. 101), while the true fatherland is that State which is the most highly cultured (ib. vii. 212). Such was Fichte's own culture-philosophy. Yet the Fichtean element that appealed to the Romanticist was the Ego, whose free activity was for Fichte the leading principle of all culture. Schlegel, however, develops romantic culture by emphasizing the esthetical activity of the Ego, whence he derives his doctrine of *Ironie*, the watchword of Romanticism. In essence, *Ironie* consists in a work of self-creation and self-destruction, due to the Ego's striving after an impossible ideal (Athenaum, §51). In poctry, this subjectivism is called transcendental where it begins as satire with its contrast between ideal and real, changes to the sadness of elegy, and ends as an idyll which identifies the two (ib. §228). Where Schiller used 'sentimental,' Schlegel employs 'transcendental,' of which style he considers Dante the prophet, Shakespeare the centre, and Goethe the climax—'der grosse Dreiklang der modernen Poesie' (ib. §247). In thus styling Shakespeare transcendental, Schlegel invests Schiller's 'naivo' and 'sentimental' with the historical sense of ancient and modern—an idea carried out systematically in Die to the Ego's striving after an impossible ideal modern—an idea carried out systematically in Die Griechen und Römer (1797). Grecian poetry, declares Schlegel, begins with nature and aims to reach beauty through culture (p. 10); modern poetry aims at subjective æsthetical power rather than objective beauty (p. 79), whence arises a striving after the poetical as something transcendental, a 'Schnsucht' which is destined to remain unsatisfied (p. 103). This type of poetry contrasts strikingly with the compact culture-consciousness of Classicism, wherein 'Kunstpoesie' and 'Naturacie', regin compact culture-type of the service of Classicism, wherein 'Kunstpoesie' and 'Naturacie', regin compact culture-type of Classicism, wherein 'Kunstpoesie' and 'Naturacie', regin compact culture-type of Classicism. poesie' are in complete harmony (Athenæum, § 252). Thus, as the culture-consciousness of the Enlightenment had arisen in England, that of Romanticism has been seen to have originated in Germany. There was, of course, a French Classicism and a French Romanticism, but perhaps the most direct contribution to culture that France was to make is found in the third period-that of Realism.

found in the third period—that of Realism.

3. Realism.—The inception of the Realistic, or Laturalistic, movement may be noted as early as another than the second of the

classified by the aid of Taine in 1857, Zola in 1880, and Paul Bourget in 1883 (Huneker, Egoists, 1909, 4f.). Another root of this realism is found in Flaubert, whose Madame Bovary (1857) resulted in a culture-philosophy called 'Bovaryisme,' or Illusionism, hardly in keeping with the acknowledged realism of Flaubert. Another frank attempt to be realistic appeared with Baudelaire's Fleurs du mal (1857) under the head of 'Satanisme.' These three tendencies re-appear in the rhapsodies of the German 'superman,' Nietzsche, who was probably affected no less thoroughly by Max Stirner's The Ego and his Own (1845), which delivers its author from both pagan Classicism and Christian Romanticism, while it rivals the early Christians' contemptus mundi' by its contempt for spirit and truth (see pp. 464, 478, 484). This egoistic nihilism and activism, involving the transmutation of individualistic and social standards of value, was originally pursued by Nietzsche in the milder form of Romanticism, due to the influence of Wagher's music, which Nietzsche employs to explain the origin of Greek tragedy. Where both Cl cism and Romanticism had agreed in regar Grecian culture in the form of Apollonian cason ness, Nietzsche, who was guided by the dynamic ideal of musical art, and who had profited nent Schopenhauer's distinction between intellect a 22 will, introduced the idea of a Dionysiac element, in accordance with which the intellectual realm of culture and refinement was set off against the voluntaristic one of barbarism and passion. Nietzsche had carefully noted Schiller's use of 'naive,' and had also appreciated its significance in the psychology of Classicism; nevertheless, he In the psychology of Classicism; nevertheless, he was anxious to show that the Greeks had achieved the naive of Apollo only by a mighty conquest over the barbaric and titanic of Dionysus *Die Geburt der Tragodie*, 1886, § 3). To Schiller's naive poets, Homer and Shakespeare, he adds the name of the artist Raphael, whose 'Transfiguration' reveals, in art-symbolism, the eternal sorrow and contradiction of the world, expressed as it is and contradiction of the world, expressed as it is on the lower and darker half of the canvas, which portrays the struggles of the possessed, and the vision of peace and intelligence shining in the transfiguration above (ib. § 4). But, with his desire to conceive of culture in the activistic function peculiar to the art of music, he seems to have approved of the Dionysiac and to have welcomed its entrance into modern culture (ib. § 19). Following Nietzsche, Sudermann has elaborated a kind ing Rietzsche, Sudermann has etalorated a kind of culture-philosophy which, while attracted by the Grecian sense of harmony, agrees with Schiller in its Apollonian view (see, e.g., The Joy of Living, tr. Wharton, 1907, Act i.), but which is perhaps more ready to assert that, after all, the will is so superior to the intellect that the passions are destined to triumph over the spirit in man. This supremacy of the Dionysiae same to avalein the supremacy of the Dionysiac seems to explain the sensuality and irrationalism of man, who accounts for his viciousness by saying, 'Es ist das Heidenthum in uns' (cf. Axelrod, H. Sudermann, eine Studie, 1907, p. 63).

The realistic culture that signified a kind of

Dionysiac revolt against conventionality was accompanied by the criticism of various nationalities by cultured patriots. In Russia, Turgenieff made ideal war upon society under the romantic banner of 'Nihilism' (Fathers and Children, 1861, tr. Hapgood, 1907, ch. v.), and repudiated his country

for its lack of ideas:

Our dear mother,' says he, 'Orthodox Russia, night sink down to the nethermost hell, and not a single tack, not a single pin would be disturbed, . . because even the samovar, lindenbast slippers, shaft-arch, and the knout—these renowned products of ours—were not invented by us' (Smoke, tr. Hapgood, 1907, ch. xiv.).

In Norway, Ibsen used egoism and ni'ilism to

is country to a sense of intellectual self-In Brand (1865) he idealizes the Nor-in Peer Gynt (1867) he satirizes him; Emperor and Galilean (1873) he seeks to the coming of a 'third empire' of selfhood, to supersede the 'Christian empire of the is that had overcome the 'pagan empire esh' (Pt. ii. Act iii. Sc. iv.). In America, ie national consciousness was absorbed by and weighed down by Puritanism and ism, the call to culture was sounded long the free spirit of Emerson. His address, erican Scholar (1837), contains an ideal me for the promotion of national culture; a spirit at once Athenian and American, asses the influences of nature, literature, vity, which promote the culture of 'Man g, while he also emphasizes the scholar's ward his age, which, in Emerson's mind, longer the classic or romantic, but the hical one. In far different manner from Ilonian and Socratic serenity of Emerson, hasized the Dionysiac in the form of the and mysterious with their inherent sense of ction. The significance of Poe was really the decadence that later was to repudiate the decadence that later was to repudiate.
This was to come about through Baudet was not to become effectual until the he 19th century, with Verlaine, Mallarmé, lel'Isle-Adam, Huysmans, and Maeterlinck, s Swinburne. The culture-consciousness of idence, dissatisfied with the limitations of made use of the morbid, the views and , made use of the morbid, the vicious, and terious in order to sound anew the depths soul. By means of symbolism, it sought omething objective to express the psychoprofundity that it affected. In the north, abolism was developed systematically by

y far the most systematic culturist critique nal life was carried on by Matthew Arnold, sufficiently nihilistic and egoistic in spirit le his work Culture and Anarchy (1869), was sufficiently radical to direct it against ntism and 'Hebraism.' Arnold's method to fa free Socratism, in the course of whose ion he finds it expedient to praise Plato Paul for their intellectualism (ch. iv.), sing and Herder for their spirit of national Calling himself a 'man without a phil-Arnold was possessed of sufficient con-

Calling himself a 'man without a phil-Arnold was possessed of sufficient consm to treat culture to an analysis of its 1 root, whence he regards it: (1) as an condition of humanity rather than ani-(2) as a growing and becoming rather than 2 and a having; (3) while it was so general vance mankind rather than the mere indivitinin whom (4) it consisted of an expansion s powers, instead of some one in particular, ligious (ch. 1). This broad humanistic culsold identifies with something suggestive of s'grace and dignity,' by calling it 'sweetlight'—an expression which he borrows ift, as Schiller had borrowed from Sterne. ast with his nation's 'faith in machinery,' exercises a faith in culture, by means of e is led to say that the England of his own little in comparison with the England of h (ib.). This æsthetical reflexion upon astrial age of coal was accompanied by a of the moralistic, or Puritanical, carried nnexion with the distinction between Helwith its 'spontaneity of consciousness,' braism, with its 'strictness of conscience' to principle of thinking, the other of doing. Arnold's philosophy of history, observing rope has been subjected to a double treat-culture and civilization, places Hellenism

at the head of spiritual development in the West, while it accounts for its failure to rule by calling it 'premature,' whence Hebraism was enabled to govern the world. With the supremacy of Hebraism, which Arnold treats more kindly than Nietzsche treated Christianity when he saw its 'transvaluation of pagan values,' there comes a Renaissance revival of Hellenism, which, like original Hellenism, so suffered from lax morals that Hebraism, in the form of Puritanism, was again called upon to rule by means of strict obedience (ib.). Believing that Hellenic sweetness and light is the one thing needful, Arnold believes also that it may further the cause of Hebraism, which can only gain from an infusion of Socrates' 'disinterested play of consciousness' (ch. v.). Indeed, Hebraism seems never to have relinquished its hold upon Arnold, who, in Literature and Dogma (1875), esteemed 'conduct as three-fourths of human life'; hence we may speak of his Hellenizing culture as 'morality touched with sweetness and light.' Without appreciating the strength of Arnold's sentiments, popular culture is now busy with the more entertaining features of science, art, and philosophy, its devotees being organized into groups not without resemblance to the Précieuses Ridicubes and the Femmes Savantes of three hundred years

II. THE PROBLEM OF CULTURE.—As the definition of culture has implied, the contrast between nature and spirit, animality and humanity, activity and contemplation, inner and outer, immediate and remote, contains a problem for the human species which belongs to nature, but which, nevertheless, contemplates a trans-natural or spiritual goal for humanity. The most essential element in the psychology of culture is that which relates to the intellect and the will, with the accompanying contrast between the life of culture and that of activity. With the question presented upon the intellectualistico-voluntaristic basis, the two remaining problems of humanity and happiness will follow in a natural order.

1. Culture and activity.—When contrasted with the outer life of activism, the interior and con-templative character of culture assumes the form of an intense problem of values, especially in an age where naturalism is exalted by science and where industrialism deafens the ear to the 'Know thyself' of intellectualism. Hence society has scruples against culture, which, it is urged, unfits man for life in the outer world among men and things. The antinomy between intellect and will has long afflicted the Indo-Germanic consciousness, and as far back as the days of Vedanta philosophy it had sought to reconcile the conflicting claims of the Sānkhya of thought and the Yoga of action by declaring that the pursuit of knowledge and the performance of work were both necessary to bring man to the highest spiritual state of workless contemplation (Bhagavad-Gitä, ch. v.). With the Greeks, who were both Apollonian and Dionysiac, the ascendant principle was the intellectualistic one; for, while Aristotle based life upon exepyeta, be found evocutoria to consist in an energy tempered by moderation and perfected by contemplation (Nic. Eth. x. 7). It was in this spirit that Bacon exalted the 'work of contemplation.' Voltaire's attack upon culture was carried on in the same eudemonistic manner; accordingly his pessimistic Candide (1758) urges man to work without thinking, as the only means of rendering life bearable, whence follows, at the conclusion, the familiar maxim, 'Il faut cultiver notre jardin.' In the history of French scepticism, the same advice had been given by Montaigne, who also counsels one to assume the consciousness of a dumb animal in order to find wisdom—'Il nous faut abestir pour The Carl

nous assagir' ('Apologie de Raymond Sebond,' Essais, Lyons, 1595, bk. ii. ch. xii.).

But the classic example of the genius who sought peace by harmonizing inner with outer life is Goethe, with his Torquato Tasso (1789) and Faust. Developed in Italy, where Goethe came into living contact with Hellenism, Tasso was submitted to the classic form of treatment, which was hardly fitted for the strivings of the unhappy hero with his Werther temperament. The display of soul-stuff, with its conflict between intellectualism and activism, is carried on in the comparison between Tasso and Antonio, the man of affairs; for, even when crowned with the wreath taken from the bust of Virgil, as a sign of his success in completing his Jerusalem Delivered, the poet is envious of the practical man, who has just returned from an important mission. In the course of this drama of the inner culture-consciousness, Goethe takes the opportunity of introducing certain maxims which have become famous. Thus in his jealousy of Antonio, Tasso exclaims, 'I feel myself more than ever of double soul' (Act ii. Sc. i.), referring to the duality of soul embodied in Faust (i. 759). The poet's incompleteness is celebrated in the words, 'Talent is formed in solitude, character in the stream of the world' (Act i. Sc. ii.); while it is declared that self-knowledge comes not from within, but rather out in the world among men (Actii. Sc. iii.). Where the Princess celebrates the poet's sorrow by calling it 'charming' (Act i. Sc. i.), Tasso at last confesses the profundity of his inner contemplative confesses the c tive consciousness, in the memorable Goetheanism, 'Some god gave me power to tell how I suffer' (Act v. Sc. v.). This Goethean nostalgia for activity has recently received brilliant recognition in Paul Bourget's Le Disciple (1889). Faust's sense of two collegistics are recognitive processes. of two souls within expresses the conflict more or two sours within expresses the conflict more profoundly, while it solves the problem more decisively as the victory of the active altruist over the thinking egoist, or the merging of the two in the unity of life, the consciousness of which leads Faust to bid the holy moment stay: 'Verweile doch, du bist so schön' (ii. 6953).

The culturist, however, will object to this activistic treatment of the problem, and persist in his contemplation, however painful it may be for him. Moreover, intellectualism claims that action stands in need of the thought-principle, inasmuch as the will comes to consciousness only in ideation, as was confessed by the arch-voluntarist, Schopenhauer, when he made the will-to-live objectify itself as Platonic ideas (World as Will and Idea, tr. Haldane and Kemp, 1883-6, §25). Apart from thought, activity defeats its own humanisticaims, for, 'where there is no vision, the people perish' (Pr 29<sup>18</sup>). The recent egoistic movement in literature reacts favourably upon culture, which is so interior in its nature as to make most difficult any social interpretation of the contemplative. Thus Maurice Barrès stands for a 'culte du moi' in the 'tour d'ivoire' of self-hood (cf. Huneker, Egoists, in loc.). In the same spirit, Anatole France, although apparently a be-liever in collectivism, is not without egoistic and intellectualistic traits. These appear brilliantly in *The Red Lily*, where Paul Vence's opinion of Napoleon seems to express the author's view of

activists in general:

activists in general:

'A poet, he knew no poetry but that of action. His great dream of life was earth-bound. . . His youth, or rather his subline addessence, endured to the end, because all the days of his life were powerless to form in him a conscious maturity. Such is the abnormal condition of all men of action. They live entirely for the moment, and their genius is concentrated on one single point. They do not grow. The hours of their lives are not bound together by any chain of grave disinterested reflexion. They do not develop; one condition merely succeeds another in a series of deeds. Thus they have no inner life. The absence of any inner life is particularly noticeable in Napoleon: . . He lived outside himself' (Stephen's tr., 1908, ch. iii, p. 464.).

Where the culturist grants the validity of activism, he yet sees its limits, if not its dangers; or, as Bergson, a pronounced activist, has expressed it: 'It is presumable that, without language, intelligence would have been riveted to material objects that its interests led it to consider. It would have lived in a state of somnambulism, exterior to itself, hypnotized by its work' (L'Evolution créatrice 6, 1910, p. 172). Such a condition of exteriority, observed by both France and Bergson, would seem to be the unhappy state of mankind, apart from the intellectual deliverance that comes through culture; the man of genius, raised above nature, is enabled to transform the energy of action into the work of contemplation, as Flaubert's principle of violence in art resulted in rhetoric.

2. Culture and humanity.—While it goes without saying that man was meant for humanity, or for the perfection that belongs to the species, it does not follow that this perfection must be intellectualistic. For Bacon it was easy to identify veritas with bonitas (Adv. of Learn. I. viii. 2); but the modern notion of humanity's realization of the good is often elaborated in defiance of the intellectually true. In ancient thought, Plato's Republic banished poetry and the drama from the State; but this drastic measure was in the interest of truth as man's chief good (bk. x. 595-605). In modern times, Tolstoi has opposed decadent culture, because the control of the c cause, like Rousseau, he thinks that progress in intellectualism has brought about inequality, as also for Plato's reason that art does not yield truth. Tolstoi opposes the notion that art belongs to superior souls alone (What is Art? tr. Maude, 1889, ch. viii.). 'Art,' says Tolstoi, 'should unite men with God and with one another'; whence he arraigns, as inimical to this religion of humanity, all not that is a recomplished to the state of the s all art that is superstitious, patriotic, and sensual (ib. ch. xvii.). With a condemnation of modern art almost universal, Tolstoi surrenders to the genre and sympathistic, as represented by Dickens, Hugo, Dostoievsky, Millet, Breton, etc. His attack upon Shakespeare was provoked by the percention that the neat slighted the labouring classes. ception that the poet slighted the labouring classes. Ernest Crosby having made such a socialistic criticism of Shakespeare, Tolstoi proceeded to criticize his dramas, upon æsthetic and philosophic grounds (A Critical Essay on Shakespeare, tr. Tchertkoff, 1906 or ij Crosby's article). In addition to this 1906, pt. ii., Crosby's article). In addition to this social scruple against culture, there is also an ethical detent, based upon the thought that intellectual superiority in a nation seems to involve a pyramidal arrangement of the social order, where the enlightened few are supported by the mass of labouring people, whereby injustice arises. The failure of the esthetical to redeem mankind urged Schopenhauer to put ethics in its place, with the idea that, since not all can be artists, they should all be moralists, and that even in the cultured person the æsthetic moment is so transitory that it necessitates the permanent moral treatment of life in the complete denial of the will-to-live (World as Will and Idea, tr. Haldane and Kemp, 1896, \$\$ 27, 52; also bks. iii. iv.); culture, however desirable, does not seem to be imperative like morality, activity, and the like; but the argument involved is not really one of physical necessity, but of spiritual value; for, inasmuch as 'the earth is the planet of hunger, or the planet where one eats' (A. France), it might be argued that through necessity food is as important as virtue, and the economic the equal of the ethical. The question is one of values, as also one of psychological fitness; whence the culturist concludes that morality and social life stand in need of the enlightenment and evaluation that can come only when truth and beauty are pursued for their own sake. The most perfect conception of social life seems to have found ex-

pression in ancient times, when it was said, 'Many shall run to and fro, and knowledge shall be increased' (Dn 124). In the endeavour to promote the interests of an enlightened State, it is not out of place to commend culture and foster genius, for it must not be forgotten that humanity is in part to be conceived in humanistic fashion, which involves the exaltation of letters and arts, or the 'humanities.

Culture and happiness.-Where culture is 3. Culture and nappiness.— where challenged by activism and socialism, it is finally that it criticized by eudæmonism, on the ground that it fails to satisfy the soul. Here re-appears the contention of activist and socialist, who will assert that the disinterestedness demanded by culture can result only in diverting man's attention from immediate necessities, which, like eating, drinking, clothing, shelter, are imperative for the 'Sons of Martha' to consider. Both nature and natural society point to the place man is supposed to occupy in the actual world; hence the interior life of culture can only unfit him for his vocation as a living being, so great is the preoccupation which culture demands. Hence, with the physical and social struggle for existence, the contemplator is likely to be left stranded in the onward flux of events, so that all that makes for culture threatens the wellbeing of man. Modern educational systems have long been realizing this utilitarian principle, with the result that 'humanity' now, instead of con-noting culture, stands for social efficiency; while 'culture courses' in the curriculum are included among the non-essentials. To this argument against disinterested enlightenment, the culturist may reply by noting that these practical interests will take care of themselves in connexion with man's instinctive life, just as they will ever assert themselves in human education as demands made by the inquiring interested mind. But the cultural interest in remote ideals may safely be furthered in the life and education of man, who is necessarily predisposed in favour of the immediately useful.

With regard to culture as a means of promoting happiness, the central question is one of the possession or pursuit of knowledge. Classicism, which had culture without the culture-problem, upheld the possession of knowledge as affording the highest enjoyment; hence Aristotle said: 'It is reasonable to suppose that the employment (of wisdom) is more pleasant to those who have mastered it than to those who are yet seeking' (Nic. Eth. X. vi.). Mediæval Romanticism relaxed somewhat from this identification of knower and knowledge, as when the Troubadour, or Trouvère (finder), suggested that the search after that which could be found constituted our true happiness. The culture of Modernism is not wanting in instances of representative individuals who have protested that the search after truth is more satisfying than the securing of knowledge itself. Thus it was that the Cartesian, Père Malebranche, said: 'If I held truth captive in the hand, I would open it in order to pursue it again' (Mazure, Cours de la philosophie, ii. 20); while Butler declared: 'Knowledge is not our proper happiness. . it is the gaining, not the laving, of it, which is the entertainment of the mind' (Sermons, xv.). More brilliantly and more forcefully Lessing said:

"If God were to hold in His right hand all truth, and in His left the single, ever-living impulse to seek for truth, though coupled with the condition of eternal error, and should say to me, "Choose!" I would humbly fall before His left hand, and say, "Father, give! Pure truth is, after all, for Thee alone!" (Rolleston, Life of Lessing, 1889, ch. xvii.).

While significant of the remoteness inherent in the culture-ideal, such utterances are not normal expressions of the culture-motive, which is more like the Troubadour, or finding, instinct in the human mind. Finally, our modern psychology, like

that of Wundt, by showing how similar are intellect and volition, tends to do away with the conflict between the idealistic and activistic methods of promoting human happiness, and to postulate a unity of thinking and doing, of inner life and outer existence.

CUP- AND RING-MARKINGS .- 1. Description.—The name 'cup- and ring-markings' is given to certain signs—they cannot be called drawings or sculptures—which are found on rock-surfaces and articles of use in all parts of the world, from pre-historic times down to the primitive peoples of the present day. Wherever found, they are disthe present day. Wherever found, they are dis-tinguished by the same characteristics with great variety in details. In all cases there is the central cup, hollow, or depression, surrounded by one or more concentric circles or rings. These rings take many varying forms. Sometimes they are complete circles; sometimes they are only semi-circles at the top or bottom of the cup; sometimes they take the form of spirals. At times—and this is very usual when they are found in any number—sets of cup- and ring-markings are united by lines or ducts making a variety of figures; and again, at times, the outermost circle has a number of rays issuing from it and converging towards the central depression or cup. Wherever they have been obdepression or cup. Wherever they have been observed, they are the work of peoples in the Neolithia served, they are the work of peoples in the recibility stage of culture, whether in the actual Neolithic Age of the pre-historic past, or among peoples who at the present time exist at that stage of culture.

The localities where archaic cup- and ring-markings are now known to exist are world-wide. of the finest examples are in the British Islands. It was in the year 1859 that Sir J. Gardner Wilkinson first called attention to them in a paper in the Journal of the British Archæological Association, in the course of which he refers to cup- and ringmarkings on the rocks in Northumberland, and claims to have been the first to note such markings as far back as 1835. In 1867, Sir James Simpson published his book entitled Archaic Sculpturings of Cups, Circles, etc., on Rocks, in which he described all those that were then known in Scotland, Northumberland, Cumberland, and Yorkshire, and in a series of beautiful plates he illustrated every variety of form which they exhibit.

It is now known that archaic cup- and ringmarkings exist in all parts of our own country, not only on searps of rock, but on the stones of so-called 'Druid' circles, from Inverness-shire to Lancashire, Cumberland, and the Isle of Man; on great stones forming avenues; on cromlechs; on the stones of chambered tumuli in Yorkshire; on stone cists or coffins in Scotland, Ireland, and On stone cross of comms in Somathi, Iterative, and Dorset; on pre-historic obelisks, or solitary 'standing-stones' in Argyll; on walls in subterranean 'Ficts' houses' in the Orkneys and Forfarshire; in pre-historic Scottish forts; near old camps; and --- 13t

on isolated rocks, scarps, and stones. They are found in the Cheviot Hills, on the moor near Chatton Park in Northumberland; there engraved on the boulders may be seen central cup-like de-pressions surrounded by incised concentric circles. Some of the finest examples in the British Islands are at or near Ilkley in Yorkshire. In Ireland precisely analogous markings, or 'rock-scribings,' as Wakeman calls them, are found at Mevagh, Co. Donegal, on the sides of Knockmore Cave, near Derrygonnelly, Co. Fermanagh, as well as the magnificent series of double spirals at Newgrange, Dowth, and Lough Crew, Co. Meath, which belong

to a somewhat later stage of culture.

Outside the British Islands, other archaic examples, besides those in the Morbinan, may be noted at Malta, where, in the spring of 1910, the writer sew the very five series, pointed not incided. noted at Malta, where, in the spring of 1910, the writer saw the very fine series—painted, not incised—in the hypogeum at Hal-Saffieni. They also occur incised at Hagiar Kim and Mnaidra, in Malta, and in the Giganteja at Gozo; on the rock on which the great Cathedral of Seville is built; on the steps of the Forum at Rome; on the pedestal of a statue from Athens; in Scandinavia, in China, in India, and in North and South America. in India, and in North and South America.

Present-day instances in which a precisely similar scheme of ornamentation may be observed are found among the natives of Central Australia (which will be more particularly described when we come to discuss the meaning to be assigned to them), in Fiji, in Easter Island, and other parts of the Pacific Ocean, as well as in certain parts of Africa. Further, among races who tatu, particularly the Maoris of New Zealand, a very similar

set of designs may be observed.

2. Theories as to significance.—It is an axiom of Anthropology that primitive man never gave, nor does he give, himself trouble merely for an esthetic purpose, but always had some practical object in view. Hence the theories proposed in explanation of cup- and ring-markings tall into two groups. The first would explain them by (a) religion, or (b) magic; the second, as (a) primitive star-maps, or (6) rude maps of the neighbour-hood, showing the position of hut-circles, or (c) a primitive method of writing, or at least of communicating ideas.

i. (a) Religion.—Sir James Simpson, after mentioning, only to reject, the Swedish archeologist Nilsson's conjecture that these markings were Phœnician in their origin, came to the conclusion that 'they are archæological enigmata,' but he went on to suggest that they were 'probably ornamental and possibly religious,' adding that, 'though in the first instance probably decorative,' they were also 'emblems or symbols, connected in some way with the religious thought and doctrines of those who carved them' (op. cit. pp. 92, 115, 117).

In 1872, Phene, in a paper read before the British Archeological Association around that the purpose

Archæological Association, argued that the purpose of cup- and ring-markings was a religious one, and that it was connected with sun-worship.

In 1878, Romilly Allen, an acknowledged authority in all that pertains to early Christian art, read before the British Archeological Association an exhaustive paper on the remarkable series of 'Pre-historic Rock-sculptures at Ilkley.' After giving a list of all the localities in which pre-historic giving a list of all the localities in which pre-historic rock-sculptures were then known to exist, followed by a detailed account of those at Ilkley, he proceeded to notice various theories as to their origin and meaning. It may be observed that among the markings at Ilkley there is one set of cups and lines arranged in the form of the \*\*rocatilica\*\*, a pattern of the \*\*process of the \*\*proces of universal prevalence from the Mycenæan age onwards, which is noted by Schliemann to have been found on a very large number of spindle-whorls discovered at Troy, and is found in India

as a religious symbol, and survives among ourselves as the arms of the Isle of Man. Its occurrence here would seem to carry back its use as a symbol of some sort to pre-historic times. Allen's own theory is that cup- and ring-markings were most probably used as religious symbols, and were connected, as Nilsson suggested, with sun- and Baal-worship. He also thinks, with Nilsson, that the pre-historic sculptures belong to the Bronze

In the following year C. W. Dymond read an interesting paper before the same Association on some rock-markings in the same neighbourhood, with copious reference to Schliemann's discoveries at Troy and Mycenæ. In this he makes a special point of that discoverer's theory that the cups surrounded by complete circles represent the sun, and those surrounded by incomplete or semi-circles, with or without rays, i.e. ducts, represent the rising or setting sun. In this connexion it may be noted that among the rock-paintings of the native Australians described by R. H. Mathews (in JAI xxv. [1896] 145) is one which almost certainly represents, along with a figure of two hands joined at the wrist, the sun rising or setting. The significance of this will appear later (see below, p. 366°). Dymond also notes one stone containing a most remarkable arrangement of markings, which he says he at first took for a rude representation of the planetary system, but which he afterwards thought might be an allegorical or symbolical representation of a goose (Journ. Brit. Arch. Assoc. xxxvii, 86).

As recently as 1900, H. G. M. Murray-Aynsley, in her book on Symbolism of the East and West, describes the cup- and ring-markings which she had observed in the course of her travels in India, and compares them with those known in Europe; and as to their significance she assigns all alike to

sun- and star-worship.

In his recent book Ancient Britain and the Invasions of Julius Casar (London, 1907), Rice Holmes ranges himself with those who would see in these markings some religious significance, though he is hopelessly wrong in assigning them,

as he does, to the Bronze Age.

Still keeping to the theory of their religious significance, it may be noted that Col. Rivett-Carnac, who has made a special study of the archaic rock-markings of India, particularly as they occur among the Kumaun Hills, suggested that they are connected with lingam-worship; the central mark or cup representing the lingam, the circle the yoni. The rich, he supposed, put up a monument, the poor merely carved a symbol. In his Pre-historic Times, 1900, Lord Avebury comes to the conclusion that 'we have as yet no

satisfactory clue to the meaning of these engravings' (p. 158), and he assigns the ruder, and therefore evidently more primitive, engravings, i.e. the simple cup- and ring-marks in all their variety, to the Neolithic Age, or, as we prefer to say, at any rate to the Neolithic stage of culture. As regards the meaning to be attached to the symbols, R.

Munro says:

'Although much has been written on the subject, none of the theories advanced to explain their meaning has met with general acceptance. That they had a symbolic meaning in the religious conceptions of the people is evident from the frequency with which they are found on sepulchral monuments, but any interpretation hitherto advanced on the subject, beyond the general religious idea, seems to be pure conjecture' (Prehistoric Scotland, p. 217f.)

(b) Magic.—In 1892, and again in 1806. Miss Russell propounded, with a wealth of argument and illustration, before the same Association, the theory that simple cups and circles are intended to represent eyes, and that those having a line or duct through them represent eyes transfixed with a

javelin, and that accordingly the solution of the problem as to the meaning of these signs is to be found in regarding them as charms against the Evil Eye. The prevalence of this superstition among primitive races the world over is unquestionable, and it survives to-day, with more intensity than anywhere else among civilized peoples, in Italy, as Elworthy has conclusively shown in his Honour (London, 1900), so that, had it not been for later discoveries, this might have stood as a good working hypothesis; and it may even be held to have some share in the meaning which we shall exist to them. Marie is not only the science but the meaning which we shall assign to them. Magic is not only the science, but it lies at the very root of the religion and social arrangements, of primitive folk, and it may well have its part in the explanation to be advanced for

the universal prevalence of these mysterious signs.

ii. (α) It has been held that cup- and ring-markings were connected with astrology and intended for rude maps or plans of the stellar and planetary heavens. This theory need not detain us, as it could not by any possibility apply except to a very few cases, in which the designs may seem to be arranged in some sort of definite order having some resemblance to the position of the constellations in the sky, or some appearance of being intended to

the sky, or some appearance or being intended to represent the sun, moon, and planets.

(b) There is the view that they were intended for maps of the locality, marking the position of the neighbouring raths, or oppida, for the benefit of wayfarers, whether the infabitants themselves or strangers. This theory is associated with the names of Greenwell and Wilkinson in England, and of Greenwell and wilkinson in England, and of Graves in Ireland, and was definitely applied by the latter to the Irish examples.

(c) There is also the view that they were a primitive mode of writing, or at least of communicating ideas. This theory was propounded by Rivett-Carnac as an appendage or alternative to his theory that they were connected with lingam-worship. In 1903 he read a paper before the Royal Asiatic Society entitled 'Cup-marks as an archaic Form of Inscription,' in which he suggested that they were 'a very ancient form of writing.'

In discussing our own theory we shall see how these two ideas may be combined, by a reference protective that they are server with the pridence from A patralia, but also

not only to the evidence from Australia, but also to the 'painted pebbles,' with alphabetiform signs, which Piette discovered in the cave of Mas d'Azil in the Pyrenees, and which belong to the Palæolithic Age, and to the similar signs found on and in dolmens in Portugal in the same year, down to the signs which distinguish the work turned out by modern potteries in civilized lands. It may be noted here that Wood-Martin also had already suggested that cup- and ring-markings 'might be suggested that cup- and ring-markings might be the first step made by primitive man towards writing' (Pagan Ireland, p. 571). E. Cartailhac had made the same suggestion in 1889 in his La France prehistorique d'après les sépultures et les monuments (p. 247).

3. Cup- and ring-markings, in the light thrown upon them by recent research and discoveries among the native races of Northern and Central among the native races of Northern and Central Anstralia.—In the year 1899, Spencer-Gillen's epochmaking book on The Native Tribes of Central Australia was published. It was followed in 1904 by the same authors' Northern Tribes of Central Australia, and in the same year A. W. Howitt's Native Tribes of South-East Australia was published. These, with K. Langloh Parker's The Euahlayi Tribe (London, 1905), and the researches of R. H. Mathews and other travellers and observers are our authorities on the tribal and servers, are our authorities on the tribal and social arrangements and customs of the Australian aborigines.

The characteristic feature of all these tribes is | monies of the Arunta was necessary to the full

that society is organized on a basis of totemism (q.v.), in relation to which cup- and ring-markings are found to have a living and definite significance.

are found to have a living and definite significance. Some few years ago the theory now under consideration might have been included under those which would give a religious significance to cup- and ring-markings, but recent research has made that impossible.

J. G. Flazer, in his great work on Totemism and Exogamy (4 vols., London, 1910), has proved that totemism does not belong to the category of religion, but is altogether of social significance, and this was the opinion of many students before the publication of his book settled the matter for all time. Totemism is not religion, because religion implies reverence and worship, and the totem is never worshipped, though it is treated with respect. It is the brother, never the god, of its human relations.

Before we can exhibit the relationship between cup- and ring-marking and totemism, however, we

cup- and ring-marking and totemism, however, we must first deal, as briefly as possible, with totemism as it exists in Australia, especially among the

must first deal, as briefly as possible, with totemism as it exists in Australia, especially among the Arunta.

The Arunta reckon by male descent, but their totemism is special and peculiar in that it is reckoned by locality and not by parentage at all, i.e. every child, no matter what the totem of its parents may be, belongs to the totem of the district in which it may happen to be born. The Arunta system is based on the following beliefs. They hold that each living Arunta is descended from, or rather is the re-incarnation of, an ancestor who lived in what are known as the 'Alcheringa' (q.v.) times. Each of these charinga is closely associated with the spirit part of some individual. In the place where they originated or stayed, as in the case of some of the Witchetty Grub people, or where they camped in their wanderings, there were found what the natives call obmanistilla, i.e. local totem centres. At each of these spots a certain number of the Alcheringa ancestors went into the ground, each carrying his charunga with him. His body died, but some natural feature, such as a tree or rock, rose to mark the spot, while his spirit part remained in the charinga. Thus the country is dotted over with these charakilla, each one connected with one totem. The rock or the tree marking the spirit's abode is known as the spirit's analya, and it is this idea of spirit individuals associated with the charinga, and resident in certain definite spots, which is at the root of the totemo system of the Arunta tribe. These spirits are ever waiting to be re-born, and consequently bely are ever on the look-out for litedy women through whom they may receive re-incarnation. Hence arises the most curious feature of Arunta beliefs, and the most marked characteristic of their life. They are entirely ignorant of the meaning and effect of sexual intercourse. According to their belief, it has nothing to do with the actual production of offspring; it best it only prepares the woman for the entry of the spirit-child. Consequently belongs to h

The above description of the beliefs and cere-

understanding of our subject, and it has brought us at last to rock-paintings. These are not peculiar to the Arunta; they have been noted all over Australia. But those previously described are not of the special type which concerns our purpose, which are found among the Arunta. rock-paintings fall into two groups: (a) ordinary rock-drawings similar to those already known, and corresponding with the drawings of the Palæolithic cave-people, the primitive Egyptians, Italians, and others, in many parts of the world, and the Bushmen among modern savages; and (b) certain other drawings which belong to a class of designs called churinga illemia, and regarded as sacred, or secret, mysteries, because they are associated with the totems. Each local totemic group has certain of these belonging to the group, and preserved on rock surfaces which are strictly tabu to the women, children, and uninitiated men. The designs on these churinga ilkinia, as on the churinga nanja, are each distinctive of some special totem, and are so understood by the initiated natives. Now these special totemic designs of the Arunta consist of precisely the same patterns as the rock-sculpturings or paintings which are the subject of this article. They may all be classed as cup- and ring-markings. There is the central dot corresponding to the cup, surrounded by concentric circles or semi-circles, and arranged in varying patterns, sometimes joined by lines which run through and connect them, exactly as the ducts do in the sculpturings,1 and each varying pattern has its own distinctive meaning which the native at once recognizes. One pattern belongs to the Witchetty Grub totem, while others belong to the Emu, Kangaroo, Plumtree, Snake, Sun, Moon, etc., totems, as the case may be.

Considering, then, that primitive man may be held to have everywhere, though with local modifications, passed through the same or similar stages in his evolution from the lower to the higher plane of social organization, we may hold that we are justified in assuming that in these Arunta drawings and designs, with their well-known and recognized significance, we have, as Wood-Martin suggested (Pagan Ireland, p. 47, note), the solution of our problem, and may with confidence assert that the basal meaning of cup- and ring-markings, wherever found, whether belonging to pre-historic primitive man in Europe or Asia, or to modern primitive man in Australia, is not religious, but social; that, wherever found, they were totemic in their origin, and are connected with magic but not with

Thus these mysterious signs may with justice be said to constitute the 'heraldry of primitive man,' and they would be known and understood by all whom it might concern, even as the Arunta understand them to-day, just as the followers of a mediaval knight, his squires and men-at-arms, recognized the blazon on the shield of their lord, or the crest on his helmet in battle or joust, or the pennon fluttering from his eastle keep, and as the flag is recognized among civilized nations at the present day.

It would take us too far to trace the possible connexion between the now discovered totemic significance of cup- and ring-markings and the lingam-cult or Nature-worship of a later stage of culture, but we may note the primitive phase of this idea in the Arunta theory of the spirit-child conceived beside some sacred rock or tree. A similar notion meets us, as Rivett-Carnac points out, in Switzerland and Italy, and probably further research would find it elsewhere also. The

spirit-child belongs to the totem of the locality in which it is conceived, and the churinga—both the nanja, the portable stone or stick, and the ilkinia, the rock-drawing, each sacred and secret—is the totem-badge, bearing the special design peculiar to that totem. Here we have its living and present significance. Ancient rocks and stones inscribed with cup- and ring-markings are in many parts of Europe associated with ideas belonging to the worship of the generative powers. Menhirs and monoliths not only have those marks, but are themselves symbolic of the mystery of the reproduction of life. In Switzerland they are still known as 'the babies' stone,' and, bearing this primitive notion in mind, we may see a justification for describing simple cup-markings on standing stones as representing inverted female breasts, as is done in art. Canaantes (vol. iii. p. 1784). With the same association of ideas in Brittany and other Celtic districts, childless women bring offerings to the menhir, and more than one standing-stone has been christianized by the placing of a cross upon its summit.

Finally, it is quite possible that in cup- and ringmarkings we also behold one of the carliest efforts
of mankind to convey ideas by means of signs, and
that in this sense therefore they are a form of writing. The Arunta read their meaning both in the
rock-paintings, the churinga ilkinia, and upon the
sacred sticks or stones, the churinga nanja, and
indeed have been known on occasion to employ
the latter as 'message-sticks or stones,' although
in their case the churinga is more in the nature of
a safe-conduct, rendering the bearer tabu, than an
actual means of conveying ideas. Other tribes, as
the Itchimundi, employ real message-sticks, but
they are merely a kind of tally to mark the heads
of the message, and the markings have no special
meaning as conventional signs to convey a definite
announcement. Still these signs, and such as the
Palæolithic folk inscribed on the pebbles at Mas
d'Azil, or such as are found on Neolithic dolmens
in Portugal and in certain parts of Scotland, may
lie at the root of the alphabets of the Ægean, and
form the germ of our European alphabets. But,
if cup- and ring-markings are to be taken at all as
a method of conveying ideas, i.e. as a method of
writing, it can only be of the very rudest, compared with which oghams and runes are finished
alphabets. It is better to take them simply as
totemic signs, having regard to their Arunta
affinity, and to relate them to heraldic tokens and
modern potters' marks as being tribal and family
badges and marks of ownership.

badges and marks of ownership.

Literature.—There is a succession of articles in Journ. Brit. Archæol. Assoc., in the following order: vol. xvi. (1809), Sir J. Gardner Wilkinson, 'On the Rock-basins of Dartmoor'; xxi. (1873); I. S. Phené, 'On the Uniformity of Design and Purpose in the Works and Oustoms of the earliest Settlers in Britain'; xxxv. (1879), J. Romilly Allen, 'Pre-historic Rock-sculptures at Ilkley'; xxxvi. (1879), C. W. Dymond, 'Oup-Markings on Burley Moor'; xiviii. (1892), Helen J. M. Russell, 'A recent Discovery at Rome in Connection with Mythology and Symbolism in Britain', also iii. (1896), 'Some Rock-cuttings in Northumberland'; Ivi. (1900), Ivii. (1901), lix. (1903), and lx. (1904), a series of articles by the present writer leading up to the conclusions arrived at in this article. The classical book on the subject, for its date, is, of course, Sir J. Y. Simpson, Archaic Soulpturings of Cups. (Gretes, etc., upon Stones and Rocks, Edimburgh. 1867. As regards the Arunia and other Australian natives, Spencer-Gillene' (1890), 'e (1904), and Howitt (1904) are the authorities. See also E. S. Rivett-Carnac, 'Oup-marks as an archaic Form of Inscription,' Journ. R. Asiatic Soc. 1903; Andrew Lang, Magic and Retigion, London, 1901, with a chapter on '"Oup and Ring": An old Problem solved,' sugessing a very similar solution to hiat here put loward, and The Secret of the Totem, London, 1905, by the same author; Lord Avebury, Pre-historic Times'6, London, 1900; R. Munro, Prehistoric Scotland, Edinburgh, 1899; W. Crooke, P.R.? Westminster, 1896; M. Hoernes, Urgesch. der bildenden Runst in Europa, Vienns, 1898, also Der dikuviala Mensch in Europa, Brunswick, 1903; E. B. Tylor, Prim. Cutt.', London, 1903; J. Cooke, Wakeman's Handbook of Ir. Ant., London, 1903; J. Cooke, Wakeman's Handbook of Ir. Ant., London, 1903; S. R.

<sup>1</sup> Munro (op. cit. p. 219) says, 'The cup-aud-ring with gutter channels has not been found outside the British Isles,' but in Australia the line represents the 'gutter channel.'

References to many additional sources of information are given in Lord Avebury's Pre-historic Times, and R. Munro's Prehistoric Scotland.

H. J. DUKINFIELD ASTLEY.

CURSING AND BLESSING .- I. Introductory.—Cursing and blessing are perfect opposites, and are therefore appropriately taken together for analysis and description. The preponderance of evil-wishing over good-wishing is obvious, but de-serves consideration. Like the preponderance of evil spirits over good spirits in early religions, it points to absence of harmony or failure of adaptation in the relations of man to Nature and of man

to man. But this very defect may be a condition of progress, a mark of the struggle.

The habit, in its twofold or polar aspect, is universal both in ordinary social life and in religion, organized and unorganized. It transcends all distinctions of race, and is, in fact, a permanent outcome of the working together of language and thought; for by this double mechanism are expressed wish and will, desire and determination, in that form which is, as it were, midway between psychosis and action. This does not imply that verbal utterance is a stage preceding action; we describe it as intermediate, just because cursing and blessing in their earlier forms have the appearance of being based on an unconscious theory that the word is nearer the end than is the wish, and that the act alone reaches, or rather is, the end. It follows that, in the fluid state of categorical thought which we assume for early culture, it would be both easy and natural to assimilate the spoken wish to the realized fact, by any appropriate means. Such artificial actualizing of the blessing or the curse is typical of all except the higher stages of the evolution. It will be illustrated later on. In passing, we may note that to describe such assimilation as a 'material' or 'concrete' tendency, or to describe the primitive mind as being essentially 'materialistic,' is to draw a false distinction. In view of the very rudimentary analysis of natural laws and of mental categories analysis of natural laws and of mental categories arrived at by early man, it is better to describe his mental operations by some such term as holopsychosis, or 'whole-thinking,' just as his language has been described as holophrastic. All the components are there, but they have not yet been resolved. The examples cited below will illustrate this also, besides serving to indicate that some of the earliest cases of human 'expression' are actually less material and less concrete than the latest. The curse and the blessing are an excellent ex

The curse and the blessing are an excellent example of a product of the two powers—thought and word (or logos)—and of the inhibition of such a product from becoming fact. The reasons for the inhibition need no description; they are, however, the defining conditions of the curse or blessing as such, though these conditions are always, as it were, about to be transcended. This result is most conspicuous at the highest point of the curve traced by the general habit, and corresponding to a stage when words, as such, possess more moment than they do either before or after. As distinguished from desire on the one hand and from actualiza-tion (in artificial embodiment) on the other, the curse or the blessing is the spoken word. We may well suppose that the ascription to words of such super-verbal potency as a typical curse involves coincides with a period of mental evolution, and of linguistic evolution, when man became at last completely conscious of the 'power of speech,' of the faculty which he had so laboriously acquired. Then the word was res, not nomen. The arrival Then the word was res, not nomen. at such a point of realization amounts to a crystallizing out of at least one important category from

the primal fluid of nervous life. It will be noticed that, if terms like 'concrete' and 'material' are employed, we must admit that the half-civilized and highly organized Moor is more 'primitive'

than the lowest savage.

It also seems to the writer an unnecessary and illegitimate proceeding to draw a sharp division between the magical and the religious blessing or curse, or to assign priority to the former type. A savage Australian may curse his fellow mentally or verbally, in a form as far removed from magic as profane swearing among civilized men is from religion. Or, again, if he has a god, he may invoke him to execute his spoken wish. On the other hand, we find the higher religions frequently adopting a magical form; and we can sometimes trace the religious form passing into the magical. The distinction, in fact, between magic and religion, as the form of man's relation to his environment, seems to be a matter of temperament rather than of time. Two types certainly exist for cursing and blessing, and they will be fully discussed below; here it is premised that we have no right to assume the priority of the magical type, or even its exclusion, simultaneously, of the religious.

There are, moreover, many neutral cases.

2. General character.—A curse or blessing is a wish, expressed in words, that evil or good may befall a certain person. The wish may be expressed betain a certain person. The wish may be expressed by a god or spirit, in which case it is a *fiat*, and is wish, will, and fact in one. It may be expressed for the speaker's own good or ill. It may be, again, a mere wish or will; or an appeal to another (usu-

a mere wish or will; or an appeal to another (usually a supernatural) person to execute it; or accompanied by, or embodied in, a material object. This may be an image of the result desired; a vehicle of transmission; an object representing the curse or the blessing; or a physical action by the speaker to or towards the intended person.

For the uttered wish without condition, reference, or assimilative action, we may compare the case vividly described by Turner. The Samoan has a system of organized cursing, but at times he resorts to the natural method, and curses on his own responsibility. Discovering a theft from his garden, he shouts in a loud voice, 'May fire blast the eyes of the person who has stolen my bananas!' The cry 'rang throughout the adjacent uttered imprecations.'! In Luang-Sermata, usual curses are: 'Evil shall devour you! Lightning shall strike you!' and so on.' Such is the type of the simple curse or blessing found in all races, and surviving belief in magic and in supernatural sanctions among the unthinking members of the highest civilization. civilization.

When accompanied by a material vehicle or embodiment or action, assimilative or assisting or symbolic, the adhesions of the wish become innumerable, for it links itself to the phenomena of every form of tabu, magic, and symbolism. At the back of all these there is the primary connexion with neuro-muscular discharge. Herethe wish may be simultaneous with, or subsequent to, the impulsive action, just as will may be not prior to, but accompanying or following, an action of which

but accompanying or following, an action of which it is the cerebral echo.

In Melanesia the act of blessing involves the bestowal of mana by physical contact. A man will give a boy a start in the world by placing his hand on the boy's head, thus imparting to him a portion of his own mysterious power. In the Solemon Islands, inland people are supposed to have more mana than coast people. When they go down to the coast, they considerately avoid spreading out their fingers, for to point the fingers at a man is to shoot him with a 'charm.' Blessing among the Masai consisted of spitting upon the recipient. Far more common is the use of this vehicle for the curse, or as a symbol of contempt or insult. So the Masai spat while cursing. 'It a man while cursing spits in his enemy's eyes, blindness is supposed to follow.' The Sakai are believed to be able to do

injury by 'sendings' and 'pointings.' Among the Fiort of West Africa, a sale of property becomes complete when the seller has 'blessed' the article sold. He raises his hands to his arm-pits, and throws them out towards the buyer. Then he breathes or blows over the article. This ceremony is called ku vana mula, 'giving the breath,' and is equivalent, says Dennett, to a 'God bless thee.' It seems rather to be a personal imposition of the speaker's good-will upon both buyer and thing bought, without any supernatural reference. There is here as yet no symbolism; the intention is immediate. Examples of symbolism might be multiplied indefinitely. The shaking off of the dust of the feet is a familiar case. In Morocco a suppliant at the siyit of a saint will call down misfortune upon an enemy by sweeping the floor with his clock, praying that the

shaking off of the dust of the feet is a familiar case. In Morocco a suppliant at the sigit of a saint will call down misfortune upon an enemy by sweeping the floor with his cleak, praying that the enemy may be swept likewise. It is hardly necessary to point out that mere impulsive action, deliberate magic, and symbolism shade into each other continually.

Among the Hebrews, a blessing was imparted by the imposition of hands. In blessing a multitude, the hands were uplifted. Refinements are inevitable: thus, in the Greek Church the gesture of benediction is made with the right hand, the thumb touching the tip of the ring-finger, the other fingers being erected. In the Latin use, the thumb, lore, and middle fingers are erected, the others being doubled on the palm of the hand. In the Rabbinical blessing, the priest places the fingers of both hands in pairs—the forefinger with the middle, the ring with the little finger, the tips of the thumbs, and the tips of the forefingers, respectively touching one another: thus the ten fingers are in six divisions.

Other components of the wish, as it becomes a rite, may also undergo differentiation. Thus the Talmud holds that the mere power of the spoken word is efficacious. The priest pronounces the blessing in a loud voice. So, in Islam, an important detail is the audibleness of the benediction. The Talmud also speaks of cursing by an angry look. This needs to be fixed. Such a curse has been described as a "mental curse." The Yakis have a remarkable dualistic personification—"the cursing Thought" of the Law of Mazda; the 'strong cursing thought of the wise man, opposing foes in the shape of a boar, a sharp-toothed he-boar, a sharp-toothed he-boar, a sharp-toothed he-boar, a sharp-toothed he-boar, a sharp-toothed by words. It is notable that the blessing by words is the more powerful; but the curse (Appamana) by thought is more powerful; but the curse (Appamana) by thought is more powerful; but the curse (Appamana) by thought is more powerful; but the curse (Appamana) by t

The indeterminate character of primitive thought makes interchange easy between thought, idea, word, and act, and also between mechanical, psychical, and verbal force. Thus a curse or blessing may be regarded now as a spirit, now as a thing, now as a word, but in each case it is charged with energy. Or, again, it may be regarded as travelling along a material or psychical conductor, or as embodied in a material object, its energy then being potential, ready to become kinetic when discharged. It is important to note that these early views are held in comparatively late culture, especially in religion, and there show every sign

of being living beliefs, not survivals.

When we remember the emphasis laid in all but the latest culture on words and names, we can appreciate the confusion, or rather the shifting, between the material and the verbal notion of a curse or blessing. Thus, in whatever form it is expressed, the curse or blessing, like all expressions of an idea enforced by strong emotion, has a dynamical certainty. Irish folklore has it that a curse once uttered must alight on something; it will float in the air seven years, and may descend any moment on the party it was aimed at; if his guardian angel but forsake him, it takes forthwith the shape of some misfortune, sickness, or tempta-tion, and strikes his devoted head.<sup>9</sup>
'Curses' in old Teutonic proverbs 'operate quickly'; they are 'not to be turned aside.' What

Grimm describes as the 'savage heartiness' of the curses which he records is the emotional force which has so much to do with making an impression,

whether in the direction of 'suggestion' to the victim or, generally, of the ascription of 'power' to the word or act. Emotional force as a factor in the making both of magic and of religion deserves recognition. It is well illustrated by blessings and cursings in their growth; when their forms are fixed, naturally the form is everything, and a curse uttered casually and without heat may still be efficacious. To the priestly blessing in the synagogue magical powers were ascribed, and the ÖT states that the word once pronounced is irrevocable.1 The Talmud warns against looking at the priest while he is pronouncing the blessing, for 'the glory of God is on him.' It is a natural process of suggestion working through strength of emotion, fear of ill-will and enmity, and reinforced by a complex of associated ideas relating to the essence of words and the energy of souls, that gives to the curse or blessing its independent 'power.' As it is put by Westermarck, this

is put by westermarch, this 'purely magical power, independent of any superhuman will . . . is rooted in the close association between the wish, more particularly the spoken wish, and the idea of its fulfilment. The wish is looked upon in the light of energy which may be transferred—by material contact, or by the eye, or by means of speech—to the person concerned, and then becomes a fact. This process, however, is not taken quite as a matter of course; there is always some mystery about it. 2

Just as sin 'is looked upon as a substance charged with injurious energy,' so the curse is 'a baneful substance,' like the materially conceived badi of stubstance, ' like the material's concerned when the Malays, and the *l-bus* of the Moors. Good and evil in all but the higher stages of thought are constantly 'embodied,' either by analogy, personification, or the much more normal and prevalent mode of mere mental objectification. To illustrate this last we may compare the precisely identical method, used in science, of conceiving of a force as a graphic straight line.

This conception is characteristic of the curse and blessing in their social and religious history.

This conception is characteristic of the curse and blessing in their social and religious history.

Arabs when being cursed will lie on the ground that the curse may fly over them. Among the Nandi, if a son refuses to obey his father in any serious matter, the father solemnly strikes the son with his fur mantle. This is equivalent to a most serious curse, and is supposed to be fatal to the son unless he obtains forgiveness, which he can only do by sacrificing a goat before his father. Berbers strip before taking an oath, to prevent it from clinging to their clothes. Plato speaks of being 'tainted by a curse.' Arabs fear 'the magical nature' of an oath. The 'water of jealousy' was believed by the Hebrews, as causing a curse, to go into the bowels, to make the belly to swell, and the thigh to rot. The Nubians, before eating the tongue of an animal, out off the tip, believing that 'here is the seat of all curses and evil wishes.' Among the islanders of Leti, Moa, and Lakor, a man who has quarrelled with a woman is atraid to go to war lest her curses may bring death. Here is the seat of all curse the recipient of a curse is anxious to neutralize or divert it. In the last case cited the man is at pains to secure forgiveness by making presents to the woman. In Melanesia the curse is an engine of authority. A chief will curse a man by way of a legal 'injunction'; the matter is put right by the method of toto, the offering of a gift. On receiving this, the chief sacrifices to the spirit, to'a, on whose power his curse rested. In Samoa there is the same system, particularly for the enforcement of the rights of property. In a case of theft, the injured party gives the priest a fee of mats. The priest curse the thief; the latter, to avoid the otherwise inevitable result of sickness or death, deposits at the door of the priest an equivalent for the stolen property. Then the priest prays over 'the death bowl' that the curse may be 'reversed.' The Maoris employed an elaborate ritual for cursing and its reversal. The latter w

The Todas have a curious ceremony for anticipating mischief to the sacred cattle. The point of the rite is that the assistant in the dairy, the kaltmokh, is cursed and then the curse is at once removed. The dairy-priest, the palol, pours milk and clarified butter into the outstretched hands of the kaltmokh, who rubs it over his head and whole body. The palol chants a curse: 'Die may he; tiger catch him; snake bite him; steep hill fall down on him; river fall on him; wild boar bite him! etc. Rivers infers 'that the kaltmokh is being made responsible for any offence which may have been committed against the dairies. . . The kaltmokh having been cursed, and so made responsible, the curse is then removed in order to avoid the evil consequences which would befall the boy if this were not done.'1 Toda sorcerers impose diseases by cursing-spells, and remove them with some such formula as, 'May this be well; disease leave!'2 Thus a blessing may neutralize a curse. Much's mother cursed her son for his theft; when he confessed, she rendered the curse ineffective by a blessing.<sup>3</sup>

Blessings and curses are capable both of descent and of ascent, genealogically. Thus, we find it stated in Sir 23<sup>11</sup> that 'the scourge shall not depart from his house'; and in Pr 20<sup>7</sup> 'a just man that walketh in his integrity, blessed are his children

walketh in his integrity, blessed are his children

after him.

The Basutos appear to have the belief in the descent of the The Basutos appear to have the belief in the descent of the curse; Casalis compares it with the case of Noah and Ham.<sup>4</sup> The Greek conception of the Erinyes laid stress on this; a curse might work down to the grandchildren, and even utterly exhipate a race.<sup>5</sup> Among the Maoris, 'to bid you go and cook your father would be a great curse, but to tell a person to go and cook his great-grandfather would be far worse, because it included every individual who has sprung from him.<sup>46</sup>

The energy of a curse may spread. As Irish folklore puts it, it 'nust alight on something.' Plato speaks of it tainting everything with which it comes in contact.

it comes in contact.

The Bedawin will not take an oath within or near the camp, 'because the magical nature of the oath might prove pernicious to the general body of Arabs, were it to take place in their vicinity.7 The Moors hold that it is 'bad even to be present when an oath is taken.' A remarkable detail is very commonly found,

namely, that a curse may return to the man who uttered it. 'Curses, like chickens, come home to roost'; 'they turn home as birds to their nest.'9

The Karens have a story to the following effect:
'There was a man who had ten children, and he cursed one of his brethren, who had done him no injury; but the curse did the man no harm, and he did not die. Then the curse returned to the man who sentit, and all his ten children died.'10

Here there is a moral valuation, but the earlier non-moral conception of the intrinsic energy of the curse constitutes the point of the story. With it curse constitutes the point of the story. may be compared the Roman notion that certain imprecations were so awful that even the utterer

suffered as well as his victim.11

As with the force of tabu and similar conceptions, physical contact is the most efficacious means of 'transmission.' If we regard the curse or blessing as being the mental idea of a desired material result, then, like all ideas in an impulsive brain, it produces motor energy in the form both of words and of action. Thus, besides the uttered form, we have, by association, paths of realization by means of sympathetic or symbolic action. Examples have been cited of such 'assisting' of the wish, by gestures, direct or indirect. We have also, by association, the more highly differentiated method of sympathetic or symbolic creation. A material model or symbol of the result is desiderated as a pre-embodiment of it; later this becomes a cause and a guarantee of the result. The simplest form of this method is the use of the 'wax image.' In this, model and symbol shade into one another. The image represents the recipiont, and the utterer of the wish either utters it over the image, or works upon the image the material result wished for.

VOL. IV.—24

So far, we have cases in which the curse or blessing preserves its mental or verbal character, 'mental' being taken to include artistic materialization, as in sympathetic magic. For the curse or blessing, as such, is distinguished from physical injury or physical benefit precisely because it stops short of physical action by the subject upon the object. But the two were bound to be combined when the subject is stoped to be combined; the mixed type of curse and blessing is as common as the pure, and in certain stages of culture is considered to be the more efficacious. The bestowal of a blessing is more efficacious when the man who confers it touches the man who receives it. When dealing with 'vehicles' and receives it. When dealing with 'vehicles' and 'media' of curses and blessings, we are not entitled to suppose that even in their highest development the mind is conscious of a process of 'conduction.' To us it appears obvious that, when a suppliant holds one end of a string to the other end of which is attached his protector, each should regard the string as a bridge or a wire for transmission. But it would be more logical to credit them with a correct, than an incorrect, application of a physical law, and to argue that they consider will to be conducted by any part of the ether rather than by the wire. It seems more consistent with the evidence to regard these 'conductors' as being merely the nearest thing to physical contact. The sense of touch is bound up with all direct physical action upon an object, well-doing and ill-doing, and colours all ideas of it. Similarly, when we read of curses acting at a distance—in the case of the Australian sorcerer at a hundred miles—we are not entitled to credit the belief with a reasoned or even unconscious substratum of a quasi-scientific theory of the velocity and displacement of an imprecatory particle. It is quite possible that in the case of 'conductors' of various magical 'forces,' such as food and drink, we have to deal as much with the associational idea of property as with that of kinship, or of contagion. With this proviso, such metaphors may be em-Westermarck writes: ployed.

'The efficacy of a wish or a curse depends not only upon the potency which it possesses from the beginning, owing to certain qualities in the person from whom it originates, but also on the vehicle by which it is conducted—just as the strength of an electric shock depends both on the original intensity of the current and on the condition of the conductor. As particularly efficient conductors are regarded blood, bodily contact, tood, and drink.'

As early types of the ideas, referred to above, which are connected with that of the fulfilment of

a wish, we may cite the following:

which are connected with that of the fulfilment of a wish, we may cite the following:

A Maori would say to a stone: 'If this were your (his enemy's) brain, how very sweet would be my eating of it. Or he might call any object by the name of his enemy, and then proceed to strike or insult it. This process was a 'curse,' tapa tapa, or tuku tuku.' Here is the material for the development of the image-method and the symbol-method. In the Toda curse the recipient apparently has it rubbed into his body with milk and butter. It is quite legitimate to regard this as a case where the sound and the breath 'touch' the food, and hence the recipient. The Moor transmits his 'conditional curse' to the man appealed to for protection by grasping him with his hands, or by touching him with his turban or a fold of his dress, even by grasping his child or his horse. 'In short, he establishes some kind of contact with the other person.' Psychologically it is a case of prolepsis rather than the conduction of a curse whose fulfillment is only contingent. Similarly the Moorish suppliant may slay an animal at the door of the man. If the latter steps over the blood, or merely sees it, he incurs a conditional curse. Such a curse may be involved in the food eaten at a meal to seal a compact. The phrase runs that 'the food will repay' him who breaks it. The eaten food 'embodies a conditional curse.' Conversely, for, as Westermarch puts it, 'the magic wire may conduct imprecations in either direction,' if a Moor gives food or drink to another, 'it is considered dangerous, not only for the recipient to receive it without saying "In the name of God," but also for the giver to give it without uttering the same formula by way of precaution.' In the case of a stranger receiving milk, it is held that, should he misbehave, 'the drink would cause his knees to swell.' 6

s Westermarck, i. 586.

<sup>&</sup>lt;sup>2</sup> Taylor, 94. <sup>4</sup> *Ib*. 587.

<sup>5</sup> Ib. i. 590.

<sup>6</sup> Ib.

On similar principles a curse may be applied to something that has belonged to the recipient, or to something that may come in his way.

The aborigines of Victoria 'believe that if an enemy gets possession of anything that has belonged to them, even such things as bones of animals which they have eaten, broken weapons, feathers, portions of dress, pieces of skin, or refuse of any kind, he can employ it as a charm to produce illness in the person to whom it belonged. They are, therefore, very careful to burn up all rubbish or uncleanness before leaving a camping-place. Should anything belonging to an unfriendly tribe be found at any time, it is given to the chief, who preserves it as a means of injuring the enemy. This wuulon is lent to any one of the tribe who wishes to vent his spite against any one belonging to the unfriendly tribe. When used as a charm, the wuulon is rubbed over with enu fat, mixed with red clay, and tied to the point of a spear-thrower, which is stuck upright in the ground before the camp-fire. The company sit round watching it, but at such a distance that their shadows cannot fall on it. They keep chanting imprecations on the enemy till the spear-thrower turns round and falls in his direction.'1 The aborigines of Victoria 'believe that if an enemy gets

This example contains in solution a good many of the principles connected with cursing. is also the buried curse.

Is also the buried curse.

In Tenimber one can make a man ill by burying in his path such objects as sharp stones or thorns, uttering a curse during the burial. These articles are extracted later from the victim's body by the surgeon. In the neighbouring islands of Leti, Moa, and Lakor, the buried articles are pieces of sirih from the victim's own box, or a scrap of his hair. The cursing accompanies the burial, but there is no need to place the 'embodied curse' in the man's path. Eurial is enough, for here the object buried is a part of the man.

Thus, we can book to the sympholized result.

Thus we come back to the symbolized result. Again, in connexion with tabu upon property, Codrington observes that in Melanesia

\*\*c tambu\* approaches to a curse, when it is a prohibition resting on the invocation of an unseen power, that, namely, of the tindato.\*

In Ceram a trespasser incurs the sickness wished or determined by the owner who embodied it in a talu-mark.\*

In Samoa the 'silent hieroglyphic taboo,' or tapus, contains a curse; thus, the white shark tabu, a coco-paim leaf cut to represent a shark, contains the wish, 'May the thief be eaten by a white shark!'

Even before the ethical stage of the curse or blessing is reached, their force varies, chiefly according to the character of the wisher. There is, of course, to begin with, the mere 'power of the word' or of the wish; and the curse of any one, 'however ignorant' he may be, is not to be dis-regarded.' But, as a rule, superiority of personal power or position increases the power of the bless-ing or the curse.

Among the Tongans the curses of a superior possessed great efficacy; 'if the party who curses is considerably lower in rank than the party cursed, the curse had no effect,<sup>3</sup> 'Without any dispute the less is blessed of the better.'<sup>3</sup> The principle of the whakahokitu coremony of the Maoris is that a curse will yield to the mana of a man who can summon a more powerful atua than that of the original curser.<sup>10</sup>

The importance and influence of parents, especially of the father, have an enormous effect.

ally of the father, have an enormous effect.

The Naudi regard a father's curse as being 'most serious.'11

Among the Mpongwe 'there is nothing which a young person so much deprecates as the curse of an aged person, and especially that of a revered father.'12 The Moorish proverb has it that 'if the saints curse you the parents will cure you, but if the parents curse you the saints will not cure you.'13 The Hebrew belief in the inevitable efficacy of a father's blessing or curse was remarkable. The blessing was regarded as an invaluable heritage. 'In deed and word honour thy father, that a blessing may come upon thee from him. For the blessing of the father establisheth the houses of children; but the curse of the mother rooteth out the foundations.'14 From this passage it has been suggested that 'the reward which in the Fifth Commandment is held out to respectful children was originally a result of parental blessings.'15 The Scots proverb is similar:

'A faither's blessin' bigs the toun;
A mither's curse can ding it down.'18

In Greece such beliefs were no less strong. Plato puts it that 'the curses of parents are, as they ought to be, mighty against their children, as no others are.' And he instances the cursing of their sons by Cödjus, Amyntor, and Theseus. The man

who assaulted his parent was polluted by a curse, <sup>1</sup> According to the Koreans, 'curses and disgrace in this life and the hottest hell in the world hereafter are the penalties of the disobedient or neglectful child.' <sup>2</sup>

The last two cases show the automatic production of a curse by the sin itself—a notion distinctly tending towards the ethical development of these relations.

The Barca and Kunama believe that the blessing of tife old people is necessary for the success of any undertaking, and that their curse is inevitably efficacious.<sup>3</sup> Even elder brothers and sisters among the Greeks had the preponderance in this respect over the younger; 'the Erinyes always follow the elder-born.'<sup>4</sup>

The curse or blessing of the dying is particularly

strong.

strong.<sup>5</sup>

The Ova-Herero chief, when about to die, 'gives them his benediction,' a wish for 'an abundance of the good things of this world.' <sup>5</sup>

Similarly among the Hebrews and the Arabs.<sup>7</sup>

Among the Bogos the blessing of a father or a master is essential before taking up an employment or relinquishing it, engaging in a business, or contracting a marriage. <sup>8</sup>

The Moors say that 'the curse of a husband is as potent as that of a father.' <sup>9</sup>

Westermarck points out that 'where the father was invested with succrotal functions—as was the case among the ancient nations of culture—his blessings and curses would for that reason also be efficacious in an exceptional degree.' <sup>10</sup>

Obviously the wishes of one who is professionally

Obviously the wishes of one who is professionally in touch with the magical or the supernatural are more efficacious than those of ordinary men.

more efficacious than those of ordinary men.

'The anathema of a priest,' say the Maoris, is 'a thunderbolt that an enemy cannot escape.' 11 A Brāhman 'may punish his foes by his own power alone,' viz. by his words.12 A Rājput rāja, being cursed by Brāhmans, was 'under a ban of excommunication' even among his friends.13 There is a story that the curse of a Brāhman girl brought a series of disasters on a rāja and his kindred.14 According to the Talmud, the curse of a scholar never fails.15 The Gallas dread the dying curse of a priest or wizard.16 In Muhammadan countries the curses of saints or sharifs are particularly feared.17

The helief in the power of curses and blassings

The belief in the power of curses and blessings has a striking and widely extended application in the relations of the well-to-do with the poor and needy, and of the host with the guest. In the former case the idea that the blessing of those who have nothing else to give, or the curse of those who have no other remedy, is therefore efficacious, may have some connexion with the belief and practice. In the latter case may perhaps be seen a naturally regardful attitude towards the unknown and therefore mysterious.

'He that giveth unto the poor shall not lack; but he that hideth his eyes shall have many a curse.' 18 'Turn not away thine eyes from one inta taskchi of thee, and give none occasion to a man to curse thee; for if he curse thee in the bitterness of his soul, he that made him will hear his supplication.' 10 The Greek beggar had his Erinys. 20 The Damaras' would not think of eating in the presence of any of their tribe without sharing their meal with all comers, for fear of being visited by a curse from their Omarkura (or deity) and becoming impoverished.' 21 In Morocco, itinerant scribes go from house to house, 'receiving presents and invoking blessings' upon the donors. For the latter it is 'a profitable bargain, since they would be tenfold repaid for their glits through the blessings of the scribes.' A Moor starting on a journey gives a coin to a beggar at the gate 'so ast or ceeive his blessings.' 22 The Nayadis of Malabar invoke, in their prayers, blessings upon the higher castes who give them aims. 24 Among the Ova-Herero 'no curse is regarded as heavier than that which one who has been inhospitably treated would hurl at those who have driven him from the hearth.' 24 An offended guest 'might burn the house with the flames of his anger.' 25 Guests and suppliants had their Erinyes. 32 To

the case of hospitality Westermarck applies the principle of the 'conditional curse,' 1 which will be discussed below.

Parallel with the case of the poor and needy is

Parallel with the case of the poor and needy is that of the servant and the wife.

In West Africa 'the authority which a master exercises over a slave is very much modified by his constitutional dread of witchcraft. '2 'Slander not a servant unto his master, lest he curse thee.'s 'Thou shalt not command (thy man-servant or thy maid-servant) with bitterness of spirit; lest they groan against thee, and wrath be upon thee from God.'4 'In Morocco it is considered even a greater calamity to be cursed by a Shereefa, or female descendant of the Prophet, than to be cursed by a Shereef.'5 'The houses,' says Manu, 'on which female relations, not being duly honoured, pronounce a curse, perish completely, as if destroyed by magic.'6

3. Special applications.—The circumstances in which blessings or curses are uttered, and the persons upon whom they are directed, are obviously both numerous and varied. A few special cases may be cited, which have a bearing upon the

cases may be cited, which have a bearing upon the nature of the uttered wish. Children, in particular,

nature of the uttered wish. Children, in particular, are the recipients of the blessings of parents. The blessing of Ephraim and Manasseh by Jacob became among the Jews the regular formula by which parents blessed their children. Among the Malagasy, at a circumcision, the guests present honey and water to the children, and pronounce blessings upon them, such as 'May they prosper!'s Among the Maoris, when a child was a month old, the ceremony of twa was celebrated, in which the tohunga pronounced a karakia of blessing: 'Breathe quick, thy lung,' etc. Jewish teachers to-day bless their pupils. In Fiji all prayer was concluded with malignant requests against the enemy: 'Let us live, and let our enemies perish!' 100

The curse is particularly the weapon of the wronged and oppressed against their more powerful enemies, and of zealots against their bigoted opponents. In the Bible it is especially forbidden to curse God, parents, authorities, and the helpless leaf it. To blogs God is to make this. Wet Orientale deaf. 11 To bless God is to praise Him. Yet Orientals have a tendency to curse God, even on the slightest provocation in daily life. <sup>12</sup> Blessing the king is implied or explicit in ceremonies of coronation, and on solemn occasions.

and on solemn occasions.

The gods of Egypt bestowed a blessing on the Pharach, when they presented him with the symbol of life. 13 The abhieka of the raja included a blessing, embodied in the consecrated water: 'O water, thou art naturally a giver of kingdoms, grant a kingdom to my Yajamāna'; 'O honeyed and divine ones, mix with each other for the strength and vigour of our Yajamāna.' 14 The ceremonies of anointing and the like often involve a blessing. 15 In the last example, the vehicle is personified. A Jewish author records a Roman custom of gagging prisoners, when condemned to death, to prevent them from cursing the king. 16

The connexion of food with the practice is remarkable. The blessing of food came in later Judaism to be a giving of thanks, and the idea was that food received gratefully acts as a bless-

was that food received gratefully acts as a blessing. The bismillah of Islām has a similar principle behind its use in this connexion. At an

ciple behind its use in this connexion. At an earlier stage, no doubt, the blessing, if used, was either positive or negative, removing injurious properties, but in either case simply magical. <sup>18</sup>
In the Banks Islands an 'invocation of the dead,' the tataro, is celebrated. Food is thrown for the souls of the dead with such words as these: 'They who have charmed your food, have clubbed you . . . drag them away to hell, let them he dead.' In connexion with this is a practice of cursing a man's 'eating'; if an accident befalls the recipient of such a curse, the utterer says: 'My curse in eating has worked upon him, he is dead.' <sup>10</sup>
Among the Maoris, what was almost a sense of modesty and a principle of honour grew up about the ideas of food and its preparation. A typical formula for the counter-curse is:

'Let the head of the curser

Let the head of the curser Be baked in the oven, Served up for food for me, Dead, and gone to Night!' 20

To curse, kanga, was in effect to apply to another man any word which 'had reference to food.' It is recorded that a young man, seeing a chief in a copious perspiration, remarked that 'the vapour rose from his head like steam from an oven,' and that this remark caused a tribal war.¹ The regular term for food kell war.' It is required to the steam from the steam of the steam from the steam of the steam from the steam of the for food, kai, was discontinued at Rotorna, because it happened to be the name of a chief. To use the term kai would in that case have been equivalent to a serious curse against the chief. 2

Down to a late period in the history of Christianity, marriage was a personal 'arrangement'; the Church only stepped in to pronounce its blessing upon the union. The Hebrews had a benediction both for betrothal and for marriage. The old both for betrothal and for marriage. Roman marriage by confarreatio included a bene-St. Ambrose says that 'marriage is sanctified by the benediction,' he refers to one case only of a general practice, lasting through the Middle Ages, of concluding all private arrangements with a blessing. Thus all sales of goods and property

were blessed.

The application of the curse as a protection of property and as a method of punishing theft has been incidentally noted. The early Araba cursed the thief in order to recover the stolen goods. The method is conspicuous in Samoa. Tabu is 'a prohibition with a curse expressed or implied.' The embodiment of the wish in leaf or wooden images is termed in Polynesia rahui or raui, but we cannot always infer even the implied wish in prohibitory tabu. Allied principles inevitably shade into each other. The ancient Babylonian landmarks appear to have been inscribed with curses, such as: 'Upon this nan may the great gods Anu, Bel, Ea, and Nusku look wrathfully, uproot his foundation, and destroy his offspring. The same practice was followed by the Greeks. Deuteronomy refers to the Semitic practice: 'Cursed be he that removeth his neighbour's landmark.' Taken over by Christicality the practice of the seminal for the practice. tianity, the practice survived, for example, in the English custom of 'beating the bounds,' in which the priest invoked curses on him who transgressed, and blessings on him who regarded the landmarks. 10

Some details may be put together which illustrate adhesions and developments. In Melanesia cursing by way of asseveration is common: a man will deny an accusation 'by' his forbidden food, or 'by' a tindalo. 11 The self-invoked curse, which we shall discuss below, passes in civilization into a conditional blessing, as in the English oath, 'So help me, God.' In practical ethics 'profane swearing' is originally sinful, because of the irresponsible and unofficial use of the Divine name; later its sinfulness is limited to the spirit of resentment with which it is charged. of resentment with which it is charged. In Melanesia, the practice of vivnay, or 'sending off,' is instructive for comparison with that found in civilization. A man will say, with a gesture towards a tree, vavo aru!—which is equivalent to telling his enemy to be hanged thereon. The limits of the blessing are well preserved in the Catholic distinctions between panis beneficially and remember of the property of the property of the condensation.

dictus and panis consecratus, and between benedictio vocativa and benedictio constitutiva. The earlier principle, as we have seen, was to connect It is in accordance with the extension of this principle that the curse is embodied in the 'accursed thing,' and that the transgressor of the

prohibition himself becomes the 'accursed thing' or the curse. This was the case with Achan, and with enemies 'devoted' to destruction. On the same principle a blessed man is a 'blessing.' 2

In the OT 'accursed' (AV), hörem, should be 'devoted' (RV)—devoted to God, not accursed from God,' Similarly with the Greek translation dvdθeμa. Such a thing is withdrawn from common use, either as 'vowed' to God, or as put under a ban, in which case it has a species of 'holiness.' As a rule, a thing devoted to destruction is under a curse. In Canon Law the development of anathema into excommunication is complete.

Here we arrive at the cursings and blessings of the community. In early culture a headman or body of 'old men' may represent the community

in this function.

in this function.

The State officials of Athers prayed for 'the health and safety of the people.' Greek State-liturgies, included a 'commination service,' in which curses were involved upon offenders. Mediaval and modern Christianity combine a service of commination with the Lenten penance. This has historical connexion with the early Hebrew rite, celebrated on Ebal and Gerizim. Six tribes stood on Mount Ebal to curse those who disobeyed the Law, and six stood on Mount Gerizim to pronounce the corresponding blessings upon those who kept it. The priests and Levites stood in the valley between, and on turning their faces to Gerizim pronounced a curse is between the control of the curse has especial efficacy when pronounced three hours after sunrise is noteworthy in Commexion with such formulated conditions as 'in the sight of God and of this congregation.'?

Throughout their history, private cursing and

Throughout their history, private cursing and blessing preponderate over public, and unofficial over official. As the moralized stage in religion supersedes the magical, the 'mere power of the word is confined to private practice, and perhaps becomes more sinister with secrecy. The enormous collections of private diræ and imprecationes which have survived from Greek and Roman times, chiefly nave survived from Greek and Koman times, chiefly in the form of leaden tablets or symbolic nails, inscribed with curses consigning an enemy to the infernal powers, testify to the hold retained by the primitive theory of the curse, just as the prevalence of profane swearing in modern civilization shows the convenience of the mere form, emptied of all content except ways resembled for the convenience of the mere form, emptied of all content except vague resentment, for the satisfaction of a particular emotion. The hold exerted by the simple mystery of magic upon the popular imagination is echoed in literature, and the motive of the efficacious curse is still employed in narrative fiction.

Nothing perhaps more strikingly illustrates the extent of Divine resentment than the cursing of the ground for the sins of man (Gn 3<sup>171</sup>), or the extent of human resentment than the action of a

curse beyond the grave.

curse beyond the grave.

The Maoris took precattions to prevent enemies from getting possession of their dead relatives' bones, lest they should 'dreadfully desecrate and ill-use them, with many bitter jeers and curses.' The Banks Islanders watch the grave 'lest some man wronged by him the dead man] should come at night and beat with a stone upon the grave, cursing him.' Also, 'when a great man died, his friends would not make it known, lest those whom he had oppressed should come and spit at him after his death, or govgov him, stand bickering at him with crooked fingers and drawing in the lips, by way of curse.' The Greek Erinyes complete in the world beyond the grave the punishment which they began on earth. The Arals of Southern Morocco 'maintain that there are three classes of persons who are intallibly doomed to hell, namely, those who have been cursed by their parents, those who have been cursed by their parents, those who have been duried and those who have burned corn. They say that every grain curses him who burns it.' Il

The connexion between curses and the belief in punishments after death has been drawn out by Westermarck.<sup>12</sup>

In what may be called the lighter side of cursing, there is a curious set of customs connected with ideas of luck, and perhaps based on the notion that material injury may be discounted or diverted by a verbal or make-believe injury; in other cases, on a notion that the spirits may be stimulated by scolding and abuse; in others, again, it is perhaps evil and obstructive spirits that are being driven

away. Thus the Greek farmer, when sowing cummin, would curse and swear all the time, else the crop would not prosper. Esthonian fishermen believe that good luck will attend their fishing if beforehand they ware received. A fisherman will accordingly play some practical joke on a friend in order to receive his resentent in words. The more he storms and curses, the better the other is pleased; every curse brings at least three fish into his net. To obviste punishment for ritual sin, or to 'procure absolution,' a Behari man will throw stones into a neighbour's house. The result is the reception of abuse, or even of personal violence.

violence.3

4. Conditional cursing and blessing.—What Westermarck terms the 'conditional curse,' which he was the first student to remark, is an important development of the principle of cursing and blessing, and has had considerable influence in the making of morality, especially in the sphere of good faith, honesty, and truthfulness. Put in its lowest terms, the energy of a conditional curse is the supernatural energy of an ordinary curse or of its embodiment, in a latent state. This is dis-charged by the act, if or when it takes place, against which the curse is directed. The principle applies also to blessings, but this application is less frequent.4

requent. 4

"The term l-'ar,' Westermarck writes, 'is applied by the Moors to a compulsory relation of a peculiar kind in which one person stands to another. The common expression, Ana far alluh u 'arak, ''I am in God's 'ar and your 'ar,'' implies that a man is bound to help me, or, generally, to grant my request, whatever it may be, as also that if he does not do so his own welfare is at stake. The phrase "In God's 'ar" only serves to give solemnity to the appeal: "I am under the protection of God, and for his sake you are obliged to help me." But the word l-'ar is also used to denote the act by means of which a person places himself in the said relationship to another. Had l-'ar 'allk,' 'This is 'ar on you,' is the phrase in common use when an act of this kind is performed. If the person so appealed to is unwilling to grant the request, he answers, Had l-'ar yilpraz fk, 'May this 'ar recoil upon you.' The constraining character of l-'ar is due to the fact that it implies the transference of a conditional curse:—If you do not do what I wish you to do, then may you die, or may your children die, or may some other evil happen to you. That l-'ar implicitly contains a conditional curse is expressly stated by the people themselves, although in some case this notion may be somewhat vague, or possibly have almost faded away.' 5

The various acts which establish l-'ar all serve as

The various acts which establish I-ar all serve as 'outward conductors of conditional curses.' may be made by taking the son and giving him to the father, saying, 'This is '\(\alpha\rho\) for you.' Another method is to present food. If the man accepts, he is bound to do what is asked of him. Refugees enter a tent or merely grasp the tent-pole, saying, 'I am in God's '\(\alpha\rho\) and your '\(\alpha\rho\).' An injured husband may put '\(\alpha\rho\) upon the governor, to get advers by owing to him with a piece of his tentredress, by going to him with a piece of his tent-cloth over his head; or he may leave seven tufts of hair on his head, and appeal to another tribe. 'The conditional curse is obviously supposed to be seated in' the tent-cloth or tufts of hair, and from there to be transferred to the person' invoked. 'Ar may be made by piling stones. Two woked. 'Ar may be made by piling stones. Two men making an appointment, and one failing to appear, the other makes a cairn at the spot, and takes the breaker of faith to it. The latter is then obliged to 'give him a nice entertainment.' Similarly, with ordinary curses the cairn may be used. If a muleteer buys a new mule, his comrades ask him to treat them. If he refuses, they

6 1b. 362.

make a cairn, asking God to send misfortune on the mule. By way of revenge upon a niggardly man, scribes make a cairn, and each takes a stone therefrom, and, as he throws it away, says: 'As we dispersed this heap of stones, so may God disperse for him that which makes him happy.' The sacrifice of an animal on the threshold is the most powerful method of making 'ar. To see the blood is sufficient. Over such an animal the bismillah, 'In the name of God,' is not pronounced; and it cannot be eaten by the sacrificer or the person invoked, but only by the poor. The practice

practice 'is resorted to for a variety of purposes: to obtain pardon from the government; or to induce the relatives of a person who has been killed to abstain from taking revenge; or to secure assistance against an enemy or mediation in the case of trouble.' It 'plays a very important part in the social life of the people.' 2

It is also employed to put pressure upon jinn and dead saints—usually to restrain the former, and compel the assistance of the latter. Making cairns, or tying rags, near a styid is 'ar upon the saint. The rag is knotted, and the man says: 'I promised thee an offering, and I will not release thee until thou attendest to my business.' Here we approach the conditional 'blessing.' Again, a man, invoking revenge, strews burnt corn on the floor of the styid, saying: 'I threw, O saint, So-and-so as I threw this corn.' 'This is 'ar on the saint,' as Westermarck points out, 'but at the same time it is an act of symbolic magic.' Forms of ordeal, and the whole theory of the or tying rags, near a siyid is 'ar upon the saint.

Forms of ordeal, and the whole theory of the oath, as well as its practice up to the latest stages of civilization, depend on the principle of the conditional curse, often embodied in symbolic

action.

action.

The curse as an engine of law is well exemplified in Samoa. A theft has taken place; the injured party pays the 'priest' to curse the thiet and make him sick. It the thiet falls ill, he restores the stolen property, and the 'priest' prays for a reversal of the curse. Again, suspected parties are summoned by the chief. Grass is laid on the sacred stone, the village-god, and each person places his hand thereon, saying: 'I lay hand on the stone. If I stole the thing, may I speedily die!' The use of grass is said to refer to the implied curse: 'May grass grow over my house and family!' So, in ordinary disputes, a man will say: 'Touch your eyes if what you say is true.' In the same way, European boys 'touch wood' as a guarantee of truth. of truth.

An oath may be regarded as 'essentially a conath and hay be regarded as essentiarly a conditional self-imprecation, a curse by which a person calls down upon himself some evil in the event of what he says not being true.' All the resources of symbolic magic are drawn upon in the multi-

tudinous examples of this principle.

In Tenimber the swearer prays for his own death if what he says is false, and then drinks his own blood, in which a sword has been dipped. The Malay drinks water in which daggers, spears, or builets have been dipped, saying: 'If I turn traitor, may I be eaten up by this dagger or spear!'s The Sumatran oath is still more explicit: 'If what I now declare is truly and really so, may I be freed and cleared from my cath; if what I assert is wittingly false, may my cath be the cause of my destruction!' The Greek opcos was, at an early period, the object sworn 'by.' The Ostyaks swear on the nose of a bear, which animal is held to have supernatural power. Hindus swear on the Sanskrit Harviamsa, or on water of the Ganges, or touch the legs of a Brāhman; Muhammadans, on the Qur'an; Christians, on the Bible. Have been guilty of this crime. ... then, Mbiam, Thou deal with me!' Lating the fetish' and 'drinking the water of cursing' are prominent forms of the ordeal in Africa and elsewhere. The Hindu Sapatha denotes both oath and ordeal. The mediaval 'trial by combat' was preceded by an oath, and thus defeat was tantamount to perjury. The formula of the ordeal of the Eucharist ran: 'Et si aliter est quam dixi et juravi, tune hoc Domini nostri Jesu Christi corpus non pertransest guttur meum, sed haereat in

faucibus meis, strangulet me suffocet me ac interficiat me statim in momento.' 1 In the contract and covenant a mutual conditional

curse is largely used.

Thus the 'ahêd of the Moors is the mutual form of 'ar. Chiefs exchange cloaks or turbans; and 'it is believed that, if any of them should break the covenant, he would be punished with some grave misfortune.' 2 Reconciliation is effected, among the same people, by joining right hands; the holy man who superintends wraps the hands in his cloak, saying: 'This is 'ahêd between you.' 3 A common meal also ratifles a covenant. If one party breaks faith, it is said: 'God and the food will repay him.' 4 In the pela rite of Ceram, celebrated to settle a quarrel or to make peace, both parties attend a feast, and eat food into which drops of their blood are let fall and swords dipped. This they alternately eat. 5 Reconciliation of two men in the islands of Leti, Moa, and Lakor, one man having cursed the other, is effected by the men eating together. 6 To ratify a bond of fraternity in Madagascar between two parties, a fowl has its head cut off, and is left bleeding during the rite. The parties pronounce a long mutual imprecation over the blood: 'O this miserable fowl weltering in its blood! Thy liver do we eat. . . . Should either of us retract from the terms of this oath, let him instantly become a fool, let him instantly become blind, let this covenant prove a curse to him.' 7

The mutual conditional curse, it must be noticed, allows the curse proper to be more or less lost in the material symbolism of union. Since, moreover, all these analogous principles pass into one an-other so inevitably and gradually, we do not seem entitled to press the principle of the curse too far. In reconciliatory ceremonies, for instance, it is possible that the idea of union is sufficient; the idea of the curse may adhere to it, but not essentially.

The oath carries with it the punishment for per-

jury. According to Roman legal theory, the sunctio of a statute is the penalty attached for breaking it. But in ancient States all laws were accompanied by a curse upon the transgressor. True to its mission of serving where other methods In the earliest culture, however, as that of the Australians, the personal efforts of the rulers work together with the impersonal energy of the super-

natural engines they employ.
5. The blessing and the curse as invocations.

The distinction between the 'magical' and the 'religious' curse or blessing is not to be over-emphasized. The two forms merg into one another, and either is as 'magical' or 'religious' as the other, while neither is the more efficacious. A god draws together in his own person the various threads of supernatural force. Among these are cursings and blessings. Their inherent mystery of power still depends on the will of the utterer. His invocation of the god to execute for him his than a guarantee of the result. The independent force of the wish, in fact, tends to remain even when the wish is merged in prayer. The personal quality of the utterer is still the characteristic of his wish. Psychologically: 14 in 14 diaments in the characteristic of his wish. his wish. Psychologically, it is difficult to limit a desire by making it an invocation; to divide the attention between the object of the desire and the expression of the desire on the one hand, and an intervening divinity on the other, is a matter of training. Thus it is rarely the case that, when a man says 'God bless you!' he is conscious of the reference to God, any more than when he says 'Bless you!'

Further, there is the tendency for the principle of the curse, if not of the blessing, to become itself personified. This result is found as far back as the stage of culture represented by the Maoris. The 'oursing thought' is personified in the Avesta; so is the 'pious and good blessing.' The Greeks personified the curse as Erinys. Behind this there may be the notion 'of a persecuting ghost, whose

374 CUSTOM

anger or curses in later times were personified as an independent spirit.' Allegorical figures of curses were included by painters in pictures of the wicked in hell.<sup>2</sup> Subsequently the Erinyes became the ministers of Zeus.<sup>3</sup> The steps by which a curse or blessing becomes an appeal to a god, a prayer that he will injure or benefit the person intended, are not indistinct. The Melanesian curses in the name of a lio'a, a powerful spirit. His connexion with the lio'a gives or adds efficacy to his curse. The efficacy of the mere word naturally is increased, not by the will of the spirit invoked, but by the use of his power. The spirit invoked, but by the use of his power. The Talmud and the OT supply examples of 'the ancient idea that the name of the Lord might be used with advantage in any curse.' Among the Hebrews the 'Name' had peculiar importance. In the next place, the appeal may take the form of a conditional blessing upon the god. In the Yajur Veda we read the formula, addressed to Sūrya: 'Smite such a one, and I will give you an offering.' This method is clearly more efficacious. Vagang in the Early is clearly more efficacious. Vagona in the Banks Islands is the most serious of curses. It consists in procuring the *intervention* of a supernatural power.<sup>7</sup> The story of Balaam (Nu 22-24) includes a belief that the Divine power can be moved to effect the injury desired. A further step is taken when the moving is in the form of compulsion. As curses may develop into prayers, so prayers may develop into spells or curses. Brahma is the energy of the gods, but it is also the prayer, and 'governs them.'s apa is both 'prayer' and 'curse'; so is the Manx word gues.' Prayer is often possessed of magical power, just as a Toda spell is in the form of a prayer.<sup>10</sup> Even in Greek religion the deity is constrained to effect a curse or a blessing; 11 even the personified curse, the Erinys, works by a spell-song which binds the victim. Thus the phrases, 'by,' for the sake of,' and the like, are but vague expressions of the actual relation between the inclusion of the sake of the sa tween the invoker and the invoked.

tween the invoker and the invoked. In the Banks Islands, cursing by way of asseveration is described in English terms as swearing by a forbidden food, or by some powerful tindalo, a the Toda paid prays with a gurgling utterance in the throat: 'May it be well!' or 'May it be blessed... with the buffaloes and calves; may there be no disease;... may clouds rise, may grass flourish, may water spring... for the sake of 'certain 'objects of revenence.' This term, idith, is used in special connexion with the name of a god, and involves the idea of supplication; it is also employed in sorcery, 14

A modern Christian prayer for a blessing 'for Christ's sake' is thus widely different, in the condition appended, from the Toda or Melanesian type.

Magic, so to say, has given place to emotion, though itself originating in emotion, of another kind.

6. Connexion with morality.—Law gradually takes over the function of the curse, as a form of retribution; while prayer may still retain its use in cases where human intervention fails, or even as a spiritual replica of human intervention. The moralizing of the curse and the blessing within these limits follows the course of ethical evolution. In the OT the undeserved curse has no effect, or may be turned by God into a blessing. The justice of the wish is left to the decision of God; while it follows that an unjust curse or blessing is a sin against the All-Just. The Greeks modified their theory of the hereditary transmission of a curse by arguing that each generation

commits new sins.1 At one end of the process we have an invocation to the gods, as in the Surpu of the Chaldwans, asking for relief from the effects of a curse, not for forgiveness; or the thief invokes God while he breaks into the house, the bandit the Virgin. At the other, the god rewards or punishes independently of human invocation, and with absolute justice. According to Aquinas, 4 a maledictio is efficacious only when made by God. In the mouth of man, however uttered or however deserved, it is per se inefficacious. But, when this stage is reached, cursing or blessing has become a contradiction in terms.

LITERATURE.—The literature has been given fully in the foototes.

A. E. CRAWLEY.

CUSTOM.—In the course of his discussion on 'Custom and the Moral Life,' Wundt writes as follows (*Ethics*, Eng. tr., i. 131 f., 151: for an unfavourable criticism, see Ladd, *Philosophy of Carlot New York* 1888.

Conduct, New York, 1902, p. 27f.):

'A custom is any norm of voluntary action that has been developed in a national or tribal community. However rigorously individual conduct may be prescribed by custom, one is still left free to obey or disobey, as one chooses. . . And it is custom, too, that transfers the principle of freedom, which in the animal consciousness does not extend beyond the realm of habit, to the general consciousness of society. . . . In custom the settled habits of the human race and of its subdivisions still refship the abstracts of consciously covertive medium. the settled habits of the human race and of its subdivisions still retain the character of consciously operative motives. Instinct is habitual conduct that has become mechanical; custom, habitual conduct that has become generic. . It is true that custom finds its own means of compulsion. But these, like custom itself, are never of the obligatory kind. They consist neither in subjective commandments like the moral laws, nor in objective menaces like the laws of the state. Custom is closely compared both with both the conductive of the state.

Custom is closely connected both with habit and with usage, the distinction of each from the other being thus well set forth by Wundt (op. cit. p.

'Habit covers all and every form of voluntary action that,

On the other hand, custom, with its social basis, tends to become habit in the individual, producing, it may be, an impression of oddity when he moves in a circle where the custom is different, so that in countless cases custom and habit may stand in sharp antithesis. But if custom, in the main, produces habit, habit in its turn, if the individual possessing it, whether as a result of previous environment or in virtue of personal idiosyncrasy, be strong enough to impress his own particular habit on his fellows, may influence custom, or even give rise to a new custom of greater or less extent (for some interesting specific instances, see *JE* iv. 396; e.g. 'it was the custom of R. Judah b. 'Illai to bathe his face, hands, and feet in warm water before Sabbath began. This also was adopted by before Sabbath began. This also was adopted by the Jewish community'). This, by the very nature of every social organism, is comparatively rare, and, if custom is thus to arise, it must meet a real, even though perhaps hitherto unfelt, need of society, either in whole or in part. Otherwise we have, not custom in its true sense, but the more

have, not cusson.

CUSTOM

375

evanescent 'fashion' or 'vogue.' For custom is concerned with the constant needs of society,

shild is 'subject to change only with change in conditions of life or theories of living; and, as this change is reflected in the forms of custom, custom is as truly a picture of the moral consciousness of the community as a man's habits are the expression of his individual character. Habits can constantly be formed anew, because new individuals, whose habits they are, are constantly coming into existence. But custom, national habit, endures while the nation endures '(Wundt, op. cit. p. 164).

We have seen that custom and habit are mutually interactive. Under conditions now prevailing, even amongst primitive peoples, custom is by far the more potent factor, and yet it would seem that this was not always the case. There must have been a time when no form of organized society existed, and when men were so widely scattered because of the fewness of their numbers that individualism must have prevailed far more than it now does. Then it was that habit, not custom, was the dominant factor; and it would seem that, as individual habit met individual habit, each modifying and being modified by the other, the composite resultant was crystallized as custom; while custom meeting with custom-perhaps even affected now and again by the individual habit of some specially strong individuality—was in its turn blended into an amalgam of custom of wider scope and influence, until at last there was evolved one of the great determinants of society as a whole. At the same time it must be borne in mind that such a reconstruction is entirely hypothetical and incapable of historical proof. Custom is already existent at the earliest historical time and in the most primitive modern social conditions of which we have any knowledge, and, in view of the fact that all members of any primitive society are, and doubtless always were, on approximately the same mental scale, it would seem that, as Wundt says (op. cit. p. 161),

says (op. cit. p. 161),

'one man may contribute one thing to a custom, and another another; but the custom as a whole is a common creation, which cannot be analyzed into individual elements, for the simple reason that the various individual factors are all operative at one and the same time, and that it is consequently impossible for the individual to separate his own particular contribution from the contributions made by others' (cf. Wundt's criticism of this entire scheme of reconstruction, p. 159 ff., summarized thus [p. 164]: 'Oustom has, so far as we know, but one course of development, and that is from preceding customs of kindred contents. Usage, fashion, and habits, on the other hand, constitute a mixed medley of new forms and relics of a long dead past. Transformation and new formation are here often enough difficult of discrimination; but there is no such thing as an entirely new custom').

To primitive man, however, the problem of the

To primitive man, however, the problem of the origin of custom seldom arises. For him it is enough that such and such a custom exists; and his sole explanation, if one be sought from him, is that, as the Kafirs say (Leslie, Among the Zulus and Amatongas, Edin. 1875, p. 146), 'it was so done by my fathers,' or, as the Narrinyeri have it, that it was so commanded by Narundere, the 'All-father' (Taplin, in Woods, Nat. Tribes of S. Australia, Adelaide, 1879, p. 55). In this connexion it must not be forgotten that a custom may persist after its original cause has ceased to be operative, and that in such a case it may have an entirely different reason and motive assigned it (cf. Wundt, op. cit. p. 139 ff.). At the same time, for specially important or striking customs, or for particularly remarkable natural phenomena, ætiological mytlis may be invented with the most honest intentions imaginable, so that custom comes to be one of the factors, as Lang well points out in his Custom and Myth, in the genesis of the

myth.

In view of the homogeneity and lack of sharp distinction which characterize the more primitive

1 The theory of Herbert Spencer (Principles of Sociology 3, 1893, §§ 529, 693), that custom originated in ancestor-worship, is too biased and one-sided to deserve serious consideration.

stages of the human race, custom may be said there to permeate and to control well-nigh every phase of man's mental and moral activity; and, although impaired in part by the rise (or is it rather the recrudescence?) of individualism, it still exercises this potent power to a very great extent over the most highly civilized peoples. In the domain of religion it is custom which has largely influenced ritual and been in part responresort, that is the chief factor in the evolution of law, which, to primitive man, is inextricably interwoven with, and inseparable from, religion; custom conditions the entire existence of almost every individual, even in the most highly civilized communities, from the hour of his birth to that of his death. Indeed, the most daring radicalism and the most pronounced individualism have their own customs; for without custom there can be no type of human thought or of human activity

Such being the case, it is but natural that in the earlier stages of civilization custom should be held to be Divinely sanctioned, and that any breach of it should of itself constitute a serious crime, so that the Khonds of India, the Kamchatkans, and the pagan Greenlanders hold the breaking of an old custom to be one of the greatest of sins (Hopkins, Religions of India, London, 1895, p. 531; Steller, Beschreibung von dem Lande Kamtschatka, Frankfort, 1774, p. 274; Rink, Tales and Truditions of the Eskimo, London, 1875, p. 201f.); while violation of custom provokes the wrath of the deified ancestors amongst the Basuto (Casalis, Basutos, London, 1861, p. 254); disaster and harm Aleuts (Ellis, Eme-speaking Peoples, London, 1890, p. 263; Elliot, Alaska and the Scal Islands, New York, 1886, p. 170); and the Ainu, in such an event, fear the wrath of the gods (Batchelor, Ainu of Japan, London, 1892, p. 243 f.). Whether, however, Wundt is right in saying (op. cit. p. 134) that 'custom was at first an act of worship' seems open to question.

With the evolution of a specific concept of law, a distinction may be drawn between law and custom, as when Plautus (Trin. 1033, 1037) makes

Stasinus say:

'Ambitio iam more sanctast, liberast a legibus, . . . .

Mores leges perduxerunt iam in potestatem suam'; and a few lines further on he utters the profound truth, valid even when taken in the cynical spirit of its speaker:

'Leges mori serviunt'l-

a phrase which, like the Talmudic maxim, 'Custom always precedes law' (Soferim, xiv. 18), might well serve as the motto for almost any treatise on the origin of law; while in like manner Justinian expressly says that 'long prevailing customs, being sanctioned by the consent of those who use them, assume the nature of laws' (*Instit.* I. ii. 9).

When it becomes possible to draw such a dis-

tinction between custom and law, infringement of the former, unless distinctly coincident with and protected by law, no longer constitutes an offence of which legal cognizance must be taken, although even so advanced a code as the Jerusalem Talmud Pesahim, iv. 3) authorized the courts to punish (Pesahim, 1v. 3) authorized the courts to punish transgressors of custom equally with transgressors of law—a survival of some such stage as that of the African Wanika, amongst whom, 'if a man dares to improve the style of his hut, to make a larger doorway than is customary; if he should wear a liner or different style of dress to that of his

nner or different style of dress to that of his 1 The strictly legal distinction between leg, mos, and consustrated by Isidore of Seville (Etymol. v. ii. 21.): Lex est constitutio scripta. Consustate probate consustated moribus institutium, quod pro lege suscipitur, cum deficit lex; neo differt scriptura an ratione consistat quando et legem ratio commendat.

376 CUSTOM

fellows, he is instantly fined' (C. New, Life, Wanderings, and Labours in E. Africa, London, 1873, p. 110). Yet this failure of modern law normally to give legal protection to custom does not mean that non-observance of custom, whether such infringement be careless, indifferent, unwitting, compul-Any such violation may, and often does, lead to social ostracism of greater or less extent, even when the infringed custom in question may be

ethically indifferent.

And yet, the separation between custom and law is by no means complete, even from the legal point of view; for it is custom, as is well known, that forms the basis of the vast body of common law in England, whence it was adopted in N. America.1 Into the details of the common law distinctions Into the details of the common law distinctions between general and particular customs—the latter category applying only to particular districts or to those engaged in particular occupations, and not recognized, except in a few States, by the common law of the United States—it is unnecessary to enter here. Suffice it to say that a custom, to be enforceable at common law, must be both definite and reasonable, and that it must have been used uninterruptedly and undisputedly 'so long that the memory of man runneth not to the contrary,' this latter phrase being understood to mean from the accession of Richard r. in 1189 (whence the rejection of particular customs in the United States, since none such could there possibly date

Law, being normally derived from custom, is for the most part in harmony with it; so that in practically every affair of everyday life one avoids all conflict with law if one simply follows custom. At the same time, just as custom may be in sharp contrast with habit, such may be its relation to law. In this case the law in question—whether as being due to the caprice of the ruler or to the more advanced ideas of the governing classes-is not, as is usually the state of affairs, derived from custom. but from the weaker source of individual, class, or other minority requirements. Under these condiother minority requirements. Under these conditions law usually succumbs to custom and remains a dead letter, so that, for instance, 'under the Hindu system of law, clear proof of usage will outweigh the written text of the law' (Mayne, Treatise on Hindu Law and Usage, Madras, 1878, p. 41); while the Roman jurists (Instit. I. ii. 11; Digesta, I. iii. 32) laid down the maxim that a law may be abrogated by desuctude or by contrary usage. Nay, law being even more conservative than custom, the change of custom may be such that a law—even one which initially may have been far in advance of custom—may come to be so much behind and below the altered custom that it much behind and below the altered custom that it is resolved, for this very reason, into a mere dead letter, and must either fall into oblivion or be amended to meet the changed conditions of the social organism. In general it may be postulated that no law can be enforced against the prevailing that no law can be enforced against the prevailing custom; even chiefs and kings, with the apparently despotic powers that attach to them in primitive society, prove unequal to the task (cf. the examples quoted by Westermarck, MI i. 162); and the lamentable failure of many laws designed for the highest benefit to society and drafted by men of unimpeachable ethical character proves—were proof necessary—that custom is really supreme over law in the highest as well as in the lowest stages of civilization. stages of civilization.

As has already been noted, custom is subject to the most complete transformations, both in motive and in manifestation. Before the average man has <sup>1</sup> A similar system of common law formerly prevailed in France, as in the custom of Normandy, of Paris, etc., and the same was true of Germany almost until the close of the Middle

. . '

read many pages of a book dealing, say, with the peoples of Africa or of Polynesia, he will find mention of customs that seem to him ridiculous, disgusting, or immoral—all of which judgments, from the point of view of his own civilization, may be perfectly true. And yet, in the words of Wundt

be perfectly true. And yet, in the words of Wundt (op. cit. p. 264),

'the moral value of the personality is relative; it varies with the stage of development to which moral ideas have attained.

Judgment of the moral value, whether of the individual or of society, depends not upon the absolute value of their disposition and action, but upon the relation of these to the stage of moral evolution already achieved.

It is doubtful whether any custom whatever, no matter how repugnant to our present æsthetic or moral sense it may be, can ever have arisen without some reason which—immoral or foolish though such reason may seem to us—commended itself to the people adopting it as subserving some highly desirable social end. Thus, the killing of an aged parent is rightly a crime of unmitigated turpitude to us, yet from the point of view of many primitive peoples (see artt. ABANDONMENT AND EXPOSURE and OLD AGE; cf. also Westermarck, op. cit. p. 386 ff.) there is much to be said in its favour; and in many other cases what seems to us a most immoral act is really due to sentiments which we can only regard as praiseworthy and, in the best sense of the term, as moral. On the other hand, there are to be found amongst every people, side by side with customs regarded as moral (i.e. com-mending themselves to the best ethical judgment of the highest thinkers of the people in question), customs deemed immoral—in other words, detrimental to the best interests of the society under mental to the best interests of the society under consideration. All this merely means that, as society develops to a higher and higher ethical stage, customs once justified by specific conditions then existing have no longer such justification, so that they survive only by force of inertia or as pandering to the baser side and the lower strata of a society which, as a whole, has taken a marked step in advance.

Midway between the moral and the immoral custom stands what we may call the unmoral or indifferent custom—one whose observance or non-observance is a matter of ethical unconcern and indifference; but it must be noted that the un-moral custom is likely, in course of time, to be regarded as immoral or wrong (although, of course, regarded as immoral or wrong (atthough, of course, the reverse frequently happens, so that the custom once held to be unmoral and indifferent evolves into a custom deemed moral and ethically imperative). In point of fact, most unmoral customs have doubtless passed through the moral stage; but custom qua custom is, like law, neither moral, immoral, nor unmoral. Nor should it be forgotten that a custom once held to be moral may come to be viewed as unmoral and that be viewed as unmoral or even immoral, and that still later, with further changes in the status of society, such a custom may again develop, usually through the unmoral stage, into a moral rule. But, though the ultimate basis of every custom is moral and religious, a custom once firmly established tends to become more and more divorced from true ethical and religious considerations and questions, until at last even those most strenuously adhering to a custom may be, as has already been noted, entirely unaware of its real provenance.

A custom almost universally regarded as moral by a given society may be held by some of its members to be immoral, or at best indifferent. Here, as in the case of law, there emerges a moral advantaging of all custom when the case of the control of the case of the control of the case of the cas marked characteristic of all custom, when once it has gained sway. This characteristic is thus summarized by Westermarck (op. cit. p. 160):

'Custom regulates external conduct only. It lolerates all kinds of volitions and opinions if not openly expressed. It does not condemn the heretical mind, but the heretical act. It demands that under certain circumstances certain actions

shall be either performed or omitted, and, provided that this demand is fulfilled, it takes no notice of the motive of the agent or omitter. Again, in case the course of conduct prescribed by custom is not observed, the mental facts connected with the transgression, if regarded at all, are dealt with in a rough and ready manner, according to general rules which hardly admit of individualisation.'

This brings up the difficult problem of how far one ought to conform to a custom which he deems not merely unmoral and indifferent, but immoral and wrong. To an indifferent custom no one, unless he be finically hyper-ethical or—as is here more usually the case—wantonly iconoclastic (i.e. delighting in flouting custom as custom), should object to accord obedience, at least externally, if for no other reason than merely to avoid disturbing social amenities or to avert unfavourable comment on the score of oddity and 'crankiness.' 'If,' writes the great Apostle of the Gentiles, 'meat maketh my brother to stumble, I will eat no flesh for evermore, that I make not my brother to stumble' (1 Co 8<sup>13</sup>; cf. St. Paul's admirable discussion of the entire question of the unmoral custom in Ro 14). The case is far different, of course, with regard to customs that are felt to be positively immoral and wrong. This question is more fully discussed in art. Conformity. Here it may be sufficient to point out that the presumption is always that any custom is felt to be moral by the community or social organism within which it prevails. The 'burden of proof' must rest on him who ignores or wilfully violates the custom in question. In any final judgment as to obedience or disobedience to a custom, account must be taken of the history and meaning of the particular custom under consideration, and there must be full appreciation of the ethical implications of compliance with or violation of the custom as regards the moral effect of such action both upon self and upon others. Above all, the individual, if he is to be sane in his judgment, must be constantly on his guard against personal idiosyncrasies and the excessive individualism of modern times—the 'right of private judgment' run mad.

LOUIS H. GRAY.

CUSTOM (Hindu).—The Sanskrit word is āchāra, 'religious custom,' 'established usage.' The binding force of custom is fully recognized in the Sanskrit lawbooks. Thus it is stated in the Code of Manu (i. 108) that āchāra is transcendent law, and that, therefore, a twice-born (i.e. high-caste) man should always be careful to follow it. The whole body of the sacred law (dharma), according to a favourite scheme, is divided into the three parts—āchāra (rules of conduct), vyavahāra (rules of government and judicature), and prāyaśalhitta (penance and expiation). The well-known Code of Yājūavalkya comprises the following subjects under the head of āchāra: purificatory rites (saṃskāra); rules of conduct for young students of the Veda; marriage and duties of women; the four principal classes and the mixed castes; duties of a Brāhman householder; miscellaneous rules for one who has completed his period of studentship; rules of lawful and forbidden diet; religious purification of things; śrādhas, or oblations to the manes; worship of the deity Ganapati; propitiatory rites for planets; duties of a king. See Dharma and Law (Hindu).

CUSTOM (Muslim).—See LAW (Muslim).

CUTTING .- See MUTILATION.

CYBELE (Κυβέλη).—The great Mother Deity of the Phrygians, known also, and especially in the cult language of the Romans, as the Great Mother of the Gods, or the Great Idean Mother of the Gods (Magna Deum Mater, Mater Deum Magna Idaea). Her worship had its origin in Asia Minor in pre-historic times, possibly prior to the advent of the Phrygians, which is placed at about 900 B.C.; became prominent in early historic times in Galatia, Lydia, and Phrygia, where the various forms of the Cybele legend agree in localizing the origin of her cult; and was most strongly centralized in Phrygia. Its most sacred seat in the East was at Pessinus, a Galatian city near the borders of Phrygia, but once a part of the great Phrygian Empire, where the symbol of the goddess, a small meteoric stone, was preserved. From Asia Minor the cult spread to Thrace and the islands, and finally to Greece, though it never became popular there owing to its un-Hellenic nature. In 204 B.C., in response to an oracle to the effect that Hannibal could be driven from Italy if the Idean Mother were brought from Pessinus, the sacred stone was transferred to Rome, and the cult was adopted by the State and located on the Palatine (Livy, xxix. 10-14). It first became of great importance in the Roman world under the Empire, when it spread from Rome as a centre to all the provinces. Like the cults of Mithra and Isis, it was one of the most obstinate antagonists of Christianity, and disappeared only after the long struggle between the two religions which culminated in the victory of Theodosius over Eugenius in A.D. 394.

As the cult of Cybele probably suffered little modification in Greece and Italy, the original character of the goddess may be inferred from what is known of her in Greek and Roman times. She was identified by the Greeks with Rhea, Ge, and Demeter, and by the Romans with Tellus, Ceres, Ops, and Maia. She was known as the universal mother—of gods and men, as well as of the lower creation—though her character as the mother of wild Nature was especially prominent, as was manifested by the orgiastic wildness of her worship, her sanctuaries on the wooded mountains, and her fondness for lions, which are frequently associated with her in art and literature. Her early attendants in legend, the Korybantes, Idean Daittyloi, and sometimes Kuretes, were wild demonic beings, probably ithyphallic (Georg Kaibel, GGN, 1901, p. 488 ff.).

The priests of Cybele in historic times were ennuchs called Galloi, who first appear in Alexandrich in the street of the contraction of the contracti

The priests of Cybele in historic times were eunuchs called Galloi, who first appear in Alexandrian literature about the 3rd cent. B.C. Clad in female garb, they wore their hair long and fragrant with ointment, and celebrated rites to the accompaniment of flutes, cymbals, tambourines, and castanets, yelling and dancing themselves into a frenzy until their excitement culminated in self-

and castanets, yelling and dancing themselves into a frenzy until their excitement culminated in selfscourging, self-laceration, and exhaustion. Their consecration to the service of the goddess sometimes consisted in self-emasculation. Priestesses

also took part in the cult.

Like Venus and Adonis, Isis and Osiris, etc., Cybele and Attis were usually associated in worship, and formed a duality symbolizing the relations of Mother Earth to her fruitage. The birth, growth, self-castration, and death of Attis, the son and lover of Cybele, signified the springing, growth, and death of plant life (see ATTIS). A celebration corresponding to the annual spring festival at Rome, which extended over the period March 15-27, thus including the equinox, consisted in a kind of sacred drama of Cybele and Attis and no doubt existed in Phrygia also.

Cybele usually appears in art seated on a throne, draped, with mural crown and veil, accompanied by lions. The tympanum, cymbals, patera, sceptre, garlands, and fruts, and Attis with his attributes, the Phrygian cap, pedum, syrinx, and the pine, also appear with her. The so-called Niobe on Mount Sipylus is a Cybele, and the Cybele of Formice, now in Copenhagen, is one of the best sculptural representations of her. She inspired no piece of art of the first class. In literature no important work except Catullus lxiii. is devoted to her, though she is frequently mentioned in the literature of the Empire. Her religious importance lay in her mysticism and in the closeness of her contact with the common people, and was very great in spite of the gross practices which grew up around her cult.

LITERATURE.—See references under artt. GREAT MOTHER and GRANT SHOWERMAN.

CYCLE.—See CALENDAR, ARTHUR, CUCHULAINN CYCLE, etc.

## CYCLOPS.—See GIANTS.

CYNICS.—The name is derived from κύων, 'dog,' with which it was connected in several ways. (a) To the east of Athens, heyond the Diomean gate, on a spur of Lycabettus, was a gymnasium known as the Cynosarges. Unlike the Academy and Lyceum (schools for youth of free Athenian parentage), it was provided for children of mixed blood. Antisthenes, son of an Athenian of this name by a Thracian slave woman, taught his disciples here after the death of Socrates, his second master. Κυνόσαργες is compounded of κύων and ἀργός, lit. 'white dog.' The story ran that the gymnasium stood on or near the site of an ancient sanctuary of Hercules (the Cynic tutelary, cf. Wilamowitz-Möllendorff, Euripides' Herakles', Berlin, 1885, i. 102 f., 130), and that, on the first occasion of sacrifice to the hero, a dog rushed in and seized a portion of the offering. The designation refers, possibly, not to the colour of the dog, but to the flash-like effect of its speed upon the spectator. (b) The epithet 'dog' was soon adopted by Cynic teachers—Antisthenes, the 'downright dog,' Diogenes, the 'royal dog'—doubtless as a symbol of their return to the 'simplicity' of animal nature and habits, or of endurance and hardihood (cf. Plato, Rep. ii. 375 f., v. 415 f.); it was also applied to them by their opponents for less flattering reasons, connected with displays of audacity, coarseness, and immodesty (cf. Winckelmann, Antisth. Frag., 1842, p. 8 f.). (c) Eventually the epithet became so associated with the sect in the popular mind that the Corinthians placed a marble dog upon the pillar erected by them over the grave of Diogenes.

1. History.—(a) Personal.—The Cynics flourished prosperously for about a century after the death of Socrates (399-299 B.C.). As their teaching contemplated a way of life rather than a philosophical system, and as their works are lost, or known only in fragments and by late reports at second-hand, we are not informed in detail about the history of the sect. Indeed, Antisthenes; Diogenes, and Crates excepted, many representatives are little more than names to us.

tives are little more than names to us.

Antisthenes of Athens (c. 444-874 g.c.), at first a pupil of Corgias the Sophist, and a 'late learner' (ct. Plato, Soph. 251) with Socrates,—Plato implies one too old to learn,—founded the movement. Diogenes of Sinope (c. 412-823) was his most notable, notorious, and popular follower. He appears to have won many disciples, probably at Corinth principally, where he was sold as a slave to Xeuiades, whose sons he taught. Among them were Monimus, a slave from Syracuse, an admirer of Crates; Onesicrias of Egina (fl. c. 327), an officer who went to Hindustan with Alexander the Great, and interested hinself in a comparative study of the Indian Gymnosophists and the Cynics (ct. G. Grote, Plato and the Other Companions of

Sokrates 2, 1835, i. 158 f.); his sons, Philiscus and Androsthenes; Menander Drymus, and Hegesaus Clocus of Sinope. More distinguished associates, eminent for other reasons than their mere connexion with Cynicism, ere, possibly, Phocion the 'Good' (c. 402-317), the Athenian statesman whom Demosthenes feared, Anaximenes the rhetorician, and, certainly, Stilpo (fl. c. 310), the influential Megarian (see MEGARIANS), whose combination of Cynic moralism with genume devotion to metaphysics paved the way for Stoicsm (q.v.). Finally, we have Crates of Thebes (fl. c. 320), the third leader of the Cynics, who, unlike his predecessors, was a man of some position and wealth. Perhaps Pryson, the Achean, taught him (cf. Diog. Laert. vi. 35). Crates counted among his followers his wife Hipparchia of Maronca, awoman of good family, whose incurable infatuation for the wandering philosopher overcame the opposition of her parents to the unpropitious union; her brother, Metrocles, whose social standing seems to have lent him weight; and his initiates, Theomentus, Cleomenes, Demetrius of Alexandria, Simarchus of Alexandria, Menippus of Sinope (fl. c. 273), a satirist who influenced Varro (32-37), the Roman poet (see Neo-Cynics); and Melcager of Gadara (cf. Diog. Laert. vi. 99), who may be classed with Menippus. The Ephesian Echecles was also of the Crates-Metrocles circle, and he taught Menedemus, a furious ranter, once the pupil of the Epicurcan Colotes of Lampsacus; Menedemus seems to have been the last of the regular Cynic succession. Thrasylus (c. 306) is reported as a Cynic acquaintance of Antigonus Cyclops (cf. Plutarch, de Vitus. Pud. 531 (cd. Bernardakis, vol. iii, p. 376]; Reg. et imp. apoph.; Ant. 182 (15) [ed. Bernardakis, vol. iii, p. 201). Diodorus of Aspendus (fl. c. 300), a belated Pythacorean, who adopted Cynic asceticism, may be placed on the fringes of the sect; he is said to have conventionalized the garb of the mendicant Cynic. Theodorus of Cyrene (fl. c. 300), called the 'atheist, emphasized the 'theological' r

Running over the names, one is compelled to notice the large proportion of Cynics who came from the outskirts of Hellenic culture—Pontus, Thrace, Syria, Pamphylia, Egypt, for example; they were not nurtured in the pure Greek tradition. By the time of Menippus, the Syrian satirist (c. 280-65 B.C.), Cynicism had gone to seed in mere antinomianism and quixotry; not seldom, perhaps, in even less reputable manifestations. Its significant doctrines passed over into Stoicism through Zeno of Citium (336-264), the pupil of Crates; even the attempt of Aristo of Chios (fl. c. 260), Zeno's disciple, to revive the Cynic contempt for science and liberal culture within Stoicism failed, although he taught his famous pupil, Eratosthenes of Cyrene and Alexandria (276-196), the cosmopolitan humanitarianism of Diogenes. No doubt, Cynicism survived sporadically, almost as a 'mendicant order' in all likelihood,—often of sorry scoundrels,—till its re-appearance, in Roman Imperial times (cf. J. Bernays, Lukian u. d. Kyniker, Berlin, 1879), with Demetrius, the contemporary of Seneca, and others (see Neo-Cynics). But its essential contribution had been absorbed into Stoicism, which always retained traces of Cynic tendencies, as may be noted even so late as Epictetus (cf. Diss. iii, 19-22; R. D. Hicks, Stoic and Epicurean, London, 1910, p.

(b) Socio-philosophical origins.—Greek reflexion originated in the desire to know for the sake of knowledge; and, in this sense, philosophy became a life. Thus, the problems of knowledge and of conduct never lay far apart. But, as aspects of one whole, they struggled for mastery, with varying fortune. The Cynics represent an extreme phase, in which science and culture had ceased to be held as of any value that was not pragmatic, and 'philosophy' had been reduced to the most beggarly elements of paradoxical utilitarian practice. This issue was one natural result of the historical antecedents of the Greek municipal societies, and of the reaction upon their conventions after the displacements due to the Persian war

(490-45 B.C.). The difficulty was to adjust the  $\pi o \lambda \iota \tau \epsilon \iota a$  to empire, the particularism of the Greek citizen to the universalism of mankind; and it took shape in the lengthy controversy about νόμος and  $\phi b \sigma u$  (see CASUISTRY), in which the Cynics played the most partisan rôle (cf. Dewey-Tufts, Ethics, 1908, pt. i. ch. vii.). Very briefly, the development of the Hellenie municipal societies had been as follows. The corporate family was an outgrowth of ancient religion, and appealed to religious sanctions (cf. Solon, frag. 12). Thus, domestic law and the rule of the family-group were integral parts of the 'Divine favouring fate within a man (cf. Pindar, Ot. ii. 94, ix. 28, 100, 110, xiii. 13; Nom. vii. 30, viii. 35). The wider civic law and municipal government were evolved gradually on this basis (cf. Fustel de Coulanges, La Cité antique 1, Paris, 1895, bk. iii. ch. xviii.; bk. v. ch. i.). Local customs, conventions, and laws thus acquired great authority, and overflowed private life to such an extent that it hardly existed in the modern sense. The State claimed the citizen's time, intelligence, service,—his whole life even,—in return for the inestimable advantages bestowed, inestimable because only when endowed with them could a man enjoy a worthy human career (cf. S. H. Butcher, Some Aspects of the Greek Genius<sup>3</sup>, 1904, p. 47f.). Accordingly, individual independence did not flourish—the man had not emerged from the citizen. So the opposition between old norms and new experiences remained latent, more or less, till the Sophists (q.v.) broached it with their pupils, and Aristophanes and Euripides, each in his characteristic way, ventilated it before the public at large. The theoretical side of the controversy most probably reached the Cynics through the influence of Gorgias upon Antisthenes; the practical or social deductions through Socrates, to whom, in his last years, Antisthenes resorted. But the Cynics were 'imperfect' Socratics, who interpreted the Athenian sage in a fashion of their own, and it must be confessed that Socratic 'irony' and contemporary socio-political changes

and contemporary socio-political changes gave colour to their anarchism.

The social conditions are perplexing, because they oscillated in a twofold movement. On the one hand, and negatively, the decay of age-old beliefs (cf. Aristophanes, Nub. 396 f., 1060 f., 1420 f.; Plato, Rep. ii. 358-65) sapped confidence in the adequacy of national institutions. Could the State justify its pergasive interference with the individual justify its pervasive interference with the individual, by rendering sufficient return? This question—its terms becoming clearer gradually—provoked inquiry; the sequel was reflective ethics. And, are reflective and the server of the server as reflexion bodes search for a stable principle, the possibility that this had not been found was implied. Hence a critical movement in theory. The Peloponnesian War (431-405) forced similar issues upon the average man in daily life (cf. Thucyd. iii. 40-44, 82, v. 89). The generous assurance of high vocation that nurtured Pindar, Themistocles, Æschylus, Sophocles, Pericles, and as a glorious consummation, Plato, beat feebler and feebler. On the other hand, and positively, new men broke into the ancient State, bringing new associations. Traditional civic usages bore less meaning for them, because they did not share the compensation to the full. Necessarily, they felt other aspirations, and gravitated towards other standards. The straits of war drove the rural population upon Athens, just as, during prosperous peace, strangers had flocked to her gates. Inaction and demoralization bred a pro-letariat, neither citizen nor slave, which strained the ordinary resources of government. In addition, the marvellous instances of individual development, the glory of the Periclean epoch, set a potent example. And the energies and personalized

aims here manifested had to find fresh channels. Pericles could say: 'We [Athenians] alone regard a man who takes no interest in public affairs, not as a harmless, but as a useless, member of society' (Thucyd. ii. 40). But, political autonomy shrunk or gone, this socialized unity lost its power to charm. Accordingly, what more natural than that 'social reform' should attract many? What more sould retorm should attract many? What more natural than that they should concentrate upon the personal ideal, αὐτάρκεια (cf. Gomperz, Gr. Denker, 1903 [Eng. tr. 1905], vol. ii. bk. iv. chs. i.-iii.)? 'The honest man is Nature's noble' (Eurip. frag. 336). But, what may 'honest' mean? The Cynics were to extract their answer from Socrates (q.v.).

Plato makes Socrates speak as follows, in his

famous speech of defence:

famous speech of defence:

"If you say to me, "Socrates, this time... we will let you off, but upon one condition, that you are not to inquire and speculate in this way any more." ... I should reply: "Men of Athens, I honour and love you; but I shall obey God rather than you, and, while I have life and strength, I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet after my manner, and convincing him, saying: "O my friend, why do you, who are a cutzen of the great and mighty and wise city of Athens, care so much about laying up the greatest amount of money and honour and reputation, and so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? Are you not ashamed of this?" (Apol. 29).

This represents the Socratic surirt admirable. This represents the Socratic spirit admirably. But Socrates left no methodical system, nor did he prescribe specifics for social ills. Devotion to the thenian State, and respect for the higher personal life, were the poles of his character and teaching. He could say of the State:

'Our country is . . . higher and holier far than mother or father. . . When we are punished by her . . . the punishment is to be endured in silence. . . . Whether in battle or in a court of law, or in any other place, he [the citizen] must do what his city and his country order him. . . This is the voice which I seem to hear murmuring in my ears, like the sound of the flute in the ears of the mystic' (Plato, Crito, 51, 54; cf. J. Adam, Crito, 1888, Introd. p. xivi.)

That is, Socrates preserved intact the old Greek consecration to the  $\hat{\eta}\theta$ os of the City-State, with its subordination of the individual to the community as the will of the gods, and as the most valuable (useful) relation for the citizen. In practice, he identified himself completely with Athens, whose vicinity he seldom left (cf. Plato, Crito, 52). But, at the same time, touched by the ampler experience of the new age, he strove to universalize the individual. Whether the individual is a part of a wider teleological system or no, becomes thus for Socrates a secondary question; and what he is mainly interested to maintain is that each man for himself should work out such a system in his own life' (E. Caird, Evolution of Theology in the Gr. Philosophers, 1904, i. 70). Socrates could, therefore, declare to Antiphon: 'To have no wants at all is, to my mind, an attribute of godhead; to all is, to my mind, an attribute of gotherat; to have as few wants as possible, the nearest approach to godhead '(Xenoph. Mem. i. 6). That is, his asceticism was no end in itself, but accessary to the desire to secure due scope for the higher activities of manhood. The positive purpose thus involved a negative element. Now Scorates lived all this, but left no authoritative exposition of it. Accordingly, his 'imperfect' followers seized upon one or other aspect of his personality, and pushed it to the applicant of its personality, and pushed it, to the exclusion of the compensating factors. The Cynics so enforced this negative moment that they placed freedom in actual renunciation of so-called superfluities' (Hegel, Werke, 1842, xiv. 139, Eng. tr. Hist. of Phil., 1892, i. 480-81). Historical circumstances occasioned their revolt from the communal ideas of the City-State. 'wise man' will not govern himself according to enacted laws, but by the law of virtue (Antisthenes, ap. Diog. Laert. vi. 11). The sole authentic citizen-ship is citizenship of the world (Diogenes, ib. vi.

In short, under stress of social exigency, the Cynics abstracted Socratic independence from the conditions whence it drew its strength and relevance, and identified virtue with unbridled protest against Diogenes to Xeniades, 'for, ere long, everything will be turned upside down' (Diog. Laert. vi. 31-32). The Cynics lost recollection that the Socratic dialectic was an incidental means to disclosure of dialectic was an incidental means to disclosure of the fundamental principles of morality. They could 'think only of the barefooted old man, indefatigably disputing in the open streets, and setting himself against society' (Grant, Ethics of Aristotle's, 1874, i. 171). Thus minded, they turned upon contemporary norms and, holding nothing holy, flouted human ties scornfully, violently, and

coarsely.

2. Teaching.—(a) Theoretical.—Avowedly, the Cynics were bent upon a practical end. Indeed, it is often asserted that they repudiated scientific training and mental culture, with no little osten-tation. This is probably an over-statement. It training and mental culture, with no little ostentation. This is probably an over-statement. It would be nearer the mark to say that they subordinated scientific inquiries to the attainment of virtue, regarding intellectual discipline as indifferent in itself. Thus, while they combated men of the Plato type, and held aloof from the constructive schools, they could not, and did not, escape the theoretical problems of their age. Logic and epistemology, it is true, had not reached clear definition; this had to await Aristotle. Nevertheless, with the Sophists, if not earlier, the question of the relation between language and thought tion of the relation between language and thought had asserted itself, sometimes in logomachies that seem trifling to us. And, in this connexion, a disseem triffing to us. And, in this connection, a distinct negative or critical movement became manifest. The contemporary Megarians, for example (cf. K. Prantl, Gesch. d. Logik, Leipzig, 1855, i. 33 f.; G. Grote, op. cit. i. 122 f.), with whom the Cynics had some affiliations, revelled in 'eristic' gymnastics. The Cynic leaders, Antisthenes and, probably, Diogenes, evinced kindred tendencies, as their fragmentary remains, scattered references in Plato and Aristotle, and the reports of later writers indicate. Possibly the same was true of Crates, Monimus, and their followers. In other words, ere the ethico-political doctrines of the sect had sunk to the level of a social mannerism,

'Whose dog-like carriage and effrontery, Despising infamy, outfac'd disgrace,'

the Cynics partook in theoretical discussions of the day, occupying a position akin, apparently, to that of the Megarians (q.v.), and one not far removed, in ultimate principle, at least, from the Cyrenaics

(q.v.). Thus, Epictetus (Diss. i. 17, 12) attributes to Antisthenes the saying, 'The examination of terms is the beginning of education.' Similarly, Plato (Euthyd. 277 E, cf. Crat. 384) records that, according to Prodicus, 'a right use of terms is the beginning of knowledge' (cf. Protag. 337). Unfortunately, owing to the loss of Antisthenes' treatise On Words, we are unaware how these statements should be interpreted. Conceivably, they imply no more than Plato (Thext. 201 E) and statements should be interpreted. Conceivanty, they imply no more than Plato (*Theæt.* 201E) and Aristotle (*Met.* viii. 3) assert. On the other hand, it is certain that, through the peculiar notions about evidence entertained in their law-courts, committees of the popular assembly (cf. R. J. Bonner, Evidence in Athenian Courts, Chicago, 1905), the Athenians had long been familiar with forensic dialectic, as Æschylus' Orestes (458 B.C.) suffices to show. Furthermore, at the time when the other Greek arts reached their results (a 440 p. Ch. relativist the Athen of results). zenith (c. 440 B.C.), rhetoric, the  $\tau \dot{\epsilon} \chi \nu \eta$  of words, had flourished for a generation in Sicily, under Corax of Syracuse (c. 465 B.C.); and Gorgias, accompanied by one of its chief exponents, Tisias,

had impressed the Athenians with it, on the occasion of the Leontine embassy (427 B.C.), when Antisthenes was a lad of seventeen. The future Cynic leader became a pupil of Gorgias, and then taught rhetoric before joining the Socratic circle. And, while it is likely that the epideictic 'display, entitled the Controversy between Ajax and Odysseus for the Arms of Achilles, belongs to a later period, the list of the writings of Antisthenes preserved by Diog. Laert. (vi. 15f.) proves that he was a practitioner, not only of rhetoric, but also of dialectic, with its more or less subtle and verbal treatment of terms. In addition, one must recall that Greek oratory as a practical art, employing both rhetoric and dialectic, dates from Gorgias (cf. F. Blass, Die attische Beredsamkeit v. Gorgias bis zu Lysias, Leipzig, 1868, p. 1f.), and that, as a result of the development of their polity, which made him who 'is master of the stone on the Pnyx' master of Athens (cf. E. A. Freeman, *Historical Essays*, 2nd series, 1873, p. 128 f.), rhetoric and dialectic came to be of extreme utilitarian consequence to the Athenians (cf. Isocrates' review of his life-work. Or. xv. 295f.). Language was now a potent weapon, and the study of terms indispensable. Or. xv. 295 f.). Accordingly, we are forced to conclude that, what-ever slight Antisthenes and his fellows may have ever slight Antisthenes and his fellows may have put upon 'science,' 'learning,' and 'culture' at a later time, when engaged upon their ethical 'mission,' the founder of the Cynic movement was educated in a 'scientific' atmosphere, and knew the necessity for technical discipline in the 'art of words.' No doubt, the studies of Protagoras, Prodicus, and Hippias, in etymology, synonymy, and the like, were little more than beginnings in the abstractions of grampar, and obviously, the the abstractions of grammar; and, obviously, the science of Logic was even less advanced, the nature of negative propositions especially offering insoluble problems, whence the vogue of the Sophistic clenchus. Yet the Sophistic influence upon the clenchus. Yet the Sophistic influence upon the 'imperfect' Socratics is so pervasive that, before he repaired to Socrates at last, Antisthenes must have been carried away by it. The jibes of Plato (Phædo, 101 D f. (?); Rep. ii. 372 D, v. 454 A (?); Theæt. 155 E; Soph. 251 B, 230 D; Phileb. 14 D (?)), Aristotle (Met. iii. 2 (?), iv. 29, vii. 3; Top. i. 11), and others (e.g. Cicero, ad Attic. xii. 38) would seem to indicate that Antisthenes and the root either we indicate that Antisthenes and the rest either relapsed into 'sophistical' quibbling in theory, or failed to keep step with the contemporary advance of scientific inquiry. For, even if Xenophon's testimony to the acquirements of Antisthenes (Symp. iv. 41 f.) be suspect on account of his evident Cynic leanings, the references of Plato (Cratyl. 389 f. (?); Phileb. 44 C; cf. K. Barlen, Antisthenes u. Platon, Phiteb. 44 C; cf. K. Barlen, Antisthenes u. Platon, 1881; K. Urban, Ueber d. Erwähnungen d. Philos. d. Antisthenes in d. platon. Schriften, 1882; F. Dümmler, Akademika, Giessen, 1889, p. 148 f.), the partial admission of Aristotle (Met. v. 29), his serious refutations (de Soph. El. xx.; Rhct. ii. 24), and the remark of Cicero (de Nat. Deor. i. 13) warrant the probable inference that, while Antisthenes had once known better, and still posed as a disciple of Socrates (this would be Plato's view), he had reverted to the empiricism of Gorgias, and had reverted to the empiricism of Gorgias, and had fallen thence into theoretical scepticism, regarding fallen thence into theoretical scepticism, regarding 'science' as negligible except for purposes of direct utility, as with Hippias—had become, in short, a 'barbarian.' In a word, although they started from the Socratic insistence upon definition, the Cynics never reached theoretical solutions; in fact, they accorded them as impossible partiags even they regarded them as impossible, perhaps even as worthless

Remembering, then, that Logic had no independent existence, the little that we know of Cynic logic may be traced to Socrates for its primary impulse, and to the Sophists, especially Gorgias and Hippias, for its content. The effort of Socrates

to define the ideal Good, to replace a physical or cosmological by a logical φύσι, had not reached complete success (cf. Xenoph. Mem. iii. 9. 14, iii. 8. 3, i. 3. 2). It was an aspiration rather than a final achievement. The problems therefore were: (1) to formulate a definition carrying universal validity; (2) to state its content; (3) to explain how man might realize it in life. Such fragments of Cynic logic as we have are remnants of a theoretical effort connected with the first problem; Cynic ethics, a practical reply to the second and The former represents a reversion to the Sophists; the latter follows mainly from undue emphasis upon, and isolation of, one aspect of the person of Socrates, filled out probably, as regards its inconsistent universalism (cosmopolitanism), by elements drawn chiefly from the teaching of

Turning to the logical side, then, we find that for Antisthenes a satisfactory definition must be the statement of the essence of a thing. But, the statement of the essence of a thing. But, seeing that things consist of parts, the only definition was that the statement of the essence of a thing. finition practicable would be a description of these parts as actual components of a whole (cf. Plato, Soph. 251 f.). Accordingly, the thing itself, being simple, is indefinable; it may be named, but the name tells nothing of the essential reality (cf. Aristotle, Met. i. 3). Diogenes is reported to have said, when Plato was talking to him about 'ideas' and using the terms 'tableness' and 'cupness,' 'I see a table and a cup, but I see no "tableness" or "cupness" (Diog. Laert. vi. 55; cf. Plato, Parmen. 132 B). That is, according to Cynic epistemology, 132 B). That is, according to Cynic episternoval, general ideas exist solely in the mind, individual things alone are real. This is the earliest distinct Nominalism. Logically, it results expression of Nominalism. Logically, it results in the conclusion that no judgments are permissible except judgments of identity. 'Man' and 'good' are different from one another. You cannot predicate 'good' of 'man'; you can say merely, 'man is man,' 'good is good' (cf. Plato [?], Hipp. Maj. 304 A; Grote, op. cit. ii. 47). This led immediately to the assertion, put into the mouth of Dionysodorus by Plato (Euthyd. 286 B), that contradiction (or error) cannot occur. If so, the paradox issues that false and contradictory propositions are impossible, which implies, in turn, that all propositions to which such reasoning might apply, in the sense that 'form' does not guarantee truth, had not yet been considered independently, the Cynics meant, probably, that predicates, because applicable to many subjects, could not be attached more exclusively to one than to another. But we are able only to conjecture as to this (cf. Plutarch, adv. Colot. 1119 Cf. [ed. Bernardakis, vol. v. p. 45f.]; Plato, Parmen. 130 f.). In any event, however, it is evident that the conclusion of the matter is in the Sophistic vein. Objects, when 'composed' of single factors, may be defined. Simple objects ('ultimates'), being perceptible only to sense, are susceptible of nomenclature, but are unknowable as The distinction here raised—really between percepts and concepts—is valid enough. But the inference of Verbalism, instead of carrying out a logical and epistemological analysis, leads back to Sophistic scepticism which, once more, is hardly distinguishable from Sensationalism (cf. Aristotle, Met. iii. 5). The Cynics thus seize the negative element in the Socratic dialectic process towards definition, but omit the positive. As a consequence, they entangle themselves in a paradoxical inquiry such as that typified by Alfred de Musset's question—'Le cœur humain de qui, le cœur humain de quoi?' (cf. A. Ed. Chaignet, Hist. de la psych des Grees, i., Paris, 1887, p. 189 f., note 4; Grote, op. cit. i. 168 f., note 1).

(h) Practical —The sthind dostrines of the (b) Practical.—The ethical doctrines of the

Cynics may be traced to the coalescence of several elements; and very probably this is more evident now than it was to the Cynics themselves in their period of transition. But the numerous stories related about their leaders (for the sake of the story), and the scantiness of the documentary evidence, render a dispassionate account very difficult. Still the following constituent factors, at least, can be traced with some certainty: (1) Socrates, the plain, 'common' man, sturdy and independent; (2) the Eleaticism of Antisthenes' teacher, Gorgias; (3) the 'return to nature' of Hippias and Euripides; and (4) the momentary exigencies of daily life in Athens and in Hellas.

(1) The Cynics dessend from the Xenophontic, at the Platonic Secretary (cf. E. Pilling 1977).

(1) The Cyflics descend from the Aenopholius, not the Platonic, Socrates (cf. S. Ribbing, Weber d. Verhältnis zwischen d. Xenoph. u. Platon. Berichten ub. d. Personlichkeit u. d. Lehre d. Sokrates, Upsala, 1870; F. Dümmler, loc. cit., and Antisthenica, Halle, 1882). This is the Socrates who, as we saw above, made independence an attribute of godhead (cf. Xenoph. Mem. i. 6). Vat for him assetticism was a means to an end Yet, for him, asceticism was a means to an end (cf. Xenoph. Cyn. xiii.), not an end in itself, as it became with the Cynics. The endurance which he praised was no unusual or new thing; it related ated by the early 'proverbial' moralists (e.g. Hesiod, Opp. Di. 287f., 411f.). Quickened by moral sincerity, Socrates protested against the indignity put on labour; as a 'friend of the common folk' (Xenoph. Mem. i. 2), he held work to be more honeywheld they idence the inhonourable than idleness (ib. iii. 8. 9, 10). It was this side of his character that attracted Antisthenes, and produced in the disciple a parody of

the master's temperate protest against the enervating habits of the luxurious city.

(2) But, alongside of this moralized 'common sense,' a distinct theoretical element operated, of which the Cynics were, in a way, unconscious. Socrates had taught that virtue is a 'science' (Aristotle, Eth. Nic. iii. 8. 6), meaning thereby that virtue was communicable. Now, although Gorgias dismissed metaphysical speculations about Being, and thus showed that the 'science' could not be concerned with 'nature,' he hinted, by implication, at an internal (rational) One. That is, his argumenta ad hominem emphasized the homo. Accordingly, although he denied what he held to be an unconditional object out of relation to self, he still left self as the One, even the unexplored One. This survival of Eleatic doctrine reappeared in the Cynic interpretation of the positive side of Socratic teaching: courage, justice, wisdom are identical—they are knowledge; or, as Antisthenes put it theologically, the gods are many κατά νόμον, they are One κατά φύσιν. Reason, many kara νομον, they are one kara φυσιν. Reason, the organ of this knowledge, is the prerogative, not of men, but of mankind (cf. Diog. Laert. vi. 105; Xenoph. Mem. i. 2. 19; Plato, Meno, 71; Aristotle, Pol. I. xiii. 10). Reason bestows the power ἐαυτῷ ὁμιλεῦν. If incommunicable theoretically, at all events by means of the current education; it can be recognized and liberated in practical tion, it can be recognized and liberated in practical activity. In short, Will becomes the content of the 'science' of the sole Good—virtue. As against Platonicabsolutism, with its aristocratic tendencies, which separate men from each other, the Cynics assert a democratic unity. They admit a pragmatic universal in the shape of a plan of life. Thus olketos haves came by essential content, despite nominalistic logic (cf. Diog. Laert. vi. 12, 103). No matter what the theory, essence could be exhibited -in overt conduct.

(3) The Cynics preached a 'return to nature' as an escape from social convention with its ills. Here they stood in line with Hippias and Euripides. Man ought to be self-sufficient. They meant by

382

this that there is a human 'nature,' beyond the accidents of citizenship, language, and even race (Eurip. frag. 1050), and that civil institutions are unjustifiable because they interfere with the cultivation of this common possession. As Hippias said: 'All of you who are here present I reckon to be kinsmen and friends and fellow-citizens by nature, and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature' (Plato, Protag. 337); or, as Isocrates put it: 'Athens... has brought it to pass that the name "Greek" should be thought no longer a matter of race but a matter of intelligence' (Or. iv. 50). Hence Cynic cosmopolitanism. The Cynics proposed to realize this unitary 'nature' by denuding themselves of wants, by eschewing obligation to the 'resources of civilization.' Simplicity, temperance, ability to fend for self, were to be the means to this end. Hence their anarchism.

(4) Even before the Peloponnesian War, the Hellenic world had grown conscious of new displacements, and the course of the struggle accentuated this condition. The molurical lacked the flexibility needed to meet the transition. Consequently, men became aware increasingly of a separation between the organized State and transient society (cf. G. A. and W. H. Simcox, Demosthenes and Eschines On the Crown,' 1872, p. lxviif.). As has been said above, the citizen no longer found absorbing vocation in his citizen-ship: loyalty was on the wane. Besides, the war produced special effects of its own. The unity of Hellas and the independence of the rival cities proved to be incompatible ideals; the gulf between rich and poor yawned wider; the itch for personal recognition brought disregard of social responsibility; and numerous men 'without a country' roamed over all Greece (cf. Isocrates, Ep. ix. 10). The system of education had forfeited the confidence of many (cf. Isocrates, Or. xii. 292f., xi. 230f., x. 208f., xv. 84f., 259f.), while, on the other hand, the people were untouched by the things of the spirit (cf. Isocrates, Or. xi. 230, ii. 23f., viii. 161f., xv. 168 f.), as, indeed, Aristotle asserted later (Eth. Nic. i. 5. 3). Every one was finding fault with his neighbour; the efficiency of democratic government was in doubt. These grave matters were at once the incentives to, and the immediate objects of, the Cynic 'mission.' Unfortunately, hindered doubtless by the temper of the time, the Cynics, who surpassed all in fearlessness, appear to have employed no weapon more potent than contentious abuse, and to have prescribed no remedy more practicable than an impossible renunciation. Better known to the masses than any other teachers, their extravagance and licence rendered them easy marks for ridicule and resentment, so that the seriousness of the evils which they attacked legitimately was overshadowed by the bizarre conduct of the critics. Few, if any, constructive results were accomplished in the 4th cent., as the st

ethics.
Although the Sophist was a rexroyptops, the teacher of a practical 'art'—and Gorgias belonged very distinctly to this type—a man of Antisthenes' quality, when deflected by Socrates, could easily pick holes in Sophistic practice (cf. Plato, Soph. 250 A); he and, more emphabically, his follower, Diogenes, might retain portions of the Gorgian method (cf. Aristotle, Ehet. iii. 17. 7), the temper

Seeking reputation and gain, the Sophists could not be entirely disinterested (cf. Xenoph. Cyn. xiii.). Perforce they had to adapt themselves to popular tastes; and Gorgias, conspicuously, seems to have conformed himself to current prejudices; in like manner, Hippias' ideal of a umon between the Greek States, just because it was not original with him, serves to illustrate a similar tendency. Such pliability, amounting often to hollowness, revolted Antisthenes, when contact with Socrates had converted him. The times It was not appeared to call for sterner stuff. enough to suggest moral notions by elegant discourses; proselytes must be secured. Independence was needed above all else; and this could be justified on condition that a man found his ideal purposes within himself (cf. Eurip. Traad. 988; Plato, Rep. ii. 366 E). Thus the Cynics came to regard virtue, not as good, but as the Good, and this as an implicit quality inherent in manhood, made explicit in the 'wise man' (i.e. Socrates universalized by Cynic pragmatism); for without a universal there could be no philosophy (cf. Plato, Purmen. 136). No matter at what cost, the 'sage' must develop and guard this possession (cf. Cicero, de Off. i. 41), for on it depended the one great issue of life—self-sufficiency. Everything must be sacrificed for it; indeed, this complete secrifice was reverted as the assence of plete sacrifice was regarded as the essence of virtue. On the other hand, vice was the sole evil; and the intermediate values of life, high or low, positive or negative,—wealth, position, health, poverty, shame, sickness, even death,—were wholly indifferent. Thus self-control imwere wholly indifferent. Thus self-control implied, not the moralizing of human relations, but their total eradication, because they are invitations to weakness or to submission (cf. Diog. Laert. vi. 93). So the Cynics came to 'exceed' the nature at which they had arrived; the subjective tendency overpowered them. And there are signs that, like the Stoics afterwards, they wavered here (cf. Diog. Laert. vi. 2, 6, 13, 30, 31, 63, 72); yet their professed ideal was to possess no home, no city, to be beggars and wanderers (cf. ib. vi. 38). For man comprehends by nature what is just and true (cf. ib. vii. 53), and this internal nature is to be set free as against the law or convention of society. The declaration of Hippias (Plato, Protag. 357 D), transmuted now into a φύσις ἀνθρωπίνη, is elevated into the single principle capable of moral authority. The insight of the 'wise man,' won by renunciation, becomes the supreme test; and, according to its judgment, the supreme test; and, according to its judgment, all laws, institutions, and arrangements of society are found arbitrary and harmful. They hamper and enslave true manhood; for, morally viewed, men are free, and therefore equal, just because they possess a specific virtuous nature in their own individual right. Consequently, man is able to realize the Good only if he renounces them. Society is the great Sophist (of. Plato, Rep. 492 A); it renders evil absolute; therefore it is infinitely better to be an uneducated beggar than an educated echo of 'civilization.' Thus the Cynics desert their theoretical Nominalism, and fall into the old paradoxes resultant upon the the supreme test; and, according to its judgment. fall into the old paradoxes resultant upon the clash between personal ideal and social opporclash between personal ideal and social oppor-tunity. Casuistry (their species of sophistry) marks them for its own, and antitheses displace reasoning. As always, their anarchism ends in communism, for, without fraternity, liberty and equality are but barren words. The socio-political indecision and helpleseness of Hellas led to this extrama conclusion. led to this extreme conclusion. An ulterior principle, the innate prerogative of simple manhood, came to be viewed as the only escape from con-temporary evils. This indifference of the Cynics to political, social, and domestic obligations led, of

course, to antinomianism (cf. Diog. Laert. vi. 12). Curiously enough, however, they did not advocate quietism (cf. F. W. Bussell, Marcus Aurelius and the Later Stoics, 1910, p. 51 f.) as a result of their nonconformity and repudiation. The Cynic 'missionary' became a familiar figure, and he lived in face of the public. Like Crates, he was a 'dooropener' (Diog. Laert. vi. 86), but he seems, as a rule, to have been taken more jocularly than seriously. Nor is this wonderful. Strange as it may appear, the besetting sins of Athenian character—vanity and self-sufficiency—found a new incarnation in the censoriousness and self-advertisement of some Cynics. As a matter of fact, they had not investigated morality with due care, and so they could not deliver themselves from paradox. For, after all, consistent Cynicism is tantamount to a confession of failure. Deny the existence of the problem, as the Cynics did in relation to Athenian economic conditions, for example, and-

the problem, as the Cynics did in relation to Athenian economic conditions, for example, and—you have solved it! 'Vanity of vanities,' saith the preacher, 'all is vanity'; whereas the greatest of vanities is apt to be the preacher himself.

It is possible, and too easy perhaps, to judge Cynicism as the temporary exaggeration of a clique. But, after all, it dealt with the immortal things of life, and in later times left its mark upon ancient thought; Epictetus could idealize even Diogenes (Diss. iii. 24). An overwhelming personality like Socrates transmutes the fluid tendencies of his epoch, and outpaces the average man. Nevertheless, Socrates was of his age, and could not escape its limitations. Antisthenes and his followers started from this temporary factor, and, by confining the Socratic doctrine to it, impressed the ordinary mind. Rudely enough, perhaps, they proved that Greece still had a conscience. They exercised the magisterial and reproving function (of. Epictetus, Diss. ii. 21), emphasizing the force and conviction, though not the dignity and sublimity, of the master; yet this very bias freed them from the sordid passions of self-interest which so afflicted their contemporaries very bias freed them from the sordid passions of self-interest which so afflicted their contemporaries (cf. Diog. Laert. vi. 85 f.; Xenoph. Symp. iv. 34 f.). As their denunciation of slavery showed, they had a glimpse of a sublime idea, and were enabled consequently to enter a splendid protest against the otiose compromises and superficial conformities of the day. And, if their zeal outran discretion, or even decency, it must be recalled that they were bred of a society which lived in puris naturalibus to a degree incomprehensible by us; that, by insistence upon the moral significance of much that had been deemed non-moral, they aired questions to which otherwise Aristotle's saving common sense might never have been applied (cf. e.g. Eth. Nic. x. 6). As a result, they paved the way for the conclusion As a result, they paved the way for the conclusion that virtue is not a theory, but a spiritual state—it is dynamic over against the trivial. Their defence of a thesis doubtless blurred their vision of the seminal personality of the 'wise man.' Notwithstanding, they did make the 'sage' the moral norm, and thus gave the first hint that 'the 'Return to nature," so far from implying reversion to animalism, and the reduction of man's needs to the level of the beasts, was found to involve fundamental differentiation of reasoning involve fundamental differentiation of reasoning man from the unreason of the brute or the inertia of matter, to place man on a unique spiritual plane, and eventually to summon him from indiplane, and eventually to summon min from marvidual isolation to conscious brotherhood with kind' (G. H. Rendall, Marcus Aurolius Autonius to Himself, 1898, p. xlvi). Driven by a theory which spelt failure, the Cynics could not perceive these great issues; but ideals, whose end is not yet, originated with them.

LITTERATURE (in addition to the works mentioned in the text).

—Ueberweg-Heinze, Grundriss d. Gesch. d. Philos. i.10 (1910), gives a complete summary of the technical literature: see § 7, or the primary and secondary sources for the history of Greek philosophy; § 8, for literature on the pre-philosophical period of Greek culture; § 87, for literature on the Opinics specifically. For the English reader the best work is still E. Zeller, Socrates and the Socratic Schools, Eng. tr., London, 1868, and successive reprints; W. Windelband, Hist. of Anc. Philosophy, Eng. tr., London, 1899, is also very valuable; the most brilliant and readable account of the Opinics is to be found in Th. Gomperz, Greek Thinkers, Eng. tr. vol. ii., London, 1905. With special reference, as a rule, to the social, political, and literary environment, the following works may be added: T. C. Finlayson, Essays, Addresses, and Lyrical Translations, London, 1898, p. 194 t; P. Girard, L'Educ. athen. au vet au ve sitele awant Jésus-Christ?, Paris, 1891; O. Apelt, Beitr. Z. Gesch. d. gr. Phil. Leipzig, 1891 (the essay on Cosmopolitanism in Antiquity); R. E. Hammond, Polit. Institutions of the Anc. Greeks, London, 1895; A. Croiset, Hist. de la litt. greeque, tom. iv. [Paris, 1900] pp. 861, 2401; P. Decharme, La Critique des traditions religieuses chez les Grees, etc., Paris, 1904, p. 217; R. Hirzel, Der Dialog: ein literarhist. Versuch, i., Leipzig, 1895; M. Clerc, Les Métèques athénicus: Efude sur la condition légale, la situation morale et le rôle social et économique des etrangers damiciliés à Athènes, Paris, 1893; H. Francotte, De la Condition des étrangers dans les outes greeques, Louvain and Paris, 1903; H. Sidgwick, Lectures on the Philos. of Kant, etc., London, 1905 (the essay on the Sophists); Ed. Schwartz, Charakterkopfe d. antiken Lit., 2nd series, Leipzig, 1910, p. 11.

CYRENAICS.—The name given to a school of thinkers founded at Cyrene, a Greek colony on the northern coast of Africa, towards the beginning of the 4th century B.C. It is one of the earliest attempts—and perhaps the most thorough-going—to base the conduct of life on the pursuit of the individual's pleasure. The founder of the school was Aristippus. He came to Athens to hear Scrates, whom he reverenced to the end of his life (Diog. ii. 65, 76), and whose scholar, in spite of the differences between them, he always avowed himself to be (ib. 74). Socrates would never really himself to be (ib. 74). Socrates would never really have accepted the pursuit of mere personal pleasure as the end of life; indeed, in the Memorabilia (ii. 1), Xenophon gives us an account of a keen dispute between him and Aristippus on this very point. Yet the 'pupil' might fairly have claimed to teach nothing inconsistent with his master's fundamental principles. Socrates, in fact, while claiming that man's rational life lay in the search after what was truly good, had yet left undetermined what this true good might be (see Sidgwick, History of Ethics, pp. 24, 31). The Cyrenaics argued that it could be found in nothing but pleasure, which was the one thing manifestly desirable, and which all creatures, unless perverted, did desire and choose (Diog. ii. 87, 88, 89).

This ethical doctrine seems to have been closely connected with their general view—derived probably

connected with their general view—derived probably from Protagoras—that the individual was limited to a knowledge of his own sensations. A man could know only what appeared to him, not what things know only what appeared to him, not what things were in themselves, nor even what they appeared to others; and there was thus apparently no possibility of a rational assertion that anything was noble or not in itself. All we could know of goodness' was what was pleasurable to us (Diog. ii. 92, 93; Sext. Empir. adv. Math. vii. 191-200). There was thus no room for the Cyrenaics to admit fundamental differences of quality in pleasure; and this, it would seem, they fully realized. One tundamental differences of quality in pleasure; and this, it would seem, they fully realized. One pleasure was no whit better than another (Diog. ii. 87), nor could the source from which it sprang, however base that might be called, make any difference to its worth (ib. 88). In this they were profoundly at variance with Plato and Aristotle, who both argued for absolute standards of value and of the they were profoundly at the control of the country of the previous country is the control of the country of the previous country is the country of the country who both argued for absolute standards of value and of truth, standards going beyond the mere opinions of individual men (e.g. Plato, Repubble, vi. ad fin.; Arist Metaph bk. ii. c. 5. 1009a, Eth. Nic. bk. i. c. 8. 1099a). The famous discussion in the Philebus (36 C f.) as to the possibility of a distinction between true and false

pleasures, parallel to that between true and false opinions, is in all probability written with an eye to the Cyrenaic position. It is of great interest also to note that this initial scepticism of theirs led the Cyrenaics to turn aside from scientific inquiry into Nature, as from useless speculation

(Diog. ii. 92).

The anecdotes told of Aristippus and his biting wit give a vivid commentary on his theory. His seems to have been one of 'the great experiments in life' that the Greek philosophers were not afraid to make. Resolute, daring, and self-controlled, on one side it recalls the great Socratic tradition of unswerving obedience in practice 'to that argument which seemed the best,' and even the Socratic scorn for non-essentials; 'it was better to be a beggar than a dunce; if the first had no money, the second had no manhood' (ib. 70). But there is a sinister side as well. Aristippus will take anything he can get from Dionysius, the tyrant of Syracuse. 'I went to Socrates when I wanted knowledge, I come to you when I want money' (ib. 78). He does not demand constancy from his mistresses; what did it matter to him if others sailed in his ship (ib. 74)? Money and what money could get are not to be shunned, but used, and used freely. The evil lies in being bound by our pleasures, not in enjoying them (ib. 75; Stobeus, Floril. 17, 18). Let them be as vivid as possible—the 'calm' so near indifference, afterwards advocated by the Epicureans, is scorned as nothing better than sleep (Diog. ii. 89)—but let them not defeat their own object by fettering the mind (ib. 66, 67). The 'smooth motion' of the Cyrenaic pleasure was always motion, but the rippling motion of a great sea which should never be roused into storm. Though circumstances may, prevent the wise man from obtaining this always, yet he will be able to attain more of it, and in a more intense form, than any one else (ib. 90, 91). Aristippus himself was always famous for his easy mastery over all circumstances, prosperous and adverse alike; and the line of Horace (Ep. I. xvii. 24) that pictures him 'at peace in the present, yet striving for greater things' ('Tentantem maiora, fore presentibus æquum'), gives us Cyrenaicism at its best.

The pressure of the practical problem, how to attain the maximum of individual pleasure, is shown in the divergencies of his successors. Hegesias felt the inevitable pain of life so keenly as to disbelieve in the possibility of anything deserving the name of happiness (Diog. ii. 94). The most that could be hoped for by the wise man, acting for his own interest alone, as a wise man should, was to escape from suffering, and this could be attained best by indifference to external things (ib. 95, 96). Here we reach a strange likeness to the Stoics and Cynics, and, stranger still, we find this leader of what purported to be the school of vivid per-

sonal life called by the name of 'Death's Advocate,' and accused of luring men to suicide (ib. 86; Cic. Tuse. i. 83).

Annikeris, at the cost of consistency, gave a gentler tone to the whole system. It is plain that the question between what might be called individualistic and altruistic hedonism, between the pleasure of oneself and the pleasure of others, was coming to the front and pressing for solution. According to Annikeris, there were such things of genuine worth as friendship and patriotism (which Itegesias had denied). The wise man would suffer for his country and still be equally happy, although he got little pleasure from it, and pleasure alone was the end. The happiness of another was not a reasonable object of choice, yet the wise man would endure for the sake of his friend (Diog. ii. 96, 97).

96, 97).

Theodorus, called 'the Atheist,' seems to have been the closest, both in keenness of intellect and in hardness of temper, to the original founder. Friendship he dispensed with; the foolish could not use friends, and the wise man had no need of them (ib. 98). There was nothing to be ashamed of in theft and adultery and sacrilege, provided one escaped the penalties (ib. 99). He seems to have differed slightly from Aristippus in that he felt the need of laying more stress on the attitude of the mind, and less on the external goods of chance as necessary for the well-being of man. Thus he was led to say that the vital matters were not 'pleasure' and 'pain,' these in themselves being indifferent, but 'joy' and 'grief,' which in their turn depended on prudence and folly. This at least is the interpretation suggested by Zeller for a somewhat obscure passage in Diog. ii. 98, and it is certainly probable.

About the time of the later Cyrenaics, Epichrus

About the time of the later Cyrenaics, Epichrus was developing a more subtle and elaborate form of the doctrine, and after the 3rd cent. B.C. we do not hear of Cyrenaics as distinguished from Epicureans. See also artt. HEDONISM and PHILOSOPHY (Greek).

SOPHY (Greek).

Literature.—No writings, other than fragmentary, of the Cyrenales themselves are in existence. The chief ancient authorities are: Diogenes Learting, de Clumrum Philusophorum Vitis, bk. ii. 65-104, c. 8, 'Aristippus' for the ethical doctrines of the school and the character of Aristippus), Paris, 1878; Sextus Empiricus, adversus Hathematicus, bk. vii. 190-200 for the metaphysical position), Leipzig, 1840. See also F. W. A. Mullach, Fragmenta Philosophorum Gracorum, ii. 397 ff., Paris, 1867; H. Ritter and L. Preller, Historia Philosophiae Graco, 'Cyrenaici,' 204-213 B, Ootha, 1988; F. Ueberweg, Grunadriss der Gesch. der Philos. Berlin, 1894-93, i. 95 ff.; E. Zeller, Socrates and the Socratic Schools (tr. Reichel), ch. xiv. (very clear and thorough, with copious quotations and references), I London, 1868; J. E. Erdmann, Grundries der Gesch. der Philos. Berlin, 1895-96 (Eng. tr., London, 1890), i. 89 ff.; H. Sidgwick, History of Ethics, i. c. ii. \$\frak{3}\text{2}\text{4}\text{1brief}, but illuminatingl, London, 1890; G. W. F. Hegel, Geschichte der Philosophie, ii. 1. c. 2. C. 2 (the work of a master), Berlin, 1833. W. Pater, in Marius the Krieurean, London, 1885, gives incidentally a vivid though somewhat rose-coloured sketch of the system.

D

DACOITY.—This term, which is derived from Hindi dakait, 'robbery belonging to an armed band,' probably from dāknā, 'to shout,' is now usually employed as an equivalent for brigandage (or, technically, the conspiracy of five or more men to engage in an act of robbery, or the actual commission of such an offence) arising from, or at least existing in, an unsettled condition of some of the administrative districts in India. It is in this sense that it is used with regard to Burma.

Originally, however, it referred to a much more definite and curious condition of society, in which robbery with violence was not only an occupation but a religious and caste duty. Robbery was a hereditary profession, although the ranks of the Dacoits were continually augmented from the outside. The system reached its greatest development in the Native State of Oudh (shortly before its incorporation within the British Dominion in India), owing to the incapacity of its native rulers.

But it was also prevalent in nearly every Native State, and was encouraged by the rulers, who shared in the proceeds of the robberies as the price of their toleration. The Dacoits rarely committed their depredations near their native haunts, or even within the State which harboured them. As their victims were usually strangers, the Dacoits were not the objects of fear and hatred on the part of their neighbours, who were not, therefore, anxious to betray them to the authorities. Their raids were carefully planned, and the members of an expedition made their way to their rendezvous singly or in small bands, disguised as pilgrims or as holy water-carriers or as bullockdrivers. After carrying out their plans, they made their way back to their jungle fastnesses with almost incredible rapidity. As a rule, they pre-ferred to avoid bloodshed, but on occasion they did not scruple to take life.

The Dacoits were usually of low caste, and their social and religious customs were of a totemistic character, exogamous marriage being the practice. Their raids were undertaken only when the omens were favourable, and after the exercises of religion. The deities of most of the Dacoit clans or septs were Kālī or Devī (an axe sacred to her being carried by Dacoit leaders in Central India) and

Sorruj Deota (the sun-god).

The British authorities in India made great efforts in the decades preceding the middle of last century to stamp out the practice, but, as it was rooted in religion and social custom as well as encouraged by misrule in Native States, the task was very severe; and the evil came to life again when it had been apparently stamped out. But, with the final annexation of Oudh, its great stronghold no longer proved a shelter for the robber clans, and Dacoity since the Mutiny has been indistinguishable from local brigandage, to the suppression of which the police are adequate.

The attitude of the British authorities to

Dacoity, as in the similar cases of Thuggee (see THAGS), affords an instance of interference with native religions and customs; but it brings out clearly the rationale of such action in that the custom must be recognizably of an anti-social and

criminal character.

LITERATURE.—J. Hutton, Popular Account of the Thugs and Dacoits, London, 1857; E. Balfour, Cyclopædia of India<sup>3</sup>, London, 1885, i. 874. See also the literature under Thags. JOHN DAVIDSON.

DADUPANTHIS. - I. Dadu (A.D. 1544 to 1603) was born in Ahmadābād, of Brāhman parents. His father, Lodi Rām, had left his Shāstras and temple services for trade with foreign parts. About the time of the Reformation in Europe and a little before Dādū's birth, a Reformation of Hinduism had spread over all northern India, from Bengal to the Panjāb, and south towards Bombay. Kabīr, the founder of the Kabīrpanthīs (q.v.), had very thoroughly done a reformer's work round Benares. Nānak, from whom, under his ninth successor, came the Sikhs, had founded to the successor, came the Sikhs, had founded to the successor, came the sikhs, had fought idolatry and superstition in the Panjab. The influence of these two spread far and wide, and hundreds of earnest souls were protesting against the grosser abuses in Hinduism.

Dādū was early affected, and his religious convictions led him to spend his life in preaching the

Reformation doctrines over the midlands, between Ahmadābād and Delhī. He lived for a time in Sämbhar, where his monument is, and where his coat and sandals are kept as relics and worshipped. Amber, the old capital of Jaipur, was Dādū's home for a time, where a house of his followers still flourishes, and in the modern capital we have the headquarters of the Nāgās. Dādū visited Delhī, and had an interview with the famous Akbar.

Thereafter he turned his face towards the south. making new disciples and strengthening his old ones, among whom were some nobles. After a year in Amber he went to Narainā, a village about 40 miles S. W. from the capital and 8 from Sambhar, and there died in A.D. 1603.

and there died in A.D. 1603.

Dudu left 152 disciples to continue the work among his many followers. His teachings are embodied in the Būnī, a poetic work of 5000 verses. In its 37 chapters various religious subjects are treated, such as: The Divine Teacher, Remembrance, Separation, The Meeting, The Mind, Truth, The Good, Faith, Prayer. The Hymns appended are set to music, and are suitable for public and private worship. public and private worship.

2. From the Bānī it appears that Dādū con-

demned and rejected much that was new and false in Hinduism, and that he re-discovered and taught

much truth about God, man, and salvation.

He rejected: (1) The Vedas and Quadan as ultimate truth; (2) the Vedantic philosophy; (3) ritmate truth; (2) the *veaantie* philosophy; (3) ritualism and formalism; (4) the corrupt priesthood; (5) caste and caste marks; (6) idolatry; (7) the use of the rosary; (8) pilgrimages and ceremonial ablutions. (9) He threw new light on the transmigration of the soul, holding that all possible re-births happen in man's one life on earth. The moods of mind and the quality of actions give the moods of mind and the quality of actions give the soul the birth of a fox, a goose, a pig, an ass, and such like. (10) He held that the gods Siva, Viṣṇu, and Brahmā were only men who had been canonized. Their pictures and statues had been made and preserved as object-lessons, to teach men their history. (11)  $M\bar{a}y\bar{a}$ , the world, matter, was not evil in itself. The bad man made it was not evil in itself. The bad man made it evil by allowing it to lead his mind away from God. Worldliness, and not the world, is evil. (12) He again and again says: 'I am not a Hindu, nor a Musalmān. I belong to none of the six schools of philosophy. I love the merciful God.'

His doctrines about God, man, and salvation

included the following.

"Forsake not the One God. Forsake all evil." 'I have found that God is the unchangeable, the immortal, the fearless, the joy-giving, the best, the self-existent, the almighty, the beautiful, the glory-of-all, the pure, the unimaged, the unseen, the incomprehensible, the infinite, the kingly One." 'He is brightness, effulgence, light, illumination, perfection.' 'I have made all things teach me of God, and I know that He is immanent in the universe with all its properties and elements.'

God is the *Creator*.

'So powerful is the Lord, that by one word He created all.'

'His works are wonderful, and cannot be fully understood.

'He alone does all and gives power to all. He blesses all His servants and is not proud.' 'He created us after a model He had formed: of His plans, His wisdom, His works, no man can see the limit.' 'Where nothing was, He made all; and when He wills it becomes nothing. Become as nothing before Him, and love Him alone.'

God is the Preserver of all. 'I meditate on Him, who preserves all.' 'I adore the Parabrahma, the unsurpassable. My God is the Holy One. I worship the pure and unimaged one.'

Man is a creature, and made to worship God.

'Who is so wretched as the man who persuades you to serve other gods?' 'Not for a moment even let God's name depart from your heart.' 'My soul, if now thou knowest not that God's name is the chief good, thou shalt repent and say, 'What a foul I was!"' 'The world is an ocean of pain, God is an ocean of joy. Go to this ocean and forsake the useless world.'

ocean of joy. Go to this ocean and forsake the useless would.'

Conscience spoke clearly in Dādū.

'I have done very wickedly; be not angry, O Lord. Thou art the God of patience. To Thy servant all the blame belongs. I have forsaken Thy service. I am a sinful servant. There is no other like me so vile.' 'I sin in every action, I am unjust in everything. I sin against Thee every moment. O God, forgive my sin.' 'I am the only great sinner in the whole world. My sins are infinite and countless.' 'From the beginning to the end of my life I have done no good; ignorance, the love of the world, false pleasure, and forgetiulness have held me.' 'I have lived in lust, anger, suspicion, and have not called on Thy name. I have spent my life in hypocrisy and the sins of the senses.' 'I am bound by many fetters. My soul is helpless. I cannot deliver myself, My beloved alone can,' 'I am a prisoner. Thou art my deliverer. Save me, O God most merciful.' 'The evil is in my soul, my heart is full of passion; 'reveal Thyself and slay all 

VOL. IV.-25

mine enemies.' 'My soul is sorely afflicted, because I have forgotten Thee, O God. I cannot endure the pain; deliver me.'
Dādū knows that it is sin which separates the

soul from God. The longest poem in the  $B\bar{a}n\bar{\imath}$  is called 'Separation.' It is the wail of a woman sick

called 'Separation.' It is the wail of a woman sick of love and maddened by the pain of separation. 'I am full of love, I greatly desire Thee. O Lord, my beloved, come and meet me; now is my time.' 'The wife, separated from her husband, calls day and night, and is sad. I call my God, my God, vehemently thirsting.' 'My whole soul calls as the Chātrag,' My beloved, my beloved, I thirst for Thee, I long to see Thee. Fulfil my desire.' 'O Chātrag ! Thy voice is sweet. Why is Thy body so black? I am consumed of love. I call day and night, O Thou, O Thou.' 'To whom shall the wife tell her pain? By whom send news to her absent one? Watching his return, her grief turns her hair white. 'As the opium-eater longs for his opium, the hero for war, the poor for wealth, so longs my soul for God.'

Dādū had cast aside the Vedas, the gods, and all

longs my soul for God.'
Dādū had cast aside the Vedas, the gods, and all that men hold to be the means of salvation. He found nothing in the past or in the present, and

so he rushes into the future and says:

'When will He come? When will He come? My beloved, when will He reveal Himself? Sweet will He be to me. I will embrace Him. Without Him I must die. Body and soul will find joy when God reveals Himself.'

Dādū knows from his wants what 'the meeting' ought to be and what ought to be revealed to him, and so he calls on God to come as 'the Divine Teacher,' 'the Deliverer.'

Teacher, 'the Deliverer.'

3. Dādū's disciples are called Dādūpanthīs ('they of the path of Dādū'). They exist in considerable numbers and in two divisions.

(a) The Laymen, 'the Faithful,' 'the Scrvants.' These may marry, and follow any respectable trade or profession. In theory they are supposed to have given up Hinduism. They ought to store their minds with the Bānī, and use their creed and prayers. Discipline is lax, however, and so in practice there are various stages of attainment. At times the connexion becomes very slender indeed, for a dole to a begging sādhū is sufficient to maintain it. maintain it.

(b) The Priests, 'the Esoteric,' 'the Masters.'
These are all monks, and keep up their ranks by adoption from the better castes. They devote adoption from the better castes. They devote themselves to a religious life and to teaching the  $B\bar{a}n\bar{a}$ ; but this does not prevent them from bearing arms, practising medicine, lending money, or from agricultural pursuits. Only 52 of  $D\bar{a}d\bar{a}$ 's original disciples opened, mainly in  $R\bar{a}$ jputănā, 'doors of  $D\bar{a}d\bar{a}$ ' ( $D\bar{a}dv\bar{a}r\bar{a}s$ ) and adopted successors. Some of these 'seats' have prospered in wealth and learning, and some have almost passed away. They produced a good deal of what, in relation to Hinduism, may be called Protestant Literature, written in verse, and in the common tongue (Bhāṣā). Probably much of this has been lost, for it has nove then collected in winted as transfer. for it has never been collected, printed, or trans-

The present distinctions arise not from difference in belief, but from locality and modes of life of the

Dādūpanthīs.

(1) The Khālsas ('the pure, ruling').—The 'seat' of these is Narainā (Jaipur). Here Dādū died, and here lives his successor, the head of all the Dādūpanthīs. They all contribute something to keep up the dignity of their head; and here, once a year.

up the dignity of their head; and here, once a year, a great gathering (Melā) is held.

(2) The Nāgās (soldier monks).—Their name, from nagna ('naked'), refers to the simplicity of their dress when they go to war. Their founder was Sundra Dās, a Rājput of Bīkānīr, who, seeing the value of the sword, before the Pax Britannica filled the land, trained his followers to serve as mercenaries. There are at present about 20,000 of them, in 9 camps, near the Jaipur borders, which they defend. They have fallen far behind in the modern accomplishments of the soldier in drill and arms. They have only the sword, the shield, and arms. They have only the sword, the shield, and the match-lock. They were faithful to England

1 A bird supposed to drink only the rain from heaven.

in the Mutiny. They are a fine class of men, and their training to read the  $B\bar{a}n\bar{\imath}$  and to arms prevents them from falling into dissipation.

(3) The *Utrādīs*.—These have come from a great and prosperous 'school' in the Panjāb. The founder was Bābā Banwārī Dās. These Dādūpanthīs take to medicine and money-lending, and

many of them are very rich.

(4) The Virkat.—These may not touch money, but have to live on the alms they get. They wear salmon-coloured clothes and devote themselves to study. They seldom stay long in any place, but are guided by 'grain and water' (i.e. food) in their movements. 'The Master' has with him from one or two to many disciples—boys whom he has adopted and whom he trains. The present writer and whom he trains. The present which has seen them travel about in as large a 'school' as 150. They teach not only the  $B\bar{a}n\bar{i}$ , but also difficult Sanskrit books relating to Literature, Philosophy, and Religion.

(5) The  $Kh\bar{a}k\bar{i}s$  ('ashes-covered').—These Dādū-

panthīs accentuate austerities, wear few clothes, have long coiled hair, and smear themselves with ashes. They usually go about in small companies, and believe that, like the stream, they keep pure

by constant movement.

4. The present condition of the Dādūpanthīs.— Hinduism, against which Dādū protested, has, in a modified form, found its way amongst them again. It has come in by way of the intellect, and many are Vedāntists. It has also come in by way of the heart, and many use the rosary, worship the  $B\bar{a}n\bar{\imath}$  as an idol, and prostrate themselves before the sandals and old clothes of Dādū.

LITERATURE.—W. W. Hunter, IGI2, London, 1885-87, vi. 344, vii. 53, and artt. 'Amber,' 'Naraina'; W. Crooke, Tribes and Castes of the N.W. Proc. and Oudh, Calcutta, 1896, ii. 286-289; E. W. Hopkins, Religions of India, London, 1896, p. 5131; J. C. Oman, Mystics, Ascetics, and Saints of India, London, 1903, pp. 183, 189; A. D. Bannerman, Rajputana Census Report, Lucknow, 1902, p. 471.

DAGAN, DAGON .- I. The Babylonian Dagan. In Bab. and Assyr. texts a god appears whose name is written with the syllabic signs DA-GAN. The objections of Jensen (Kosmologie, 449 ft.) to the phonetic reading of these signs have been set aside by the discovery of new texts in which gan and by the discovery of new verse in which game receives a phonetic complement, e.g. Da-gam-na (Vorderas. Bibl. i. [1907] 231), and, in the Tell el-Amarna letters (Winckler, 1896, nos. 215, 216), Da-ga-an (without the determinative for 'god').

Da-ga-can (without the determinative for 'god'). We meet also Da-gan-ni, with a different sign for gam (Jensen, op. cit. 449; Jastrow, Rel. Bab. 137); and in one case Da-gu-na (Bezold, Catalogue, 1889-99, iv. 1482).

In Babylonia, Dagân first appears in personal names on the obelisk of Manishtusu (c. 2400 B.C., Meyer), namely, Karib (?)-Dagân (A. v. 8), Gimil-Dagân (A. xi. 15), and Iti-Dagân (C. xvi. 7). The 37th year of Dungi, king of Ur, took its name from the building of the temple of Dagân (Vorderas. Bibl. i. 231). A king of Isin (2145 B.C., Meyer) bore the name of Idin-Dagân, and his son was Ishmê-Dagân. In the prologue to the Code of Hammurabi (iv. 27f.) the king describes himself as 'warrior of Dagân, his begetter.' Dagân is mentioned in several other early Bab. inscriptions (Jensen, op. cit. 449). A seal-cylinder published Mentioned in several other early late. Inscriptions (Jensen, op. cit. 449). A seal-cylinder published by de Clercq (Cylindres orientaux, 1888, no. 245) bears the inscription 'Dagân-abi, son of Inni-Dagân, servant of Dagân,' and in the Ira-myth he is mentioned along with Anu (KIB vi. [1900] 60,

In Assyria this god first appears in the name of the king Ishme-Dugan (c. 1900 B.C.). Itti-Mardukbalatu, an Assyrian ruler whose date cannot be determined, calls himself 'the chosen of Anu and Dagan' (Winckler, Unters., 1889, p. 139). Ashur-

nasirpal (885-860 B.C.) calls himself 'darling of Anu and Dagan' (Layard, Pl. 1, line 1; WAI xvii. 10-11). The eponym for the year 879 B.C. was named Dagan-bel-nasir (KIB i. [1889] 204). Shamshi-Adad (825-812 B.C.) and Sargon (722-705 B.C.) also mention Dagan in connexion with Anu (KIB i. 175, ii. [1890] 39, 41). Dagan is not found in personal names after the 9th cent., and his worship seems to have died out in the later days of the Assyrian empire. Sargon's reference to him is an archaism.

In tablets from the kingdom of Hana, on the upper Euphrates near Sållijeh, Dagån is mentioned in oaths along with Shamash (*PSBA* xxix. [1907] 177 ff., xxxi. [1910] 292; Ungnad, *BASS* vi. [1909] 5, p. 28; *Vorderas. Schriftenkmiler*, vii. [1909] 204), and in one of these the personal name *Yashshulj-Dagån* occurs. In a tablet from the capital of this kingdom, Shamshi-Adad, *patesi* of Assyria, styles himself 'worshipper of Dagån, builder of the temple of Dagån, in the city of Tivra.' Assyria, styles himself 'worshipper of Dagân, builder of the temple of Dagân in the city of Tirqa' (ZA xxi. [1908] 247; OLZ xi. [1908] col. 193). In a tablet of Hana published by Thureau-Dangin (JA xiv. [1909] 149) several priests of Dagân are mentioned, and the name lzra'-Dagân occurs. In the Cappadocian tablets also the page It Dagân the Cappadocian tablets also the name Iti-Dagan is found (Sayce, Babyloniaca, i. [1907]). the Canaanite writer of two of the Tell el-Amarna letters bears the name Da-ga-an-takala (Winckler, nos. 215, 216). It appears, accordingly, that the cult of Dagan extended all the way from Babylonia to the shores of the Mediterranean.

On the basis of a derivation of Dagan from  $d\bar{a}g$ , 'fish,' many writers have assumed that he was a hish, many writers have assumed that he was a fish-god, and have appealed to the legend narrated by Berossus (Müller, FHG ii. [1885] 496 ff.; Lenormant, Fragments cosmogoniques, 1872, p. 6f.; Hrozny, MVG viii. [1903] 252 ff.), that seven beings, half-fish and half-man, came out of the Persian Gulf and taught the primitive inhabitants of Babylonia the arts of civilization. The first of these was called Ōánnēs; the second, Annēdōtos; and the last, Ōdákōn. The last is supposed to be the same as Dagân; and, on the strength of this the same as Dagân; and, on the strength of this identification, the numerous fish-men depicted in Bab.-Assyr. art (Ward, Scal-Cylinders, 1910, pp. 217, 282, 355 f., 385, 410) have been supposed to be representations of Dagân (e.g. Layard, Nineveh, 1849, ii. 353 and pl. at end of book; Schrader, KAT², 1882, p. 182; and in Riehm, HWB¹, 1874, p. 250; Menant, RHR xi. [1885] 295 ff.; and most of the popular handbooks). Ödákön, however, has nothing to do with Dagân, but is the Sumerian fish-god U-ki-di-a, or U-di-a-ki, who is associated with the fish-god Han-ni, the prototype of Oánnēs (Reisner, Hymn., 1896, pp. 91, 137; Hrozny, MVGviii. [1903] 258). The fish-men in Bab. art represent Ea, the god of the sea, and his attendants; but viii. [1903] 258). The fish-men in Bab. art represent Ea, the god of the sea, and his attendants; but with these Dagan is never identified (Jensen, op. cit. 451; Zimmern, KAT<sup>3</sup>, p. 358; Hrozny, op. cit. 451; Zimmern, KAT<sup>3</sup>, p. 358; Hrozny, op. cit. 261; A. Jeremias, Das AT im Lichte d. cit. Orients<sup>3</sup>, p. 470). On the contrary, Dagan is constantly equated with En-lil, or Bel, the god of the earth. In the passages cited above he is associated with Annual Constant of the passages of the contrary is republished.

com. on Is 461 (where some Gr. texts read 'Dagon' instead of 'Nebo') says: 'Dagon est idolum Ascalonis, Gazac et reliquarum urbium Philistim.'

Anu, the sky-god, in the manner in which Bêl is ordinarily associated, and in WAI (i. 4, no. 15, line 6 ff., iii. 68, 21 cd) the identity of the older Bêl of Nippur with Dagan is asserted (see BAAL in vol. ii. p. 295; Jastrow, Rel. Bab. 137, 142, 145, 219). 2. The Canaanite Dagon.—In the OT Dagon appears as a god of the Philistines who had a temple at Gaza, and a temple and image at Ashdod (Jg 16<sup>251</sup>, 1 S 5<sup>2-7</sup>, 1 Mac 10<sup>834</sup>. Il<sup>4</sup>). Jerome in his

came from Caphtor (prob. Crete). They are first mentioned as invading Palestine in the 8th year of Ramses III. (1190 B.C.). They seem not to have brought Dagon with them, but to have adopted him from the Canaanites among whom they settled, since he is found in place-names that are older than the time of their conquest and that lie outside of their territory. Bayti-Duquna appears in a list of the Egyptian king Ramses III., which is copied from an earlier original of the XVIIIth or XIXth dynasty (Müller, Egypt. Rescarches, 1906, p. 49). It seems to be identical with Beth-Dagon (Jos 15<sup>41</sup>) which is either the modern Beit-Dejan, 6 miles S.E. from Jaffa, or Dâjûn, 1½ miles farther S.—and with Bit-Daganna of Sennacherib (Prism-Insc. ii. 65=KIB ii. 92). There was another Bêth-Dāgôn in Asher (Jos 19<sup>27</sup>). Jerome knows a Kepher-Dāgôn (OS, ed. Lagarde [21887], 104<sup>15</sup>, 235<sup>14</sup>) between Diospolis and Jamnia. There is also a modern Beit Dagan S.E. of Nabhus, All theorem depublisher. Beit-Dejan, S.E. of Nablus. All these are doubtless survivals of ancient place-names, and indicate a wide diffusion of the cult of Dāgôn in Canaan before the Philistine conquest. A borrowing of Dāgôn by the Philistines is not surprising, since they adopted the Canaanite Ashtart (1 S 3110) and the Syrian Atargatis (see ATARGATIS in vol. ii. p. 165). Whether Marnas (Aram. Marnā, 'our Lord'), a deity of the Philistines at the beginning of our Beitr., 1888, p. 65 f.).

Dāgôn seems also to have been a god of the Phænicians, either through survival from primi-

rhealeians, either infough survival from primitive Canaanite religion, or through adoption from the Philistines (cf. Philo Byblius in Müller, FHG iii. [1885] 567 f.). The Etym. magn. says that Bētagōn (Bēth-Dāgōn) is Kronos among the Phœnicians. Sayce (Higher Criticism, p. 327) reports a seal bearing in Phœnician letters the inscription 'Ba'al-Dāgōn,' and the inscription of Eshmungar king of Sidon contains the words Eshmunazar, king of Sidon, contains the words 127 ngm, which may mean 'land of Dagon,' or merely 'corn-land.'

Α

The theory that Dāgôn is derived from  $d\bar{a}g$ , 'fish,' and that the image of Dāgôn was half-man, half-fish, is not found in old Jewish sources such as the Targum and Talmud, or in Josephus; it first appears in Jerome, who interprets Dagôn as compounded of  $\eta$  and  $\eta$ , and renders it *piscis tristitiæ* (OS, ed. Lagarde<sup>2</sup>, 327; cf. 18914). This theory was adopted by Jewish commentators of the Middle Ages, from whom it has been inherited the Middle Ages, from whom it has been inherited by modern scholars. It is still defended by Cumont (in Pauly-Wissowa, RE, iv. [1909]), Baethgen (Beitr. 65), Lagrange (Rel. sém. 131), A. Jeremias (op. cit. 470). In support of this view it is urged (1) that Dāgôn is derived from יַּדְ, 'fish'; but it may come equally well from יַּבְי, 'corn,' and may be a foreign word for which no Heb. etymology is to be sought. (2) In 1 S 54, after the account of how Dāgôn's head and hands were broken off, the Heb. text reads יַּבְּיְבֶּיִלְּיִבְּיִבְּיִבְּיִרְ יִּבְּיִבְּיִלְ יִּבְּיִבְּיִבְּיִר יִּבְּיִר יִבְּיִר יִּבְּיִר יִבְּיִר יִבְייִר יִבְּיִר יִבְּיִּבְּי יִבְּיִי יִבְּיִבְּי יִבְּיִר יִבְּיִבְּי יִבְּיִי יִבְּיִי יִבְּיִי יִבְּי יִבְּי יִבְּיוֹ יִבְּיִי יִבְּיִי יִבְּי יִבְּיוֹ יִבְּי יִבְּי יִבְּי יִבְּי יִבְי יִבְּי יִבְי יִבְי יִבְּי יִבְי יִבְי יִבְּי יִבְי יִבְי יִבְי יִבְּי יִבְיי יִבְי יִבְּי יִבְי יִבְּי יִבְּי יִבְּי יִבְּי יִּבְי יִבְי יִבְּי יִבְּי יִבְּי יִּבְי יִבְי יִבְי יִבְּי יִבְּי יִבְּי יִבְּי יִבְּי יִבְי יִּבְי יִבְּי יִבְּי יִבְּי יִבְי יִבְי יִבְּי יִבְי יִבְיי יִבְי יִבְי יִבְּי יִבְי יִבְיי יִבְי יִבְי יִבְי יִבְי יִבְּי יִבְי יִבְ nu, the sky-god, in the manner in which Bêl is dinarily associated, and in WAI (i. 4, no. 15, 1872, p. 1i), with more probability, reads vg, 'his ne 6 ff, iii. 68, 21 cd) the identity of the older of Nippur with Dagân is asserted (see BAAL 1872, p. 1i), with the LXX, we may suppose that vg tool. ii. p. 295; Jastrow, Rel. Bab. 137, 142, 145, 19).

2. The Canaanite Dāgôn.—In the OT Dāgôn prears as a god of the Philistines who had a temple and image at Ashdod Ig 16<sup>221</sup>, 1 S 5<sup>2-7</sup>, 1 Mac 10<sup>831</sup>. 1147. Jerome in his navel up the form of a man. (3) Derketo, or Atargatis, at Askalon had a fish's tail (see ATAR-GATIS in vol. ii. p. 166), and she was possibly the consort of Dāgôn. But, even granting that the two were consorts, which is not known, there is no reason why Dāgôn should have had the same form as his spouse. The Sumerian fish-god Udaki has The Philistines were a non-Semitic people who 1

263), and similarly the fish-goddess Atargatis may have had as consort the corn-god Dagon. (4) Coins of Arados and of Askalon dating from about 350 B.C. depict a triton-like tigure holding a trident 350 B.C. depict a triton-like lighte holding a tritler in his right hand and a fish in his left (Head, Hist. Num., 1887, p. 666; Hoffmann, ZA xi. [1896] 279 f.; Lagrange, Rel. sém. 131). These are supposed to be Dāgôn, but there is no proof. They are in pure Greek style, and far more probably depict Neptune. Accordingly, there is no better evidence that Dāgôn are a filled than there is in the coard Dagôn. was a fish-god than there is in the case of Dagan. From the seal referred to above we learn that he was one of the be alian, who in Canaan were predominatingly agricultural deities (Hos 27 (5)), and on this seal an ear of corn is depicted. According to I S 6°, Dagon was discomfited by Jahweh's sending mice which destroyed the crops. This looks like an agricultural divinity. Dagon must also have been a warder-off of disease, since he was also have been a warder-on of disease, since he was attacked by Jahweh's sending tumours upon the Philistines (1 S 56th.). He was also the leader of his people in war, who delivered their enemy into their hand (Jg 162th.) and in whose presence they set the ark as a trophy (1 S 52). He was worshipped in joyous festivals with athletic sports (Jg 162th). The one rite of his cult that is known to us is priested a voidance of treading upon the threshold.

The one rite of his cult that is known to us is his priests' avoidance of treading upon the threshold of his sanctuary (1 S 5, Zeph 19).

3. The identity of Dagân and Dāgôn.—This is doubted by Jensen (Kosmol. 449 ff.) and by Moore (EBi 1. 985), but is accepted by Schrader, Baethgen, Baudissin, Sayce, Bezold, Zimmern, Jastrow, Hrozny, and Lagrange. It is probable for the following reasons:—(1) The two names are precise etymological equivalents. Heb.  $\delta$  is a modification of an original  $\delta$  and is represented in Assyr either of an original a, and is represented in Assyr. either by a or by a: e.g. Ammôn, Assyr. Ammânu; Ashkelôn, Assyr. Iskalûna. Hence Heb. Dāgôn is rightly reproduced by Assyr. Dagûn, or Dagûna (Bezold, Catalogue, iv. 1482). The occurrence of the two forms shows that the resemblance is not accidental. (2) The Canaanite  $Dag \delta n$ -takula in the Amarna letters (Winckler, 215 f.) must have been a worshipper of Dägôn. (There can be no doubt that this is the name of a god, in spite of the lack of determinative.) (3) The Heb. name  $B\delta th$ - $D\bar{a}g\delta n$  appears in the annals of Sennacherib as  $B\delta t$ -Daganna. (4) The combination  $D\bar{a}g\delta n$ - $Ba \delta a$  on the seal referred to above is analogous to the combination  $B\delta t$ - $Dag\delta n$  in Babylonia. (5) The statement of Philo Byblius (FHG iii. 567 f.) that  $D\bar{a}g\delta n$  was the son of Ouranos and  $G\bar{e}$  points to his identity with  $B\bar{e}$ - $Dag\delta n$ , the earth-god of the the two forms shows that the resemblance is not his identity with Bêl-Dagân, the earth-god of the Bab. triad. (6) The character of Dāgôn, so far as we know it, as a national god of agriculture and of war, corresponds to the character of the Bab.

Dagân. 4. The origin of Dagan-Dāgôn.—Schrader (KAT<sup>2</sup>, p. 181 f.), Delitzsch (Wolag das Paradies?, 1881, p. 139), Sayce (Higher Crit. p. 325), on the basis of the association with Anu, regard Dagan Basis of the association with Ant, regard Bagan as a Sumerian deity whose cult was adopted by the Semitic Babylonians, and by them passed on to Mesopotamia and Palestine; but his name never occurs before 2500 B.C., and then only in the inscriptions of Semitic kings. All the personal names compounded with Dagan are Semitic, and many of them show the West Semitic type that is many of them show the West Semitic type that is frequent in the period of the dynasty of Hammurabi. Now that it is known that Babylonia was invaded by the Amorites about 2500 B.C., and that the first dynasty of Babylon was Amorite (Meyer, Gasch.<sup>2</sup> i. [1909] 463 ff.), the theory has become exceedingly probable that Dagan was a god of the Amorites, whose worship was brought by them from their original home into both Babylonia and Palestine: so Bazold (ZA xxi, [1908] 254). Meyer Palestine: so Bezold (ZA xxi. [1908] 254), Meyer (op. cit. 467), Jastrow (Rel. Bab. 220), Clay (Amurru,

p. 147), Cook (*Rel. Anc. Palestine*, 1908, p. 92). This theory is favoured by the fact that Hammurabi in the prologue to his *Code* (iv. 28) speaks as though

Dagan were the ancestral god of his race.

If Dagan-Dāgon was originally the god of a people speaking a language similar to Hebrew, then the most probable etymology for his name is the one given by Philo Byblins (FHG iii. 567), and suggested as an alternate by Jerome, that it is the same as Can.-Heb. 127, 'corn.' This agrees with the facts noted above, that both in Babylonia and in Canaan he was a god of the earth and of agri-culture, and that on a seal he is called ba'al and

culture, and that on a seal he is called balal and has the emblem of an ear of corn (so Movers, L. Müller, Schröder, Pietschmann, Wellhausen). Jensen in Baudissin (PRE³ iv. 426) suggests a derivation from Arab. dagn, 'copious rain.'

DAIBUTSU ('Great Buddha').—The name given to several colossal images found in Japan. These vary in size, posture, material, etc.; some indeed are not much larger than the ordinary size of the house before any correct deserved. of the human body, and scarcely deserve the title of daibutsu popularly assigned to them. Some of them are of wood, but the majority are of bronze; some are in a sitting posture, others in a standing one; recumbent figures, such as are seen in Ceylon or Burma, are never found in Japan. The Buddhas represented are Vairochana, Antiābha, Avalokiteśvara (Kwannon), Ksitigarbha (Jizō), and Sākyamuni, but there are also representations of other Ruddhes and Reddisenting. of other Buddhas and Bodhisattvas. For the purposes of this article, three daibutsu only will be considered, viz. those at Nara, Kyoto, and Kamakura. These are the daibutsu that are properly so called.

so called.

1. Daibutsu at Nara.—This was erected under the auspices of the Emperor Shōmu Tennō (A.D. 724-748), the most zealous, perhaps, of all the Buddhist Emperors of the country. It is of especial interest to the student of the religious history of Japan, as being connected with Shōmu's audacious but successful plan of planting Buddhism firmly on the soil of Japan by proclaiming its essential identity with the Shintoism indigenous to the country. In this plan the Emperor was ably assisted by a Korean priest of the name of Gyogi, who must be considered as the true parent Gyogi, who must be considered as the true parent of the *Byöbu*, or amalgamated Buddho-Shintoism, which continued in force until the Meiji era. Which continued in force until the Meiji era. Gyogi's plan was to impress the native mind with the dignity of Buddhism by the erection of a colossal statue of Buddha set up in a temple architecturally worthy to be the religious centre of the country, and then to absorb into the organized system thus established the whole of the native cults which were then, as now, bound up with the life and worship of the nation. This could not be done without the sanction of the Shinto priesthood, and the instruments chosen to

1 Gyogi, the descendant of a Korean king, was born in A.D. 668 in Japan, where his family had been domiciled for some time. Ordained to the priesthood at 18, he soon distinguished himself by his practical schemes for the improvement of the country—read-building, etc. He became spiritual adviser to the Emperor Shōmu and his consort Kōmyō, and inaugurated the movement for the amalgamation of the two religions then existing in Japan—undoubtedly with the best of intentions. He died in 749, just before the completion of the dasbutsu.

secure their assent were Gyogi himself and the Udaijin Tachibana no Moroye. According to the Daibutsu-engi, Gyogi was sent to Ise, nominally for the purpose of prayer, but actually, it would seem, to confer with the authorities at the Ise shrines. A similar messenger was dispatched to the Hachiman shrine at Usa in Kyūshū. The results of these preliminary meetings having been found satisfactory, a formal embassy was sent, with Tachibana no Moroye at its head, to propitiate the Sun-goddess, and the result was a formal reply, conveyed first in a dream to Shōmu, and then in a definite message, that the Great Sun-goddess was pleased to identify herself with Dainich ('great sun') Nyorai, whose true essence was the great Buddha Vairochana. Thus was laid the foundation of that great system which taught the Japanese to see in the gods of Shinto manifestations of the deities of Buddhism, and enabled them to become Buddhists without ceasing to be Shintoists. This was in 743. The colossal image was the perpetual memorial of the alliance thus cemented. The casting was completed in 749, the inauguration ceremony was held forthwith, and the whole work was finished in 751. The statue, which is in a sitting posture, is 53 ft. in height, It stands in the Daibutsu den, or 'Hall of the Daibutsu,' in the Todaiji Temple at Nara, the building in which it is enclosed serving to some extent to conceal the magnificence of its proportions.

It was the desire of the Emperor and Empress to have Gyogi perform the ceremony of inauguration. But he did not live to see the completion of the statue. At the New Year's festivities in A.D. 749, Shōmu and Kōmyō had received from Gyogi the vows of the Bodhisattva, and had retired from the world, abdicating in favour of their daughter Kōken. Gyogi, feeling the approach of death, then designated a fit person to take his place an Indian monk of the name of Bodhisena, known an Indian mork of the fixine of Bothmesha, known in Japan as Baramon Sōjō, or the Brahman archbishop. (Japan was at the time feeling the effects of the Muhammadan upheaval. Refugees from India, Persia, and Central Europe, gathering at the court of the Tang in Singanfu, had continued their wanderings as far as Japan, and in the reigns of Shōmu and Kōken we find not only Buddhist monks from India but Manichagus and dhist monks from India, but Manichæans, and even a Nestorian Christian doctor, at the court

even a Nestorian Christian doctor, at the court of Nara.)
When the day for the inauguration of the statue came, Bodhisena mounted the platform and 'opened its eyes' with a brush dipped in water. The whole congregation had its part in the ceremony, for a long string, fastened to the brush, passed among them for those who would to take in their hands. The congregation comprised the ex-Emperor Shōmu and his Empress, the reigning Empress Kōken, and all the mag. the reigning Empress Köken, and all the mag-nates of the court. It was an imposing congregation in another sense, for, in the parlance of the day, Shōmu was an incarnation of Kwannon; Ryōben, who was considered to be the founder of the temple, was looked upon as an incarnation of Maitreya; Gyogi, of Mañjuśrī; and Bodhisena, of Samantabhadra. The Buddhist doctrines that were at that time uppermost in the mind of Japan

were those known as *Kegon*, contained in the mystic Scriptures of the Avatamsaka.

The Nara daibutsu has experienced many vicissitudes. In 855 its head fell off and was with difficulty restored to its position; in 1180, during the civil wars, the temple was burned, and the head melted. The image remained headless until 1195, when it was restored, through the efforts mainly

China, and who travelled through Japan on a wheelbarrow collecting money. In 1567, the temple was burnt, but the daibutsu remained temple was burnt, but the autousu remained uninjured. Time, however, has necessitated many repairs from generation to generation. Very little, probably, of the original material now remains, yet the daibutsu has retained its identity throughout all its changes.

2. Daibutsu at Kyoto.—We have seen that the temple anglesing the daibutsu at Nara was lumpt

temple enclosing the daibutsu at Nara was burnt during the civil troubles in 1567. The temple remained in a ruinous condition for many years, and this suggested to Hideyoshi, who became Kwampaku in 1585, the idea of reconstructing it on some other site, and of placing in it a colossal image which should be more magnificent even than the one at Nara, and which should also be a perpetual memorial of himself. In 1586 he selected a site on the Amida-zaka at Kyoto, and commenced the erection of his temple. It did not seem as though Heaven were propitious to his designs. The first temple, built of wood brought from the districts of Tosa, Kii, and Kiso, and containing a wooden daibutsu (of Lochana-Buddha), 160 ft. in height, was destroyed by an earthquake in 1596. Nothing daunted, Hideyoshi set to work again on a more substantial structure. On Jan. been completed up to the neck, the building and scaffolding caught fire and were destroyed, and, Hideyoshi being by this time dead, no immediate attempt was made to repair the disaster.

A year or two later, however, Tokugawa Iyeyasu, being anxious to reduce the family of Hideyoshi. to impotence, suggested to Hideyori that the completion of the daibutsu and temple would form a very fitting tribute to the memory of his great father. Hideyori and his mother fell into the trap, and ruined themselves financially with the trap, and rumed themselves manically with the carrying out of Hideyoshi's magnificent but extravagant design. Hideyoshi's structure was 150 ft. in height, 272 ft. in length, 167½ ft. in depth. The roof was supported by 92 pillars, with an average diameter of 5 ft., and the sitting figure of Lochana-Buddha was 58½ ft. in height. When the whole was finished, Iyeyasu picked a quarrel with Hideyori over an insult, real or pretended, supposed to be conveyed to him in the inscriptions on the bells. The dedication ceremonies were postponed, and it was not long before Iyeyasu took up arms against the family of Hide-

yoshi and crushed it for ever.

Hideyori's daibutsu was destroyed by earthquake in 1662, and the copper used for coinage. No interest attaches to its successors. The present

Kyoto daibutsu dates from 1801.

3. Daibutsu at Kamakura.—This image, though smaller than the one at Nara, is much better known. It stands in the open, amidst beautiful surroundings, and is constantly being photographed. No illustrated description of Japan would be complete without it. It is an image of Amids 49 ft. 7 in in height, and may be taken Amida, 49 ft. 7 in. in height, and may be taken as marking an era in Japanese Buddhism. The daibutsu at Kyoto had no real spiritual signification: it was erected by men devoid of religious faith, for purposes of self-glorification. That at Nara symbolizes that union of Buddhism and Shintoism which was made possible by an acceptance of the peculiar tenets of the Kegon school, with Vairochana as its chief Buddha. The Kamakura daibutsu is an image of Amida, and marks the period when Vairochana was going out of fashion, and Amitābha, with the sects devoted to his worship, was coming to the front.

It is said that the idea of having a daibutsu at

Kamakura first occurred to Minamoto Yoritomo of Jugen, a disciple of Honen, who had been in in A.D. 1195, when he was assisting at the cere390 DAITYA

monies of the re-dedication of the Nara image after its restoration. Yourtomo, dying in 1195, did not live to see the completion of his design. It was not, however, suffered to fall to the ground, Ita no Tsubone, one of the ladies of Yoritomo's court, undertaking to collect funds for the purpose. Ita no Tsubone's efforts were supplemented by a priest named Jōkō, who was also active in collecting contributions. A wooden image was erected in 1241, the bronze one in 1252. The first was dedicated to Amida, the second apparently to Sakyamuni. But the present image, representing Amida, is said to be the very image erected in 1252, in which case we have an image with a double dedication—to Sākyamuni and to Amida. This, however, presents no difficulty. Ni son ichi ('two blessed ones with one personality') is a common doctrine of the Jōdo sects, Sākyamuni and Amitābla being looked upon as identical in essence whilst distinct in personality and name. Like the daibutsu at Nara, this image was originally enclosed within a temple. But the temple was destroyed by tidal waves in the year 1369 and again in the year 1494, and no attempt has been made since the last catastrophe to rebuild it. Strange to say, the metal does not seem to have suffered at all from the inclemencies of the weather. A. LLOYD.

DAITYA.—The word daitya, the formation of which is explained by Pāṇini (iv. 1, 85), etymologically means 'descendant of Diti,' just like Daiteya and Ditija; it occurs in classical Sanskrit literature from the Epics downwards, and is there synonymous with Asura and Dānava, which are already found in Vedic literature. This article must, therefore, treat of all three—Asuras, Dānavas, and Daityas—as denoting one kind of demons

or enemies of the gods.

The word asura originally had not an altogether evil meaning, and it is still used in the Rigyeda as an epithet of the higher gods, especially of Varuna;1 but even there it has in other places the meaning inimical to the gods. In the Brāhmanas and Upanisads the latter meaning is exclusively given to the word asura, which is there the common name of demons as enemies of the gods. Both the Asuras and the gods are descendants of Prajapati. According to the Satapatha Brāhmana, the Asuras were created from the downward breathing of Prajāpati, and entered the earth; 2 they had dark. ness and magic (māyā) assigned to them by him, and held to untruth. Originally they had divided the world with the gods, and once built three strongholds, one in each world. But they continually contended against the gods, and, though they were more numerous or more powerful than the latter, they were in the end always defeated by them. Frequently they were put to flight by Indra, with or without the assistance of Brhaspati. Thus at last they were driven from the earth and the regions above.7

From these statements it appears that the authors of the Brāhmanas and Upanisads regarded the Asuras as the pre-eminently evil ones; once it is even said that their alleged battles with the gods are fictitious, and that they became degraded through their own wickedness. It is, however, to be noted that they are enemies only of gods, not of men; some peoples (the Easterns and others) are even said to be of Asura-nature, and it is added that they make their burial-places round and line

1 Asurya (adj. and subst.) in the Rigveda refers to gods, and not to demons.

them with stones. This seems to imply that some peoples were supposed to worship Asuras.2

As regards the second synonym of Daitya, mentioned above, viz.  $D\bar{a}nava$ , we find this word, as well as  $d\bar{a}nu$ , from which it is derived, used in the Rigveda very much in the same sense as the later asura. A female dānu is mentioned (I. xxxii. 9) as the mother of Vrtra (vrtraputra). She came in later times to be regarded as the mother of the Danavas; for dānava might be taken as a metronymic from dānu, and mythologists, of course, gladly availed themselves of this etymology in drawing up their legendary genealogies. The Daityas are derived from Diti, as the Dānavas from Dānu; but there is this difference, that danava was an ancient name for demons which gave rise to a myth of their descent, while daitya is a name derived, after the Vedic period, from a somewhat ill-defined and evidently not popular deity, Diti. She is mentioned thrice in the Rigveda and several times in the Atharvaveda, almost always in conjunction with the well-known great goddess Aditi, apparently as her sister, to whom she may be said to owe her existence, through a popular etymology which regarded aditi as formed by a privative and diti, just as asura was derived from sura. Diti, a product of priestly speculation, would scarcely have given rise to the popular name Daitya; but the latter was apparently formed as a 'pendant' of Aditya a name which already in the Rigveda denoted a class of deities including some of the highest gods, and at the same time had been regarded as a metronymic from Aditi. So, to match it, the foes of the Adityas—the Asuras—were named, by another metronymic, Daitya, after Diti, though this goddess had scarcely any hold on the imagination of the people.

The only myth related of Diti in the Rāmāyana . 46) and the Puranas 4 betrays a similar tendency.

(1. 46) and the Puranas betrays a similar tendency. It is to the following effect:

In the battle between the gods and the Daityas, which ensued on the churning of the ocean, the latter were worsted and slain. Diti then performed austerities, and asked Kaśyapa for a boon, viz. that she might give bitth to a son who should vanquish Indra. Kaśyapa granted the boon on condition that she should remain entirely pure for a thousand years. During her pregnancy Indra watched her closely, and at last found her in an impure position. Thereupon he entered her womb, and divided the embryo into seven parts, which became the sevon lords of the Maruts, or winds.

The present writer is of opinion that this myth.

The present writer is of opinion that this myth was invented in order to explain that the Daityas are the elder brothers of the gods. For marut is also used, at least in classical Sanskrit, as a synonym of deva, 'god.' The motive of the myth lies, obviously, in an etymology which derives diti from the root da, 'to cut.' The myth itself is evidently not an old one, for it rests on the assumption that the Daityas are the children of Diti, and that they were killed in battle by the gods.

In epic and classical Sanskrit literature, where Asura, Dānava, and Daitya are interchangeable terms, these beings continue to be regarded as rivals, and, occasionally, as deadly foes, of the gods; but the attitude of the writers has decidedly changed since the composition of the Brahmanas. Thus, the great epic contains several stories in which the Asuras—Vrtra, Bali, Sambara, Namuchi, and others—are spoken of as virtuous and wise;

and others—are spoken of as virtuous and wise;

I satapatha Brāhmaņa, xiii. 8. 1. 5, xiii. 8. 2. 1.

I thay be remarked, as illustrative of the godless character of the Asuras, that the secondary word sura; 'god,' was formed from asura, the latter being wrongly understood to be a-sura, 'non-god.'

According to Böhtlingk-Roth (Skr. Wörterb., St. Petersb., 1875, s.v. 'Diti'), the Diti of the Rigveda is different from the Diti of the Atharvaveda.

4 Cf. Wilson, Vignu Purūņa, ii. 79, note 1.

5 It may be mentioned that the Mahūbhārata (ix. 38, 32 ff.) contains an entirely different account of the origin of the Maruts; they were formed from the vital seed of the rsi Mahkanaka falling into the river Sarasyatī.

ot to demons. 3 ii. 4. 2 xi. 1. 6, 8. 3 ii. 4. 4 ix. 5. 1, 12 ff. 5 1, 12 ff. 5 1, 12 ff. 5 1, 12 ff. 6 1, 14 ff. 6 1, 14 ff. 6 1, 14 ff. 6 1, 14 ff. 6 1, 15 ff. 8 ff. 8 ff. 1, 16, 17 ff. 8 ff. 16, 18 ff. 17 ff. 18 ff. <sup>8</sup> ii. 4. 2, 5. <sup>5</sup> 1. 2. 5, 1 ff.

DAITYA

and some Asuras are acknowledged by gods as their friends and protégés, e.g. Prahrāda by Viṣṇu, and Bana by Siva. Moreover, they were not believed to lead a life of wickedness, but to conform to the precepts of the Veda. They had a teacher and priest of their own, a purchita, in the person of Sukra, otherwise called Kāvya Uśanas, a descend-

ant of the great rei Bhrgu. I Finally, the abode of the Asuras, Pātāla, is described not as a dwelling-place of demons, but as equalling, and even surpassing, the heavenly regions in beauty and splendour. In popular literature, also, the Asuras seem to have been looked upon with a decided sympathy, for bk. viii. of the Kathāsaritsāgara contains the story of Sūryaprabha, apparently the subject of a romantic epic, the hero of which is an Asura who is held up to our admiration. People seem to have cherished a similar feeling towards the Asuras as towards the Nāgas, who shared the Pātāla regions with them. On the other hand, whenever the contention of the Asuras with the gods becomes the subject of the writers, they are at one with the Vedic authors, and describe the Daityas as demons given to deeds of violence, skilled in sorcery and magic power, and able to make themselves invisible or to assume any shape at will.2

The Mahābhārata and the Purāṇas contain accounts of the origin and genealogy of the Asuras, which, however, differ considerably in details. Marīchi, one of the six mental sons of Brahmā, produced by his will a son, Kaśyapa, a prajāpati, or secondary creator. He married thirteen daughters (putrikās) of Dakṣa, who was also a prajāpati. The first place in the list of these thirteen daughters of Daksa is always given to Aditi, and the second to Ditt; but the latter was the eldest, as is expressly stated in *Mahāb*. xii. 207, 20. Diti had but one son, Hiranyakasipu, the ruler of the Asuras. He had five sons, Prahrāda, etc.; Prahrāda had three sons, Virochana, etc.; Virochana's son was Bali, whose son was Bāṇa. These Asuras and their progeny are, properly speaking, the Daityas; but popular usage takes no account of this genealogy, and regards all enemies of the gods as sons of Diti. By Danu, another daughter of Daksa, Kasyapa had 33 or 40 sons, among whom are enumerated the most famous Asuras. The sons and grandsons of these are said to be countless; they are the Danavas proper, but the above remark about the Daityas applies also to them. Kasyapa's son by the fourth daughter of Dakşa, Simhikā, is the famous Asura Rāhu, whose head was cut off by Viṣṇu, and who ever since persecutes sun and moon, and occasionally swallows them (mythological cause of eclipses). Danāyus, the fifth wife of Kaśyapa, became the mother of Bala and Vṛṭra, the Asuras who were killed by Indra; and Kālā, the sixth wife of Kaśyapa, gave birth to the Kālakeyas, a class of Asuras. Accordingly, the Mahābhārata (i. 65) derives the whole race of Asuras from five daughters of Daksa.

According to the Visnu Purāna, Simhikā was the sister of Hiranyakasipu, and wife of Viprachitti, a son of Dānu, and, as the same source does not mention the above-named wives of Kasyapa, or at least does not make them the ancestresses of separate Asura families, there are practically only two races of Asuras acknowledged by the Purāṇas, viz. Daityas and Dānavas. There are variations

in other Puranas which need not be detailed here.1

The Purāṇas, however, have another account of the origin of the Asuras at the first creation of the world:  $^{2}$ 

world: 2

'Brahmā, being desirous of creating the four orders of beings termed gods, demons, progenitors, and men, collected his mund into itself. Whilst thus concentrated, the quality of darkness pervaded his body, and thence the Asuras were first born, issuing from his thigh. Brahmā then abandoned that form which was composed of the rudiment of darkness, and which, being deserted by him, became night.'

Wilson says in a note: 'These reiterated, and not always very congruous, accounts of the creation are explained by the Purāņas as referring to different kalpas, or renovations of the world, and therefore involving no incompatability. A better reason for their appearance is the probability that they have been borrowed from different original authorities.'

As reconds the origin of the Asuras, it is probable

As regards the origin of the Asuras, it is probable that the myth quoted above has been developed from the statement in the Brāhmaṇas mentioned at the beginning of this article. The genealogy of the Asuras is of later growth, and introduces a new element of confusion into the accounts of them. How, for instance, could Hiranyakasipu, the first-born of all Daityas and Dānavas, rule over the whole race of Daityas and Dānavas, who, according to the Pauranie theory, sprang from his children and grandchildren?

It has been said above that the Asuras reside in Pātāla, and the Satapatha Brāhmana already states that they entered the earth. Yet they are not restricted to Pātāla, but may own towns and fortresses on earth, in air, and in heaven. Thus the three sons of Tāraka possessed three towns, which, united into one, became the famous Tripura, which Siva reduced to ashes with his mystical arrow. The Paulomas and Kalakañjas inhabited the flying town Hiranyapura, which was destroyed by Arjuna (*Mahāb*. viii. 33 f., iii. 173). Another tribe of the Dānavas, the Nivātakavachas, live on the shore of the ocean, where Arjuna vanquishes them (ib. iii. 168 ff.). In most stories about Asuras, the scene is laid in the upper regions, where they acquire power even over the three worlds, till some

god slays them.

The belief that the Asuras dwell in the regions below has been common to all Indian sects. Thus, according to the Northern Buddhists, the world of the Asuras, who, besides the Daityas, comprise the Rākṣasas, Yakṣas, and similar demons, is the uppermost of the four *Apāyalokas*, or worlds of suffering; and it is situated exactly as far below the surface of the earth as the world of Indra is above Among the Asuras the foremost rank is held by Rāhu, the demon who causes eclipses of the sun and moon.<sup>3</sup> The Jains reckon the Asuras, or, as they call them, the Asurakumāras, as the lowest class of the Bhavanavāsin or Bhaumeyaka gods, and assign them the uppermost part of Ratnaprabha, the highest hell-region, as their residence.4

A great many names of Asuras are given in epic and classical Sanskrit literature, some of which have already been mentioned. We add the names of a few more who are frequently mentioned in of a few more who are frequently mentioned in connexion with the god who slew or overcame them: Bala, Vṛtra, Namuchi, Triśiras, Jambha, and Pāka were slain by Indra; Madhu, Kaiṭabha, Bali, Mura, and Naraka by Viṣnu (who is thence called Daityāri, foe of the Daityas) or Kṛṣna; Pralamba by Balarāma; Sambara by Pradyumna; Andhaka by Siva, who also destroyed Tripura; Sumbha, Nisumbha, and Mahiṣa by Devī; Tāraka and Bāṇa by Kārttikeya; and Ilvala and Vātāpi by Agastya.

1 Wilson op. cit., in his notes to pp. 26, 69 ff. It may be mentioned that the Väyn Purana gives the progeny of Dana-

mentioned that the Vaju Purund gives the progeny of Banaryus (ii. 7, 30 ft.).

2 Wilson, op. cit. 1. 97 f.

3 Kern, Manual of Indian Buddhism (GIAP iii. 8), 1896; and the works quoted there, p. 57, n. 7.

4 Tattvārthādhigama Sūtra, iv. 11, tr. in ZDMG lx. 319.

<sup>11</sup>t may be mentioned in this connexion that Indra, by killing Vrira, incurred the sin of brahmahatyā, or murder of a Brahman, and in consequence lost his celestial kingdom (Mahābhārata, iii. 101, v. 10, xii. 231, 342). Still, Vrira is but an Asura and an enemy of the gods.

2 Cf. V. Fausböll, Indian Mythology, according to the Mahābhārata, London, 1903, p. 3 ff.

3 Not enumerated in the Visuu Purāna, but in some others, e.g. Vāyu Purāna (Bibl. Ind.), ii. 74 f.

The Asuras (Daityas, Dānavas) constitute the highest class of demons; they are the enemies of the gods, and not of mankind; indeed, men seem, as a rule, excluded from their sphere of action. This is the principal point in which they differ from the remaining classes of demons, such as Rākṣasas, Yakṣas, Nāgas, etc., who sustain hostile or friendly relations with men. See art. BRAHMANISM.

In conclusion, an opinion must be noticed which has been put forward by some writers—most recently by the Danish scholar V. Fausboll—viz. that the wars of the Suras and Asuras are but a mythological account of what originally was a strife between the Aryans and the aboriginal inhabitants of India. Fausböll includes among the Asuras other classes of demons, Rākṣasas, the Asuras other classes of demons, reasons, Yaksas, Nāgas, etc.—a course which, as has just been pointed out, cannot be admitted. As regards the Asuras proper, with whom alone we are concerned in this article, his theory is without foundation, and is quite unnecessary. The Indians had at least two war-gods—Indra, and, in later times, Kārttikeya. Warlike gods presuppose, in India as elsewhere, enemies with whom to wage war, and those enemies were the Asuras, Danavas. or Daityas.

LITERATURE.—This has been sufficiently indicated in the course the article.

DAKHMA .- See DEATH AND DISPOSAL OF THE DEAD (Parsi).

DANAIDS .- The Danaids (Aavalões) were the daughters of Danaus. Their number is variously given: Hecateus (schol. on Eurip. Orest. 872) enumerates twenty, and Hesiod (ap. Hecateus, loc. cit.) fifty; the latter figure has won general acceptance. Their fame is enshrined in two legends acceptance. Their fame is enshrined in two legends—the one telling how they murdered their bridegrooms during their wedding night; the other how, after death, they were condemned to pour water into vessels full of holes.

1. The standard form of the first legend is that given to it by Æschylus; it forms the basis of the story as found in the Bibliotheca of Apollodorus, ii. 12 ff. (cf. schol. on Homer, H. i. 42), and Hyginus's Fabula, 168 (cf. schol. on Stat. Theb. Hyginus's Fabulæ, 168 (cf. schol. on Stat. Theb. ii. 222; schol. Strozz. on German. Aratea, p. 172, ed. Breysig). We find part of it in the extant 'Ικέτιδε of Æschylus—the first portion of his Danaid-tetralogy—and the entire myth in the prophecy of Prometheus in Prom. Vinct. 853 ff. The story is as follows. The fifty Danaids fiee, under their father's direction, from Egypt to Argos, in order to escape from the unwelcome suit of their cousins, the fifty sons of Ægyptus. The youths, however, set out after them, and, by mere superiority of force, compel the maidens to marry them. Danaus, however, commands his daughters to kill their respective husbands, and all of them obey save one, Hypérmnestra, who spares Lynkeus out of love. Hypermnestra, who spares Lynkeus out of love. Hypermnestra, saved from her father's vengeance, and at length reconciled to him, continues the lineage of the family, and by inheritance secures for her

acknowledged husband the over-lordship of Argos. The scene of the myth is thus Argos, and, indeed, the mere name of the father and his daughters the mere name of the father and his daughters indicates this locality, as in Homer the Argives are most frequently referred to as Aaraol. Since the publication of Preller's Griechische Mythologie (cf. ii. Berlin, 1861] 45 ff.) the myth has been commonly interpreted as relating to the scarcity of water in 'thirsty Argos'; the slaying of the bridegrooms is taken to mean the drying up of the springs. This hypothesis is still adhered to by Ed. Meyer (Forschungen zur alten Gesch. i. [Halle, 1892] 74) and Waser (in Pauly-Wissowa, iv. 2089),

but its lack of evidence is on a level with its failure but its lack of evidence is on a level with its failure in lucidity (cf. P. Friedlander, Argolica, Berlin, 1905, p. 24). It is certainly true that the full, though not identical, lists of the Danaids given by Apollodorus, ii. 16, and Hyginus, Fab. 170, contain at least one name, Amymone, which is also the name of a fountain in Argos; and, while there may be another here and there which could be appositely applied to a spring, this cannot be said of the majority. Anymone, moreover, is the subject of a special myth, which bears no resemblance to that special myth, which bears no resemblance to that of the others: she yields herself to Poseidon, who in return reveals to her the springs of Lerna; and she bears to him a son named Nauplius (Apollod. ii. 14 and 23; Hygin. Fab. 169). The purport of this story is, in fact, the direct opposite of the Danaid myth; the latter really implies that the maidens, in order to preserve their virginity, do not shrink from slaying even their bridegrooms. It is shrink from slaying even their bridegrooms. It is true that this aspect is not made explicit in the story as related by Æschylus, who lays stress on the Danaids' hatred of the Ægyptiads only, not of men in general, and speaks of their timidity of character. His reason for making this alteration is revealed in the only passage of any length that now remains of the third portion of his Danaid-tetralogy (fr. 44), in which Aphrodite extols the might of love, and so vindicates Hypermnestra and her disobedience to her father's cruel command. might of love, and so vindicates hypermiestra and her disobedience to her father's cruel command. The Æschylean rendering, however, is really a transformation of the original myth, as appears from the following considerations. (1) The slaying of men by the Danaids has always formed the kernel of the myth. (2) Their fruitless labour of water-drawing after death, as will be shown below (§ 2), is an indication of the fact that they were never married. (3) The only extant fragment of the epic Δαναίδες represents them as beings of Amazon-like nature. From this epic, which, according to the Borgia tablet (Jahn-Michaelis, Griech. Bilder-chroniken, Bonn, 1873, p. 76, K<sup>2</sup>), contained 6500 lines, or about half the number in the *Iliad*, Clement of Alexandria (Strom. iv. 120-124), when giving examples of brave women, cites the cases not only of Leaina and Telesilla, but also of the Danaids, and in support thereof quotes from the epic as follows: 'And then the daughters of Danaus armed themselves quickly by the wide-flowing stream of the lord Nile.' We may, there-fore, infer that the characterization of the Danaids in this epic was quite unlike that given by Æs-chylus. Amazons have no occasion for a father's care, or for an admonition to guard their virginity; and in point of fact. Danaus himself as hes been and, in point of fact, Danaus himself, as has been long recognized (cf. Ed. Meyer, op. cit. p. 73), is a mere phantasm, having neither a cult nor a special

mere phantasm, having neutier a curvature myth of his own.

The story of the Danaids as slayers of men and adepts in the use of arms must, accordingly, be brought into line with the Amazonian myths. These have been admirably dealt with by J. Töpffer (Pauly-Wissowa, i. 1754; cf. also the same writer's Attische Genealogie, Berlin, 1839, p. 191 ff.; Kretschmer in Glotta, ii. [1908] 201 ff.; O. Braunstein, Die politische Stellung der griech. Fran, Leipzig, 1911, p. 69 ff.). In the myths of the Amazons, Töpffer potentiaties Stetening are green. Trans. Temples, 1811, p. 69 ff.). In the myths of the Amazons, Töpffer sees fragmentary reminiscences of a pre-Hellenic 'gynaikocratic' race which survived for a considerable period in Asia Minor, but had at one time been spread over Greece proper and the Archi-pelago. The Danaid myth finds a parallel in the story of the women of Lemnos who slew their husbands, and it is perhaps more than a coincidence that Hypsipyle, one of these Lemnian women, should appear in Argos, associated with the legend regarding the institution of the Nemean Games by the seven Argive heroes who marched against Thebes. It is also worthy of note that Bellerophon,

1 Op. cit. p. 41 f.

DANGI 393

the earliest traditional antagonist of the Amazons in Lycia, came originally from Argos (*Il.* vi. 186). Now, as we find Amazon-like women—the Danaids, namely-in Argos, it is natural to infer that they had made the same journey as Bellerophon—had come, that is, from Argos to Lycia. As a matter of fact, the Danaids bear the name of a pre-Hellenic tribe. For, since the Canaanite Philistines have been identified with the *Palisatu* mentioned in the documents of Ramses III. (1200-1175 B.C.)—one of the tribes which worshipped Minos and brought their civilization to its highest development in Crete during the 2nd cent. B.C. (cf. Bethe, in *Rhein, Mus.* lxv. [1910] 200 ff., with lit. and proofs) we can no longer doubt that the Argive Danaoi and the Danuna mentioned in Egyptian documents as early as the 14th cent. B.C. were one and the same people (Ed. Meyer, Gesch. d. Alterthums, i.<sup>2</sup> [Stuttgart, 1909] 226).

A word or two must be added recording Hypory.

A word or two must be added regarding Hypermnestra, the only one of the Danaids who spared her bridegroom, and the mother of the royal race of Argos. Her story, even more than that of Amymone, runs directly counter to the specific bearing mone, runs directly counter to the specific bearing of the Danaid myth. Account must also be taken of two additional facts. (1) Of all the Danaids, Hypermnestra alone had a cult in Argos (cf. Hygin. Fab. 168=schol. Strozz. on German. Aratea [172, ed. Breysig], who speaks of a 'fanum,' while Pausan. ii. 21. 2, refers to the tomb of Hypermnestra and her husband in the city of Argos). (2) Lynkeus, again, is a standing figure in Peloponnesian legend, while the other sons of Ecyptus are but empty while the other sons of Ægyptus are but empty names. We may, therefore, assume that Hypernames. We may, therefore, assume that hypermestra, like Amymone, was a later addition to the group of the Danaids, designed to bring each of them into the imposing genealogical fabric of Argive mythology. This is confirmed by the legend that Lynkeus killed his sisters-in-law and their father (schol on Eurin Hekuha, 886). Accordtheir father (schol. on Eurip. Hekuba, 886). According to Archilochos (fr. 150, in Malalas, Chronogr. iv. 68), Lynkeus was depicted as a conqueror who robbed Danaus of both his dominion and his daughter.

The process of reducing the originally Amazonlike Danaids to human proportions, as we find it already consummated in Æschylus, led at length to the complete obliteration of their characteristic quality of hostility to men. After the murder of the Ægyptiads they all marry again. Their father gives them, without a price, as rewards to the victors in the games (Pindar, Pyth. ix. 112 f.)—a

victors in the games (Findar, Fyth. 1x. 112 1.)—a story which had originally no connexion with the Danaids (P. Friedlander, op. cit. p. 17).

The scene of the man-slaying was laid among the streams of Lerna (Pausan. ii. 24. 2; Paramiographi, i. 108), but also in Argos itself—on the acropolis, where, as noted by Pausanias (loc. cit.), there stood some memorial of the sons of Ægyptus. 2. The earliest literary record of the tradition that after death the Danaids were doomed to the

endless and aimless labour of pouring water into vessels with holes is found in the pseudo-Platonic Axiochus (3rd cent. B.C.), 371 E. In the 5th cent. B.C., Polygnotus, in his pictures of the under world, had portrayed men and women—characterworld, had portrayed men and women—characterized as 'unconsecrated'—engaged in a like task (Pausan. x. 31. 9; cf. Plato, Gorgias, 493 B, Rep. 363 D). Accordingly, Wilamowitz-Möllendorff (Homer. Untersuchungen, Berlin, 1884, p. 202) and Rohde (Psyche, Tübingen, 1891–94, pp. 292–297) have advanced the hypothesis that this penalty of fruitless habour forms a later according of the fruitless labour forms a later accretion of the Danaid myth. But Rohde's assertion that the Danaids were drekeis, i.e. that they had not attained their τέλος by marriage, suggests that the conception of the Danaids as aimless water-drawers in Hades may possibly be older than he believes.

This drudgery, in fact, was regarded among the Greeks, and is regarded even to-day, e.g., in the Tyrol, as the lot of the unmarried in the under world (Waser in Pauly-Wissowa, iv. 2087, 60 ff.;

The relative antiquity of this element in the story is likewise borne out by a further remark of Rohde, viz. that the Danaids could be associated with the task of drawing water only at a time when they were still thought of as unmarried. Even in Pindar's day (Pyth. ix. 112), however, this was no longer the case; while, according to Æschylus, at least two of them, Amymone and Hypermnestra, yield to the power of love. For that form of the myth which, as made known to us by the surviving verse of the epic Auratões, represented the Danaids as Amazon-like women hostile to men, we are thus brought to a date not later than the 6th cent. B.C. It must, therefore, have been about that time that the lot of the unmarried in Hades—the unending labour of drawing water-was first ascribed to the Danaids.

Once this feature had been added to their story, however, and had become effectually grafted upon it, the Danaids would come quite naturally to be regarded as drawers of water even in their lifetime. regarded as drawers of water even in their lifetime. In this way they would then be brought into connexion with Lerna in Argos—perhaps originally the district haunted by their ghosts—and at length the water-nymph Amymone would be numbered with them. It accords with all this that Danaus was extolled as the hero who provided Argos with water: so Hesiod, fr. 24 [ed. Rzach], a verse given by Strabo, viii. 370, and again (371) in a simpler rendering which however is of special interest as rendering, which, however, is of special interest, as it states that it was not Danaus, but the Danaids, who 'made Argos, once waterless, a well-watered land.

\*\*DANTE.\*\*

\*\*Life.\*\*—Dante Alighieri was born at Florence, some time between May 18 and June 17, 1265, of an old Florentine family of supposed Roman descent. His father, Alighiero di Bellincione Alighieri, was a notary who adhered to the Guelf faction, for which his ancestors had fought. Cacciaguida, Alighieri's great-grandfather, who appears in the Paradiso as the founder of the house, is menhioned in a recently discovered document of 1131 as 'Gacciaguida, filtus Adami.' The poet was the only child of his father's first marriage, but had a step-brother and two step-sisters (one of whom appears in the Vita Nuova) younger than himself. Two episodes chiefly colour his early life; his romantic love for Beatrice (probably the daughter of Folce Portinari and wife of Simone de' Bardi, whom he first saw at the end of his ninth year, and who died on June 8, 1290; and his triendship (gained by his first sonnet, written in 1283) with the older poet, Guido Cavalcanti, who died in August 1300. At an early age he fell under the influence of the Civenthine philosopher and statesman, Brunetto Latini. Recent research tends to confirm the statement of his early biographers concerning his studying at the university of Bologran; a sonnet, now generally accepted as his, shows that he was in that city shortly before 1287. Dante served in the Florentine cavalry at the battle of Campaddino on June 11, 1289. After the death of Beatrice, he lapsed that a mode of life which he atterwards recognized as morally unworthy, and seems to have had relations with several women, the exact nature of which he atterwards recognized as morally unworthy, and seems to have had relations with several women, the exact nature of which he atterwards recognized him and forces Donatid, of Parg. xxiii, 115–119). About 1286 he married Gemma di Manetto Donati, a lady of a noble detween him and forces Donatid, of Parg. xxiii, 115–119). About 1286 he married Gemma di Manetto Dona

of fortune, which is wont unjustly to be ofttimes reputed to the wounded. Until the summer of 1303, he made common cause with his fellow-exites at Siena, Arezzo, Forli, and elsewhere, in attempting to return to Florence by force of arms and with Ghibelline aid, but ultimately broke with them, and found it 'for his fair faune to have made a party for himself' (Par. xvii. 69). Between the latter part of 1303 and the end of 1306 we find him at Verona at the court of Bartolommeo della Scale; at Italian with the summer of the state of the summer of the

Ghibelline aid, but ultimately broke with them, and found it 'for his fair faime to have made a party for himsel' (\*Par.\* xvii. 69). Between the latter part of 1303 and the end of 1306 we find him at Verona at the court of Bartolommeo della Scala; at Bologna, where he may have made a more lengthy stay; possibly at Padua (though the document once regarded as attesting his presence there in August 1306 is now disputed); certainly in Lunignana, with the Marquis Franceschino Malaspina (October 1306). We now lose sight of him for several years, during which he is said to have left Italy and gone to Paris.

In September 1310, the newly elected Emperor, Henry VII., entered Italy, with the avowed object of restoring the claims of the Holy Roman Empire, and healing the wounds of the country. Dante, recognizing in him the new 'Lamb of God' to take away the sins of the world, threw himself heart and soul into his enterprise. We find him, in the spring of 1311, paying homage to the Emperor in person at Milan, and writing terrible and eloquent letters to him and against the Florentines from the Casentino, whither he had, perhaps, been sent on an Imperial mission. By a decree of September 2, the Florentine government included the poet in the list of exiles to be excluded from amnesty. In April 1312, Dante was with the Emperor at Pisa, and there Petrarch, a little boy of seven, saw his great predecessor for the first and only time. Although he had urged Henry to lay Florence low, reverence for his fatherland (so Leonardo Bruni writes) kept Dante from accompanying the Imperial army which meffectually besieged the city during the autumn of this year. Henry's death (August 24, 1313) annihilated the poet's hopes. His movements again become uncertain. It is possible that he retired for a while to the convent of Santa Croce di Fonte Avellana, in the Apennines, and afterwards sought the protection of Uguccione della Faggiuola, the great philosopher.

The poet was further and finally excluded from amnesty by a provision of June 2, 13

Works.—Dante's works fall into three periods: (a) the period of his youthful love and enthusiasm, finding expression in the poetry and prose of the Vita Nuova; (b) the period of the Rime, his later lyrics, his linguistic and philosophical studies and researches, bearing fruit in the Italian prose of the Convivio, the Latin prose of the de Vulgari Eloconvent, the Latin prose of the de Vulgari Eloquentia, and his passionately developing political creed and ideals, represented by the de Monarchia and certain of his Latin letters; (c) the period of turning, for the reformation of the present, to the contemplation of another world, 'to the divine from the human, to the eternal from time' (Par. xxxi. 37, 38), in the Divina Commedia, with which are associated the prose Latin epistle to Can Grande della Scala, and the revival of the pastoral muse of Vergil in the two Latin Eclogues.

(1) The Vita Nuova, Dante's first book, which is dedicated to Guido Cavalcanti, tells the story of his love for Beatrice in thirty-one lyrical poems, symmetrically arranged, and connected by a prose The lyrics (twenty-five sonnets, one narrative. ballata, three canzoni, and two shorter poems in the canzone mould), written from 1283 to 1292, cover a period of nine years, while the prose com-mentary, composed between 1292 and 1295, weaves the whole into unity. Its earlier chapters, in particular, show the influence of the Provençal troubadours, together with the philosophical re-handling of their theme of chivalrous love which we find in

the poetry of Guido Guinizelli of Bologna, whom Dante elsewhere claims as his father in the use of 'sweet and gracious rhymes of love' (Purg. xxvi. 99). The first of the three canzoni, 'Donne ch'avete intelletto d'amore,' marks an epoch in Italian poetry. The later portions of the book are already strongly coloured with the Christian mysticism which inspires the Divina Commedia. There is much sheer allegory in the details and episodes, but the work as a whole is not to be taken in an allegorical sense. It is a mystical reconstruction of the poet's early life, in which earthly love becomes spiritual, but, being thus exalted above itself, falls to earth again when its sustenance and inspiration are removed, only to rise once more in repentance and humility to a clearer vision and a larger hope, with the resolution to turn to the daily work of life until such time as the soul may become less unworthy to attain the ideal which it

has discerned.

(2) Besides the pieces inserted in the Vita Nuova, there exists a large body of lyrical poetry from Dante's hand, known collectively as the *Rime* (or, less correctly, the *Canzoniere*). It consists of (a) occasional poems in the ballata and sonnet form, composed at various times in Dante's life, which have not yet been satisfactorily collected or freed from spurious pieces; (b) a series of fifteen canzoni, which Boccaccio, probably following the poet's intention, arranged in a definite order to form a complete work. Two of these canzoni seem to belong to the period of the Vita Nuova; the rest represent the period in Dante's life between the death of Beatrice and the inception of the Divina Commedia. They give variety, dignity, and technical perfection to the metrical form which the early Italians had received and developed from the Provençals, and introduce, partly from the Provencal, two entirely new varieties to Italian poetry. Their subject matter is partly philosophical love, in which the seeker after wisdom depicts his quest with all the imagery of an earthly lover's pursuit of an adored woman; partly, it would seem, more tangible human passion; partly, ethical and didactic themes. One of the noblest of the series is the canzone of the three ladies: 'Tre donne intorno al cor mi son venute' (probably written c. 1304); in this the legend told by Thomas of Celano and St. Bonaventura, of the apparition of Poverty and her two companions to St. Francis, is transformed into an allegory of Dante's own impassioned worship of Justice, which contains the Divina Commedia

(3) The Convivio, Dante's chief work in Italian prose, is an attempt to put the general reader of the epoch into possession of an abstract of the entire field of human learning, as attainable at the beginning of the 14th cent., in the form of an allegorical commentary upon fourteen of the poet's own canzons. Its basis is the saying attributed to Pythagoras, to the effect that the philosopher should not be called the wise man, but the lover of wisdom—a conception which Dante elaborates in the terms of the chivalrous love poetry of his age, personifying Philosophy as a noble lady whose soul is love and whose body is wisdom, and identifying love with the study which is 'the application of the enamoured mind to that thing of which it is enamoured.' The work shows the influence of the de Consolatione Philosophia of Boethius (its professed starting-point), Isidore of Seville, the Didascalon of Hugh of St. Victor, the Tresor of Brunetto Latini, and the Aristotelian treatises and Summa contra Gentiles of St. Thomas Aquinas. Dante's aim is to make the mediæval encyclopædia a thing of artistic beauty, by wedding it to the highest poetry, and to show the world that the Italian vernacular was no less efficient than Latin as a literary medium. At the same time, it was to be his apologia pro vita sua, justifying his own conduct as a man and as a citizen, and, incidentally, explaining certain of his poems of earthly love as inspired purely by philosophical devotion. Internal evidence shows that it was composed between 1306 and 1308. It was left unfinished, only the introductory treatise and the commentaries upon three canzoni having been written.

(4) The de Vulgari Eloquentia, the earliest of Dante's Latin works, seems to have been begun shortly before the Convivio (probably in 1304 or 1305). Like the Convivio, it was left unfinished, only two of the projected four books having been written. In the first book, starting from the origin of language, Dante considers the rival claims for pre-eminence of the three romance vernaculars—French, Provencal, and Italian—and proceeds to examine in detail all the various dialects of the last, none of which he finds identical with the ideal language of Italy:

'The illustrious, cardinal, courtly, and curial vulgar tongue in Italy is that which belongs to every Italian city, and yet seems to belong to none, and by which all the local dialects of the Italians are measured, weighed, and compared.'

As Mazzini well said, Dante's purpose here is 'to found a language common to all Italy, to create a form worthy of representing the national idea'—the purpose which he was ultimately to fulfil by writing the Divina Commedia. In the second book, he defines the highest form of Italian lyrical poetry, the canzone; distinguishes the three subjects alone worthy of treatment therein—Arms, Love, and Virtue; and elaborates the poetical art of its construction, from the practice of the Provençal troubadours (Bertran de Born, Arnaut Daniel, Giraut de Borneil, Folquet of Marseilles, Aimeric de Belenoi, Aimeric de Pegulhan, to-gether with the French poet, king Thibaut of Navarre), the poets of the Sicilian school (Guido delle Colonne and Rinaldo d'Aquino), and the poets of the dolce stil nuovo (Guido Guinizelli, Guido Cavalcanti, Cino da Pistoia, and himself). Dante refers to his own canzoni as those of 'the friend of Cino da Pistoia,' and it is possible that he intended to dedicate the work, when completed, to Cino, as he had done the Vita Nuova to Cavalcanti.

(5) The election of Henry of Luxemburg to the Empire, in November 1308, drew the poet back from these philosophical and linguistic studies to the political strife that was about to convulse Italy. Confronted with this new situation, of apparently unlimited possibilities for his native land, he felt that all that he had hitherto written was fruitless and insignificant. It was probably about 1309, in anticipation of Henry's coming to Italy, that Dante composed the de Monarchia, fearing lest he 'should one day be convicted of the charge of the buried talent.' For Dante, the purpose of temporal monarchy or empire, the the purpose of temporal monatory of empire, the single princedom over men in temporal things, is to establish liberty and universal peace, in order that the whole of the potentialities of the human race, for thought and for action, may be realized. In the first book he shows that this universal monarchy, thus conceived, is necessary for the well-being of the world; in the second he attempts to prove, first from arguments based on reason and then from arguments based on Christian faith, that the Roman people acquired the dignity of empire by Divine right. It is a cardinal point in Dante's reading of history that the history of the Jews and the history of the Romans reveal the Divine plan on parallel lines, the one race being entrusted with the preparation for the Gospel, the other with the promulgation of Roman law. For him, as for mediaval political theorists in general, the Emperor of his own day, when duly elected and 1

أجالاء

crowned, is the successor of Julius and Augustus no less than of Charlemagne and Otho. The third book proves that the authority of such an Emperor does not come to him from the Pope (the coronation of Charlemagne being an act of usurpation on the part of the latter), but depends immediately upon God, 'descending upon him without any mean, from the fountain of universal authority.' Divine Providence has ordained man for two ends: blessedness of this life, which consists in the exercise of his natural powers, and is figured in the Earthly Paradise; and blessedness of life eternal, which consists in the fruition of the Beatific Vision in the Celestial Paradise. To these two diverse ends, indicated by reason and revelation respectively, man must come by the diverse means of philosophy and spiritual teaching, and, because of human cupidity, he must be checked and directed:

'Wherefore man had need of a twofold directive power according to his twofold goal: the Sovereign Pontiff, to lead the human race to eternal life in accordance with things revealed; and the Emperor, to direct the human race to temporal felicity in accordance with philosophical teaching.'

This, then, is the purpose of Church and State, each independent in its own field, a certain superiority pertaining to the former in that mortal felicity is ordained for immortal felicity. We here find 'in its full maturity the general conception of the nature of man, of government, and of human destiny, which was afterwards transfigured, without being transformed, into the framework of the Sacred Poem' (Wicksteed).

(6) Dante's political letters are a pendant to the de Monarchia, but coloured by the realities, and finally embittered by the circumstances of the Emperor's expedition. From the Messianic fervour peoples of Italy (Ep. v. ['Oxford Dante'], written in 1310), we pass to the prophetic fury and sæva indignatio of his address to 'the most wicked Florentines within' (Ep. vi., March 31, 1311), and his rebuke to the Emperor himself (Ep. vii., April 16, 1311), when the former were organizing the 10, 1311), when the former were organizing the national resistance to the Imperial power, and the latter seemed to tarry. To the latter part of 1314 belongs the eloquent letter to the Italian cardinals in conclave at Carpentras after the death of Clement v. (Ep. viii.), urging the election of an Italian Pope to return to Rome and reform the Church. Of Dante's private and personal correspondence the only specimen that can sonal correspondence, the only specimen that can be unhesitatingly accepted as authentic is the famous letter to a Florentine friend refusing the amnesty in 1316 (Ep. ix.); but two others, apparently accompanying two of his lyrical poems, addressed to Cino da Pistoia (Ep. iii., c. 1305) and Moroello Malaspina (Ep. iv., c. 1306 or 1311), are probably genuine.

(7) The authenticity of the letter to Can Grande della Scala, though much disputed, is gradually becoming generally recognized. Written apparently between 1318 and 1320, it dedicates the Paradiso to Can Grande, interprets the opening lines of its first canto, and explains the allegory. lines of its first canto, and explains the allegory, subject, and purpose of the whole poem. It is the starting point for the study of the mystical aspect of the Divina Commedia, alike in its appeal to the authority of St. Augustine, St. Bernard, and Richard of St. Victor for the power of the human intellect to be so exalted in this life as to transcend the measure of humanity, and in its unmistakable claim for the poet himself that he has been the personal recipient of a religious experience too sublime and overwhelming to be adequately expressed in words.

(8) Dante's first Ecloyue, a pastoral poem in Latin hexameters, was written about 1319, in

- . . .

answer to a Latin poem from Giovanni del Virgilio, a lecturer at Bologna, who had urged him to write a Latin poem and come to that city to receive the laurel crown. It is a beautiful and gracious poem, in which the Vergilian ecloque becomes a picture of the poet's own life at Ravenna in the comparative peace and calm of his latest years. A second Ecloque in the same spirit, sent to Giovanni del Virgilio by Dante's sons after the poet's death, is somewhat inferior, and was, perhaps, only in part actually composed by him.

(9) The Quastio de Aqua et Terra professes to be a philosophical question concerning the relative position of water and earth on the surface of the globe, publicly discussed by Dante at Verona on January 20, 1320. Its authenticity has of late found several able defenders, but must still be regarded as highly problematical.

(10) It is impossible to decide at what date the Divina Commetic was actually beaus.

Divina Commedia was actually begun. According to Boccaccio, the first seven cantos of the Inferno were composed before the poet's exile, and he was induced to take up the work again in consequence of his recovery of the manuscript in 1306 or 1307. Although this seems contradicted by internal evidence, there are some indications that these cantos were originally conceived on a different plan from that ultimately adopted in the poem. It is possible that the poem, as we now have it, was begun about 1308, interrupted by the Italian enterprise of Henry of Luxemburg, and resumed in the years after the latter's death. While there are no certain and definite allusions in the Purgatorio to events later than 1308, there are references in the Inferno, by way of prophecy, to occurrences of 1312, and possibly (though this is more open to question) of 1314, while the Paradiso (xii. 120) contains what appears to be an echo of a Papal bull of 1318. An allusion in the first Eclogue shows that, by 1319, the *Inferno* and the *Purgatorio* ('infera regna') were completed and, so to speak, published, but that Dante was still engaged upon the *Paradiso* ('mundi circumfua corpora astricoleque'); and we learn from Boccaccio that the last thirteen cantos had not yet been made known to the world at the time of the poet's death. In any case, it seems clear that the Divina Commedia as a whole, whenever it may have been begun, although the action is relegated by a poetic fiction to the assumed date of 1300, should be regarded as the work of the last period of the poet's career, when the failure of his earthly hopes with Henry of Luxemburg had transferred his gaze from time to eternity, and, himself purified in the fires of experience and adversity, he might lawfully come forward as vir prædicans justiliam, to remove those living in this life from their state of misery, and to lead them to the state of felicity.'

Dante's primary source of inspiration for the Divina Commedia is the actual life of his own times which he saw around him, interpreted by the story of his own inner life. His aim is to reform the world by a poem which should present man and Nature in the mirror of eternity. But he has, inevitably, his literary sources. While the has, inevitably, his literary sources. While the sixth book of the *Æncid* may be called his startingpoint, Dante was probably acquainted with some of the many mediaval accounts of visits of a living man, 'whether in the body or out of the body,' to the other world, the *immortale secolo*, which, be-ginning with the *Visio Sancti Pauli* and those recorded in the *Dialogues* of St. Gregory the Great, became especially abundant in the latter part of the 12th cent.; though the only one that has left notable traces in the Divina Commedia is the Visio Tnugdali of the Irish Benedictine Marcus (1149). Of the Latin poets, next to Vergil,

he was most influenced by Lucan, while Ovid and Statius are his main sources for classical mythology, and Livy and Orosius for classical history. Cicero was familiar to him from his early manhood; but he shows surprisingly little acquaintance with Terence and Horace. The Latin versions of Aristotle, the Vulgate, and the works of St. Augustine permeate the poem with their influence. He knew no Plato at first hand (he was almost completely ignorant of Greek), save, perhaps, the Timeus in the Latin version of Chalcidius, but there is a strong vein of Neo-Platonism in the poem, derived in part directly from the pseudo-Aristotelian de Causis and the Dionysian writings Aristotelian de Causis and the Dionysian writings (either in the translation of Scotus Erigena or through the medium of Aquinas). Certain elements in his thought came from Boethius and St. Gregory the Great, while, of later medieval writers, the influence of St. Peter Damian (esp. his de Abdicatione Episcopatus), of St. Bernard, and of Richard of St. Victor is especially marked. Indeed, the mystical psychology of the whole poem is largely based upon the de Praparation and Contemplations and Contemplations and Contemplations. animi ad Contemplationem and the de Contemplations of the last-named writer. Of the poet's own contemporaries, Albertus Magnus and St. Bonaventura impressed him less than did St. Thomas Aquinas, the influence of whose Aristotelian treatises, his Summa contra Gentiles, and Summa Theologiæ, is profound and all-pervading. Recent investigation points to Dante's acquaintance with the mystical treatises of Mechthild of Magdeburg and Mechthild of Hackeborn, though it is questionable whether either of them can be identified with the Matelda of the Earthly Paradise. There is a certain element of Joachism in the Divina Commedia, but Dante was probably acquainted with the doctrines of the Abbot of Flora only at second hand, in the Arbor Vitæ Crucifixæ of Ubertino da Casale (1305), which is chronologically the last of the sources of the poem, and Father by St. Bonaventura, and, perhaps, the earlier legend by Thomas of Celano) he derived his conception of the life and work of St. Francis in the Paradiso.

The Divina Commedia is an allegory of human life and human destiny, in the form of a vision of the 'state of souls after death'; it is likewise, in the mystical sense, a figurative representation of the soul's ascent, while still in the flesh, by the three ways of purgation, illumination, and union, to the fruition of the Absolute in that 'half-hour during which there is silence in Heaven'

Above and around the material universe is the celestial rose of Divine Beauty, flowering in the rays of the sun of Divine Love, still to be completed by man's correspondence with Divine Grace; while on earth—the threshing-floor of mortality—by use or abuse of free-will, character is formed, and human drama is played out. The dual scheme of the de Monarchia is transplanted from the sphere of Church and Empire to the field of the individual soul. Man, in the person of Dante, vainly attempts to escape from the dark wood of alienation from truth, and is barred by his own vices from the ascent of the delectable mountain (felicity, or, perhaps, knowledge of self); but Vergil, representing human philosophy inspired by reason, guides him through the nine circles of Hell (realization of the nature and effects of sin), and up the seven terraces of Purgatory (setting love, the soul's natural tendency to what is apprehended as good, in order, and purifying the soul from the stains still left after conversion) to the Earthly Paradise, which in one sense is the happy state of a good conscience, and in another the life of Eden regained by the purgatorial pains. This life is personified

in Matelda, the realization of Leah, who, in the mystical system of Richard of St. Victor, symbolizes 'affection inflamed by Divine inspiration, and composing herself to the norm of justice.' Then the soul can rightly comprehend the history of Church and State, as represented in the allegorical pageant, and is prepared for a further illumination. Beatrice, symbolizing the Divine Science as possessing Revelation, thence uplifts the poet through the nine moving heavens of successive preparation, corresponding to the nine angelic orders, into the true Paradise, the timeless and spaceless empyrean heaven of heavens, where her place is taken by St. Bernard, type of the loving contemplation in which the eternal life of the soul consists; and, after the impassioned hymn to the Blessed Virgin placed upon Bernard's lips, the poem closes in the momentary actualizing of the soul's entire capacity of knowing and loving, when desire and will move in harmony with 'the Love that moves the sun and the other stars,' in an anticipation of the Beatific Vision of the Divine Essence.

In describing the 'spiritual lives' of Hell, Purgatory, and Paradise, Dante has given a summary, illumined by imagination and kindled by passion, of all that is permanently significant in the life and thought of the Middle Ages. He is throughout harking back to a primitive ideal of Christianity, freed from the corruptions and accretions of the subsequent centuries. Under the tree of an Empire renovated by the power of the Cross, Revelation is seated on the bare ground as guardian of the chariot of the Church, with no attendants save the theological and moral virtues, who bear nought save the seven gifts of the Holy Spirit. But the ideal is never realized, because, side by side with the conquest of the world by Christianity, had come the conquest of the world by Christianity, had come the conquest of the Church by the world. The alleged donation by Constantine of wealth and territory to the Papacy is for Dante the turning-point in history, and the primal cause of the failure of Christianity, which was bearing such bitter fruit in the corruption of mankind. The supremely significant event of his own century is thus the rise of St. Expres and his own century is thus the rise of St. Francis, and his marriage with Lady Poverty, as the first attempted return to the ideal of Christianity that Christ had left. This, in its turn, having proved but a passing episode, the poet can only look forward to the coming of the deliverer, the mysterious Veltro, the 'Five Hundred Ten and Five,' to be sent from God to renovate the Empire and to reform the Church by other methods. For the rest, men at all times 'are masters of their fate,' through the supreme gift of free-will, to put violence upon which, as Richard of St. Victor had said, 'neither befits the Creator nor is in the power of the creature. The soul of man works out its own salvation or damnation; and the tragic fact consists simply in the soul's deliberate choice of evil. The Inferno departs less than the other two canticles from mediæval tradition in its structure and machinery; but it is here that the dramatic side of Dante's genius is especially displayed. The tragic impression is intensified, on the one hand, by the wasted virtues of the lost (the patriotism of Farinata degli Uberti, the fidelity of Piero delle Vigne, the scientific devotion of Brunetto Latin, the high concention of marks origin and nature. the high conception of man's origin and nature that impels Ulysses to his last voyage); and, on the other, by frequent and effective use of dramatic contrasts between the souls in Hell and those in Purgatory or Paradise (Francesca da Rimini and

1.66

in which the souls find the very purgatorial pains a solace to be willingly undergone, Dante breaks almost completely from legend and theological tradition, and presents a conception of the second realm which is entirely his own. The Purgatorio depends less than the Inferno upon the splendour of certain episodes, though many of these are among the most beautiful in the poem. It is in its sustained harmony and all-pervading tenderness that it makes immediate and universal appeal to heart and mind. The noblest passages of the *Paradiso* are lyrical rather than dramatic, and there is naturally less action and less individualization of character. With the exception of St. Bernard, who is a singularly vivid character, the human aspect of the souls in bliss is somewhat lost in the glory of their state since they have become 'sempiternal flames'—the suggestion of humanity being held in abeyance after the third sphere (where the stretch of the earth's shadow is passed), until it reappears in celestial splendour in the tenth heaven. Notwithstanding this, we are sensible of no monotony in the passage through the higher spheres; for it is part of the poet's conception, worked out alike in the allegorical imagery and in the spoken narratives of each sphere, that, although each soul partakes supremely of the Beatific Vision, which is one and the same in all, yet there are not only grades, but subtle differences in the possession of it, in which the previous life has been a factor. As Wicksteed puts it, 'the tone and colour, so to speak, of the heavenly fruition of the blessed is affected by the nature of the moral warfare through which they rose to spiritual victory.' The human interest in the Paradiso seems concentrated in such episodes as the appearance of Piccarda Donati and Dante's colloquy with Cacciaguida, or the exquisite passage where Beatrice, her allegorical office completed, resumes her place, in the unveiled glory of her human personality, in the celestial rose. The mystical poetry of the Paradiso is unsurpassable: above all, in the closing canto it reaches a height of spiritual eestasy for which it would be hard to find a parallel elsewhere in modern literature. Shelley wrote of the Paradiso that it is a perpetual hymn of everlasting love'; and Manning, Post Dantis paradisum nihil restat nisi visio Dei.

The netre in which the Divina Commedia is written, the terza rima, seems to have been created by Dante from the sirventese, the Italian form of the Provencel sirventes, employed by the troubadours for political or satirical compositions in contrast to the statelier canso, or canzone, of love. His style has the highest qualities of terseness, condensation, variety of intonation, passion, The closely packed imagery is hardly ever introduced for its own sake, but to exemplify and clarify his meaning. Even at the heights of the Paradiso, he does not shrink from uncompromising realism in his similes and images. The beauty and fidelity of his transcripts from Nature are likewise unapproachable. He can render a complete scene in a few lines, sometimes in a single line, whether it be the flight of birds, the trembling of the sea at dawn, or the first appearance of the stars at the approach of evening. 'Dante's eye was free and open to external nature in a degree new among poets. . . But light in general is his special and chosen source of poetic hearty? (Church, Dante, 1901, pp. 149, 163). Dante's fidelity to Nature has been well compared with that of Wordsworth. And, when he turns from Nature to the mind of man, 'his haunt, and the main region of his song,' no such revealer of the hidden things of the spirit, save Shakespeare, has ever found utterance in poetry.

3. Position and character.—Dante is the last poet of the Middle Ages, and the first of the modern world. He has given perfect poetical utterance to what would otherwise have been artistically silent, and has proved the most influential interpreter of mediæval thought to the present day. If it can no longer be said, without considerable reservation, that he created the Italian language, or that he founded Italian literature, it is certain that he first showed that modern literature in general could produce a work to rival the masterpieces of antiquity, and he first gave to Italy a national consciousness. His character is reflected in his works: profoundly reverent to what he deemed Divinely ordained authority, but no less enkindled with prophetic fire against the abuse and corruption of that authority, whether in Church or State, and absolutely fearless in his reforming zeal; relentless in his hatred of baseness and wickedness, above all in high places, but with a capacity for boundless tenderness and compassion; liable to be carried to excess, both in speech and in action, by his impassioned hunger and thirst after righteousness; conscious of his own greatness, but ever struggling against pride, and exalting humility above all other virtues; listensign for a while to the song of the antica streya, the siren of the flosh (Purg. xix. 58), but borne up 'even to the sphere of fire' by the eagle of the spirit (Purg. ix. 30). The visionary experience, upon which the whole Divina Commedia is based, was, it would seem, a sudden realization of the hideousness of vice and the beauty of virtue, the universality and omnipotence of love, so intense and overwhelming that it came upon him with the force of a personal and special revelation; but this was not all; we gather from the letter to Can Grande that the poet himself experienced one of those contacts with the Divine attributed to the great saints and mystics of all creeds—in which, as George Tyrrell puts it, the mind touches the smooth sphere of the infinite, but is unable to lay hold

Leteraure.—I. Biography.—Our earliest sources for the life of Dante, in addition to his own works and a few extant documents, are a chapter in the Istorie Frometine of Giovanni Villani († 1848), the Vita di Dante of Boccaccio († 1875), the insignificant sketch by Filippo Villani († a. 1405), the more authoritative and critical treatise of Leonardo Bruni († 1444), and the first commentators. There are ten 14th cent. commentators upon part or the whole of the Divina Commedia, including both Dante's sons and the author of the so-called Oitimo Commento, who professes to have known the poet personally. The most important is Benvenuto Rambaldi da Imola (1879–1410), edited by Vernon and Lacaita (Florence, 1887). Among rocent publications should be especially mentioned: G. Biagi-Passerini, Codice diplomatico dantesco (documents, in course of publication); C. Ricci, Irutimo rifugio di Dante Alighieri, Milan, 1891; M. Scherillo, Aleuni capitoli della biografia di Dante, Turin, 1896; various volumes of Isidoro del Lungo; Paget Toynbee, A Dante Dictionary, Oxford, 1898, elso Dante Alighieri, his Life and Works, London, 1910; N. Zingarelli, Dante, Milan, 1908 a work on an exhaustive scale with full bibliographies). For the disputed story of the letter of Frate Ilario, cf. Wicksteed-Gardner, Dante and Giovanni del Virgitio, London, 1902; Rajna, in Dante e La Laniquana, Milan, 1909; V. Biagi, Unepisodio celebre nella Vita di Dante, Modena, 1910.

II. MINOR WORES.—A critical edition is gradually being pro-

del Virgilio, London, 1902; Rajna, in Dante e la Lewiyiana, Milan, 1909; V. Biagi, Un episodio celebre nella Vita di Dante, Modena, 1910.

II. MINOR WORKS.—A critical edition is gradually being produced by the Società Daniesca Italiana, of which the de Vulgari Eloquentia (ed. Rajna, Florence, 1896) and Vita Nuova (ed. Barbi, Florence, 1907) have appeared. The Rime are incomplete and unsatisfactory even in E. Moore's Tutte le Opere di Dante, 1894 (the 'Oxford Dante,' which is of the highest authority for the text of all the other works). A more recent edition, Vita Nuova and Canzoniere, by Wicksteed-Okey, is in the Temple Classics. Michele Barbi's long-promised edition of the Rime is much needed. There are critical editions of the Ecloga by Wicksteed (in Dante and Giovanni del Virgilio) and Albini, Florence, 1903. The translations of the Latin Works (Howell and Wicksteed) and of the Convivio (Wicksteed) in the Temple Classics are provided with full critical commentaries; a more recent version of the Convivio is by W. W. Jackson (Oxford, 1909). For the problem of the de Aqua et Terra, see Moore, Studies in Dante (second series, Oxf. 1899), and V. Biagi's ed., Modena, 1907.

III. DIVINA COMMEDIA.—The best Italian editions with commentaries are those of Scartazzini (epoch-making, but now a little out of date), Casini, and Torraca; of the text with English translations and notes, by A. J. Butler, the Temple Classics

editors (Wicksteed, Oelsner, Okey), and W. W. Vernon (Readings . . . chiefly based on the Commentary of Benvenuto da Imola, new ed. Lond. 1908-09).

IV. SUBSIDIARY LITERATURE.—The reader must be referred to Toynbee's Dante Dictionary and the bibliographies included in Zingarelli. Dante literature has, especially of late years, assumed colossal proportions. Among English works stand out pre-eminently the three volumes of Moore's Studies in Dante, Toynbee's Dante Studies and Researches, Lond. 1902, and Dante, Toynbee's Dante Studies and Researches, Lond. 1902, and Dante, in English Literature, Lond. 1909. Church's well-known essay still holds its place as the most suggestive of introductions to the divine poet. The Florentine quarterly publication, Il Bullettino della Società Dantesca Italiana, is indispensable to students.

EDMUND G. GARDNER.

DAPHLÄ (Daffiā, Daplā, Dophlā).—A tribe

EDMUND G. GARDNER.

DAPHLĀ (Dafflā, Daplā, Dophlā).\(^1\)—A tribe occupying a section of the Himālaya lying N. of the Darrang and Lakhimpur Districts, Eastern Bengal, and Assam. They numbered 954 at the Census of 1901; but the greater part of the tribe is found in independent territory beyond the British frontier, whence, driven by famine or the oppression of the Abors, they have recently shown a tendency to migrate into the Darrang and Lakhimpur Districts. They call themselves Niso, Nising, or Bangnī, the last name meaning 'men.' According to Mackenzie (Hist. of the Relations of the Government with the Hill Tribes on the N.E. Frontier of Bengal, 541), Mirī, Daphlā, and Abor (see Abor, vol. i. p. 33) are names given by the Assamese to three sections of the same tribe in-Assamese to three sections of the same tribe inhabiting the mountains between Assam and Tibet.

habiting the mountains between Assam and Tibet. 'Their principal crops are summer rice and mustard, maize, and cotton, sown in clearances made by the axe or hoe in the forest or in the jungle of reeds. Their villages, usually placed on or near the banks of rivers, consist of a few houses built on platforms raised above the naked surface of the plain, presenting a strong contrast to the ordinary Assamese village. . . . Under the houses live the fowls and pigs which furnish out the village feasts, and the more prosperous villages keep herds of buffalces also, though these people, like so many of the non-Aryan races of Assam, eschew milk as an unclean thing' (Mackenzie, op. cit. 541).

I. Ethnology.—The Daphläs are probably connected with the great Bodo (q.v.) or Barā race, which includes the Kāchārī, Rabhā, Mech, Gazo, and Tipperā tribes, and they are by origin Tibeto-

and Tippera tribes, and they are by origin Tibeto-Burmans, who followed the Mon-Anam from N.W. Burmans, who followed the Mon-Anam from N. W. China between the waters of the Yang-tse-kiang and the Ho-ang-ho (Census Report Assam, 1901, i. 120). Their language is closely related to that of the Akā, Abor-Mirī, and Mishmī tribes.

'We know a good deal about Abor-Mirī and Dafā. Robinson [JRASBe, 1851, p. 181] gave us grammars and vocabularies of both in the middle of the last century, and, to omit mention of less important notices, inlater times, Mr. Needham has given us a grammar of the former, and Mr. Hamilton one of the latter' (G. A. Grierson, Census Report, 1891, i. 184).

2. Relations with the British Government.—The independent portion of the tribe has long been accustomed to make raids in British territory.

accustomed to make raids in British territory. Even in 1910 it was found necessary to send an expedition against them. This is due not so much to friction with the British authorities as to quarrels between the independent and the settled branches of the tribe. In 1872-3 one of these outbreaks occurred because the men of the hills claimed compensation for losses of life believed to have been caused by infection introduced from the plains. On this being refused, they raided British territory and captured several slaves (Mackenzie, 31).

3. Religious beliefs.—Much information regard-

3. Religious beliefs,—Much information regarding their religion has been collected since, in 1872, E. T. Dalton gave the first account of them (Descriptive Ethnology of Bengal, 36):

'I never heard of Dophla priests, but Robinson says they have priests who pretend to a knowledge of divination, and by inspection of chickens' entrails and eggs declare the nature of the sacrifice to be offered by the sufferer and the spirit to whom it is to be offered. The office, however, is not hereditary, and it is taken up or laid aside at pleasure. So it resolves itself into this, that every man can, when occasion requires it, become a priest. Their religion consists of invocations to the spirits for protection of themselves, their cattle, and their crops, and sacrifices and thank-offerings of pigs and fowls. They acknow.

ledge, but do not worship, one Supreme Being, which, I conceive, means that they have been told of such a Being, but know nothing about him.

During the Census of 1881 (Report, § 150 ff.; Mackenzie, 543 ff.) it was ascertained that the Mikirs and Daphläs worship Yāpum and Orom, the latter the malignant spirits of the dead, the former a sylvan deity or demon, who suffices for the needs of everyday life, though in critical conjunctures some great god has to be gained over

conjunctures some great god has to be gained over by the sacrifice of a mithan or gayāl (Bos frontalis).

'A hill Min told me how he had once, while a boy, actually seen a Yāpum. The character of this god is that he lives in trees, and all the beasts of the forest obey him. My informant was throwing stones in a thicket by the edge of a pool, and suddenly became aware that he had hit the Yāpum, who was stiting at the foot of a tree in the guise of an old grey-bearded man. A dangerous illness was the consequence, from which the boy was saved by an offering of a dog and four fowls made by his parents to the offended Yāpum, who has since visited him in dreams' (Mackenzie, 543).

They also count the Sun among their deities; but their great god, who must be propitiated by

but their great god, who must be propitiated by the sacrifice of a mithan, is UI or WI, of whom no Daphla cares to speak much for fear of incurring his displeasure. His character may be guessed from the Assamese equivalent of his name, Yom or

nis displeasure. His character may be guessed from the Assamese equivalent of his name, Yom or Yama, the Hindu god of death (ib. 544). E. A. Gait (Census Report Assam, 1891, i. 223) adds:

'The general name for God is UI, but there are also special names for each particular deity. Most of their gods are inmical to men, and have to be propitated by sacrifices. The chief gods are Sonole, the god of heaven; Siki, who presides over the delivery of women; Vogle and Lungte, who hurt men; and Yenpu, who injures children. Then there is Yapum, the god of trees, who frightens to madness people who go into the forest; Chili, the god of water; Prom, the god of diseases; Sotu, the god of dumbness; and numerous others. There are a few beneficent deities, such as Pekhong, the god of breath, and Yechu, the goddess of wealth. To all these gods, sacrifices are offered. When a person is ill, a sorcerer (deondie) is called in, and chants an incantation in a loud singsong voice, which he sometimes keeps up till he works himself up into a frenzy of excitement. The Dafiās believe in a future life, but cannot say much about it, except that they expect to cultivate and hunt there. The dead are buried in a sitting position, and a small shed is put up over the grave; in it rice and drink are placed, and a fire is kept burning for five days. The mourners sacrifice fowls, pigs, and sometimes mithun, the blood of which is sprinkled over the grave; the fiesh they eat themselves.'

B. C. Allen (Census Report Assam, 1901, i. 46 ft.) gives an account of similar beliefs among the allied

gives an account of similar beliefs among the allied

gives an account of similar beliefs among the allied tribes of this group—the creation legends of the Mikirs and Garos, and the conception of the other world held by the Mirīs, Mikirs, and Garos.

LITERATURE.—E. T. Dalton, Descriptive Ethnology of Bengal, Calcutta, 1872; A. Mackenzie, Hist. of the Relations of the Government with the Hill Tribes of the N.E. Frontier of Bengal, Calcutta, 1884; Reports of the Census of Assam, 1881, 1891, 1001; B. C. Allen, Gazetteers of the Lakhimpur and Darrang Districts, Calcutta, 1906.

W. CROOKE.

DARDS.—The Dards are an Aryan race inhabiting the country round Gilgit, between Kashmir and the Hindū Kush, and down the course of the Indus to near where it debouches on the plains. Colonies of the tribe are also found farther east in Baltistān, where they are known as Brolepas, or Highlanders. Along with the Khōs of Chitral and the Hindū Kush Kāfirs of Kāfiristān, Dards are classed by the present writer as descendants of the Piśāchas, or 'Ωμοφάγοι of Sanskrit writers. This is not accepted by all scholars, but no alternative has hitherto been suggested. Although of Aryan origin, their language cannot be classed as either Indian or Iranian, having issued from the parent stock after the former branch had emigrated towards the Kābul Valley, but before the typical characteristics of Iranian speech had become fully developed. They are mentioned by Herodotus (iii. 102-105), though not referred to by their present name. On the other hand, Sanskrit writers knew them as Daradas, and they are the Derdai of Megasthenes and Strabo, the Daradrai of Ptolemy, and the Dardae of Pliny and Nonnas. Most of the Dards belong to the tribe of Shins, whose headquarters may be taken as Gilgit, and their 

<sup>&</sup>lt;sup>1</sup> The origin of the name, which, as pronounced in the Lakhimpur District, would be written *Domphilā*, is unknown.

language is either Shīnā or some closely allied form of speech. By religion, the Dards of the present day are nearly all Musalmans, but the Brokpa colonies in Baltistan profess the Buddhist faith of their neighbours. It is not known at what period the Muhammadan Dards were converted to Islam, the Muhammadan Dards were converted to Islam, but, down to the middle of last century, when a reformation was carried out by Nathū Shāh, the Governor of Gilgit, on behalf of the Sikhs, it held but a nominal sway. Even after Nathū Shāh's time remains of the old pre-Islāmitic beliefs have survived, so that many Dard practices are very different from those enjoined on the followers of the Qur'an. For instance, until about eighty years ago the dead were burnt and not buried, and this custom lingered on sporadically down to the last recorded instance in 1877. A memory of it still survives in the lighting of a fire by the grave after burial. Instead of considering the dog as unclean, they are as fond of the friend of man as any Englishman. The marriage of first cousins, which is frequent among true Musalmans, is looked upon with horror by the purer tribes of Shins as an incestuous union. Although the Muhammadan lunar calendar has been introduced, an ancient solar computation, based on the signs of the zodiac, still exists. According to Biddulph, 'Islām has not yet [1880] brought about the seclusion of women, who mix freely with the men on all occasions. Young men and maidens of different families eat and converse together without restraint.' The levirate custom has a strong hold, and this often leads to two sisters being the wives of the same man simultaneously, though such a practice is forbidden by Muhammadan law.

The Dards received Muhammadanism from three directions. From the south (i.e. Afghanistān) came the Sunnīs, and that branch of Islām is now prevalent in Chilās. From the Pāmirs in the north came the Maula'i sect (famous for its wine-libbary), and this destriction is never a comment whell directions. bibbers), and this doctrine is now commonly held north of Gilgit. On the other hand, the people round Gilgit and to the south are mostly Shi'ahs

converted from Bältistän.

On the Buddhist Dards, or Brokpas, of East
Bältistän their nominal religion sits even more lightly than on their Musalman fellow-tribesmen to the west. The only essential Tibetan practices which they have adopted seem to be the dress of the men and the custom of polyandry. The religious ideas of the Brokpas were examined by Shaw in 1876, and of late years by A. H. Francke, whose researches into the ancient customs and known. The information gathered from these two sources agrees closely with the traces of the ancient Shīnā religion observable in other portions of the

Dard area, and from the whole we get a fairly clear, if incomplete, idea of its general character.

According to Francke, the origin of the world is believed by the Brokpas to be as follows:

Out of the Ocean grew a meadow. On the meadow grew three mountains. One of them is called "the White-jewel Hill," the second "the Red-jewel Hill," and the third "the Blue-jewel Hill." On Hill," and the third "the Blue-jewel Hill." On the three mountains three trees grew. The first is called "the White Sandal-tree," the second "the Red Sandal-tree," and the third "the Blue Sandal-tree." On each of the trees grew a bird,—"the Wild King of Birds," "the House-hen," and "the Black Bird," respectively." Francke adds: 'As regards the system of colours, we are decidedly reminded of the gling chos, or pre-Buddhist religion of Tibet (see oliss ones). I am inclined to believe that the three mountains were thought to exist one on the top of the other; the lowest being the blue mountain and tree forming the Under-world, the red mountain and tree being in the middle and representing the Earth, and the uppermost being the white

Nothing like this cosmogony has been noted in other Shin tracts, and it may be that it has been partly borrowed from Tibet. At the same time it may be noted that the Klumo or Nāginās, who are prominent characters in the gLing chos, are also met, under the form of snakes, in Gilgit tradition, and, according to Leitner, the earth is there known

as the 'Serpent World.'1

From the hymn from which Francke has culled the preceding information he also extracts the following two names of deities, Yandring and Mandède Mandèschen. These names are, at any rate, not Tibetan, and are therefore probably Dard. In another prayer, the name Zhúmi occurs as that of a house-god. Múmmo, which properly means 'uncle,' stands in the collection of hymns for the 'uncle of the past,' i.e. the 'forefather' or Adam of the race, who is also honoured almost like a god.

Transfer mortions water milk butter and

Francke mentions water, milk, butter, and flower offerings as sacrifices, and also burnt offerings of the pencil-cedar (see below). Sheep and goats are also offered to the gods, and in one song—that of the ibex hunter—the hunter carries all the necessaries for the offerings along with him when following his quarry, and after the lucky shot they are at once offered to the gods.

Farther west, we also come across traces of Buddhism. A rock-cut figure of the Buddha is still to be seen in a defile near Gilgit, and throughout the Gigit and Astor valleys, as well as elsewhere, there can be found ruined *chortens* (q.v.), whose forms can even now be distinctly traced. One of the Shin festivals, the *Talent*, which commemorates the destruction of an ancient king who devoured his subjects,2 seems to have a connexion with a his subjects, seems to have a connexion with a similar festival among the Iranian fire-worshippers of the Pāmirs. In neither case, however, can we consider such remains as part of the true ancient Dard religion. They are just as exotic as Islām.

The practical side of Dard religion, as distinct from graphlying theories regarding cosmogony.

from speculative theories regarding cosmogony and the like, is best described by Shaw in his account of the Brokpas (p. 29 ff.), which fully agrees with the information derived from other sources. The real worship is that of local spirits or demons, much like the cult of similar beings in the neighbouring Ladakh. Closely connected with this worship is a kind of cedar or juniper tree (Juniperus excelsa), called in Shīnā chilī, and by the Brokpas shukpa. In every village in which Shīns are in a majority there is a sacred chili stone, dedicated to the tree, which is still more or less the object of reverence. Each village has its own name for the stone, and an oath taken or an engagement made over it is often more binding than when the Qur'an is used. Shaw's account of the local Brokpa goddess of the village of Dah may be taken as a sample:

as a sample:

'Her name is Shiring-mo. A certain family in the village supplies the hereditary officiating priest. This person has to purify himself for the annual ceremony by washings and fastings for the space of seven days, during which he sits apart, not even members of his own family being allowed to approach him, although they are compelled during the same period to abstain from onions, salt, chang (a sort of beer), and other unholy food. At the end of this period he goes up alone to the rocky point above the village, and, after worshipping in the name of the community the delty who dwells there in a small cairn, he renews the branches of the "shulpa" (Juniperus excelsa) which were placed there the previous year, the old branches boing carefully stowed away under a rock and covered up with stones.'

mountain and tree forming the Land of the Gods. But in other respects the story of the origin of the world is at variance with the gLing chos, according to which the world is framed out of the body of a giant, while here it grows out of the water, as in Indian legends.'

<sup>1</sup> Leitner, Dardistan in 1808, 1886, and 1898, p. 50.

2 It is an interesting fact that all over the Piśācha region there are traditions pointing to ancient cannibal customs which were put a stop to by some here or god. The Sanskrit word Piśācha means 'eater of raw flesh.'

<sup>1</sup> Quoted from a private communication.

DARDS 401

by the demon, and in that state to dance a devil-dance, giving forth inspired oracles at the same time; but these manifestations have ceased for the last twelve or fifteen years [written in 1876]. The worship is now simply one of propitiation inspired by fear, the demon seeming to be regarded as an impersonation of the forces of nature adverse to man in this wild mountainous country. Sacrifices of goats (not sheep) are occasionally offered at all seasons below the rock, by the priest only, on behalf of pious donors. They talk of the existence of the demon as a misfortune attaching to their tribe, and do not regard her with any loyalty as a protecting or tutelary deity. In each house the fireplace consists of three upright stones of which the one at the back of the hearth is the largest, 18 inches or 2 feet in height. On this stone they place an offering to the demon from every dish cooked there, before they eat of it. They also place there the firstfruits of the harvest. Such is their household worship.'

This belief in demons is universal over the Dard area. They are called Yach. They are of gigantic size, have each only one eye, in the centre of the forehead, and, when they assume human shape, may be recognized by the fact that their feet are turned backwards. They can walk only by night, and used to rule over the mountains and oppose the cultivation of the soil by man. They often dragged people away into their recesses, but, since the adoption of the Muhammadan religion, they have relinquished their possessions, and only occa-sionally trouble the believers. Their oath is by malevolent. On the occasion of their weddings they borrow the property of mankind for their rejoicings, and restore it faithfully, without the lender being aware of the loan. On such occasions they have kindly feelings towards the human race. The shadow of a demon falling on a person causes madness.

Fairies, known as Barai, are also common. They are as handsome as the demons are hideous, and are stronger than they. They have a castle of crystal on the top of the mighty mountain of Nanga Parbat, which has a garden containing only one tree composed entirely of pearls and coral. Although they are capable of forming love-attachments with men, like Lohengrin they have a secret, and they never forgive the human being who discovers it. Death is the only possible recompense for the indiscreet curiosity. They sometimes take the form of serpents (Nagas or, feminine, Naginīs).

While the shadow of a demon causes madness, that of a fairy confers the gift of prophecy. Divination is still practised, in spite of Muhammadanism. The diviner, or Dainyal, is one on whom the shadow of a fairy has fallen in sleep. When performing his or her office, the diviner is made to inhale the smoke of burning juniper wood till he is insensible. When he revives, the neck of a newly slaughtered goat is presented to him, and he sucks the blood till not a drop remains. He then rushes about in a state of ecstasy, uttering unin-telligible sounds. The fairy appears and sings to him, he alone being able to hear. He then explains her words in a song to one of the attendant musi-cians, who translates its meaning to the crowd of spectators.

Amongst miscellaneous customs, we must first of all mention the remarkable abhorrence entertained for everything connected with a cow (we have already remarked the fondness for dogs). The touch of the animal contaminates, and, though they are obliged to employ bullocks in ploughing, the Dards scarcely handle them at all. They employ a forked stick to remove a calf from its mother. They will not drink milk or touch any of its products in any form, and believe that to do so causes madness. There is nothing of reverence in this. They look upon the cow as had, not good, and base their abhorrence on the will of the local

<sup>1</sup> So also in India. Compare the hoofs of the European devil and the *Diable botteux*. Whitley Stokes tells of an Irish legend, according to which the devil could not kneel to pray, as his knees were turned the wrong way.

Marriages are celebrated with much ceremony, for an account of which the reader is referred to Biddulph (p. 78 ff.). We trace a survival of marriage by capture in the bridegroom setting out for the bride's house, surrounded by his friends and equipped with bow, arrow, and battle-axe. An essential part of the dress of a Shin bride is a fillet of cowrie shells bound round her head. When the bride and bridegroom take their first meal together, there is a scramble for the first morsel, as whichever eats this will have the mastery during the future wedded life. After the birth of a child the mother is unclean for seven days, and no one will eat from her hand during that period. Ordeal by fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the place appointed seven paces distant, and, should any mark of a burn remain on his hand, it is a proof of guilt. Magic has a prominent place in Dard ideas, and written charms are in great request. They are even attached to the mane and forelock of a horse. They confer courage and invulnerability. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is cast into them.

The principal festivals are as follows:-

The principal festivals are as follows:—

(1) The Nos, in celebration of the winter solstice. The word means 'fattening,' and refers to the slaughtering of the cattle, fat after the grazing on the pastures, which takes place. This is necessary because the pastures have become covered with snow, and only sufficient fodder is stored to keep a few animals alive through the winter. On the second day the Talen, already mentioned, is celebrated.

(2) The Bazono, in celebration of the commencement of spring, The sacrifice is a sheep, which must be lean and miserable. The word means 'leanness.'

(3) The Atbot, which took place in the first week in March, has now fallen into desuetude. It was said to mark the time for pruning vines and the first budding of the apricot trees. In some respects it resembled the Indian Holl. Prominent features were mock fighting amongst the men, and the licensed oudgeling of men by women. Its cessation is due to the Musalman reform movement of Nathu Shah.

(4) The Ganoni celebrated the commencement of the wheat harvest, and is still kept up. At dusk on the evening before the festival, a member of each household gathers a handful of ears of corn. This is supposed to be done secretly. A few of the cars are hung over the door of the house, and the rest are roasted next morning and eaten steped in milk. The Dards of the Indus Valley below Sazin do not observe this festival.

(5) The last festival of the year, and the most important, is the Chill, which formerly celebrated the worship of the juniper tree, and marked the commencement of wheatsowing. Within the last eighty years the rites connected with the tree-worship have ceased, but the ceremonies connected with the tree-worship have ceased, but the ceremonies connected with the with sowing are still maintained. Bonfires of child wood are, however, still lit, and the quantity of wheat to be used in the next day's sowing is held over the smoke.

It will have been observed how frequently the held over the smoke.

It will have been observed how frequently the sacred chits, or juniper tree, has been referred to in the foregoing pages. In former years the worship of this tree was performed with much ceremony, and hymns were sung in its honour. In prayers to it for the fulfilment of any desire, it was addressed as 'The Dreadful King, son of the fairies, who has come from far.' The chill stone, at the entrance of every Shin village, has already been mentioned. On it offerings to the chill were placed, and from it omens were deduced. A full account of the ceremonies connected with its worship will be found in Biddulph (p. 106 ff.).

To sum up. The present writer has met in none

To sum up. The present writer has met in none of the authorities on the Dard religion any reference to a Supreme Deity, corresponding to the Käfir *Imrā*. In translations from Christian scriptures, the Musalmān word *Hudā* has to be used for 'God.' The centre of the worship seems to be the chili tree, a mighty son of the fairies; and the whole mountain region in which the Dards dwell is peopled by spirits, some benevolent, and some malevolent, probably personifications of the powers of Nature, who exercise a constant influence on the lives of the human beings who dwell under

VOL. IV.-26

their sway. Most of the worship is in the form of propitiation of the malevolent spirits, though we occasionally find prayers addressed to the benevolent chilī. Over the whole is spread a complex mist. We see traces of the Magian religion of Irān; of Buddhism, left behind on its way to Central Asia; and, in modern times, Islām, in strong possession.

The pure Dard religion has nothing in common with any of them. Attempts have been made, but with any of them. Attempts have been made, but in the opinion of the present writer entirely without any justification, to connect it with the religions of India, and (with better reason) with the ancient gLing chos religion of Tibet. It is a pure Nature-religion of an agricultural and pastoral people, dwelling in a barren land, amidst the highest mountain ranges in the world. The languages of the Piśacha people, of which the Dard languages form an important group, are, as has been stated, something between Indian and Iranian, and one of their most characteristic marks is the wonderful their most characteristic marks is the wonderful way in which they have preserved ancient Aryan forms of speech almost unchanged down to the present day. The same may be said of the Dard religion. It retains many of the characteristics of the oldest form of Aryan religion with which we are acquainted. There is the same adoration of a special plant (in the Vēdas the soma, and amongst the Dards the chilī), and the same worship, mixed with terror, of the personified powers of Nature.

DARKNESS—See LUCHT AND DARKNESS

DARKNESS.—See LIGHT AND DARKNESS.

DARŚANA.—The term darśana, the literal meaning of which is 'seeing,' 'sight,' is more usually employed in Sanskrit literature with a derivative or metaphorical significance, as 'insight,' perception,' i.e. mental or spiritual vision. It is thus at once expressive of one of the most characteristic and fundamental thoughts of Indian philosophy—the meditative and mystical attitude of mind which frames for itself an idealistic conception of the universe; e.g. Manu, vi. 74:

'He who is possessed of true insight (darsanasampanna) is not bound by deeds,
But the man destitute of insight (darsanena vihīna) is involved in the cycle of existence.

The word is also used of the vision of sleep, a

dream or dreaming,1 wherein the mind perceives and learns independently of the exercise of the bodily senses.

Thus darsana is thought, perception in general, the application of the mental faculties to abstract conditions and problems; and ultimately denotes thought as crystallized and formulated in doctrine or teaching-the formal and authoritative utterance of the results to which the mind has attained.2 In this sense it is practically equivalent to sāstra.

As a technical term, darsana is applied to the six recognized systems of Indian philosophy, which give many sided expression to Indian thought in its widest and most far-reaching developments. These form the six darkanas, systems of thought and doctrine properly so called, viz. the Pārva-and Uttara-mīmānsā (the latter more usually known as the Vedānta); the Sānkhya and Yoga; the Nyāya and Vaišesika. Of these, the first consists mainly of explanation and comment on the ritual tark of the Yola while the second expanding ritual texts of the Veda, while the second expounds the widely known speculative and idealistic philo-

1 e.g. Hariv. 1235.

2 e.g. Mahābhārata, xii. 11045. Śāstradarsin is one who has insight into; intuitive perception of, the meaning of the sāstras.

sophy of India. The third and fourth are nearly related to one another; and of these the ancient Sānkhya formulates a materialistic theory of the universe, which the Yoga—in its essential elements equally ancient—then takes up and interprets in a theistic sense. The Nyāya and Vaisesika are not systems of philosophy at all in the ordinary acceptation of the term; the former treats of logic and literary criticism, the latter of natural philosophy and the physical constitution of the universe. The universe, which the Yoga-in its essential elements precise date at which these systems originated or were first reduced to order and writing is unknown; they represent, however, the outcome and final residue of Indian thought and speculation, extend-

ing probably over many centuries.
There is no reason to believe that the six darsanas contain all that the mind of ancient India con-ceived, or to which these early thinkers endeavoured to give expression. It would seem probable, however, that, while much has been lost, and the extant figurative, and difficult of interpretation, there has been preserved in the darsanas, and in the traditional and literary sources upon which they have drawn, the best that India had to give of speculation and thought upon the problems and conditions

of life.1

A somewhat similar word is tarka, 'investigation,' 'inquiry,' 'discussion,' which also in course of time was used to denote the science or system which was its outcome and fruit. It was then later employed in the same manner as darsana, specifically of the recognized philosophical systems. The former term, however, seems never to have obtained the same degree of acceptance or currency. as the latter, which in the usage of writers of all periods was the ordinary and appropriate designa-tion of the six systems to which alone orthodox rights and authority were secured.

A. S. GEDEN. DARWINISM.—It has become customary to give the title of 'Darwinism' to that particular development of the doctrine of evolution which is associated with the name of Darwin (1809–1882), and which began, in 1859, with the publication in England of his *Origin of Species*. The central feature of this development of thought has been the conception of evolution as the result of Natural Selection in the struggle for existence. It has caused so great a change in the general tendencies of knowledge that Romanes probably did not exaggerate the effects when he described them to be without parallel in the past history of mankind. Nearly all the departments of thought related to the subject of religion and ethics have felt the effects of the revolution.

At first sight the *Origin of Species* accomplished nothing in itself very remarkable. The theory of evolution had long been in the air. While the conception of continuous development in the universe had come down to us from the Greeks, the modernized and scientific theory of it had become a commonplace of knowledge by the middle of the 19th century. Kant's nebular hypothesis, further developed by Laplace and Herschel, had familiarized the world with the idea of development as applied to the physical universe. In Geology, workers like Murchison and Lyell had brought workers like Murchison and Lyen had brought home to men's minds the same conception in con-nexion with the history of the earth. Even in the biological sciences the idea of continuous de-velopment by the modification of existing types was strongly represented by Lamarck and many other distinguished scientists. But before Darwin all these separate developments lacked vitality. In the last resort they rested largely on theory.

1 For the literature and detailed expositions of the six systems see the separate articles VedXnta, etc.

In particular, the idea of the evolution of life by gradual modification was unsupported by any convincing argument drawn from facts and evidence furnished by the existing conditions of life. The most characteristic position was that which had been reached in Biology. Controversy turned upon the meaning of species. These were held to be permanent and immutable. While it was admitted that there might be a certain amount of small variation of forms, species were considered to represent special acts of creation at various times in the past history of the earth. Among the leading representatives of the biological sciences, permanence of species was the accepted view. Down to the publication of the Origin of Species, said Darwin,

'all the most eminent living naturalists and geologists dis-believed in the mutability of species . . . I occasionally sounded not a few naturalists, and never happened to come across a single one who seemed to doubt about the permanence of species (Life and Letters, ch. ii. [vol. i. p. 87 in 1887 ed.]).

Lamarck's theory, by which he accounted for divergence of types by the accumulation of the inherited effects of use and disuse of organs, was ridiculed. Cuvier had become the representative of prevailing opinion, according to which the past history of life was one of constant cataclysms and of constantly recurring creations. Finally, this scientific view was powerfully reinforced by all the indefinite authority of general and popular opinion, which took its stand on a literal interpretation of the Hebrew account of creation in six days,

contained in the first chapter of Genesis.

It was into these intellectual conditions that the doctrine of organic evolution by Natural Selection was launched by Darwin in 1859. The distinctive feature of the doctrine of development which it put forward was that it accounted for the evolution of life by the agency of causes of exactly the same kind as are still in progress. It exhibited modifica-tion and progress in life as the result of the process of discrimination always going on in the struggle for existence. It was by formulating the conception of this kind of 'Natural' Selection as the mechanism by which the transmutation of species is effected, and then by supplying in the Origin of Species an enormous and well-organized body of facts and evidence in support of it, that Darwin instantly converted scientific opinion and succeeded in carrying the doctrine of evolution towards a new horizon. The theory of the mechanism of Natural Selection

formulated by Darwin was extremely simple. 'There is,' he said, 'no exception to the rule that every organic being naturally increases at so high a rate, that, if not destroyed, the earth would soon be covered by the progeny of a single pair's (Origin of Species, ch. iii. [p. 79 in 1909 ed.]).

This tendency to increase beyond the conditions

of existence is accompanied by an inherent tendency

of existence is accompanied by an inherent tendency in every part, organ, and function of life to vary.

'As many more individuals of each species are born than can possibly survive, and as, consequently, there is a frequently recurring struggle for existence, it follows that any being, if it vary... in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be naturally selected. From the strong principle of inheritance, any selected variety will tend to propagate its new and modified form '(th. Introd. [p. 5 in 1909 ed.]).

This is the Darwinian doctrine of the survival of the fittest. It presented the whole succession

of the fittest. It presented the whole succession of life as a theory of descent from simpler forms, under the stress of the process of competition for

the conditions of existence.

The far-reaching effect produced by the publication of the Origin of Species and by Darwin's theory of Natural Selection was undoubtedly due to two main causes. The first of these was the immediate illumination which it threw on some of the most difficult problems of the special sciences which were most closely concerned. This has been often dis-cussed, and its character and tendencies are now well understood.

character of the impression which the doctrines produced on the general mind. The nature of this impression is much less clearly understood. however, in this second relationship that the full and more lasting significance of Darwinism has to

be appreciated.

The general mind almost from the beginning perceived with sure instinct, and far more distinctly than the representatives of the special sciences concerned, the reach of the theories to the estab-lishment of which Darwin had brought such a convincing array of evidence. It appeared to many at first as if the whole scheme of order and progress in the world was now presented as the result of a purely mechanical process. position of mind or of Divine agency appeared to be excluded. Man himself seemed to be deposed from the place he had occupied in all previous schemes of creation. It was true, indeed, as has been pointed out, that before Darwin the idea of a continuous development in the physical and biologicontinuous development in the physical and biological worlds alike had inspired speculations in many quarters; but this conception, being rejected by current opinion, had left no permanent impression on the general mind. It was not until Darwin's work appeared, Sir William Huggins affirmed in his Presidential address to the Royal Society in 1905, that the new evidence was perceived by scientific opinion to be overwhelming in favour of the view that man is not an independent being, but is the options of a general and orderly evolution.

is the outcome of a general and orderly evolution.

At the first presentation, therefore, of Darwin's theories popular attention became fixed, with an extraordinary degree of concentration, on the nature of the destructive changes which the doctrine seemed to involve in the ideas which had hitherto been closely associated with prevailing religious beliefs. The most familiar ideas of the system of religion which had for generations held the Western nind seemed to have had their foundation removed. Instead of a world created for man in six days of twenty-four hours each, men saw a history of development stretching away back for ages and some into the past. Instead of a being standing, by special creation, independent and alone, as he had previously been conceived, man was presented now as but the last link in a process of evolution. With Lyell's extension of the conception of time in geology and Darwin's extension of the conception of evolution, the old order in thought seemed to have been swept away. Sir William Huggins (loc. cit.) graphically describes the revolution as it appeared to a contemporary from the standpoint of science:

from the standpoint of science:

'The accumulated tension of scientific progress burst upon the mind, not only of the nation, but of the whole intelligent world, with a suddenness and an overwhelming force for which the strongest material metaphors are poor and inadequate. Twice the bolt fell, and twice, in a way to which history furnishes no parallel, the opinions of mankind may be said to have been changed in a day. Changed, not on some minor points standing alone, but each time on a fundamental position which, like a keystone, brought down with it an arch of connected beliefs resting on long-cherished ideas and prejudices. What took place was not merely the acceptance by mankind of new opinions, but complete inversions of former beliefs, involving the rejection of views which had grown seared by long inheritance.'

The new doctrine seemed, in short, to gather up into a focus the meaning of a number of developments long in progress and revolutionary in their

ments long in progress and revolutionary in their ments long in progress and revolutionary in their nature, the recognition of which in their due place and importance had long been resisted in Western thought. It seemed to give cumulative expression to intellectual tendencies which, since the period of the Renaissance, had struggled against the overpowering weight of accepted and often intolerant religious beliefs. The first condition, therefore, was a kind of intellectual Saturnalia. The effects were felt far and wide, at almost every centre of The second cause was the learning, and in almost every department of thought,

chilosophy, and religion. Huxley in England, Renan in France, Haeckel in Germany, were representatives of one aspect of a movement of which Darwin in biology, Tyndall in physics, and Grant Allen in popular science represented another. Most extravagant conceptions became current even in circles of sober and reasoned opinion. Religious beliefs were said to have been so far shaken that their future survival was assumed as the object of pious hope rather than of reasoned judgment. They were, according to Renan, destined to die slowly out, undermined by primary instruction and by the predominance of a scientific over a literary ducation, or, more certainly still, according to Grant Allen, to be entirely discredited as grotesque fungoid growths which had clustered round the thread of primitive ancestor-worship.

The deepest effects of the movement were felt in England and the United States, and this for reasons to which still other causes contributed. When Darwin published the *Origin of Species*, the resemblance which the doctrine of Natural Selection, making for progress through the struggle for existence, bore to the doctrines which had come to prevail in business and political life was recognized. Almost every argument of the Origin of Species appeared to present a generalized conception of the far-reaching effectiveness of competition. Darwin lifted the veil from life and disclosed to the gaze of his time, as prevailing throughout Nature, a picture of the self-centred struggle of the individual, ruthlessly pursuing his own interests to the exclusion in his own mind of all other interests; and yet unconsciously so pursuing them—as it was the teaching of the economics of the day that the individual pursued them in business -not only to his own well-being, but to the progress and order of the world.

It soon became apparent that the crudities of conception which prevailed in such inflamed and excited conditions of thought were carrying men altogether beyond the positions which the doctrine of evolution involved. It also became gradually evident, as these first impressions were lived through, that the acceptance of the evolutionary faith implied conclusions which were not only different in kind, but more significant, more striking, and even more revolutionary—although in quite a different sense—than those which the

first Darwinians contemplated.

Those who had realized the depth and reality of the spiritual hold of religion on the human mind, perceived from the beginning how superficial were judgments like that quoted from Renan, to the effect that religious systems had no place in the future development of the race. But it was when the subject came to be approached in the light of the evolutionary doctrine itself that the true

nature of the situation became apparent.

The Darwinian doctrine of biological evolution had centred in the principle of utility. Every part, organ, and function had its meaning in the Nothing had come into existence by chance, or without correspondence with environment. The consistent labour of all the first Darwinians had consistent labour of all the first Darwinians had been to give prominence to the necessity for the establishment and reinforcement of this—the central arch of the doctrine of evolution by Natural Selection. It was evident, therefore, that while, on the one hand, the sanctions of faith and experience must remain exactly what they had always been for the religious life, the concept of revolutionary nature was the explanation which the doctrine of evolution would be itself bound to give of the phenomenon of religion in the light of give of the phenomenon of religion in the light of its own central principle. What was the meaning of these systems of religious belief which had filled

such a commanding place in the social evolution of man? To dismiss the phenomena as merely meaningless and functionless was, the present writer pointed out, impossible and futile, in the face of the teaching of the doctrine of evolution. They must have some significance to correspond with the magnitude and the universality of the

scale on which they were represented.

As observation was carried from primitive man to the most advanced civilization, the importance of the subject was not diminished but increased. The history of social development in its highest phases was largely the history of a group of Western peoples who have been for many centuries the most active and progressive nations of the world. The civilization of these peoples was the most important manifestation of life known to us, first in effects on the nations included in it, and now, to an increasing degree, through its in-fluence on the development of other peoples in the world. This group of Western peoples had been world. This group of western peoples had been held for thousands of years in a system of belief giving rise to ideas which have profoundly modified their social consciousness, and the influence of which has saturated every detail of their lives. These ideas had affected the development of the Western nations at every point, and had filled their history with the intellectual and political conflicts to which these had given vites. When hed decolar influenced they had given rise. They had deeply influenced standards of conduct, habits, ideas, social institu-tions, and laws. They had created the distinctive ethos of Western civilization, and they had given direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. CIVILIZATION). How could it be possible to dismiss from consideration the enormous phase of human history of which this was an example, as if evolutionists had no concern with the causes which had produced it (cf. Kidd, Social Evolution, ch. i.)?

Further consideration, therefore, made it evident that, if the theory of organic evolution by Natural Selection was to be accepted in human society, it would have to be accepted, like any other principle in Nature, without any reservation whatever. It would be necessary, accordingly, to seek for the function of religious belief in the evolution of society on a scale proportionate to the magnitude

of its manifestations.

Throughout the forms of life below human society, the stress through which Natural Selection operated was that of the struggle for existence between individuals. But in human history the fact upon which attention had to be concentrated was that we were watching the integration of a social type. It was the more organic social type which was always winning. The central feature of the process was that it rested ultimately upon mind, and implied the subordination of the in-dividual, over long tracts of time, to ends which fell far beyond the limits of the individual's own Correspondence with environment consciousness. in the case of human evolution, therefore, involved projected efficiency. It was a process of mind.
If we were to hold the process of evolution as a
mechanical one with no spiritual meaning in it,
there would be no rational sanction whatever for the individual to subordinate himself to it. The race was destined, therefore, under the process of Natural Selection, to grow more and more religious. The ethical, philosophical, religious, and spiritual conceptions which were subordinating man to the larger meaning of his own evolution constituted the principal feature of the world's history, to which all others stood in subordinate relationship.

As the early Darwinians have continued to struggle with the laws and principles of the stress

of existence between individuals enunciated in the Origin of Species, and as it has become increasingly evident that the application of the law of Natural Selection to human society involves a first-hand consideration of all the problems of mind and philosophy, a remarkable feature of the situation has presented itself. This has consisted in the extremely limited number of minds of sufficient scope of view and training to enable them to deal with the new and larger problems that have arisen. The exponents of philosophy, untrained in the methods of science and largely unacquainted with its details, have necessarily continued to be without a fully reasoned perception of the enormous importance of the Darwinian principles of evolution in their own subject. The biologists, on the other hand, continuing to be immersed in the facts of the struggle for existence between animals, have in consequence, on their part, remained largely unacquainted with the principles of social efficiency in the evolution of human society. The dualism which has been opened in the human mind in the evolution of this efficiency has, in the religious and ethical systems of the race, a phenomenology of its own, stupendous in extent, and absolutely characteristic of the social process. But it remains a closed book to the biologist, and the study of it he is often apt to consider as entirely meaningless.

The position has, therefore, most unusual features.

Darwin made no systematic study of human society. But, where he approached the subject in the Origin of Species, it was to disclose the bewilderment produced on his mind in attempting to apply the principles of the individual struggle for existence to social evolution. He seemed to think that Natural Selection must be suspended

in civilization:

"We civilized men,' he said, 'do our utmost to check the process of elimination [of the weak in body and mind]; we build asylums for the imbecile, the maimed, and the sick; we institute poor laws; and our medical men exert their tumost skill to save the life of every one to the last, moment' (Descent of Man, ch. v. [p. 168 in 1871 ed.]).

Darwin thus exhibited no perception of the fact that this sense of responsibility to life, which is so characteristic of advanced civilization, is itself so characteristic of advanced civilization, is itself part of the phenomenology of a larger principle of Natural Selection. That the deepening of the social consciousness, of which this developing spiritual sense of responsibility to our fellow-creatures is one of the outward marks, is of immense significance as characteristic of the higher organic efficiency of the social type in the struggle for existence was a meaning which seemed to escene him

to escape him.

Alfred Russel Wallace, in approaching the study of human society in his book *Darwinism* (1889), displayed the same inability to distinguish that it is in relation to the capital problems with which the human mind has struggled in philosophy, ethics, and religion that we have the phenomena of Natural Selection in social evolution. The qualities with which priests and philosophers are concerned, he asserted, were altogether removed from utility in the struggle for existence; and he even mistakenly used the suggestion as an argument in support of religion. Here also the fact in evidence was that the naturalist, with his mind fixed on the details of the individual struggle for existence as it takes place between plants and animals, has been altogether at a disadvantage, both by training and equipment, in attempting to deal with the laws and principles of social efficiency. Huxley reached an almost equally characteristic contradiction in the Romanes lecture delivered at Oxford in 1893, in which he attempted to make a distinction in principle and meaning between the social process and the cosmic process, the lesson of evolution, like the lesson of religion,

being, of course, that they are one and the same. Sir Francis Galton, one of the last and greatest of Darwin's contemporaries, recently also exhibited this characteristic standpoint of all the early Darwinians. He put forward claims for a new science, 'Eugenics,' which he has defined as a science which would deal with all the influences would develop them to the utmost advantage by 'scientific breeding.' The list of qualities which Galton proposed to breed from included health, energy, ability, manliness, and the special aptitudes required by various professions and occupations. Morals he proposed to leave out of the question altogether 'as involving too many hopeless difficulties.' Here once more we see the difficulty with which the naturalist is confronted in attempting to apply to human society the merely stud-book principles of the individual struggle for existence as it is waged among plants and animals. The entire range of the problems of morality and mind are necessarily ignored. The higher qualities of our social evolution, with all the absolutely characteristic phenomena contributing to the highest organic social efficiency, remain outside his vision.

We are as yet only at the beginning of this phase of knowledge. The present remarkable situation, here of necessity only lightly referred to, in which the biologists and the philosophers remain organized in isolated camps, each with the most restricted conception of the nature and importance of the work done by the other and of the bearing on its own conclusions, cannot be expected to continue. One of the most urgent needs of the present time is a class of minds of sufficient scope and training to be able to cover the relations of the conclusions of each of these sets of workers to those of the other and to the larger

## DASNĀMĪS.—See ŚAIVISM.

DĀWŪD B. 'ALĪ B. KHALAF.—Dāwād b. Alī b. Khalaf, called al-Zāhirī (with the kunya Abū Sulaiman), a jurist celebrated as the originator of the Zāhiriyya school in Muslim theology, was or the Zahiriyya school in Musim theology, was born in Kūfa, A.H. 200 [=A.D. 815] (or, according to other authorities, A.H. 202 [=A.D. 817]), of a family belonging to Isfahān. Among the many eminent teachers under whom he studied in his youthful travels were two of the leading theologians of Islām, viz. Ishāq b. Rāhawaih (†A.H. 233 [=A.D. 847]) of Nīsābūr, with whom he enjoyed personal relations of the most intimate character, and Abū Theur (Ibrāhīm b Khālid) of character, and Abū Thaur (Ibrāhīm b. Khālid) of Baghdād (†A.H. 240 [=A.D. 854]). Having completed his career of study, he settled in Baghdād, where he soon established a great reputation, and began to attract pupils in large numbers. His audience, in fact, commonly numbered about 400, and included even scholars of established repute. At this time Baghdad possessed another teacher of renown, Ahmad b. Ranbal († A.H. 241 [=A.D. 855]), the Nestor of ultra-conservative orthodoxy, whose name is borne by the Hanbalitic party. Dawid sought to come into friendly relations with Ahmad, but all his advances were repelled, as he lay under the suspicion of having affirmed, while at Nīsābūr, that the Qur'ān was a created work— a doctrine which Almad had attacked with great vigour and at heavy personal cost. It was even said that Dawud had been punished for his error by Ishaq b. Rahawaih. Though Dawud met -, h 5 - 11 1 1 1

these allegations with a distinct denial, Ahmad still refused to receive him; nor was the strain relieved by the fact that the system promulgated by Dāwūd coincided in many respects with that of

by Dāwūd coincided in many respects with that or Ahmad, and was even fitted to lend it support.

Although Dāwūd, in his travels as a student, had applied himself eagerly to the study of the Hadīth, 'prophetic tradition,' he has no outstanding reputation as an authority on that subject. In point of fact, he is said to have given currency to only one prophetic dictum of note, which came to be accounted with his name through the instruto be associated with his name through the instrumentality of his son, Abu Bakr Mulammad, a well-known bel esprit of his day. The saying is as follows: 'He who loves and pines and hides (his tornient), and dies thereof, is to be regarded as a martyr.' As a teacher of jurisprudence, on the other hand, Dāwūd's influence was enormous, and here he ranks as the founder of a distinct school. He allied himself with the system of the Imām, al-Shāfi'i, for whom he manifested an extraordinary reverence, and to whose high qualities (manāgib) he devoted two of his books. But, while Dāwūd found his starting-point in the system of Shāhīi, he at length developed a new method in the deduction of sacred law-a method which, in its results, diverged from that of his master in the most pronounced way, and at the same time brought its author into collision with the uni-versally received views of Muslim jurisprudence. According to the prevailing doctrine, the bases of juristic deduction were (1) the ordinances attested by the Quran; (2) those which had the support of tradition; (3) the consensus 'vima' of recognized authorities; and (4) the conclusions established by speculative reasoning from analogies (giyās), and by deduction of the ratio legis ('illat al-shar') from given ordinances. In cases where positive injunctions derived from the first three sources injunctions derived from the first three sources proved inadequate, the reflective insight (ra'y, opinio prudentium) involved in the fourth was regarded as valid ground for juristic reasoning. Dawūd, however, denied the legitimacy of this last-mentioned source, i.e. the ra'y, and all that it implied, as also of all inquiry into the reasons of implied, as also of all inquiry into the reasons of the Divine laws and the analogical arguments founded thereon. The only sources of juristic deduction which he recognized were the positive, or, as he calls them, the 'evident' (zāhir), i.e. the Qur'an and Tradition. As for the consensus, he restricted it to the demonstrable 'agreement of the companions of the prophet' (ijmā al sahāba), assigning no more precise limits to the scope of this factor. In thus running counter to the procedure of the dominant schools, Dāwūd found himself in alliance with the extreme section of the himself in alliance with the extreme section of the party known as the ashāb al-hadīth ('traditionalists')—in contrast to the ashāb al-na'y ('speculative jurists'),—and became the founder of the Zāhiriyya school, which is accordingly also called the madhhab Dāwūd. It is true that he brought himself to the point of conceding the admissibility of the 'obvious analogy' (qiyās jatī) plainly indicated by positive injunctions, but only as a last resource. As a preliminary of delivering judgment, moreover, he demanded an independent investigation of tradition and demanded. dition, and deprecated a mechanical adherence to the established doctrine of a master or a school (taglid). 'The automatic repetition of the teachign of one who is not infallible is pernicious, and shows blindness of judgment. 'Out-upon him who, having a torch (i.e. tradition) wherewith he may light his own way, extinguishes his torch, and moves only by another's help.' Men should not blindly follow any human authority, but should examine the sources for themselves.

Of Dawid's writings a list of which is given in

Of Dawud's writings, a list of which is given in the Kitāb al-Fibrist, nothing is now extant, but

it would be possible to reconstruct his doctrines from quotations in later literature. Biographical writers are at one in extolling the piety and sincerity of his character, and his abstemious mode of life. His fame spread far beyond the confines of his domicile, and from the furthest limits of the Muhammadan world those who were perplexed with theological problems came to him for light. He died in Baghdad in A.H. 270 [=A.D. 883]. Vast as his influence was, however, his system, which, owing to its limited scope, did not adequately meet the requirements of juristic practice, failed to gain a firm footing in public life. Numerous Muslim scholars associated them. selves with it, but their adherence was largely personal and theoretical, and, except in a single instance, the system never attained an authoritative position in the official administration of justice. Its solitary success in this respect was achieved in the empire of the Almohads in Spain and North-West Africa, the founders of which, repudiating all adherence (taglid) to particular schools, held that the appeal to the traditional sources was the only permissible procedure. The history of Muslim learning down to the 9th cent. A.H. contains the names of famous adherents of the Zāhiristic principle in many different countries. The most important, and, in a literary sense, the most eminent, of these was the valiant Andalusian, Ibn Hazm, 'Alī b. Aḥmad, who expounded the Zähiristic method in his works, and applied it not only to the jurisprudence of Islām, but to its dogmatic theology as well.

## DEACON. DEACONESS .- See MINISTRY.

DEAD .- See Ancestor-Worship, Death and DISPOSAL OF THE DEAD, STATE OF THE DEAD.

DEÆ MATRES .- The Deæ Matres are diviniworship is found chiefly in the Celtic and German provinces of the Roman Empire (cf. art. CELTS, vol. iii. pp. 280, 286, and passim). How far they are to be identified or associated with so-called 'Mothergoddesses' among other peoples is a matter of dispute and will be discussed later. But there is evidence on Celtic and Germanic territory, and to some extent outside these limits, of a fairly definite cult of goddesses called usually *Matres* or *Matronæ*, and depicted in accordance with well-established conventions. Knowledge of them is derived entirely from inscriptions and monuments, of which a large number (over four hundred inscriptions) have been preserved; apparent survivals of their worship have been detected in the beliefs and traditions of the Celts and Germans of later and traditions of the Celts and Germans of later ages; but no certain reference to them has been found in ancient literature. There is no reason for applying to them, as is sometimes done, a passage cited from Varro in the de Civ. Dei of St. Augustine (vii. 3, 'Unde dicit etiam ipse Varro, quod dis quibusdam patribus et deabus matribus, sient hominibus impebilites excidinged'.) Varrage guot this quintistam patrious et deadus matrious, sicut hominibus, ignobilitas accidisset'). Varro's reference is probably general, and certainly the context in St. Augustine does not suggest an application to the particular divinities in question.

The inscriptions discovered up to the year 1887 were published and classified by him in his very important monograph on the Matronenkultus (cited here by this short title; for exact references, see the Literature at end of article). Additional material

was included in Ihm's art. in Roscher (s.v. 'Matres'), and later discoveries will be taken account of, together with the results of later discussion, in the course of this article.

The name of the divinities appears in three forms in the inscriptions: Matres, Matronæ, and \* Matræ (the last being the nominative case inferred from the datives Matris and Matrabus). A fourth form \*Mairæ is held by some scholars to be preserved in five inscriptions, but the evidence for it is in no case clear. Three of the inscriptions in question are lost, and in the other two—a stone altar at Dijon and a relief at Metz—the readings are very uncertain.<sup>1</sup> The form \* Matræ may be due to Celtic influence, an old Celtic nominative due to Celtic influence, an old Celtic nominative singular \* Matar having been latinized as \* Matra and a dative plural \* Matrabus developed from it, perhaps with the aid of Celtic datives in b (cf. Matronenkultus, p. 10). But, in view of such analogous Latin forms as nymphabus, fatabus, filiabus, natabus, etc., the Celtic explanation cannot be deemed necessary. In the case of the dative plural Matris, the parallel formation heredis (=heredibus) has been similarly used as evidence (=heredibus) has been similarly used as evidence against the theory of Celtic influence. Whatever be the explanation of the Latin words in question, there is one inscription which is generally held to show a Celtic (Gaulish) form of the name. This is preserved in the Museum at Nîmes and reads, in Greek letters, Ματρεβο Ναμανσικαβο βρατουδε. The epithet Ναμαυσικαβο is almost certainly local='to the Nemausian Mothers'; but the tr. of  $\beta parov\delta e$  is more doubtful. If it contains the root of the Ir. brath, 'judgment,' it may well mean ex judicio, and be equivalent to the common formula ex imperio.<sup>4</sup>

Matres and Matronæ appear to be synonymous, though their geographical distribution, as will be seen later, is somewhat different. They even occur as equivalents on a single inscription: 'Matribus sive Matronis Aufaniabus domesticis' (Matronenkultus, no. 207); and the same epithet is some-times found in combination with both terms (cf. 'Matribus [V]acall[i]neis' [ib. no. 215] with 'Matronis Vacal(l)nehis' [ib. nos. 224, 225, 227]). But such close association of the two is exceptional, and certain distinctions have been pointed out in their use. Ihm (Roscher, p. 2466) shows that Matres is accompanied by epithets of greater veneration ('augustae,' 'deae'). Hild (Daremberg-Saglio, iii. 1636) tries to make out a difference in the fact that men pray oftener to Matres, and women to Matronæ; but his figures can hardly be regarded as significant. Roach-Smith (in his Collectanea Antiqua, vii. [1878-80] 213) argues that the Matronæ were concerned primarily with the feminine principle in Nature, with maternity and offspring, while the Matres presided over the fruits of the earth and, in general, over public and private business. None of these distinctions, however, is really established as valid. It is perhaps a significant fact, which is pointed out by Haver-field (Arch. Æl. xv. 320), that Matronæ does not occur in any land where the cult is demonstrably imported; and the name may be really the Celtic Matrona, which survives in the French Marne and a few other names of places, rather than the Lat. Matrona. Since there is no evidence outside of

Matrōna. Since there is no evidence outside of 1 In support of \*Matra, see Hirschfeld, CIL xiii. no. 5478; against it, Inm, Matronenkultus, p. 12 ff.

2 See Haverfield, Archæol. Æliana, xv. [1892] 32. Sommer, Handbuch der lateinischen Laut. u. Formenlehre, Heidelberg, 1002, p. 350, explains such forms by the analogy of deabus. Matronabus also occurs (see Noticie degli schiavi, 1897, p. 6).

3 See Siebourg, Westdeutsche Zeitschrift, 1888, p. 115, and Bonner Jahrbucher, cv. [1900] 86.

4 See Thurneysen, Handbuch des Alt-Irischen, Heidelberg, 1909, p. 190, and Rhys, 'Celt. Inscr. of France and Italy,' Proc. Brit. Acad. ii. [1905–6] 291. It should be said that some scholars do not hold the inscription to be Celtic. D'Arbis de Jubannville (RCel. 1890, p. 250) explains it as Latin; and Bréal (RA xxxi. [1897] 104) as Italic. The latter scholar translates βρατουδε by merito de, comparing Oscan brateis.

inscriptions, the quantity of the o must be regarded as uncertain; and, if it was pronounced long, as is likely enough, this might simply mean that the familiar Latin word had been substituted for the Celtic. The substitution would have been entirely natural, and the two words would have come to be regarded as identical. The fact that Matrona appears regularly in the singular, whereas the Matrona are named in the plural and depicted in groups, might show a divergent development of the two cults, but would not preclude a common origin. Moreover, there is some doubt, as will be shown later, whether the Matres or Matronæ snown later, whether the Matres or Matrona were not sometimes conceived and represented singly. Even if the identification of Matrona with Matrona should be accepted, it would not become any easier to make a distinction between Matres and Matrona, for the Celtic (or possibly pre-Celtic) Matrona, like the Latin, appears to be a derivative of the simple word for 'mother.' The character of the divinities bearing the name Matrona is also quite uncertain. On the whole, then, Matres and Matronæ seem to be equivalent in sense, and neither of them is probably Roman in origin. In the following discussion the two words will be used interchangeably, except where a distinction is explicitly made between them.

The dates of the monuments to the *Matres* or *Matronæ* range all the way from the time of Caligula (*Matronenleultus*, no. 35) to that of Gordi-Cangula (Marromentativis, no. 38) to that of Gordi-anus (ib. no. 361). They are found chiefly in Cis-alpine Gaul, Gallia Narbonensis, Gaul proper, and Lower Germany, and to a limited extent at Rome itself, in Britain, and in Spain.<sup>2</sup> Those at Rome and in Britain are apparently due to soldiers or tradesmen, and do not prove the local existence of the cult; and the same may be true of the few inscriptions preserved on the Spanish peninsula. The latter, however, are taken by d'Arbois de Jubain-ville as evidence that the Celtiberi had the worship in common with the Gauls; and the epithet 'Gallaicis' favours the supposition. Still more remote provinces are brought into relation with the cult by the inscriptions, 'Matres Pannoniorum et Delmatarum,' preserved at Lyons (Matronen-kultus, no. 394), and 'Matres Afræ Italæ Gallæ,' preserved at York (ib. no. 348). But no inscription to Matres or Matronæ has yet been found in ither Africa out the Illusian provinces could be in the Illusian provinces could be incorporated by the inscriptions of the Illusian provinces and the Illusian provinces are incorporated by the inscriptions of the Illusian provinces are incorporated by the inscription in the Illusian provinces are incorporated by the inscription in the Illusian provinces are incorporated by the inscription in the Illusian provinces are incorporated by the Illusian provinces are incorporated by the inscription in the Illusian provinces are incorporated by th either Africa or the Illyrican provinces south of the Danube, and it seems probable that the names indicate simply military service in those regions on the part of the dedicants or of their soldiers.4 Monuments are commonest on the west bank of the Rhine and in the vicinity of Lyons; and the tribes among whom the worship chiefly flourished appear to have been the Vocontii, Arecomici, Allobroges, Sequani, Lingones, and Ubii. There Anoroges, sequant, lingoles, that Ohl. There are almost no traces of it in Aquitania or western Narbonensis, and few in the region east of the Rhine. The geographical distribution of the names is, in general, as follows: Matronæ seems to be the only form in Cisalpine Gaul, though some abbreviations are doubtful, and it is the prevailing form in Germany; \*Matræ occurs chiefly near Lyons

1 The comparison between Matrone and Matrone is old.
See, for example, Pictet in RCel ii. 8. On the occurrences of Matrone, see Holder, Altectt. Sprachschatz, s.v. For the view that it is Ligurian, not Celtic, compare H. d'arbois de Jubain-ville, Premiers habitants de l'Europe ?, Paris, 1889, ii. 169, and G. Dottin, Manuel pour servir à l'étude de l'antiq. celtique, Paris, 1906, D. 240.

2 For a map showing their distribution, see Haverfield's art. in Arch. Act. xv.

3 See RCel xiv. [1893] 376; also J. Leite de Vasconcellos, Religiões de Lusitania, ii. [1905] 176 ff.

4 See Im, Bonner Jahrb. xcii. [1892] 258, and Matronen-kullus, p. 120 ff., for inscriptions to 'Campestres,' 'Triviae,' etc., in Africa and the Danube provinces.

5 On certain evidences recently pointed out for such worship in the Palatinate, 'see Grünenwald, Westdeutsche Zeitschrift, 1906, p. 239 ff.

and in Gallia Narbonensis; and Matres is common

in Gaul proper and in Britain.

So far as we have direct evidence, then, concerning the worship, it belongs to the Celtic and Germanic provinces of the Roman Empire, the Germanic provinces of the Roman Empire, the chief points of radiation being Gaul and Lower Germany. With regard to its origin and early history there is difference of opinion. The theory that it was a general Indo-Germanic institution (set forth most fully by Becker, Kuhn's Beitrage, iv. [1868] 146 ff.) is rejected by most recent investigators, though the relation of this to other cults of Mother-goddesses among various peoples presents obscure problems which are not by any means to be summarily dismissed. This subject will receive further mention, but in the meantime clearness will be undoubtedly served by confining the discussion, as Ilm has wisely done, to the narrower cussion, as Ihm has wisely done, to the narrower range of forms which are evidently related. These have been held to be the original possessors of the worship. The probabilities are rather in favour of the view that the Celts first developed it and that the Germans borrowed it from them. The oldest dated monument (Matronenkultus, no. 35, of the age of Caligula) has been found in northern Italy, and the cult was undoubtedly native also to southern Gaul. It is unlikely that the Celtic population of either of those regions derived it from the Germans, and all that is known of the relations of Germans and Celts down to the beginning of the Christian era favours the theory that ning of the Christian era favours the theory that the Germans, in such matters, were the borrowers or imitators. It is possible, of course, that both peoples possessed the worship equally from the beginning (cf. Siebourg, op. cit. p. 97; also Much, ZDA xxxv. 315 ff.), or that they derived it independently from older populations which preceded them in the occupation of western Europe. Attention has already been called to the uncertainty concerning the history of the names Matres and Matronæ themselves.

The Mother-goddesses, in the restricted sense in

The Mother-goddesses, in the restricted sense in which they are now being considered, were apparently conceived in triads. Only one inscription ('Matribus tribus Campestribus,' CIL vii. 510, preserved in Britain) designates the number; but the goddesses are often depicted in groups of three, and no monument representing a different number is definitely associated with the most invitation. is definitely associated with them by an inscription. The position and arrangement of the Matres vary somewhat on different monuments, the prevailing type showing three draped figures, seated beneath a canopy or arch, wearing round head-dresses like a nimbus, and holding baskets of fruit on their knee. The middle goddess is usually distinguished from the others in some fashion, either by the size and position of her figure or by a difference in head dress. On one monument she is seated size and position of her figure or by a difference in head-dress. On one monument she is seated while the others stand, and on another she stands while the others sit. It is hardly to be supposed, however, that there was any distinction of rank or function among the divinities. Such variations in the type were doubtless purely artistic in purpose. On a very few monuments, notably the Metz relief (Matronenkultus, p. 43, fig. 7), the three goddesses are represented as standing.

10f. Matronenkultus, p. 57ff.; and C. de la Saussaye, Relig. of the Teutons, 1902, p. 85 ff. See also, on the early relations of Celts and Germans, d'Arbois de Jubainville, Premiers habitants, ii. 328 ff.; Kluce, in Paul's Grundriss, i. 2 [1901] 324 ff.; Bremer, ib. iii. 2 [1904] 737 ff.; R. Much, Deutsche Stammeskunde, Leipzig, 1900, p. 41 ff. Kaufmann, in Itschr. des Ver. für Volksk. ii. [1892] 24 ff., disputes the adoption of Mother-worship by the Germans, except when they had practically abandoned their nationality. But there is considerable evidence on the other side. See Siebourg, Bonner Jahrb. cv. 100. For an attempt to connect the type with Gr. representations of the Mother of the Gods, see Loeschcke, Bonner Jahrb. xv, [1894] 281.

It is doubtful how far monuments representing groups larger or smaller than three are to be associated with the worship of the Matres. Five dancing women on a relief at Avigliana probably do not themselves represent the goddesses, though the monument is inscribed 'Matronis' (see Matronential) kultus, p. 48). A group of two figures on a relief at Poitiers, holding cornucopiæ and baskets of fruit, has also been taken to represent Matres. But the existence of other goldesses known to have been worshipped in pairs renders the identification extremely doubtful. The single figures of a goddess riding a horse, often referred to in the past as an 'equestrian Matrona,' 2 are now held the past as an 'equestrian Matrona,' are now held to be Epona, a divinity of distinct character, whose worship appears, however, in the same regions as that of the  $Matres.^3$  Occasionally, in fact, Epona and the Mother-goddesses are associated on the same monument.<sup>4</sup> It is, of course, possible that Epona was originally, as Renel (Les Religions de la Gaule avant le christianisme, Paris, 1906, p. 281) suggests, only a Matrona with specialized function (mère spécialisée).

Of dubious connexion with the Matres, likewise, are numerous statuettes of single figures, without names, more or less resembling the inscribed representations of the goddesses. Some of these figures carry fruit or cornucopiæ, and have the same head-dress as appears on the larger monuments; others represent women with babes—a conception in itself suitable enough to Matres or Matronæ, though not in accordance with the usual convention. Ihm rejects all such figures, insisting upon the triadic group as characteristic of the cult (Matronenkultus, p. 53 ff.); and the existence of statuettes of the regular triad rather counts in his favour, making it more difficult, as Siebourg has argued, to identify single figures as Matronae.<sup>5</sup>
It is even doubted whether the numerous statuettes of women with babes or fruits represent goddesses at all. They may be merely votive offerings or talismanic images; but in the case of many of them the symbolism appears to indicate local or personal divinities similar in function to the *Matres*. The most reasonable conclusion, perhaps, is to recognize the probable existence of many related forms of worship, and at the same time to restrict the names Matres and Matronæ to monuments actually so inscribed or exhibiting the customary figures of the three divinities. The geographical limits already laid down for the cult were made up on this basis, and it does not seem wise to extend them by the inclusion of doubtful monuments. The term 'Mother-goddesses,' which is applied, especially by French archæologists, to a great number of these statuettes of various types, is sometimes used very

1 Cl., for example, the inscription, 'Deabus Vercanae et Medunae,' at Trèves; and see, for other references, Matronen-kultus, p. 58 fl., and Slebourg, Bonner Jahrb. ev. 98 fl.

loosely. Thus Gassies, pleading against the restriction of the Mother-worship to Gaul and Germany, cites Venus, Juno, and Demeter as déesses mères; and other writers (see, for example, A. Wirth, Danae, Vienna and Prague, 1892, p. 95) have compared the Matres with the Semitic 'Αστάρται. Statuettes, moreover, of the sorts just referred to have been found in widely separate regions outside of Gaul: for example, in Greece,

Italy, and Northern Africa.1

The difficulty, if not the impossibility, of keeping the worship of Matres and Matronæ distinct from all other cults is hardly less apparent in the case of inscribed than in that of uninscribed monuments. For the ancients themselves associated, and doubtless to some extent identified, these divinities with others. Just as in the case of several of the more important individual gods of the Celts and Germans, so with regard to the Matres, the modern investigator is puzzled by the uncertain meaning of the interpretatio Romana. Roman conquerors and romanized provincials alike were eager to identify the gods of the northern barbarians with those of the old classical pantheon, and the resulting equations are neither consistent with themselves nor easy to understand.2 The Matres, in this way, are sometimes associated with the Parcæ, on the evidence of a few inscriptions 'Matribus Parcis.' But it is not clear that an But it is not clear that an antification of the two groups was intended by

dedicants in question. Moreover, the modes presenting the *Matres* and the *Parcæ* are ifferent, and their fundamental characters have been dissimilar (see below, p. 410<sup>3</sup>, tronenkultus, p. 66 ff., and Haverfield, xv. 326). The association of the · Matres is also doubtful, and finds nort in the inscriptions.3 In the vhæ, whom some investigators relation with the Matres, there the comparison, beyond the of divinities have numerous

ghtly better, as Ihm has shown, for ming the Matres with the goddesses of the 'Biviæ,' 'Triviæ,' and 'Quadriviæ,' though the matter is by no means certain. But the divinities who may with most probability be identified with the Matres are those who were called 'Campestres,' Junones,' and 'Suleviæ.' All these names appear both independently and in combination with Matres or Matronæ, and it is hard to say whether they stand for goddesses originally distinct and later identified with the Matres, or whether they were originally mere epithets of the Matres and afterwards came to be used independently. At all events the divinities concerned were closely associated in the end with the Mother-goddesses. The Junones, in the sense now under consideration, should probably be distinguished from the Roman Tunones, conceived as the geniuses of women. They are very likely only Matrone worshipped under another name, and the chief seat of their cult appears to have been Cisalpine Gaul. The

Sc. 6 See particularly Ihm's art. 'Junones II.' in Roscher. The Juha vuma, sometimes identified with the Matres, seem to (RA espond rather to the regular Roman Junones (cf. Matronenвратия, р. 97).

Campestres have sometimes been described as goddesses of the fields, but it is more probable that they were the special protectors of the military camp, or rather that their name was the epithet applied to the *Matronæ* when conceived as exercising this function.1 In the case of the Suleviæ it is more probable that we have divinities originally distinct from the Matres, though of closely similar character and function. Inscriptions to them are far less numerous than those to the Matres or Matrona, but their geographical distribution is similar. The origin and meaning of the name Suleviae is unknown, though it is tempting to compare the British Dea Sul, worshipped at Bath (Aquae Sulis), and to seek an etymology in the Celtic root sul (O. Ir. suil, 'eye'). If this theory is right, the meaning of the word would be similar to that of *Tutelæ*.<sup>2</sup>

In the absence of all ancient literary treatment of the Mother-goddesses, the only evidences of their divine functions are those furnished by the artistic representations of the divinities, and by the epithets applied to them. The customary figures of the *Matres* have been described already. The of the Matres have been described arready.
epithets, though numerous, contribute very little
new information. Many of them are simply general terms of veneration, such as 'augustæ,' 'deæ,' 'divæ,' 'sanctæ,' perhaps also 'dominæ,' though the application of this to the *Matres* is not certain.<sup>3</sup> 'Nemetiales' is possibly equivalent to 'sanctæ,' but seems rather to be connected with the tribal name of the Nemetes or with some locality (see Rhys, p. 102; Matronenkultus, p. 16). Other epithets denote the special protective relation of the goddesses to individual dedicants or their families; for example, 'meæ,' 'suæ,' 'paternæ,' 'maternæ,' 'domesticæ,' 'trisavæ,' 'conservation'. 'maternæ,' 'domesticæ,' 'trisavæ,' 'conservatrices,' 'indulgentes.' By far the greater number contain the names of nations, tribes, or localities, such as 'Afræ Italæ Gallæ,' 'Italæ Gallæ Germanæ Britannæ,' 'Omnium gentium,' 'Noricæ,' 'Treveræ,' Nαμαντικαβο, and the numerous non-Latin or half-latinized names which, though largely unexplained, are held to belong chiefly to this class. A few of the latter have been brought into relation with definite place-names like 'Juli-neihiæ,' 'Albiahenæ,' 'Nersihenæ,' 'Mahlinehæ,' connected respectively with Jülich, Elvenich, Neersen, and Mechelin; but the great majority seem to go back to pre-Roman names, since dis-placed and lost. The names Aflims, Saitchamims, and Vatuims—over against the latinized forms Afliabus, Saithamiabus, and Vatuiabus—which are of special interest as exhibiting very archaic are of special interest as exhibiting very archaic forms of the Germanic dative plural ending, are also presumably of local significance. The du, native epithet which seems to have reference function is 'Gabiæ,' with its compounds deral gabiæ' (on two inscriptions at Mainz), and lidren gabiæ' (on an inscription at Bürgel). Eve cry out, not beyond dispute, and its meaning is ground, ticularly individualizing at best. It he massi of translated the 'Givers,' the 'All-Giverge directed dora)—a name which is quite consiste. lady, however, was frightfully ugly, and the bridegroom sent her back. Thereupon the god cursed his son-in-law, declaring that his posterity should be frail as the flowers (RHR liv. [1906] 169). A Haida story accounts for death by the fact that men were formed of grass and salmon-berry bushes. But the Haida have another legend, according to which men were made by the Raven, who decreed that they should never die. The decision was changed at the instance of the Wren, that he might have a place of resort under their grave-scaffolds (Jesup Exped. v. 1905] 210, 238). Among the Quinault Indians of British Columbia, where Eagle and Raven are the joint authors of things as they now are, Eagle proposes that when men due they shall come to life again. Raven, however, opposes this, and has his way. He regrets it when his own daughter dies and cannot be revived, but it is then too late (op. cit. ii. 111).

The enmity or the slackness of one of the lower animals is regarded by many people as the cause of death.

A story very wide-spread in Africa among Negroes, Bantu, and Hottentots alike, is found in two forms. The Hottentot version is that the hare was charged by the moon with the message to men: 'Like as I die and rise to life again, so you also shall die and rise to life again.' But the hare conveyed the message thus: 'Like as I die and do not rise to life again, so you also shall die and not rise to life again.' The angry moon split the hare's lip with a blow; but the mischief was done and was irremediable. Hence the hare is a tabued animal to the Hottentots. Among the Bantu the chameleon is made the messenger. But he is a slow creature, and after his departure the Superior Being changed his mind and dispatched the lizard with the message of death. The lizard overtook the chameleon and arrived first. When afterwards the chameleon delivered his message, it was too late: the fireyocable decree had been conveyed (Bleek, Reynard the Fox, Lond. 1804, pp. 71, 74). In Calabar a dog and a sheep are the rival delegates; and it is through the fault of the dog that we die (Journ. Afr. Soc. v. [1906] 194). The ill-will of the antelope is alleged by a tribe on the Ivory Coast as the reason for death. A man was sent to the great fetish of Cavalla for a charm against death. He was given a stone to block the path by which it came. But the antelope, offering to assist, maliciously sang a spell which rooted the stone to the spot (Journ. Afr. Soc. vi. [1907] 77).

The Melanesians of New Pomerania tell the story of the message wrongly transmitted. The Wise Spirit ordained that snakes should die, but men should slough their skins and live for ever. His brother, the Churl, reversed the decree (ARW x. [1907] 308). In the Shortland Islands the people (also Melaresians) relate that the great foremother of the race sloughed her skin at intervals and remained eternally young. The catastrophe of her death occurred because she was once districted in the operation by the screening of her trophe of her death occurred because she was once disturbed in the operation by the screaming of her child, who was unluckily allowed to witness it. This was the way death came into the world (FL xvi. [1905] 115). A similar story is told by the Baluba, on the borders of the Congo State; but there the operation is interrupted by the woman's fellow-wife (Globus, lxxxvii. [1905] 193). According to the Hupa of California, people used to renew their youth, when they grew old, by sleeping in the sweat-house. But this happy condition came to an end. we learn from a ceremonial dition came to an end, we learn from a ceremonial formula, because a certain mythological personage formula, because a certain mythological personage was unfaithful to his two wives, who in revenge took the two children they had borne him and buried them alive. When the children came up again they put them back, declaring that thenceforward every one should do that way (Goddard, Hupa Texts, Univ. California Pub. i. [1903-4] 75, 366). The Eskimo of Greenland relate that the first warmen brought death by saving: 'Let these die to woman brought death by saying: 'Let these die to make room for their posterity' (Crantz, Greenland,

Lond. 1820, i. 204).

In these stories, death is the result of curse or spell. Another Eskimo tale accounts for it as the issue of a dispute between two men, one of whom desires men to be immortal, the other to be mortal: their words are probably also spells (Rink, Tales, Edin. 1875, p. 41, citing Egede). A tale widely known in North America relates that, when the first death occurred, an attempt was made to bring the soul back from the land of the dead. But some prohibition was broken, the returned soul was greeted too soon, and it vanished: wherefore there is no return for mankind from the spirit-land (the

Cherokee stories [19 RBEW, 1900, pp. 252, 436]

Cherokee stories [19 RBEW, 1900, pp. 252, 436] may be taken as typical).

Similar to the Eskimo stories just cited are some Australian stories. The Kaitish and Unmathera say that formerly, when men were buried, they came to life again in three days; and the Kaitish declare that permanent death is due to an old man who was displeased with this arrangement and wanted men to die once for all. He secured this effect by kicking into the sea the body of one who had just died and been temporarily buried (Spencer-Gillen), 513). So also the Wotjobaluk story runs that, when people died, the moon used to say, 'You up-again'; but an old man said, 'Let them remain dead,' and since then none has ever come to life again except the moon (Howitt, 429).

The phases of the moon naturally suggest death and restoration to life. It is, therefore, not wonderful to find that among the Australians, as among the Hottentots, the moon plays a considerable part in the legends. We have space to mention only one more.

only one more.

The Arunta relate that, before there was any moon in the sky, a man died and was buried. Shortly afterwards he rose from the grave in the form of a boy. When the people ran away for fear, he followed them, shouting that if they fled they would de altogether, while he would de but rise again in the sky. He failed to induce them to return. When he died, he re-appeared as the moon, periodically dying and coming to life again; but the people who ran away died altogether (Spencer-Gillene, 564). The Chams of Further India see a female figure in the moon. She was a goddess who raised all the dead to life, until the great sky-god, tired of this interference with the eternal laws, transported her to the moon (Cabaton, Nouvelles Recherches sur les Chams, Paris, 1901, p. 10). Many other nations connect the moon with death.

Once more. The Todas of the Nilciri Hills say

Once more. The Todas of the Nilgiri Hills say that at first no Todas died. After a time a man died, and the people, weeping bitterly, were taking the body to the funeral place when the goddess Teikirzi took pity on them and came to bring him back to life. But she found that, though some of the pack to life. But she found that, though some of the people wept, others seemed quite happy. She therefore changed her mind, and, instead of raising the dead man, ordained the funeral ceremonies (Rivers, Todas, Lond. 1906, p. 400). When in the Scandinavian mythology Baldur was slain, the goddess Hel promised to release him if all things wept for his death. This too, though not in its present form an actiological story, possibly arose to account for an ætiological story, possibly arose to account for the permanence of death.

The foregoing are but specimens of the sagas told in the lower culture concerning the origin of death. They exhibit the universal incredulity of mankind as to its naturalness and necessity.

III. Death believed to be unnatural.—I. The

escape of the soul.—In practice, among the races of the lower culture, death, if not caused by violence, is generally ascribed to the action of supernatural beings, as gods or spirits, or to witcheraft. In a few cases, as among the Wadjagga of Central Africa, the weakness of old age may be reckoned among its causes (Globus, lxxxix. [1906] 198). Sometimes sickness and death are ascribed to the escape of the soul from the body. Thus, among the Hareskins of Canada, sickness is believed to be due to this cause, and it is the task of the medicine-men to capture the errant soul and oblige medicine-men to capture the errant soul and oblige Ettsuñe, a supernatural being who is perhaps a personification of death, to enter the patient for the purpose of replacing it (Petitot, *Trad. ind.*, Paris, 1886, p. 278, cf. p. 434). The details of the belief in the soul, its escape and restoration, cannot here be discussed. It will be sufficient to say that from Siberia to Australia, from Puget Sound to the islands of the Eastern Archipelago, means are taken to prevent the soul from wandering, and to bring it back if from any cause it departs; for the permanent loss of the soul means nothing less than death.

Some peoples have developed the theory that the soul is not single but multiple, and that some, or one only, of these souls reside in or about the body.

Thus, according to the Balong of the Cameroon, one soul is housed in the body of the man himself, a second may be em-bodied in an elephant, a third in a wild hog, a fourth in a

leopard, and so on. This seems to multiply a man's chances of personal misfortune. For every mishap suffered by one of the secondary souls—more strictly of the body in which it is imsecondary souls—more strictly of the body in which it is immured—reacts on the person concerned, and is able to draw after it disease and death. If, for example, any one comes home from hunting, or from the field in the evening, and says: 'I shall soon die,' and if death really occurs, it is clear that one of his 'outside souls' has been killed by a hunter through the slaughter of a wild hog or a leopard or some other animal in which the soul was incarnate, and that the man's death is the natural consequence (Globus, ixix, 1896) 277).

2. The act of a supernatural being.—The act of a god or of the spirits of the dead is also a cause of death known widely in the lower culture. Death by lightning is an obvious instance of the former. But it is by no means the only one. Death by accident is due either to a supernatural being or to

witcheraft.

witchcraft.

On the island of Keisar, one of the Moluccas, sickness is sometimes ascribed to the malignant sprit Limiswall, or to the god who dwells in the sky or the sun (the latter from anger at neglect of some old custom), or to the spirits of the dead who have not been duly honoured (Riedel, De stutie en kroesharige rassen, Hague, 1886, p. 419). The aborigines of Kola and Kobroor (also in the Moluccas) hold that the nitu, or spirits of ancestors, kill the living to feed on their souls (2b. p. 271). The Navahos attribute a death to the direct action of Ohinde, described as the devil—probably a malignant spirit (I RBEW [1881] 123). Among the causes assigned by various tribes of Negroes for a death, the act of a felish and that of a deceased relative are enumerated (Clozel and Villamur, Coutumes indigenes de la Côte d'Ivoire, Paris, 1902, p. 363; Spieth, Ewe-Stamme, Berlin, 1906, p. 255). The Andamanese attribute 'almost all deaths, sickness, and calamities' to the machination of spirits; and all sudden deaths are ascribed to the malign influence of the evil spirit of the woods, or to that of the evil spirit of the sea (JAI xi. [1882] 288, 289). In the north-west of Australia every illness is ascribed to the djuno, an evil spirit otherwise known as varruga or varrunga (Internat. Archio, xvi. [1904] 8).

3. Witchcraft.—But by far the most usual cause assigned for a death is witchcraft—the malicious act of some open or secret foe, performed

cious act of some open or secret foe, performed not by the obvious means of violence, but by the subtle and mystical arts of magic. This does not exclude the action of angry or envious spirits, for they are frequently held to inspire the evil-doer; or his ill intentions may be accomplished by their aid. The Mission Indians of California, indeed, in their legend of the origin of death, attribute the first death in the world to witchcraft. No one had died before; but, with the success of the first practitioners of witchcraft, death came into the world (*JAFL* xix. [1906] 55). Witchcraft, in fact, is the ordinary reason given by savage and bar-barous peoples for a death. On such an occasion, one of the foremost duties of the survivors is to discover the exact cause of death, and to ascertain and punish the author of the mischief. For this purpose the ancient Gauls used to put widows to the question like slaves; if detected, the unfortun-ate wretches were executed with fire and all sorts of torture (Cæsar, de Bell. Gall. vi. 19). Peoples as far apart as the Balong already mentioned and the Koryaks of Siberia make a post-mortem examination. In the Wimmera district of Victoria amination. In the Wimmera district of Victoria (Australia) the clever old men and relatives of the Australia) the clever old men and relatives of the deceased watch the corpse through the night. They see the wraith of the slayer approaching with stealthy steps to view the result of its machinations. Having apparently satisfied itself, it disappears in the direction of the hunting grounds of its own people, and the relatives of the deceased know what tribe to retaliate on. In New South Wales the Tharumba repeatedly rub the body with a mixture of burnt bark and grease. Some of the old men scrape a portion of it off when dry, and throw a few pinches of it on the embers of a fire kindled for the purpose. By the way the smoke rises they judge the direction of the murderer's camp. A party is sent out to avenge the death. After identifying the murderer by a repetition of the process, this is accomplished, not by violence, but by incantations and by terrifying the victim, so that he really believes he must die (Mathews, Ethnol. Notes, 1905, pp. 145, 72). must die (Mathews, Ethnol. Notes, 1905, pp. 145, 72).

Among the Warramunga the divination is accomplished differently. A little mound of earth is raised on the exact spot where a man has died. A ceremonial visit is paid to it within a day or two after the occurrence, and a search is made for tracks of any living creature. According to the tracks found, conclusions are drawn as to the totem of the guilty person. The Warramunga commit the body not to the earth but to a tree. Similar ceremonial visits are paid to the tree for the discovery of some indication of the person who has caused the death. If unable to identify the person or his tribe, the relatives may at least find a beetle of a kind supposed to resemble a man, and by killing it may ensure the death of the enemy, whoever he may be. When everything else fails, they pay a further visit and thrust a fire-stick into the body, with certain ceremonies. Then, returning hurriedly to the camp, they sit down quietly for two days, abstaining from all food and drink. After this possed was accepted the present when this period has passed, each of the persons who has taken part in the rite imbibes a mouthful of water and spits it out secretly in various directions. This is regarded as sufficient to cause retribution to fall on the author of the crime, and they expect to hear his death-cry (Spencer-Gillen, 526 ff.).

Sometimes the dead man takes a more active part in the indication of the cause of death. This is common among the Negroes. Various branches of the Ewho-stock go to the house of the *tro* (fetish, god) and there inquire through the priest, who answers, speaking from an inner room, in an assumed voice believed to be that of the ghost (Spieth, *Ewe-Stämme*, 258, 260, 286, 492, 636, 752). So in Europe it has been believed, up to quite recent times, that the ghost of a murdered man (though not through the medium of priest or religious rites) will communicate the fact of his murder and call for vengeance on the slayer.

murder and call for vengeance on the slayer.

Other Negroes draw the information from the corpse. The Agni of Indénié cause it to be carried through the village on the heads of two men, who are made by the priest to run and turn round in all directions, until by some movement or arrest of the bearers it points out the guilty person. The ceremony practised by the Ngoulango is not so laborious. Three stakes are fixed in the earth, one representing the fetish (god), another a deceased relative, and the third a living inhabitant of the village, presumably suspected beforehand. If the corpse touch the stake representing the fetish or the deceased relative, a sacrifice of a few fowls is offered, and there is an end of the matter. If, on the other hand, the suspected man be indicated, he is immediately seized and put to an ordeal; or, in case of avowal, he is led away into the bush to execution (Clozel and Villamur, op. cit. 157, 332).

In Africa the ordeal is usually by means of some

In Africa the ordeal is usually by means of some and important persons, all the relations are compelled to undergo the test. Among the Wadjagga, a Bantu people on the Eastern side of the continent, however, it takes the form of an oath upon the ashes of the fire at which the funeral feast is cooked (Globus, lxxxix. 198). Ordeals, it need hardly be said, were for ages applied to persons in Europe accused of causing death and other evils by means of witchcraft. A common method was that of the ordeal by water, reported, so early as the 3rd cent. B.C., by Phylarchus, of the Thebi or Thibii, a tribe occupying the country about Trebizond (see Ordeals, Witchcraft). Elsewhere it is deemed enough to convey to a

wise man' some relics of the deceased.

wise man'some relics of the deceased.

Among the Sissi of the north-west of Brazil on the occasion of a death not long ago, some articles of clothing, together with the alleged 'poison' conjured by the witch-doctor out of the body of the patient, were sent after his death to a distant tribe, which included practitioners of renown. They inquired into the matter, performed their conjurations over the relics, calling the murderer, and solemnly burnt the 'poison.' It was believed, according to a well-known principle of witchcraft, that at the instant the 'poison' fell into ashes the enemy, whoever he was, died (Globus, xc, [1906] 328).

In general, throughout South America, it would

seem that it is the duty of the medicine-man to put himself into communication with the spiritworld and discover the culprit, who, at all events

world and discover the culprit, who, at all events among some tribes, is thereupon put to death, and burnt with all his family and goods. If this were omitted the deceased would himself avenge his death on his relatives (Internat. Archiv, xiii. [1900], Suppl. 70; Anthropos, i. [1906] 880).

In old Tahiti, people were held to be killed by the gods (atua), either of their own motion or because they had been bribed by an enemy. It was the business of the priest to ascertain to which of these alternatives the death was to be attributed. He took a cance and paddled slowly near the house in which the corpse lay, watching for the flight of the soul, which it was believed he could see. From the shape assumed by the soul in departing he judged of the cause of death (Ellis, Polyn. Res., Lond. 1832, i. 308).

IV. Abandoument and premature burial.—I.

IV. Abandonment and premature burial.—1.

Abandonment of the dying.—Among many savage peoples it is customary to abandon the dying to

their fate.

their fate.

The Yerkla-mining of Australia, when death approaches, leave the dying person alone, as comfortably as possible, near a fire, and quit the neighbourhood, not returning for a considerable time (Howitt, 450). The Baumanas of the French Sudan with loud cries abandon a dying man, for fear that he may drag one of them into the grave with him (Steinmetz, Rechtsverhältmisse, Berlin, 1908, p. 161). The fear lest the eyes of the dying man will fasten on them, and his ghost then molest and even kill them, causes similar conduct among some of the Ho in German Togo (Spieth, 632). The Selung of the Mergui Archipelago, off the coast of Burma, take the patient across to a desert island, and there leave him (L'Authropologie, xv. [1904] 434). The Dorachos of Central America led a dying person to the woods, and left him, with some cake or ears of corn and a gourd of water, to his fate (1 RBEW 115).

2. Burial before death.—As an alternative to leaving the sick or the aged to die, they may be buried while still living.

The Indians of the Paragusyan Chaco, oppressed by the falling of heblies reasons.

buried while still living.

The Indians of the Paraguayan Chaco, oppressed by the teeling of helpiessness and by superstilion, when hope of recovery is gone, neglect the patient and deny him food; and, lest he should die in the village during the night, he is removed to a distance, and there left to die in solitude, or death is hastened by premature burial (Grubb, Among the Indians of the Par. Chaco, 1904, pp. 41, 45). The tribes of Navitilevu, Fiji, place the dying man in the grave, with food and water. As long as he can make use of them, the grave remains open; when he ceases to do so, the earth is filled in and the grave closed (JAI x. [1881] 144). In the Gazelle Peninsula of New Pomerania, one who is too long in dying is wrapped in pandanus leaves and carried out to the dead-house (ARW x. [1907] 309). Among the Northern Maidu, persons who were long sick were securely tied up, in a squarting position, in a bear-skin, with small objects of personal use (the usual way of preparing a body for the grave), and buried before death (Bull. Am. Mus. Nat. Hist. xvii. [1906] 245). The Hottentots used either to bury old and superannuated persons alive, or to carry them away to a cleft in the mountains, and leave them with provisions for a few days, to be starvets, Lond. 1795-6, if. 1944). So the various Bantu tribes of South Africa either abandoned the dying or buried them before death (Campbell, Traw., Lond. 1815, pp. 428, 515; Kidd, Besential Kafir, Lond. 1904, p. 247).

Practices like these may have had more than once origin. Economic causes doubtless played.

Practices like these may have had more than one origin. Economic causes doubtless played their part. The care of the living was more im-perious than that of the dying; and, where conflict arose between these two duties (as it often must in savagery), customs would grow up out of sad necessity, which would be continued when the necessity had ceased. Such causes would be aided by the beliefs current in the lower stages of culture to the continued when the continued when the necessity had ceased. ture. In West Africa it is not uncommon that a

protracted sickness wearies the attendants.

protracted sickness wearies the attendants.

'They decide that the body, though numbling inardoulate words and aimlessly fingering with its arms, is no longer occupied by its personal soul; that has emerged. 'He is dead'; and they proceed to bury him alive. Yet they deny that they have done so. They insist that he was not alive; only his body was "moving" (Nassau, Fetichism in W. Africa, Lond. 1904, p. 54).

More potent, perhaps, is the universal dread of death and horror of a corpse. This horror is very lively in the Yakuts. Among them old people burdened with years or disease often begged their children to put an end to their life. The funeral feast was held for three days; neighbours and friends were invited to it, and the dying person received the place of honour and the choicest

Then he was led out into the forest, morsels. thrust into a grave dug beforehand, and buried alive, with his arms, utensils, provisions, and horses (RHR xlvi. [1902] 212).

3. Removal from house or bed.—Where it is not customary to go to the length of burial alive, horror of the corpse leads very generally to the removal of the dying from among the living.

norror of the corpse leads very generally to the removal of the dying from among the living.

It is a common practice, e.g., of the North American tribes to carry a dying person out of the house or camp (I RBEW 123, 154, 157, 201; I7 RBEW [1808] 487). The Sinhalese frequently take a person dangerously ill from the house and place him in an adjoining temporary building, in order that, if he dies, the house may escape pollution (Davy, Centon, Lond. 1821, p. 289). The Kamtchadals are reported to have had the custom of abandoning the cabin where death had taken place, because they believed that the judge of the subterranean world paid a visit to it, and caused all whom he found there to die. But, as the construction of a new cabin gave much trouble to people who had neither axes nor mattocks, they took care to transport the sick out of their cabins, for fear that death would surprise them there when it was too late (Georgi, Description de... Russie, St. Petersburg, 1777, iii. 91). In the island of Luzon, among the Serranos, when a sick person does not show signs of recovery, a family council is held and a fixed sum voted for his cure. When this is spent, the patient is removed from his bed and laid upon a hide on the ground outside the house. A child is posted to fan him and keep off the files, and only water is given him until he dies (Sawyer, Inhab. of the Philippines, Lond. 1900, p. 277). Among the Basuto, when death is seen to be at hand, the patient is taken out of the hut to a screen, because it is said the manes (melimo) obtain easier access to the latter than to the interior of the hut. In fact, a hole is out in the screen to enable them to enter, as they cannot do so through the doorway of mortals. There the patient dies, often not without the active assistance of the two old women who are set to watch him (FLX xv. [1904] 255).

The motive of the procedure in all these cases would seem to be the same—the horror of the corpse and the fear of pollution of the dwelling by its presence. A description is given in the Report of the Palestine Exploration Fund for 1902 of a Samaritan assembly to celebrate the Feast of the Passover in 1898, at which a woman became very ill and a cry was raised to remove her to a tent outside the camp, lest the camp should be defiled by a dead body—a ritual ban perhaps derived from some passages in the Hebrew law. In this case the defilement would extend to the whole congre-

There are, however, some cases of removal the motive of which is different. In the Reef Islands which, if we may trust the report, seem to be connected with the cult of, or at all events with the belief in, superior beings. These houses are empty. If a man is sick and does not die quickly, he is put into one of these 'that he may die quickly' (JAI xxxiv. [1904] 230). Among the Warundi of German East Africa the dying are carried out and placed on an ikitabo (a sacred circle, either public or belonging to the family). There the priests recite a sort of litany consisting entirely of conjectures as to the origin of the sick man's malady, which appears to be ascribed to the deceased father or other manes of the family (van der Burgt, Warundi, 1904, art. 'Temple'). With other burge, rearrance, 1904, art. Temple.). With these we may compare a remedy prescribed by the Ottoman Jews for one in extremis. It is to carry him to the cemetery and lay him down there for twenty-four hours. 'He may die there; but, if he has the good luck to live, he will quickly make a complete recovery' (Mélusina. viii 11806-71978)

complete recovery (Mélusine, viii. [1896-7] 278).

In Europe a very wide-spread custom is to take a dying man out of bed, and to lay him on the earth or on straw.

This is practised from Ireland to the Caspian Sea. In the Malay Peninsula a dying man's mosquito-curtains are opened, 'and in some cases, at all events,' he is taken out of his bed and laid upon the floor (Skeat, Malay Magic, 1900, p. 398 n.). A Nambūtiri Brahman in Malabar is placed on a bed of kuśa-grass in the verandah, or some convenient place outside the foundations of the house (E. Thurston, Castes and Tribes, Madras,

1909, v. 214). In Cochin a Nayar 'is removed to the bare ground floor, as it is considered sacrilegious bate growth floor, as it is considered sacringious to allow the last breath to escape while lying on a bed and in a room with a ceiling, which last is supposed to obstruct the free passage of the breath' (Rep. Census of India, xx. [1901] 162).

The reason alleged by those who practise this removal in Europe is that a man cannot die on feathers (sometimes game-feathers, sometimes those of domestic fowls), and consequently that to lie on them adds to his agonies and makes his death 'hard,' or 'unlucky.' The Cheremiss of Kozmodemjansk declare that, if he were allowed to die on a feather-bed or a felt coverlet, he would be forced in the other world to count the feathers, or the hairs of the felt (Smirnov, Pop. finnoises, Paris, 1898, i. 137). These reasons, however, seem to be invented to account for a practice of which the real origin has been forgotten. Alb. Dieterich (Mutter Erde, 1905, p. 27) has endeavoured to explain it as an attempt to bring the dying man into touch with the earth, so that the soul may pass without delay into the realm of the dead beneath. Monseur (RHR liii. [1906] 204, 301), comparing it with other usages relative to the earth, attributes it simply to a survival of the custom of lying on the earth at a time when such luxuries as bedsteads and feathers were unknown. These reasons, however, do not account for the requirement, found in Germany, Sweden, and elsewhere, to place the moribund person on straw, and afterwards to burn the straw. So the Wends in the Spreewald lay him on fresh straw spread on the ground, 'else no one would be willing to lie in the bed afterwards.' The straw is subsequently burnt in the open field, and the water wherewith the corpse has been washed is thrown over the spot where the fire was made. Any one who passes across that spot before the birds have flown over it across that spot before the birds have flown over it a few times becomes withered up (von Schulenburg, Wendisches Volksthum, 1882, p. 110). There can be little doubt that the real object of the custom is to avoid the death-pollution upon the bed. It is probably a survival of the practice of removing the patient from the house before death. It has naturally the effect sometimes of hastening death; and it is performed in Europe avowedly for that purpose in the belief that it abridges the that purpose, in the belief that it abridges the sufferings of the dying and is therefore an act of kindness. The same purpose is assigned for the removal of the pillow, which is an obvious attenuation of the practice of removing the patient from bed.

V. Separation of soul and body.—The usual theory of the process of death is the separation of the soul from the body. The soul may, however, separate from the body before death, as in dreams. Sickness is frequently held to be such a separation. The distinction between such a separation and that of death is that the latter is final. Occasionally it is requisite that the soul be caught as it escapes. The population of Nias believe that the escapes. The population of that believe that the chief of a village, especially if rich and possessed of descendants, has more souls than one, of which one is an hereditary essence called the chèha. This must be received in his mouth by the son of the dying man, if there be a son; if not, it is received in a purse for the purpose of securing that the deceased will watch over the family money (Modigliani, Viaggio a Nias, Milan, 1890, p. 277). So among the Greeks the nearest relative received the last breath of the dying man in a kiss.

Efforts are often made to recall the soul, not

merely as a remedy for sickness, but to restore one dead. They may consist in simple cries to the soul to come back, as among some Tongking tribes (Lunet de Lajonquière, Ethnog. du Tonkin sept., Paris, 1906, pp. 263, 274); or they may

be the regular incantations of an expert, similar to those in use during sickness, as among the Dayaks of Borneo (Furness, Home-Life of Borneo Head-hunters, Philad. 1902, p. 50). A survival of some such custom may be found in Europe, on the death of a Pope or of a king of Spain. In these cases a high official of the court calls with a loud voice three times the name of the deceased, and, receiving no reply, he certifies the death.

VI. Before the funeral.—Death having occurred, a number of significant customs are observed, only some of which can be enumerated here.
will be reserved for a subsequent section.

1. Opening of doors and windows.—In the British Islands and all over Europe it is usual to open all Islands and all over Europe it is usual to open all doors and windows. Nor is the practice confined entirely to the uneducated classes. It was reported about twenty years ago (30th Aug. 1890) to have been performed at the death of a dignitary of the Church of England (NQ, 7th ser, x. [1890] 170). In France, Germany, and Switzerland it is not uncommon to take a tile off the roof. This is constituted death with the chief of sometimes done before death, with the object of easing the departure of the soul. For the soul easing the departure of the soul. For the soul cannot escape unless the way be made open to it. Often, however, the window is permitted to remain open only for an instant, the return of the soul being feared (Ztschr. des Vereins für Volkskunde [=ZVV] xi. [1901] 267). In China a hole is made in the roof (Tylor, Prim. Culture, 1871, i. 409; JAI xxxiii. [1903] 103); and this used to be the practice of the Basuto wherever a man died within the hut (Journ. Afr. Soc. iv. [1905] 204).

2. Observances in the house.—Throughout Europe it is a common practice to stop all clocks in the

it is a common practice to stop all clocks in the house, and to cover all mirrors, or to turn them with their faces to the wall, immediately after a death. It may be conjectured that the latter was done to avoid puzzling and misleading the ghost in its efforts to quit the house. All water-vessels are emptied. Various reasons are assigned for this emptied. Various reasons are assigned for this custom, the most usual being perhaps a desire to prevent the ghost from drowning itself. The ghost is certainly conceived in many places as thirsty or needing a bath; and a special jar or bowl of water is provided for its use. In Greece, bread and water are placed in the death-chamber  $(JAI \times xiii. [1894] 37)$ . In some parts of France a jar of water is placed beside the corpse  $(RTP \times xiv. [1899] 245)$ . The Wends of the Spreewald place a dish filled with water under the bench on which the corpse is laid out, for which a sanitary reason is now given (von Schulenburg, op. cit. 112). The Mordvins put a cup of water on the window-sill of a dying man's house, for, on quitting its corporeal envelope, the spirit must wash (Smirnov, i. 357). Hindu rites require the heir (but apparently not until after cremation) to place in the habitation of the deceased a small vessel full of water, over which he ties a thread to the ceiling, and lets it hang down as a sort of ladder for the prana (lifenang down as a sort of ladder for the prana (life-breath, spirit) to descend and slake its thirst during the ten days following; and a handful of rice is placed as food every morning beside the vessel (Dubois-Beauchamp, Hindu Manners, Oxf. 1906, p. 488). It is probable, therefore, that the object of throwing away water standing in any vessels for household use is to prevent the deathpollution conceived as contamination by the touch of the ghost. This is confirmed by the practice in some districts of the Landes in the south-west of France where, after the death of the father or

See also §§ VI. 9 and et décès, 1902, p. 162).

XVII. r below.

3. Telling the bees.—Another custom is that of 'telling the bees.' When a Dayak dies, as soon as the body is removed the head of the household calls over the names of all the children and other members of the household, to prevent the soul of the dead from alluring their souls away, in which case they would die. This ceremony is repeated on the return from the funeral (Int. Arch. ii. [1889] 182). The catastrophe to be prevented here is exactly that which it is desired to prevent by the practice common in Europe of telling the bees of the death of their owner. Some one goes to the hive, knocks, and whispers the fact to the tenants, sometimes also informing them who their new owner is. A humming heard inside the hive is taken as an indication that they will remain. If the ceremony be not performed, they will all die or go away. Sometimes they are put into mourning by attaching a piece of crape to the hive, or the hive is turned round or removed, or a piece of turf laid on it. These are all expedients against the attempt of the ghost to lure the bees away, though other interpretations have been given by the people who practise them and who have lost the real reason. The precaution is by no means confined to bees. In Cornwall the bird-cages and indoor plants are put into black. In various parts of France all the domestic animals must be interpretationally. formed, crape must be attached to the pigsties formed, crape must be attached to the pigsties and to the eat. Even the trees must be told, and sometimes put into mourning. Elsewhere similar customs obtain (Choice Notes, FL, 1859, pp. 65, 90, 180, 210; Sébillot, Folk-lore de France, Paris, 1904-7, iii. 103, 375; Lloyd, Peas. Life in Sweden, Lond. 1870, p. 131). Among the Cheremiss the people even avoid watching a funeral procession from the window, for fear that the dead man may take them with him (Smirnov, i. 137). The prohibition against watching a funeral procession from a window is not uncommon. dow is not uncommon.

4. Wailing and dirges.—The custom of wailing is universal. The wail frequently begins before death, as among the Hottentots, who are said to surround a dying person, and 'set up such a terrible surround a dying person, and 'set up such a terrible howling as were enough, one would think, to fright the soul out of the body.' But this is nothing to what succeeds the death. 'The kraal shakes under the raging din; you hear them miles off' (P. Kolben, Present State of the Cape, Lond. 1731, p. 312). Where the funeral does not take place the same day, the wailing often breaks out with fresh force on that occasion: and it is kept up for periods of on that occasion; and it is kept up for periods of varying length among different peoples—from a few hours to months, or even years. Naturally, in the atter case it is only certain relatives (chiefly widows of the deceased) who indulge in it, and only at stated times of the day. Widows and other relatives, among many peoples, go to wail at the grave. The wailing is renewed at certain intervals of time —on the anniversary of death, or at certain feasts, or on the occasion of the exhumation of the bones. Elsewhere, among the Kaffirs, a son away at a distance, when his father dies, must wail on his return every time he enters the kraal during the next six months (Kidd, 250f.). In many cases the men join in the walling, while in others, perhaps among related peoples, it is left chiefly or entirely to women. It may be accompanied (at first, at all events) by the wildest demonstrations of grief, amounting to temporary insanity.

At a stage less than that, Dr. Junker describes the conduct of the women and slaves of a ruler of the A-Saudé of the Sudan. Sixty or seventy women went round the seriba wailing, turning somersaults, rolling in the dust, pretending to search in every couner, crying out, 'O my lord! Where is Fadl 'Allah? Lie! Lie! They crawled about on hands and knees under the projecting roots, constantly howling and lamenting. In the even-

ing, with music and dance, the men joined in the wailing, which lasted all night. The next day a raid was made upon the wardrobe of the deceased, and every woman who could get hold of an article of his costume put it on, and went round in procession, until the ceremony appeared like a fancy-dress ball. All their heads were strewn with ashes, that covered with dirt their faces and bodies as they rolled and tumbled in the dust. The proceedings lasted for fifteen days, becoming gradually less and less an exhibition of sorrow, and more and more the subject of evident enjoyment, until they finally degenerated into a festival of music and dancing (Frobenius, Heiden-Neger a. uyypt. Sudan, Berlin, 1893, p. 408).

In the Aaru Archipelago, when a member of the family dies, all the women leave the house with hair hanging loose, to wail upon the shore, tumbling head over heels, and smearing their bodies

bling head over heels, and smearing their bodies with dirt and mud (Riedel, Sluik- en kroesharige rassen, 268). Even in a much higher civilization, the conduct of the mourners is characterized by excess. At the death of a Maltese, two or three women, called neuwieha, were hired. Dressed in long mourning cloaks, they entered the house singing a dirge. After damaging and destroying certain parts of the property of the deceased, they threw themselves on their knees before the coffin, singing the praises of the dead, and cutting off handfuls of their hair, which they spread over the coffin (Busuttil, *Holiday Cust. in Malta*, 1894, p. 128)

It is obvious that the wailing, though doubtless originating in emotions common to humanity, has everywhere taken on more or less of a ritual character. This is seen alike in the excesses, in the fact that it is emphasized almost everywhere for men, in the prescriptions of time and place when and where it is to be repeated, and in the more measured forms into which it tends to pass. Among the latter are the dirges equally familiar in all quarters of the globe. There is little difference in

quarters of the globe. the substance of dirges.

the substance of dirges.

'Ah, ah me! Why hast thou died? Was there lacking to thee food or drink? Why then hast thou died? Ah, ah me! Hadst thou not a beautiful wife? Why then hast thou died? and so on, runs the lament in the Ruthenian tongue of the ancient pagan Prussians (FL xii. [1901] 300). The Hereros of German S.W. Africa cry: 'Now he is dead, he who always was so good; always he slaughtered cattle; always did he say, "Take only, take only" (S. Afr. FL Journ. i. [1870] 53). For one killed in war the Mundurucus of South America chant: 'Thou art dead; we will avenge thee. For that we are in the world, to avenge our own who fall in fight. Our enemies are not braver or more men than we are. My brother, my son, we come to bury thee. Thou art dead; to this end wast thou born. Thou art dead in war because thou wast brave; to that end our fathers and mothers brought us into the world. We must not have fear of enemies. Who dies in war, dies with honour—not like one who dies of sickness.' And reply is made by women in the name of the dead: 'My mother, my wife, you will die in your hammock; I died in war because I was brave' (Int. Arch. xiii. Suppl. 114).

Probably these specimens fairly represent the

Probably these specimens fairly represent the general matter of the dirges: a gentle reproach to the deceased for dying, and thus leaving those who were dear to him; praise of him—sometimes, as in the Irish 'keens,' in great detail; and vows to avenge him. In the more rudimentary cultures, dirges have not developed; the wailing, so far as it

is articulate, is confined to a few words or phrases.

The ritual character of the wailing is expressed very clearly, not only in the dirges, but also in the

very clearly, not only in the dirges, but also in the practice of hiring mourners to wail.

Among the Gros Ventres and Mandans of Dakota, 'those who mourn are always paid for it in some way by the other friends of the deceased, and those who mourn the longest are paid the most' (I RBEW 161). The Chiriguanos of South America caused their dead to be bewalled thrice a day—morning, noon, and evening—for several months at the grave by women hired for the purpose (Int. Arch. xiii., Suppl. 165). In Malta, as we have seen, and throughout the Nearer East, hired wailers are universally employed. Among the Bedui of Abyssinia it is the prostitutes who act in this capacity (Munzinger, Ostafr. Stud.<sup>3</sup>, Basel, 1883, p. 150). In Calabria, so necessary is wailing deemed that, if a stranger dies, women are hired to attend his funeral and wail over the dead (Ramage, Wanderings, 1868, p. 73).

The reasons for the rite have been a subject of much discussion. There may be more reasons than one. In the first place, there can be little doubt that excessive demonstrations of grief may, in some cases, be traced to the desire to avoid suspicion of having been accessory to the death. Bentley expressly asserts that in the Congo basin, where the belief in witchcraft is so powerful and so cruel, an ostentatious exhibition of grief is to avoid the charge of witchcraft (Pioneering on the Congo, Lond. 1900, ii. 259). In Angola, however, the noise is supposed 'to drive away the spirits' (JAFL ix. [1896] 16). Similarly, it is believed by the Klamath Indians of the north-west coast of the United States that for three days during the funeral ceremonies the soul is in danger from the O-mah-a, or demon. 'To preserve it from this peril, a fire is kept up at the grave, and the friends of the deceased howl around it to scare away the demon' (IRBEW 107). The Basuto hold that the spirits (we may assume that the ancestral spirits, including perhaps the immediately deceased, are meant) become enraged with any one who is so heartless as not to cry at the funeral of friend or relation, and punish him with some terrible sickness (Martin, Basutoland, 1903, p. 92). In some of the Moluccas the wailing is intended to affect the departed, to bring the spirit to its senses, or to render it conscious of its pay condition (Riedal are cert 465).

new condition (Riedel, op. cit. 465).

That the wailing is meant to affect the departed in some way seems to follow from the contents of the dirges, and from the fact that they are in many cases (perhaps usually) addressed directly to him. The sorrow expressed, the praises, the appeals to return, cannot but be supposed to have an effect on the spirit, which is believed to be hovering near and to partake in the ceremonies performed. wide and careful comparison of the customs of the South American Indians has led Theodor Koch to infer that the native is fully convinced that the dirges are understood by the deceased; and he suggests that the chief motive is conciliation the placation of one whose natural disposition would be hostile (*Int. Arch.* xiii., Suppl. 114, 117). That this motive does operate seems certain. A striking example is furnished by the Ja-Luo of East Africa. When a person dies, the whole vil-lage wails with great fervour for days, if not for months, and at stated intervals, according to the conventions laid down for the case. When a barren woman dies, the wailing is commenced in the usual The brothers and sisters of the deceased hasten to the place; and the first who arrives takes a sharp acacia-thorn, sticks it into the sole of the corpse's foot, and breaks it off. Immediately all wailing ceases, and it is never renewed (JAI xxxiii. 344). Hobley, who reports this ceremony, could obtain no account of its object. There cannot, however, be much doubt that the thorn is intended to prevent the deceased from walking after death and troubling the survivors. (A similar case is reported from the Moluccas by Riedel, op. cit. 81; see also § XI. 2 below.) A childless woman would naturally be envious and malicious, and would have no descendants over whose well-being she might be supposed to watch. Released, therefore, from the fear that she would leave the grave for hostile purposes, they would have no further motive for

conciliating her.

But it cannot be admitted that fear is the only reason for wailing. There is abundant evidence that the dead are believed to regard their surviving relatives—in particular, their descendants—with a measure of affection (at least of friendly interest), not unmixed indeed with caprice, that they are often dependent on them for the sacrifices and other means of rendering comfortable their existence in the world of the departed, and that they grant them favours and good fortune if satisfied with their treatment and general conduct. In these circumstances, it seems inevitable to con-

clude that the wailing is, in part at all events, a genuine expression of affection, and is intended to call forth corresponding feelings in the deceased

5. Toilet of the corpse.—Among the earliest cares after a death is the toilet of the corpse. The Yakuts perform this ceremony before death, in order doubtless to avoid embarrassment to the relatives by the defilement of death (RHR xlvi. 208). The body is usually washed. In the lower stages of civilization it is often merely painted. Whether washed or not, it is in these stages painted. The colour varies, but in the vast majority of cases recorded it is red. The bones of Neolithic dead in Europe are frequently found painted with red. Some of the Australian tribes rub off the outside skin, leaving the white underskin exposed—a practice not unconnected with the skin exposed—a practice not unconnected with the belief that the dead return white, as ghosts or white men (cf., e.g., Parker, Euchlayi, 91). The eyes are carefully closed, and the eyelids weighted to keep them shut. The uncanny look of a corpse with staring eyes accounts, partly, but not fully, for the universality of this practice. The ghost has not yet wholly deserted his mortal tenement, and the recent given by the Nicolay Lendens is and the reason given by the Nicobar Islanders is probably not far wrong, namely, that it is to prevent the ghost from seeing (Ind. Cens. 1901, iii. 208). At least it prevents the eerie feeling of the survivors that they are being watched. The best clothes of the deceased are commonly put on the body. Very often, relatives and friends contri-bute new clothes for the purpose. Among many peoples, as among the Chinese, and, indeed, among European peoples, the deceased has in life prepared special clothes, for the dead must enter the spiritworld in their best array. Sometimes, as in various districts of Germany, they are buried in their wedding-clothes. Ornaments, jewels, and particularly amulets, are not omitted. By a parsimony easy to understand, some peoples remove the most valuable clothing and ornaments before cremation or burial, but they are more usually left. Where shoes are worn, the deceased is shod, for he has a long journey to take. Such, for example, is the custom in many parts of Europe; and it extends in Great Britain as far back at least as the Late Celtic period. The toilet is concluded by binding the corpse in the attitude in which it is to be buried or otherwise disposed of. This attitude in all the lower planes of culture is very generally squatting, as we find among the pre-historic dead of Europe. It is often explained as that of the infant in its mother's womb; more probably it is that of natural rest. If necessary, the sinews, as among the Basuto (Journ. Afr. Soc. v. 357), or even the backbone, as among the Bechuana (JAI xxxv. [1905] 308), may be cut to admit of the body being bound in the proper position. Among the Slavic populations of Germany, as well as among the Masurs, it is customary to throw out the water used for washing the corpse, together with the vessel containing it, after the coffin as the funeral leaves the house, by way of precaution against haunting. In Silesia the water and water wassel are having In Silesia the water and water-vessel are buried where no one will step over them, else they will cause a wasting disease. The Wends scatter millet cause a wasting disease. The Wends scatter millet upon the poured-out water, for this will prevent the birds from eating it when afterwards sown (Tetzner, Slawen in Deutschland, Brunswick, 1902, p. 375; Töppen, Aberglauben aus Masuren<sup>2</sup>, Dantzig, 1867, p. 108; ZVV iii. [1893] 150; von Schulenburg, op. cit. p. 110). The Negroes in Jamaica throw out the water after the hearse or upon the grave (FL xv. 206, 88). On the other hand, it is said to be the custom in Oleai, one of the Caroline Telends, to drink the water in which the Caroline Islands, to drink the water in which dead children have been washed (Globus, lxxxviii.

[1905] 20). Possibly this is a means of securing that the children shall be born again.
6. Mummification.—The process of mummify-

ing, or drying up the body, either with or without

6. Mummification.—The process of mummifying, or drying up the body, either with or without embalmment, is widely practised.

In Australia the Unghi occasionally dry the body in the smoke of a fire made with green boughs of a species of sandalwood, and then carry it about to visit the places frequented by the deceased during his life. The Kaiabara also dry the body of a man of note, and carry it about for six months (Howitt, 467, 469). The same rough-and-ready way of preparing a corpse is found more or less throughout the west of Africa. It is thus that a Niamniam chief in the Upper Nile basin, and a king of the Warundi in German East Africa, are prepared for burial (Frobenius, op. cit. 409; van der Burgt, 40). Some of the tribes of British Central Africa attain the result by repeatedly rubbing the corpse with bolled maize (Werner, Brit. Cent. Afr., Lond. 1906, p. 163; Journ. Afr. Soc. v. 434). The body of the king of the Baganda was squeezed dry, the viscera being first removed, butter rubbed into it, and the viscera then replaced (IAI xxxii, 1902) 44). The Boule of the Ivory Coast take out the intestines, wash them with palm-wine or European alcohol, introduce into the cavity alcohol and salt, afterwards replacing the intestines and sewing up the body. These and other preparations, however, do not entirely prevent corruption; but it comes to an end in about three weeks, giving way to desiccation, and the body ultimately presents the appearance of an Egyptian mummy (Clozel and Villamur, 115). Some Philippine tribes dry the corpse by fire, while among the Betsileo and Antankarana of Madagascar, as frequently in the South Seas, it is dried in the air, the fluids being assisted to escape. By this process, in Erub and the Murray Islands, it is described by Haddon as becoming almost as light as pagier mache (Sawyer, Philippiness, 258, 277; Madagascar au début du xxx siècle, 1902, pp. 282, 286; Haddon, Torres Str. Exped. vi. 11903 186, Head-Hunters, Lond. 1901, p. 191). The bodies of chiefs in the Society Islands wer

The object of mummifying is in many cases, as it was in ancient Egypt, to preserve the body as a permanent habitation, or at least as a place of resort, for the soul. It is not unconnected with resort, for the soul. It is not unconnected with the cult of the dead (see ANCESTOR-WORSHIP [Egyp.], vol. i. p. 440, and 'Egyptian' art. below, p. 458). Where other peoples set up images of the deceased, those who practised desiccation or embalmment were enabled to keep the bodies themselves without difficulty.

Thus, the ancient Macrobiol put the body, after drying it, covering it with plaster and painting it like the living man, into a hollow block of crystal, set it up in the house for a year, and offered sacrifices to it, afterwards removing it and setting it up, with similar blocks, round the city (Herod, iii. 24). The aborigines of Virginia and Carolina placed the bodies of their kings and rulers in a large hut under the care of priests or medicine-men, apparently for a similar purpose (I RBEW131).

Elsewhere, as among the Bangela of the Unpress.

Elsewhere, as among the Bangala of the Upper Congo (JAI xxxix, [1909] 451) and other African tribes, and in the South Sea Islands, mummification is a means of preserving the body until a convenient time for the funeral, which is frequently postponed, for one reason or another, over month's or even years. But this object does not of necessity

exclude the former.

7. Feeding the dead.—Many other observances take place, which we need not describe here. Two, however, may be referred to. The sitting in state of the dead, in the Aaru Archipelago of the Molucope, has already here mentioned. While Moluccas, has already been mentioned. While he so sits, food is offered him by the members of his family. Offerings of food and drink to the dead before burial are frequent in the lower culture; sometimes, as among the Tho of Northern Tongking, they are even placed in his mouth. These offerings are found in both hemispheres. Even in modern Europe they are not unknown.
In the Department of Loir-et-Cher, France, everything in the house that is eatable is thrown into the death-chamber (RTP)

xv. [1900] 882). De la Martinière reports, in the 17th cent., that in Russia, after death, it was usual to bring a basin of holy water for the soul to bathe, and to place a piece of bread on the corpse's head, that he might not die of hunger on the long journey before him (2VV x. 435). On account of the possibility that the ghost will put his finger in it to taste it, the watchers of the corpse about Konigsberg, in the east of Prussia, avoid drinking brandy (Am Urquell, ii. [1891] 80).

A different precaution was taken in the north-east of Scotland, where, 'unmediately on death, a piece of iron, such as a knitting-wire or a nail, was stuck into whatever meal, butter, cheese, flesh, or whisky [was] in the house, to prevent death from entering them' (Gregor, Folk-Lore of N.E. Scot. 1881, p. 206). Although in recent times it was believed that corruption followed the omission of this precaution, it is probable that at an earlier period it was believed that the ghost partook of them. Iron is a well-known preservative against the attacks of supernatural beings.

8. The wake.—A formal announcement of the

8. The wake.—A formal announcement of the death, and an invitation to the kindred and others whom it may concern to come and perform the funeral rites, are given by messenger or by drum, or, at the present day in many communities in low civilization, by firing guns. During the interval between the toilet of the corpse and its final disposal it is watched-a ceremony known in this country as the wake, because it involves one or

more all-night sittings.

posal it is watched—a ceremony known in this country as the wake, because it involves one or more all-night sittings.

The corpse of an Australian of the Wimmera district of Victoria is watched by the clever old men and relatives, for the purpose of gaining a hint where to look for the slayer by witch-craft (Mathews, Ethnol. Notes, 145). Elsewhere in Australia the object is to guard the corpse 'from the spirits' (Parker, op. cit. 85). In this they agree with the Sabobas of California, who hold that until burial the soul hovers near the corpse, and a certain demon is on the watch to seize it; and this is prevented only by the vigilance of the survivors (JAFL xvi. [1903] 159). Among the Garos of Assam the watchers are kept awake by the young men of the village, who dress up as wild beasts and enter the house, 'to frighten the women with their howls and antics.' More probably, the real reason is to frighten away the ghost or other evul-disposed spirits (Playfair, The Garos, Lond. 1909, p. 107). The Koryaks, who practise cremation and burn the body on the day of the death, or a day or two after, allow no one to sleep while the corpse is in the house. The deceased is considered still a member of the family, and, to entertain him, they even play cards on his body (Jesup Exped. vi. [1908] 110). Cards are, of course, a modern introduction from the Russians; but they, no doubt, replace some other mode of amusement necessary to keep the watchers awake. So in some of the Moluccas, while children watch the dead in a separate apartment, smoking and drinking go on, and cards are played, the night before the corpse is prepared for burial. In others of the islands the corpse is watched until it is put into the coffin, and the watchers ask riddles and play games to keep awake. Two days and nights it sits in state, clothed and adorned with corals, gold, and silver. The soul remains in the house the first night; and, if any one in the house sleeps, he is liable to encounter the soul in the assent of the deceased is senses (Riedel

9. Tabus at death.—The horror of the dead has already been mentioned. Everywhere, contact with a corpse entails a condition for the adequate expression of which we must have recourse to the Polynesian word tapu, or the Gr. word ἀνάθεμα. In English the word usually employed is 'pollution' or 'defilement.' Since, however, neither of these words, nor any other in the language, conveys the full force of the Polynesian or the Greek, we have in modern times been fain to borrow the word tapu or tabu from the former tongue, for the condition

of a person or thing set apart and shunned for a religious or quasi-religious reason, including not only objects to which we should attribute sanctity and invest with terror on that account (as the Ark among the ancient Hebrews), but also such as excite (at least in our minds) horror, disgust, and execration. A corpse is always tabu. And, as one of the most remarkable characteristics of tabu is its excessive contagiousness, the greatest care is needed in approaching or dealing with a corpse. It is not quite clear whether the corpse is feared in and for itself as a dead body, or as the vehicle of death, or whether it is feared owing to its connexion with the disembodied spirit. The rule observed among widely sundered peoples, that every one who kills another—even a warrior who has slain an enemy in battle—must undergo purification, perhaps points to the last alternative. In any case, from the contagious nature of tabu, the prohibitions consequent on a death reach far beyond the persons who have been compelled to perform the last offices about a corpse. They extend to the whole house, the whole family, the whole clan, the whole village, nay, to the very fields, and even sometimes to the heavens.

the whole family, the whole clan, the whole village, nay, to the very fields, and even sometimes to the heavens.

An unburied body fills the Yakuts with horror and fear. All Nature, indeed, feels uneasiness: violent winds arise, storms howl, fires break out, strange noises, mysterious cries, are heard; and, if it be a shaman who is dead, these manifestations acquire fabulous proportions (RHR Xiv! 211). The result of this mysterious sympathy of the various elements is that no work can be done until the body is disposed of. All labour in the entire settlement used to be stopped when a Koryak died, until his cremation. No one went hunting or sealing, nobody went to fetch wood, and the women did no sewing (Jesup Exped. vi. 104). Among the Central Eskimo, singing and danoing are forbidden during the first days after a death. Moreover, for three days no one is allowed to work on iron, wood, bone, stone, ice, snow, leather, to empty the oil-drippings from lamps, or to clean lamps; women may not combited in a row wash their faces; and all sexual intercourse is forbidden. It is believed that the soul stays with the body for three days after death. During that time any violation of the tabus affects it so much with pain that by way of retaliation it brings heavy snowfalls, sickness, and death (Boas, Eskimo of Balin Land. 1901, pp. 131, 144). Among the Barea and Kunama of Abyssinia there is neither ploughing, nor soving, nor grinding until the corpse is buried (Munzinger, op. cit. 528). In many of the Molucca Islands all work is forbidden in a village while the corpse is unburied (Riedel, 168, 197, 223, 341, 444).

At Athens, according to Cicero, after the burial the grave was sown or planted as a kind of expiation, that the fruits might be rendered to the living. The statement seems to imply that the earth was put under a ban or tabu, either by the death or by the rendered to the living. The statement seems to imply that the earth was put under a ban or tabu, either by the death or by the continent of Europe to put up on

VII. Disposal of the corpse.—r. Object of rites.
—The chief objects of the proper disposal of the

corpse and the fulfilment of all the rites and customs in connexion therewith are to free the living from the defilement of death and to give rest to the deceased. Until they are all ended, the soul is not finally dismissed to its place in the other world, it is not united to the company of the fathers, it is not elevated to its due position in the household or tribal cult, and it continues to haunt the survivors unpleasantly. This belief is little short of universal in the lower culture, and might be illustrated from all quarters of the globe. The significance of the funeral ceremonies among the ancient Greeks and Egyptians is a commonplace of anthropology. In modern Europe the prejudice in favour of Christian burial in consecrated earth, with the full rites of the Church, may be traced to the same cause.

2. Denial of rites .- Yet for special reasons these rites are everywhere denied to certain classes of the dead.

(a) Babes and children under the age of puberty, or uninitiated in the tribal rites.

or uninitiated in the tribal rites.—

In India, where the practice of burning the dead is prevalent, children are generally buried. In some cases at least, and possibly in all, this is done with a view to securing their rebirth, for the common practice is to bury in or quite close to the house, often under the threshold. Similar practices for the same reason prevail among many other peoples of the Old and New Worlds (Hartland, Prim. Pat., 1909–10, i. 227). Funeral honours are denied by the Thô of Tongking to children under eighteen years of age and unmarried women. They are simply put into the bier and taken by the priest alone to the grave (Lunet, op. cit. 103). Among the Negroes of West Africa and some of the Bantu and Nilotic peoples, where burial is the ordinary practice, rites are denied to children, who are, indeed, often thrown out into the bush: the Wadjaggs bury them in the ditch that serves as the village latrine, subsequently digging up their bones and throwing them away (Leonard, Lower Niger, 1906, p. 183; Globas, Ixxii. [1897] 43, Ixxxix. [1906] 199; Cunningham, Uganda, 1905, p. 344). In civilized Europe unbaptized children are commonly buried without rites.

(b) Slaves and common people.—

tized children are commonly buried without rites.

(b) Slaves and common people.

Among the Haida in Masset, slaves are thrown into the sea (Jesup Exped. v. [1905-9] 54). In Oregon they were thrown out into the woods or left wherever convenient (Mem. Am. Anthr. Assoc. i. [1906] 170). Very widely in Africa ordinary and especially poor persons and slaves are simply flung out and left to the wild beasts. Common people in the Marshall Islands used to be sewed into a mat and put into the sea (Steinmetz, op. cit. 438). The Ants of Vancouver Island wrap old women and men and boys of no rank in the tribe in old blankets and leave them on the ground (Sproat, Scenes and Studies of Savage Life, London, 1868, p. 259). A worthless fellow is buried without rites in the New Hebrides (Rep. Austr. Assoc. iv. [1802] 730). The Wadjagga throw childless men and women into the forest (Globus, Ixxxix. 200).

The foregoing classes are probably recarded as

The foregoing classes are probably regarded as impotent for good or ill after death, just as they have been during life, and therefore needing no consideration. In other cases, however, this reason will not apply

(c) Those who die a 'bad death.'—The manner of death frequently determines the death rites to be performed, because it determines the fate of the deceased in the other world. The list of deaths regarded as 'bad' is not identical all over the world, but a wholesome horror of suicide generally prevails. Christian Europe agrees with pagan Africa in performing only maimed rites, or denying them altogether, in the case of such as have taken their own life.

have taken their own life.

Suicides are held by the Ewhe of Togoland to have been driven mad, either by rage or ill-treatment, or by some angry ghost, malignant spirit, or god. A suicide defiles the land and hinders the due rainfall. The relatives of the deceased must therefore be fined. A stake is driven through the body, which is dragged into the bush and there huddled into a hastily excavated hole. The subsequent solemnities are few and meagre, No drum is heard, no dances are executed, no fire is lighted in the street, no sacrifice is slain for him. A few bananas and pig-nuts and a little maize are laid beside the grave, two guns are fired, and the obsequies are over (Spieth, op. cit. 276, 274). The Chootaws of North America dispose of their dead on scaffolds, and afterwards collect the bones with great ceremony. But they bury at once without the usual obsequies any one who commits suicide (1 RBEW 168).

Death by lightning is also widely attributed to

Death by lightning is also widely attributed to the direct action of a god.

Among the Bechuana, if a thunderbolt kills a man, no one complains, none weeps; all unite in saying that the Lord has done right. They suppose the vectim to have been guilty of some crnne, probably stealing, for which the judgment of Heaven has fallen on him. The beliefs of their neighbours, the Basuto, Zulus, and Baronga, are smillar (Arbousset, Exploratory Tour, Cape Town, 1816, p. 225; Casalis, Basutos, Lond. 1861, p. 242; Callaway, Ret. Syst., Lond. 1870, pp. 60, 118; Junod, Les Barronga, Neuchatel, 1888, p. 422. As to the meaning of 'Lord' and 'Heaven,' see art. Bantu, vol. ii. p. 861).

p. 361).

Divine anger may be manifested, indeed, in any accidental death: the attack by a wild beast, the bite of a snake, drowning, a fall from a tree.

The Dayaks of South-East Borneo do not bury such as die by accident; they are carried into the forest and laid on the ground (Int. Arch. ii. 181). The Malays of the Patani States inter in a waste place or cast out to the dogs and vultures 'those who die of being killed,' as they phrase it—that is to say, in any violent, sudden, or unusual way (Fasc. Mal. ii. [1904] 77).

Death by drowning is often regarded as the seizure by the water-spirit of a victim: hence no

seizure by the water-spirit of a victim; hence no

effort is made to save him.

effort is made to save him.

Persons drowned, or shot, killed by wild beasts or by falling from a tree, are held in the Babar Archipelago to be slain by the messengers of Rarawolian, the war-spirit, in order that he may feed on their souls. Their bodies may not be laid out in the house or seen by children; they are left naked. They are put on scaffolds, with merely a piece of red linen thrown over them. Sacrifices of pigs are offered to Upulero, who is invoked on behalf of their souls. The pigs are not as a rule eaten, for fear of mistortume. Ultimately the body is laid on the ground in a spot set apart for such as have been slain by Rarawoliai (Riedel, 361). In the northern peninsula of Halmahera no funeral feast is solemnized for those who are unlucky enough to die away from the kampong, nor are their souls worshipped, unless they fall in battle (Int. Arch. ii, 209).

Everywhere those who die from the effects of the

Everywhere those who die from the effects of the poison-ordeal, so commonly administered in Africa to discover a witch, are held to be slain by the 'fetish.' The body is usually denied sepulture, and is thrown into the bush. To die of certain diseases is to be struck by a god, or at all events tabued. Such diseases are cholera and smallpox commonly in India, smallpox or leprosy in the island of Nossi-Bé near Madagascar (Steinmetz, 378), consumption in Cochin-China (Aymonier, Excursions et Reconnaissances, xvi. [1883] 171). Among the Agni of the Ivory Coast, when by means of divination (§ III. 3) the corpse obstinately means of divination (§ 111. 3) the corpse obstinately refuses to disclose whose witchcraft has caused the death, it is concluded that the deacond has offended some spirit, and he is senied burial as a punishment for the offended (Clozel and Villamur, op. cit. p. 120) or perhaps, we may conjecture for fear of the enraged spirit. In ancient Cooper executed criminals, though buried, were denied the customary rites; traitors and those writes of sacrilege were refused burial at home guilty of sacrilege were refused burial at home (Rohde, Psyche<sup>2</sup>, Freib. 1898, i. 217). On Nossi-Bé executed criminals and outcasts from the family are not buried in the family grave; wherefore in the other world they are condemned to find no rest (Steinmetz, loc. cit.); and the Ewhe bury them without rites (Globus, lxxii. 42). Down to quite modern times, in Europe it used to be the fate of certain classes of executed criminals to have their remains exposed on gateways and other places of public resort, until they rotted away. Repulsion, horror, dread, whether caused by the infringement of some tabu or by the anathema of supernatural beings, are doubtless the cause in all these cases of exceptional treatment and denial of the customary rites.

(d) Persons held in reverence are also under anathema or tabu. Their sacred qualities set

them apart from mankind.

them apart from mankind.

The Masai, whose reason for not burying ordinary persons is said to be that the bodies would poison the soil, bury their medicine-men and rich men (Hollis, 305). The inhabitants of Corisco Island, off the West Coast of Africa, lay their great men and twins (see art. Twins) under a sacred tree (Nassau, 41). The Sea Dayaske expose their priests on a raised platform—a privilego, however, which others may share, if they desire. The rest are buried, except such as die in battle, who are loft where they fall, surrounded with a paling to keep away the wild

hogs (TES, new ser., ii. [1863] 236). By way of special honour, the Paharias of the Santal Parganas do not bury their priests, but lay them under the shade of a banyan (Bradley-Birt, Indian Upland, 1905, p. 308). The Caddoos of North America leave unhuried the warrior slain in battle (I REEW 103). Some African tribes, as the Latuka and the Wudjagga, also leave the slain warrior unburied. But among the Wadjagga the reason is said to be that to bury him would draw a similar fate on others (Frobenius, 451; Cunninghana, 370; Globus, lxxxix. 199).

(e) Women dying in childbed are buried in Africa, both East and West, apart, and deprived of ordinary rites. The belief that a woman thus dying is under a curse, and becomes a malignant

dving is under a curse, and becomes a malignant ghost or vampire, is widely distributed. Special precautions are, therefore, taken against her depredations. A special rite in the shape of a sacriin Yunan (Anderson, Report on Exped. to W. Yunan, Calcutta, 1871, p. 131). A different expedient is mentioned below (§ XI. 2).

(f) Lastly, in the progress of civilization it has

been held that burial cannot be accorded to the corpse of a man who has died in debt, until his creditors have been satisfied. This barbarous denial of rites necessary to future happiness seems to have been the law in mediaval Europe. A corpse was arrested for debt in the neighbourhood of Shoreditch as lately as 1811; and, though damages were recovered against the creditors by the representatives of the deceased, the fact witnesses to the late survival in England of the belief that the corpse of a debtor could legally be deprived of rites (NQ, 8th ser. ix. [1896] 241; cf. ib. 356 and x. 63). Even yet in many places—the island of Celebes and West Africa, for example (L'Anthropologie, iv. [1893] 626; Globus, lxxii. 42; Dennett, Black Mun's Mind, 1906, p. 46)—the dead cannot be buried until his debts are paid; and among the Fantis, at all events, he who has the temerity to bury a man becomes liable for his debts (Cruickshank, Eighteen Years on the Gold Coast, Lond. 1853, ii. 221). The incident is the Loundation of a number of folk-tales, from India to Ireland, and has repeatedly formed part of a literary plot.

3. Mode of disposal.—The modes of disposing of

one corporation we enumerated as (a) cannibalism, of sub-aerial deposit, (c) cave deposit, (d) water burial, (c) earth burial, (f) preservation in hut, (g) cremation.

(a) Cannibalism.—See art. CANNIBALISM, vol. iii. p. 194, and below, § XV.

(b) Sub-aerial deposit.—To leave the body on the ground was probably the earliest, as it is the simplest and most savage, form of disposal of the dead. Ordinary people are still by many tribes, as we have seen, simply flung aside. Among the Masai, burial is a special honour conferred only on a man of wealth or a medicine-man. All medicine-men are descendants of one family of supernatural origin. We may conjecture that the meaning of the tradition of supernatural origin is that their ancestor was a stranger belonging to a tribe on a somewhat higher level of civilization, where burial was customary (Hollis, 305, 325). Burial is, however, not necessarily a mark of advancing civilization. The Seri of the Californian Gulf, who are among the lowest of known savages, bury their dead (17 RBEW 288\*). On the other hand, the religion of Zoroaster seems to have imposed the rite of exposure of the corpse, to be devoured by dogs and vultures, in comparatively civilized times on a reluctant people, who were previously in the habit of burying their dead. It appears, in contrast with the rite of the Masai medicine-men, to have been at first only the practice of the sacred caste, and to have been enforced by them on all believers under the most awful sanctions, both temporal and spiritual. A thousand stripes are denounced in the Zend-Avesta on him who shall bury in the earth the corpse of a dog or of a man, and not disinter

it before the end of the second year; but, if he delay beyond that time, there is no atonement for ever and ever. Death and damnation are his fate. Indeed, merely to omit the exposure of the corpse within a year, though other parts of the ritual may have been complied with, is to be liable to the same penalty as the nurder of one of the faithful (SBE IV. xlv. 8, 31, 52). We may perhaps measure the difficulty of securing uniformity by the violence of the language and the terror of the threatened penalties. It must have been almost as uncomfortable to be a heretic in Persia as in medieval and post-mediaval Europe. Nor have the Parsis of India, in spite of their high civilization, abandoned this distinguishing characteristic of their high Europe. faith. See 'Parsi' art. on present subject (p. 502). The Veddas of Ceylon, like the ancient Chinese,

simply lay the corpse in the jungle, covered with leaves and brushwood (Tennent, Ceylon, Lond. 1859, ii. 442; Davy, An Account of the Interior of Ceylon, Lond. 1821, p. 117; de Groot, Rel. Syst. China, Leyden, 1892ff., ii. 368).

Among the Australian tribes and those of Tasmania the most varied matheda of disposal are

mania the most varied methods of disposal are found-exposure, cannibalism, burial, cremation.

Where exposure was practised, it was usually on a rude platform of boughs, or in the branches of a tree. The latter is regarded by the Unmatjera as an honour denied to the very old and infirm, and to such as have violated tribal customs (Brough Smyth, i. 108-121; Howiti, 450-474; Spencer-Gillenb, 500-545; Int. Arch. xvi. [1904] 8; Roth, Abor. of Tasmania, Lond. 1809, pp. 128-134). The same honour is also paid by the Andamanese to those esteemed worthy (Ind. Cens. Rep., 1901, iii. 65). In fact the exposure of the dead on stages, or by suspension from the branches of a tree, or from cross-bars supported on poles, is very widely spread in the Eastern Archipelago, and is practised by some of the tribes of Assam.

On the American continent, deposit on scaffolds, or in the boughs of trees, was extensively practised. In the interior of North America it was the common mode of disposal, the object being to keep the body out of the way of carnivorous beasts and to facilitate desiccation.

beasts and to facilitate desiccation.

The Hurons and some other tribes put the corpse into a coffin or box of bark or wood (often a hollowed log)—a custom also followed in British Columbia, where the 'grave-box' was trequently deposited on the ground and covered with leaves (I RBEW 158-104, 166, 168, 168); 5 RBEW [1887] 111. The various Reports on the N.-W. Tribes in the Brit. Assoc. Reports describe the customs of the Indians of Brit. Columbia. See also Jesup Exped. v. 54, x. [1008] 142). Ruder than these was the custom of the Blackfeet. 'They think it a horrible practice to expose the body to the worms and vernin that live in the ground.' So they leave it for the wild beasts and birds, above ground, on a hill-top or in a tree (B.A. Rep., 1887, p. 192; Petitot, Trad. Ind. du Canada Nord-ouest, Paris, 1886, p. 492). The Estimo often leave the dead on the ground, though some of them have learnt to use 'grave-boxes' (II RBEW, 175, 193; IS RBEW [1899] 312). The Kamtchadals used to throw away their dead to be devoured by dogs. The Chukchi, Gilyaks, and other Siberian tribes followed the same practice, or else disposed of the corpse by cremation; the Yakuts, however, used to put them in boxes and suspend them from the trees or put them on rough scaffolds in the forest (Jesup Bayed. vi. 104; RHR klvi. 211; Amer. Anthr. viii. [1906] 239). In New Caledonia the dead are placed on the summit of a cliff, on a bed of leaves or dried grass (L'Anthrop. xiii. [1902] 547).

The necessity of sub-aerial deposit either on the ground or on scaffolds or in the branches of trees has been, in some at least of these cases, forced upon the survivors by the condition of the soil. In the higher latitudes of the Northern Hemisphere the ground is often frozen for months, and it is impossible during that period (especially with the rude tools available) to dig. Even with the appliances of an advanced civilization this is found impracticable in Canada. Canadian settlers often have to content themselves during the winter with placing their dead above ground in a mortuary, and leaving them there until the spring. They only follow the example of some of their aboriginal predecessors and neighbours.

The Naskopies still 'suspend their dead from the branches of trees, if the ground be frozen too hard to excavate, and endeavour to return in the following summer and inter the body' (11 RBEW 272).

(c) Cave burial .-- An archaic and widely distributed mode of burial is in caves.

(c) Cave burial.—An archaic and widely distributed mode of burial is in caves.

Human bones, remains of sepulture of the Neolithic people formerly inhabiting Laguria, have been found in caves at various points along the Riviera, notably under stalagmitte floors in the Bas-Moulins cave at Monaco (UAnthrop. xi. [1901] 7). Among examples of a much more recent date, but still very ancient, is that of the Hebrews (e.g. the cave of Machpelah, Gn 2310 259 35<sup>247. 5</sup>013), and the custom is not yet wholly extinct in Palestine. In the Moluccas, the Philippines, the Sandwich Islands, as well as in the coral islands of the South Seas (both Melanesian and Polynesian), where caves abound, the practice prevailed of depositing the bodies, or, after desiccation, the bones, in caves and clefts of the rock often all but inaccessible. In some of the islands the custom is now restricted to the remains of chiefs, and the motive is said to be to prevent desceration by enemies, though probably it was at one time more general (Bilis, Polyn. Res. i. 405; JAI x. 141). Similarly, among the Betsileo of Madagascar the chiefs are deposited in caverns (Mad. au xxx sizete, 201, 201). In Africa it is found sporadically from north to south; it was the common practice of the Hottentots and the special privilege of the kings of Quissanga and Quiteve (Kolben, 313; Res. S.E. Africa, vii. [1901] 378, 382). On the western side of the North American continent it has been recorded of many bribes from Alaska to Mexico, as well as in the Aleutian and West Indian Islands. Among some of the Pueblo peoples of Arizona and New Mexico the practice seems a relic of the former habitation of the caves. When they were occupied as dwellings, the dead were frequently buried in the furthest recesses; and the same caverns or other clefts and shelters of the rocks have been retained by a very natural conservatism as the appropriate dwelling-places of the dead (18 RBEW 348, 355; Am. Anthr. vi., new ser., 660).

This method of disposing of the corpse, rude as it seems, ha

it seems, has been capable, as in ancient Egypt, of developing grandiose sepulchres, by artificial excavation and the provision of pompous doorways, and thus of influencing the development of a national architecture. Even where, as in Sicily, such a result was not attained, artificial excava-tion was frequently practised. Enormous num-bers of such tombs, attributed to the Siculi, have been explored in the mountain of Pantalica near Syracuse (L'Anthrop. xii. 190). It is obvious that cave burial, whether in natural or in artificial hollows, can be adopted only in rocky or mountainous regions, and then only where the geological formation is suitable. A mode of burial widely extended in Africa and found in other parts of the globe is that of sinking a perpendicular shaft in the soil and excavating, at or near the bottom, a side-vault in which the body is placed. These graves have lent themselves to the suggestion that their form is derived from a pre-vious practice of cave burial. They are actually found in some of the Fiji Islands concurrently with burial in caves (JAI x. 144). Ordinary chamber-tombs excavated in the rock are found in Crete, as on the mainland of Greece. Side by side with them at Knossos and belonging to the same period, classed by Evans as the Third Late-Minoan Period, have been found also excavated in the soft rotten limestone both simple pit-graves and graves consisting of a shaft and side-vault; as though all three types of grave had diverged from one common original, and that original a natural cave. The conclusion, so far as regards the last-named type, is perhaps rendered all the more probable by its recurrence elsewhere around the Mediterranean, where burial in natural or artificial caves was practised (Archeeo

logia, lix. [1905] 391 ff.).

(d) Water burial.—To fling a body into the se or a river is one of the easiest ways of getting ri of it. That doubtless is the reason for thus dis posing of the corpses of slaves or common peopl (see above, VII. 2 (b)), in various places. Bu it does not account for every case of wate burial. Where the object is not merely to get it is the best burial to be a superscript of the best burial of the bur rid of the body, but to prevent the decease from returning to plague survivors, probably fe-more effectual means are known to peoples i the lower culture than to throw the corpse int the water; for water is usually esteemed a barri

to maleficent spirits, and particularly to the

The corpses of pregnant and barren women (who are naturally evil-disposed), and of lepers, are regarded in Tibet as specially tabu. They are, accordingly, either thrown beyond nine hills and dales, or packed in horse- or ox-skins and thrown into the waters of the great Tsang-po River (Chandra Das, op. cit. 255). The Guayakus of Paraguay and the Cherokees commit their dead to the waters of the nearest river; the Gosh-Ute of Utah sink them in springs, possibly for fear of the departed spirit (L'Anthrop. xiii. 638; I RBEW 180).

This may have been one of the reasons for the

This may have been one of the reasons for the occasional practice of water burial found in various parts of the world, as among the sect of Bhagar Panthis in the Panjab (*Rep. Cens. Ind.*, 1901, xvii. 168), or some of the West African tribes (Nassau, 233). On the other hand, water burial is sometimes

regarded as an honour.

regarded as an honour.

One who is specially beloved or beautiful is, in the Bismarck Archipelago, not buried but laid in a boat pulled far out to sea, and there the boat and its contents are sunk (Thilenius, Ethnop. Ergeb. aus Melanesien, ii. [1903] 220. To fling the dead into the sea was quite common in Polynesia. The Chibchas of New Granada were reported by Oviedo to lay their chiefs in golden coilins and sink them in the water (Int. Arch. xiil., Suppl. 66). The corpse of the slain Baldur, with his wife and steed, and the gift of Odin's ring Draupnir, was laid in his ship upon a funeral pyre and launched forth blazing on the sea. Myth as it is, this tradition doubtless records the striking spectacle of many a Viking's funeral.

In various parts of the would earth burial or sub-

In various parts of the world earth burial or sub-aerial deposit in canoes is found—a relic perhaps of earlier exposure to the waves. Thus it was not infrequent for a Viking to be laid in his ship and

the howe heaped over it.

(e) Inhumation.—The position of the grave is determined by various considerations. Among some peoples there is no fixed rule; and it seems that the dead may be buried anywhere, according to convenience or the caprice of the survivors. This is said to be the case with some of the Bantu tribes, as the Matabele and the Barotse. The latter, however, bury in secret, from which we may probably infer that the object is to leave no clue to the burial-place lest it be violated by wizards (JAI xxiii. 84; Béguin, Ma-Rotsé, 1903, p. 115). In some of the Moluccas, graves are scattered everywhere outside the villages (Riedel, 81, 225). The Chilcotin are said to bury wherever the death occurs (Jesup Exped. ii. [1900-8] 788). Among the Chinese and other nations in the Extrapara East the Chinese and other nations in the Extreme East the situation of the grave is determined by diviners, whose art is called in Chinese fung-shui, defined by de Groot (iii. 935) as 'a quasi-scientific system, supposed to teach men where and how to build graves, temples, and dwellings, in order that the dead, the gods, and the living may be located therein exclusively, or as far as possible, under the auspicious influences of Nature.' The practice is, therefore, founded on the conviction that the is, therefore, founded on the conviction that the dead dwell in the grave exactly as the living dwell in a house. This conviction is by no means confined to China and the surrounding countries; it is explicit or implicit everywhere in the lower culture. The imagination clings to it; and mankind has found it extremely difficult to get rid of the notion, though it has continually come into collision with the teachings of the higher philosophies and religions. Accordingly, the dying man's own wishes are often consulted as to the place of his burial, or it is determined after his continual and the place of his parally or it is determined after his death, as in the Babar Archipelago (Riedel, 359), by supposed movements of the coffin in answer to questions put to the corpse. This is, of course, a species of divination. It is more commonly decided by the manner in which the dead are regarded, that is to say, whether fear, on the one hand, or affection and hope for future benefits, on the other hand, predominate in the minds of the survivors. But see § XIX.

burying children in, or at the door of, their mother's hut. A comparison of the reasons alleged for so doing, and of other practices and beliefs, leads to the conclusion that the object is to obtain a re-

birth of the child.

birth of the child.

The custom is found in Africa East and West, in the Panjāb, and among some of the Naga tribes of Assam, in Java, in the Andaman Islands, among the Karo-bataks, the Creeks, the Seminoles, the Chols of Southern Mexico, and in several of the Molucca Islands. On the island of Keisar it is suggestive that children are buried under their parents' sleeping-places, while in the Aaru Archipleago they are not buried, but hung up in the house above their parents' beds. In Tibet a new-born child who dies is kept in the house or on the roof. The ancient Italians buried their dead children under the caves of the house; and to this day the Russian peasant buries a still-born child under the floor (Hartland, Prim. Paternity, i. 227; JAI xxvi. [1897] 200; I RBEW 116; Starr, Notes Ethnog. S. Mexico, ii. [1902] 74; Riedel, 421, 267; Chandra Das, 220.

(ii.) Others than young children.—Burial or sub-

(ii.) Others than young children.—Burial or subaerial deposit at a distance prevails among the Australian tribes and among the Negroes and

Bantu.

It is, however, far from being the universal practice among either the Negroes or the Bantu. Among both those races the head of the household is frequently buried within his own settlement or compound, or, as among the Katlirs of South Africa, in the cattle kraal. Various tribes of Negroes bury in or near the village. On the Ivory Coast several bury under the hut (Clozel and Villanur, 118, 157, 321, 386, 410, 467). With some of these, as well as the West African Bantu, burial under the floor of the house, or in the kitchen-garden adjoining, is a distinction reserved for a chief, or a specially beloved relative. In others the custom seems more general, and the head of the household at least is usually buried in his own house (Nassau, 61; Leonard, 159; Spieth, 256, 634, 702, 752; JAFL ix. 17). The same rule applies to the Kilotic and Bantu ribes on the other side of the continent (Johnston, 554, 632, 693, 715, 748, 779, 793, 880; Casadi, Ten Years in Eguatoria, Lond. and N.Y., 1891, i. 303; Gessi, Seven Years in the Soudan, Lond. 1892, p. 32; JAI xxxii. 265; van der Burgt, op. cit., art. 'Enterrement'; Werner, 157, 163, 165.

In Madagascar the practice differs with the

In Madagascar the practice differs with the tribe. The Betsimisaraka, Sakalava, and other tribes bury at a distance in solitary places, and their graves are greatly feared, while the Betsileo and Hovas bury on the roadside and even between the dwellings (Mud. au xx siccle, 278).

and Hovas bury on the roadside and even between the dwellings (Mad. au xx\* siccle, 278).

A similar diversity is found among the forest and pampas tribes of South America, some of which bury under the hut. The Uanans bury on small islands in the river (water is notoriously difficult for the dead to cross) or else in the hut occupied by the deceased. But in the latter case the hut is deserted (Int. Arch. xiii., Suppl. 85). The motive in both is obviously fear. In North America, tribes like the Hupa, Wichita, Nez Percés, Shuswap and Thompson Indians, to mention no more, laid their dead near the village or encampment. Some, like the Creeks and Seminoles, buried them under the house. Others, such as the Nomiski of California, buried them at a distance. The Zuñis, who, like other Pueblo tribes, probably in former times buried their dead in their cavedwellings, still pursue the practice in their nucdern houses on the messa (13 RBEW 330, 345, 346, 365). Many of the islanders of the Eastern Archipelago and the Pacific Ocean bury in the dwelling of the deceased; but there is no uniform practice. In the interior of Viti Levu (Fiji), for instance, in the province of Ra, many persons were buried before the threshold of the house, or in case of men under the clan dormitory; elsewhere the dead are buried at a distance because they are feared (Anthropos, iv. [1909] 38, 96). In Assam the grave is dug in front of the house (IAI xxxvi. 1906) 96). In ancient Asyria and Babylonia the ordinary dead were buried under the dor of the house (ARW x. 105). What looks like a relic of the same custom is found among the Lolos of Western China: the day after the funeral a hole is dug in the death-chamber, and a formal prayer offered that the star of the deceased will descend and be buried in that hole. It is believed that if this were not done the star would fall and possibly hurt some one (IAI xxxiii. 103).

The burial-place is frequently in a grove or

(JAI xxiii: 108).

The burial-place is frequently in a grove or thicket, afterwards shunned as sacred. Chiefs or medicine-men, like Bantu monarchs and Buriat shamans, are, in particular, recipients of this Rotuma are buried on the hill-tops (JAI xxvii., 1898] 431, 432). On a hill or a headland a noble Norseman loved to have his howe or barrow. The Arapahos, the Wichita, and other North American tribes lay their dead commonly on hills or bluffs.

Among many peoples each family or each clan (i.) Children.—As an illustration of the latter has its own place of burial, whether the mode motive may be taken the wide-spread custom of disposal of the dead be by cave burial, inhumation, sub-aerial deposit, or cremation. This was the custom of the ancient Greeks (Rohde, i. 229) as well as of the ancient Hebrews; and it is continued to this day in the Holy Land (Wilson, Peasant Life, 158). Nor is it confined to a comparatively high stage of civilization. It is a natural and by no means uncommon outgrowth of the

Peasant Ly2, 158). Nor is it confined to a comparatively high stage of civilization. It is a natural and by no means uncommon outgrowth of the feeling of kinship; and, where ancestor-worship exists in a developed form, it adds strength to it by concentrating the cult about one spot.

The Chinese custom dates from barbarism; and the practice of fung-shut has never necessitated its abandonment (de Groot, iii. 829). Every clan of the Baganda, and even of the Muhammadanized Swahili, has its burnal-place (JAIxxxii, 51; Velten, Sitten und Gebruuche, 1903, p. 259). Every family of the Chechens in the Caucasus and of the Barca and Kunama in Abyssinia has its vault (Anthropos, iii. 1908) 734; Munzinger, 528). On the Gold Coast, among the Tanala of Madagascar, the Nicobarese, and some of the British Columbian tribes the families have common burial grounds (JAI xxxxii, 183; Globus, Ixxxix, 361; Int. Arch. vi. 24; Jesup Exped. i. 336, v. 54). The Uralis of Southern India have a common burial-ground at Nirgundi, in which all are finally laid to rest; but each sept has its own burial-ground close to its village, where the preliminary obsequies are celebrated (Thurston, Castes and Tribes, vii. 256). The Chams of Further India and the Khasis of Assam practise cremation; their ashes are deposited in the family sepulchre (Cabaton, Chams, 48; Gurdon, Khasis, 1907, pp. 132, 140). As society becomes more highly organized, the custom contributes materially to the family pride, and it becomes emphasized by kings and nobles. The kings of ancient Scythians and modern Kaffirs, Tongan chiefs and English peers, agree in displaying the same vanity.

Where, strictly speaking, there is no family sepulchre, sometimes, at least, the body is buried upon the property of the deceased or his family. The ancient Norseman's howe was upon his own land. The Quiché of Central America buried in their maiz fields (Int. Arch. i. [1897], Suppl. 71). The Buquidnones of the Philippines and the Mossi of West Africa are laid in their own cultivated fields (Saw

of Keisar, one of the Moluccas, a great nunu-tree stands in an open square in the centre of every village. Beneath that tree the forefathers sleep, and the dead of rank are still buried around them. It is thus a sacred place, and feasts are held there (Riedel, 422). The same character attaches to the Men's House, or Bachelors' House, necessary to a village in other islands of the East Indies; and often there, if not every man, at least every important man, is buried, and his bones are preserved after the final rites (cf. Globus, xciv. [1908] 166, 168).

(f) Preservation in house.—Many peoples preserve the body above ground in the house, either with or without previous desiccation or mummificawon. Ins practice originates in a rude and archaic condition of society, and is frequently abandoned, as civilization progresses, in favour of temporary or permanent burial. This practice originates in a rude and archaic

permanent burial.

Thus in Tahiti, a native tradition, which doubtless represents something like the real sequence of custom, speaks of a period when the dead were allowed to remain on a kind of stage in the house in which they had lived, and which continued to be occupied by the survivors. But by and by separate houses were built for the dead—small temporary buildings, where they were laid, and whence they were drawn out to be exposed to the rays of the sun. The corpse was visited from time to time by the relatives, and was rubbed every day with aromatic oils. The bones were ultimately deposited in the family marx, or temple, or else buried, except the skull, which was wrapped in native cloth and preserved, often suspended from the roof of the dwelling-house (Ellis, op. cit. i. 404).

Notwithstanding all reverence for the dead, and all precautions in the shape of desiccation and per-

precautions in the shape of desiccation and perfumes, the custom of keeping the body in the dwelling during the process of decay must have been found intolerable. Tribes to which immediate dwelling during the process of decay must have been found intolerable. Tribes to which immediate burial was repugnant therefore usually adopted one lands to the higher grounds. 'The annual irrigations are of

of two courses: they abandoned the hut to the corpse, or they removed the corpse until dissolution had been carried far enough to render it no longer offensive.

had been carried far enough to render it no longer offensive.

So the Wagogo of East Africa keep the corpse of a man of rank in the hut until it putrefies, while they mourn and drink pombe. It is then placed on a scaffold in the open air until only the bones are left, when they at last are buried (Steinmetz, 211). The Attiwandaronks, or Neutrals, of North America kept the body in the house 'until the stench became intolerable.' It was then placed on a scaffold in the open air, that the work of decay might be there completed. The remaining flesh being scraped from the bones, the latter were atterwards arranged on the sides of the cabins in full view of the inmates until the Feast of the Dead, the great day of general interment periodically held (Hale, Book of Attes, 1883, p. 72). The Muong or Mon of Tongking kept the corpse in a coffin for three years in the house, before the altar of ancestors; but they palliated the results of dissolution to some extent by fixing a bamboo tube in the lid of the coffin and carrying it up through the roof to permit the foul gases to escape (Lunet, 352). In West Africa the Baoulé enhalm and preserve the corpse in the hut for months or years. In spite of embalmment, the odour for three weeks is horrible. It then gradually dimnishes, and by the end of two months the corpse presents the appearance of an Egyptian mummy. In this state it is kept until the convenient time for the final rites, with which it is laid in a grave under the hut (Clozel and Villamur, 115, 118). The Yumbos of South America also mummity their dead, and hang them up in the house under the thatch (Int. Arch. xiii., Suppl. 79). In the Gilbert Islands the body of a king or warrior is often wrapt in mats and preserved on one of the cross-beams of the hut (&b. il. 43). On the other hand, the Saccha of South America lay out their dead in the house, pull down the house over him, and abandon it to him (Int. Arch. xiii., Suppl. 85). The practice of abandoning the hut to the dead is followed in many other places. Its moti

that has been adopted from time to time by nations widely scattered over the earth. It is the ordinary mode in India among the aboriginal peoples, as well as among the Hindus; it extends through Further India to Tongking, and has obtained a footing by Hindu influence on some of the East Indian islands. It is practised by many tribes of Siberia and of the Pacific slope of North America. In ancient times it was also practised widely (though perhaps not exclusively) by the tribes of the North American plains and of the Mississippi basin and Atlantic shores. It is customary among some of the northern tribes of South America, and among the Melanesians of North New Mecklenburg and New Hanover, two of the islands of the Bismarck Archipelago. The funeral mounds of Europe witness to its use in pre-historic times, from the south of Russia to the British Isles. The practice seems to have begun on the Continent in the Neolithic age. It became general during the Age of Bronze, and was continued right down to the Christian era, and among many tribes probably down to their conversion to Christianity. To the northern invaders who founded the dynasties and the polity predominant during the Homeric age of Greece we may with some confidence attribute the introduction into the Eastern Mediterranean of cremation, foreign as it was to the usages and beliefs of the Mycenean age. From Greece, or directly across the Alps, it spread to Italy; and, though among the Romans it never succeeded in entirely ousting the prior practice of inhumation, it became throughout the Roman Empire the fashionable mode of disposing of the dead among the official and wealthier classes. It is sporadic or occasional in many other parts of the world.

More than one reason may have conduced to the practice of cremation:

(i.) Tribes without a settled abode may have found it convenient, if they desired to carry about the remains of their dead, or to remove such remains beyond the possibility of desecration by their enemies.

great regularity, and have affected the habits of the tribes in various ways. On the death of an adult, his effects are collected for distribution among others than his relatives. The body is for distribution among others than his relatives. The body is laid on a pyre beside his hut; and, after all the claimants have been satisfied, the corpse and the rest of his goods are burnt, together with the hut and any neighbouring huts belonging to the clan that may happen to eatch fire. The survivors then abandon the site (Amer. Anthrop. iv., new ser. [1903], 480). The Man Coarse an immigrant people of Northern Tongking; and, though they have been settled as cultivators of the soil in the mountainness received first country for many corrections their willoses. they have been settled as cultivators of the soil in the mountainous region of that country for many generations, their villages are still constantly removed from place to place, to suit their rudimentary method of agriculture. They formerly burnt their dead, and carried the ashes with them in their migrations. But the custom has been generally given up, because the accumulated ashes of generations became an intolerable burden. It continues, however, in the west of the Red River basin, where the bones, after incineration, are placed in earthen jars (Lunct, 246). The Northern Maidu cremated only those who died far from hone; and in such cases the ashes were taken home and there buried (Bull, Am. Mus. Nat. Hist. xvii. 242). A similar practice was recorded among the Algonquins (Charlevoix, vi. [1744] 100), among the Haida of Masset (Jesup Exped. v. 54), and other tribes.

Many neonles hold that it is a verilla to suit in the suit of the suit is a verilla to the suit in the suit is a verilla to the suit in the suit is a verilla to the suit in the suit is a verilla to the suit in the suit is a verilla to the suit is a verilla to the suit in the suit is a verilla to the suit is suit to the suit is suit to the suit is the suit of the suit is suit to the suit is suit to the suit the suit to the suit to the suit the suit to the suit th

Many peoples hold that it is possible to work witchcraft by means of the bodies of the dead. It is probable that this may have been at least a contributory cause, inducing migratory tribes to

burn their corpses.

(ii.) Another very powerful motive for cremation is the desire to be quit of the ghost. Various means are adopted for this purpose (see XI.). Cremation is only one of these, but it is not the least potent. This is best observed where cremation is exceptional, as on the continent of Africa.

mation is only one of these, but it is not the least potent. This is best observed where cremation is exceptional, as on the continent of Africa.

Among the Yaos and Mang'anja a woman who was accused of witchcraft, and who refused the poison-ordeal, was burnt (Macdonald, Apricane, 1882, i. 104). In West Africa burning is especially the mode of disposing of bodies of criminals, by which are meant persons accused of witchcraft, some of whom are also burnt to death (Nassau, 234). The Wakulwe and other tribes in the neighbourhood of Lake Tanganyika believe that a month or two after death the process of decomposition brings back the bones to life. A mysterious being called Nkiua animates them; and by means of the new body thus formed it sets about torturing, and even killing, some other member of the family of the deceased. In order to prevent this, the corpse is dug up and burnt to ashes. Not a bone must be left, for even the smallest would suffice to give shelter to the Nkiua. A witch-doctor, or diviner, presides at the ceremony, while an assistant asperges the body with a sort of holy water, saying, 'Sleep in peace, sleep in peace' (L'Anthropologie, xxi. 1905) 375). The Nkiua thus roughly corresponds with the Varnpire of Europe, whose misdeeds were often stopped by a similar process of burning. But there is this difference that, whereas in Europe only some persons were credited with becoming vampires, among the African tribes in question all corpses are exhammed and cremated.

We have already seen that persons who die an evil death are denied the ordinary rites. Among such persons are usually reckoned those who die of smallpox, in childbed, by murder or suicide. In Siam the corpses of the Wakulwe. It is alleged that if this were not done the spirits of the departed would return and torment their friends (Globus, xiv. 1863) 27). The Chingpaws of Burna bury; but burning is simulated in the case of those who die of smallpox, or by violent deaths (Anderson, p. 131). Among the Kols of Chota Nagpur, where cremation is

It has already been mentioned that the ancient Pueblo tribes of the south-west of the United States buried their dead in their cave-dwellings. Concurrent with this custom, however, there was another, by which the dead were cremated. The co-existence of these two customs was held by

Cushing, one of the most careful and acute of observers, to be due to the coalescence of two peoples namely, of Yuman and Piman tribes of the lower Colorado region—who practised cremation, with the true Pueblo tribes, who practised cave burial. The Zuñis have now abandoned cremation, if they ever practised it. They insist that, should they incinerate the bodies, there would be no rain, for their dead are the uwannami (rain-makers). cineration, they believe, would annihilate the being' (13 RBEW 365; 22 RBEW [1904] 175; 23 RBEW [1904] 305).

(iii.) Thus cremation is an effectual protection of

the survivors against haunting and injury by the dead. It is more than this: it thoroughly frees the ghost from the bonds of this life, and fits it for union with the society of the departed in the life

beyond.

union with the society of the departed in the life beyond.

The Wayana of French Guiana burn their dead, 'that the soul may fly up to heaven on the smoke' (Int. Arch. xiii., Suppl. 87). Among the Laotians of Further India the higher classes are cremated encased in a pupper representing a mythical bird called Hatsadling. It is said that, in order to obtain Nirvana, the bird must be killed. Accordingly, a woman ceremonially shoots an arrow at it; and then the fire is lighted. There is, of course, a mythological tale of the slaughter of the bird in the first instance by a heroine who was an incarnation of a goddess; and the woman who shoots the ceremonial arrow pretends to be a descendant of the goddess. But there can be liftle doubt that Hubert's conjecture is correct, that the myth is of secondary formation, and that the hamboo bird really convoys to the other world the soul when released, together with it, by burning (DAnnie Soc. ix. [1906] 238). In this case the shooting would be the ritual slaughter of the bird, in order to put it into the same condition as the deceased. Among the Haida of Masset, persons killed in battle or by any violent means, were believed to go, after death, to the abode of a supernatural being named Täxet, which was suspended in the air. To enable them to do this their bodies were burnt: otherwise they would be refused admission. The precaution, however, seems to have been neglected with regard to friends killed in war at a distance from home—contrary to their practice in other cases. The practical difficulties were probably too great, and the custom may have been in decay (Jesup Exped. v. 54). The king of the Batutsi in East Africa was never buried. His body was exposed in his hut until putrefaction had advanced so far as to show the first worm. The hut was then set on fire, and was burnt with all its contents. When the conflagration came to an end and nothing was left, it was believed that the king had returned to heaven, whence, according to the tribas of India which have been influe

into an urn or other receptacle, and buried, or kept in the house.
This custom is familiar to us among the classic nations of antiquity. The covers of the urns were sometimes removable, in order to placate the spirit of the dead by periodically pouring

libations upon his ashes.

VIII. The grave.—I. Shape of the grave.—On this subject something has been said above in dealing with cave burial. The grave is the residence of the departed; and efforts are not wanting in various parts of the world to render it as comfortable as circumstances permit. As already pointed out, the Chinese practice of fung-shui is traceable to this motive. It is possible also that the widespread practice of abandoning the hut to the dead, whether buried beneath it or exposed above ground, may have the same motive, in addition to that of escaping the infection of death. The destruction of the hut above the corpse, which frequently takes place, need not preclude it, since it is a common principle that things intended to be of service to the dead must themselves be killed by breakage, or even burning. Where burial does not take place in the hut, a hut or shelter is often erected over the grave.

This is the practice in lands as far apart as South America and the Philippines or New Guinea (Int. Arch. xiii., Suppl. 79; Savyor, 203, 265; Chalmers, Pioner Life, 1895, pp. 53, 110, 210); while, among the Baganda and other tribes of East Central Africa, kings and chiefs at least are thus honoured (IAI xxxii. 44, 92; Cunningham, 31, 224; van der Burgt, art. 'Enterre-

ment'); and this hut, as the abode of the deceased, becomes his shrine or temple, where his spirit is invoked. In this district of Africa miniature huts or shelters over the graves of lesser persons are not uncommon. By the Lendu the miniature hut is erected explicitly as a shelter for the spirit, which is supposed to remain seated on the grave for two months after burial (Cunningham, 337). Elsewhere, as in New Guinea, the shelter is as much for the convenience of the mourners, who go thither to weep, as of the departed (Chalmers, 110).

The underground restring places of the dead are

The underground resting-places of the dead are also provided with regard to their comfort, often

to magnificence.

to magnificence.

The Ewhe of West Africa bury beneath their huts. Rich people are buried deeper than poor, and the cavity prepared for them is as large as a room (Spieth, 634). The pre-historic graves of Crete, circular chambers of stones covered mounds or domes, are modelled on the huts of the living (ARW vii. [1904] 265, viii. 520). The same intention is apparent in Etruscan tombs. So far, indeed, was it carried that, when cremation was adopted, the urns in which the ashes were placed were miniature huts. But the most striking and splendid examples of tombs as the dwelling-places of the dead are found among the ancient Egyptians (see § VII. 3 (c)).

Externally the shape of the grave has varied as much as its internal arrangements. In Europe

much as its internal arrangements. In Europe the pre-historic dead of rank and importance were buried beneath round or elliptical barrows, frequently of huge dimensions—a custom found in many other parts of the world. These barrows are raised of stones or earth, and enclose cists of large slabs, within which the bodies were deposited. And they are generally surrounded with a trench from which the earth for the barrow has been taken, sometimes also with circles of stones. Where an elaborate structure of this kind is not made, it is quite common to cover the grave with a heap of stones, or with a simple mound of earth. Where, as among many tribes, the grave is shallow, the stones, or often (according to the nature of the country) a pile of branches, may be intended chiefly to defend the body against wild carnivora. Against human beings they are more often defended by fences, or smoothed and levelled down so as to remove the traces of burial, as is the practice of various South American tribes (Int. Arch. xiii., Suppl. 92, 97; Globus, xc. 305). Where mounds Suppl. 92, 97; Globus, xc. 305). Where mounds or huts are erected over graves, they become, with growing civilization, pyramids of wrought stone and mansoles.

2. Position of the corpse.—It is a very general custom in the lower culture to bury the dead in a crouching or squatting position. This is the natural position of rest during life for peoples who have not the civilized appliances of chairs, tables, and bedsteads. It is accentuated in the case of the dead by binding the body, sometimes even breaking the bones for that purpose. The body thus prepared is usually laid on one side in the grave, just as the skeletons in Neolithic and later graves in this country are found. Sometimes, however, it is placed seated or lying on the back.

Examples of both have been described among the West Australian natives (Calvert, 41, 42). Extended burials (lying at full length) are not so common. At Knossos, bodies have been found both flexed and extended. Extended burials were customary among the pagan Anglo-Saxons. The Wichita of North America (Dorsey, Wichita, 1904, p. 13), the Brignans of the Ivory Coast (Clozel and Villamur, 467), and the Yanadis of Southern India bury in the same attitude, but the last with the face downwards (Thurston, vii. 426).

The direction in which the body lies in the grave differs among different peoples, and even among the same people. In the pre-historic graves of this country, as well as of other countries, skeletons have been found quite differently orientated, though sometimes in the same barrow; and the explana-tion of the variations is still to seek. The Wotjobaluk of what is now the Wimmera district of Victoria, in the Commonwealth of Australia, had an elaborate system by which everything in the world was supposed to be divided among the totem-clans. Every totem had its own point of the compass; and a man was buried with his head towards the point of the compass appropriate to

his totem (Howitt, 453). This arrangement is extremely rare, if not unique. More usually the direction is determined by either the rising or the setting sun.

setting sun.

Thus the Ngeumba of New South Wales bury with the head towards sunrise (Mathews, 72); the Awemba of Central Africa (JAI xxxvi. 157), the Maidu of California (Bull. Am. Mus. Nat. Hist. xvii. 243), and the Wichita bury with the head turned to the east. On the other hand, the Lillooet (Jesup Exped. ii. 269), the Mancagnes of Senegambia (D'Anthrop. xvi. 63), and the Brignans (Clozel and Villamur, 2.2), agree with the Christian populations of Europe in burying in the reverse direction. The Solomon Islanders bury with the feet turned inland (Oodrington, Melanestans, Oxford, 1891, p. 254). Tribes which preserve a tradition of migration to their present habitat, frequently bury with reference to the direction from which they believe their ancestors to have come. For this reason some of the Bantu tribes of South Africa bury so as to face the North (Dannert, 3; Kidd, 248). This practice seems to be connected with a belief that after death the soul journeys back, as among the Miao of the Chunese province of Kweichow (Anthropos, iii. 409), to the ancestral seats of the race. Among the Wanyanwezi of East Africa a man who dies in a strange place is buried with his face to his mother's village (Burton, place is buried with his face to his mother's village (Burton, Lake Regions of C. Afr.: Lond. 1860, ii. 25). Muhammadan peoples bury so that the dead may face Mecca.

3. Coffins.—The corpse is further defended

against external influences by a case or coffin. In the early stages of culture a coffin is wanting; and, if it is deemed desirable to protect the body and, if it is deemed desirable to protect the body from the earth, this is done by means of the niche or recess at the bottom of the grave-shaft so common in Africa, or a covering of boughs is laid over it before the earth is thrown in. Even yet some peoples in a comparatively high stage of civilization reject a coffin. Wood is the usual material for a coffin. Originally, probably a hollowed tree-trunk, as still among the Niamniam (Frobenius, 410), it has evolved into elaborate forms, painted, as among the Ibouzo on the Niger (Anthropos, ii. [1907] 102), or carved, as among the Eskimo and Indian tribes of the North-West of America, and the Dayaks of Borneo. These carved coffins or grave-boxes, however, are not carved coffins or grave-boxes, however, are not intended to be put under ground. In this connexion the richly carved sarcophagi of late Roman and early mediaval times will be recalled.

and early mediæval times will be recalled.

A very general custom prevals in South America, where the art of pottery is developed, of putting the dead into large urns. In pre-historic Crete it was a well-known practice to enclose the body in a terra-cotta chest called a \*Larnax\* (Archæologia\*, lix. 398-400). In Japan, bodies were often buried in sarcophagi of wood, stone, or terra-cotta (Archæologia\*, lv. [1897] 474). The Chinese, when, as often happens, especially among the rich, the dead are disinterred to be buried elsewhere in accordance with the demands of \*Lung-shu\*, place the bones in large earthen jars (de Groot, iii. 1958; Lunct, 90). The Tagbanuas of the Philippines bury children in jars (Sawyer, 313). Under the floors of pre-historic temples in Palestine numerous remains of new-born children have been found buried in jars (Frazer, \*Adonis 2\*, 1907, p. 32). The Balearic Islanders, according to Diodorus, cut up the corpse, put the pieces into an urn, and erected a cairn of stones over it (Diod. Sic. v. 18). The bones, after being denuded of their flesh, were buried in urns by many of the tribes inhabiting what is now the United States (\*Amer. Anthr. vi., new ser. [1904], 600). A similar practice is recorded by a Chinese traveller in Tibet (\*Z/RW xx. [1907] 115). And the Kukis of Assam, after the body has undergone preliminary decomposition, clean and preserve the bones in a vase, 'which they open on all important occasions, pretending that in thus consulting the bones they are following the wishes of their deceased relative (\*ARW xii. [1909] 448).

The burial of cremated bones in urns has been common wherever cremation was practiced by recorder accounting the wishes of their deceased relative (\*ARW xii. [1909] 448).

common wherever cremation was practised by peoples acquainted with the art of pottery. Burial in ships or boats has already been referred to. Sometimes, as among the Siusi of north-western Brazil, a coffin is fashioned out of the cance of the deceased by cutting it in two and placing the body between the two halves (Globus, xc. 327). Lighter materials are often employed for the coffin. On the Gold Coast it is made of wicker-work, reeds, or bark (Journ. Afr. Soc. vii. [1908] 202). On the other hand, more than one coffin is sometimes employed in the case of a wealthy or important personage. In this wasteful practice African barbarians agree with the cultured peoples of Europe.

Nor is the object of a coffin always, or entirely, to protect the body. Possibly its original intention was to protect the living from the visits of the

Cend.

This was expressly alleged to Nelson by one of the western Eskimo as the reason for the grave-boxes in which the dead are deposited on the shores of Berng Strait. 'It was better,' he said, 'to keep the dead in grave-boxes, for it kept their shades from wandering about, as they used to do; hesides, it was bad to have the degs eat the bodies' (18 RBEW 312). The latter thus appears a more subsidiary reason or atter-thought.

Although, however, we may suspect the desire of imprisoning the deceased to have been a primary motive in the provision of a coffin, the desire to provide for his comfort in the grave was probably also—perhaps equally—present. That the intention of a coffin is not always to bottle up the soul with the body is clear in such cases as that of the Siusi just referred to, where a hole is left expressly to enable the ghost to go and come, and thus preserve its temporary connexion with the bones until the time for final severance arrives.

IX. Funeral ceremonies.—1. Time of funeral.—
The length of time required to elapse between death and the funeral varies from a few hours to many months. Sometimes, as in the west of Africa and the Solomon Islands, it may extend for years, while the preparations for duly honouring the deceased slowly proceed. At length, however, the time comes when the solemn ceremony which is to sover the deal first the limit of the solemn ceremony which is to sever the dead from the living is appointed to take place. The night is not infrequently reckoned the appropriate time.

The Hopi of North America conduct their funerals at night (Ztachr. Ethn. xxxvii, [1905] 634), the Dayaks of Sarawak at early dawn (Anthropos, i. 169). The Manansa of South Africa and the Negroes of the Lower Niger bury in the evening (Holub, Seven Fears in S. Africa, Lond. 1881, ii. 240; Leonard, 159); while the Basuto dig the grave after dark, but defer the actual burial until just before dawn. It must be performed before the children wake, for they must not see the body (Martin, 99; Journ. Afr. Soc. v. [1906] 357).

The reason for the selection of the darkness as the season for burial seems to be that the survivors then cast no shadow, which is often confused with then cast no shadow, which is often confused with the soul, and hence that the deceased, or any evil-disposed spirit, would have more difficulty in capturing and retaining souls. The souls of children are particularly liable to attack. In the Southern Nicobar Islands, burial takes place at sundown, before midnight or early dawn, expressly in order to prevent the shadows—that is, the souls—of the attendants from falling into the grave and being buried with the corpse (Ind. Cens. 1901, iii. 209).

2. Touching the dead .- Throughout the rites and observances attendant on death, two motives—two principles—are found struggling for the mastery. On the one hand, there is the fear of death and of the dead, which produces the horror of the corpse, the fear of defilement, and the overwhelming desire to ban the ghost. On the other hand, there is the affection, real or simulated, for the deceased, which bewails his departure and is unwilling to let him go. Thus, though the touch or even the neighbourhood of the corpse causes defilement, there are not wanting peoples with whom it is a ritual necessity for mourners to touch the corpse.

ritual necessity for mourners to touch the corpse.

The islanders of Mabuiag, Torres Straits, and the Negroes of Jamaica agree with the people of the British Isles and the neighbouring Continent in this requirement. In Burope the reason usually aleged is that it prevents being haunted by the deceased. The German-speaking population of Iglan in the hills between Bohemia and Moravia kiss the foot of the corpse that they may not be afraid, which we may interpret in the same sense (ZVV vi. [1896] 408); while in Montenegro every one who attends a funeral must kiss the corpse (JAI xxxix, 94). Among the Bulgarians all relatives kiss the right hand of the corpse, saying, 'Forgive me.' In addition, each of them who was born in the same month bends over it breast to breast and touches its head with his own thrice (Strausz, Die Bulgaren, Leipz. 1898, p. 450).

3. Circumambulation. — Another ceromony is that of walking round the corpse.

that of walking round the corpse.

When the Argonauts in the poem of Apollonius Rhodius buried their dead comrade Mopsus, they marched round him thrice, in their warrior-gear. So among the populations of India which practise cremation, the son or other relative who lights the pyre first walks thrice round it. The custom of walking round the corpse, or the grave after burial, is recorded of peoples as far apart in space and in culture as the Central Eskimo, the Russian Lapps, the Buriats, the Shans, and the Arawaks of British Guiana. It has even been recorded as solemnly performed around the coffin of a clerowant's wife in Oxford. arawaks of British Guiana. It has even been recorded as solemnly performed around the coffin of a clergyman's wife in Oxfordshire no longer ago than 1799 (NQ xi., 8th ser. [1897], 428). At Beauquesne in the Department of Somme (France), after placing the coffin in the grave the mourners go thrice round the grave backwards (RTP xv. 164).

The direction of the procession is probably sunwise, though it is rarely recorded; and it is usually performed thrice. There can be little doubt that the rite is magical, intended to keep the dead in the grave and prevent him from disturbing the

survivors. Cf. art. CIRCUMAMBULATION.

4. Carrying out the corpse.—More widely spread still is the custom of taking the corpse out of the house by some other way than the ordinary door. Among peoples in the lower culture, from South Africa to Greenland, from Alaska to the farthest limits of Asia, the East Indian Archipelago and the isles of the Southern Ocean, where the huts are not provided with windows the dead are taken out by the smoke-hole, or a hole in the roof or side of the hut specially broken for the purpose, or, as among the Koryaks, by raising a corner of the tent. Where a window exists it is often utilized for the purpose. The hole is closed immediately after the passage of the corpse, the object being to prevent the deceased from finding his way back. As civilization progresses, the custom is gradually confined to the corpses of those that have died evil deaths.

deaths.

A Norseman who, by his character or the circumstances of his death, was deemed, like Thoroli in the Eyrbyggia Saga, likely to give trouble after death was carried out in this fashion. On the Continent of Europe suicides are frequently thus carried out; and it would seem that the practice is not unknown in England (NQ 1v., 8th ser. [1893], 189). Of the earlier and more general custom a relic has lately been discovered by H. F. Feilberg in Jutland, in a bricked-up doorway existing in some farmhouses and called the 'corpse-door' (FL xviii, [1907] 384). The Matse tribe of Ewbe carry out the body of a priest through a hole in the roof (Spieth, 766). The Wadjagga remove the corpse of a childless woman through a hole in the side of the hut opposite to the door (Globus, lxxxix. 200). On the island of Nias the same course is taken with a woman dying in childbed; while the Toba-bataks break up the floor of the house (the houses being all built upon piles) and throw down the corpse of such a woman, with imprecations, to men who are waiting beneath to tie it up fast. On the other hand, they take the corpse of an important man out through the wall (Kruijt, Animteme, Hague, 1906, pp. 264, 252). All these dead are formidable, either from the manner of death or from character and position.

Among the Masurs of East Prussia and in Bul-

Among the Masurs of East Prussia and in Bulgaria, when parents lose a succession of children. the last to die is taken out through the window (Töppen, Abergl. aus Masuren<sup>2</sup>, 112; ZVV xi. 268). Here, perhaps, the successive children dying are regarded as the same child returned and re-born through the successive children dying are (Hartland, Prim. Pat. i. 200). In that case the object is to prevent access by the dead infant to its mother, that she may not bear it again.

5. Other precautions against return.—To prevent the return of the dead, it is not enough to take out the corpse by an unusual way. The dead man must be prevented from seeing the way back. It is for this reason that the body is carried out feet foremost-a practice shared by the civilized nations of Europe with the savages of Mabuiag in Torres Straits (Torres Str. Exped. v. 248). Or he must be

Straits (Torres Str. Exped. v. 248). Or he must be confused and puzzled.

The Christian Indians of Tunupasa agree with the Basuto in changing the place of the door of the hut (Int. Arch. xid., Suppl. 92; Martin, 91). The Atonga swing the corpse to and fro (Werner, 161). The Siames not only break an opening through the house-wall, but having got the body out they hurry it at full speed thrice round the house (Tylor, Prim. Cutt. ii. 23). The Chang turn the hier about from time to time, and by marching obliquely they cause the corpse to take the most diverse positions, in order to bewilder the soul and hinder it from returning home (Cabaton, 47). Analogous

practices are found in Europe. In Leitrim the longest possible road is taken to the churchyard (PD vii. [1896] 181); and it is probably for the same reason that both in Ireland and in Germany the corpse is carried thrice round the church.

In various places in Europe a number of pre-cautions are observed. The chairs or benches on which the coffin has rested are thrown down (East Prussia; Iglau). The coffin is lifted thrice over the threshold and thrice rested upon it—an indication to the deceased that this is a solemn and final farewell (Styria; Wends; Mordvins). An axe is laid on the threshold or hung over the door as soon as the corpse has passed (East Prussia;

Water (in some places the water used in washing the corpse) is thrown out, with or without the vessel containing it, after the funeral procession (East Prussia; Poland; various parts of Germany). In Greece not only is water thus poured out and the vessel broken, but also all the water stored in houses along the route is thrown out after the procession has passed (JAI xxiii. 35, 41; Rodd, Cust. Mod. Greece, Lond. 1892, p. 124). More than one motive has probably gone to form this custom. Purification may be intended; but the object also is to prevent the return of the dead, for they, like other supernatural beings, have a difficulty in crossing water. In Greece, indeed, the custom of flinging out water is said to ease the burning pains of the dead—a later and probably Christian interpretation.

pains of the dead—a later and probably Christian interpretation.

In Brittany the dead of the commune of Plouguiel are carried across a small arm of the sea called the Fassage d'Enfer, instead of being taken by land (a much shorter route) to the cemetery (RTP xv. 631). In the same way the Haida carry a shaman to his burial by water, even though the burial-place can be reached more easily by land. It is said that they do not fear a dead shaman like other dead people, but they want 'to handle his things,' and hence, we may conjecture, to pack him off so that he cannot return to interfere with them (Jesup Exped. v. 53). In Swedon, linseed is strewn outside the house to prevent the deceased from appearing as a 'wandering spirit.' It is a common belief that supernatural beings must in such a case count the seeds—a task that will occupy them until daylight. The practice of strewing seeds is, in fact, another attempt to puzzle and confuse the ghost. So the Swedes also strew hay-seed on the road and about the grave, believing 'that Satan is thereby deprived of his power over the deceased'—which may be a Christianized form of the superstition (Lloyd, 181, 184). Among the Iban of Sarawak, ashes are strewn over the footprints of the bearers to prevent the soul of the dead man from finding its way back to the house to haunt the living (Anthropos, i. 189). The practice would appear to be not unknown in some parts of Europe. A few years ago at Budapesta wonnan who was supposed to have died in hospital returned home. She was taken for a ghost. The doors were slammed against her, ashes were strewn on the ground, and her husband refused her admittance (Pally Chron., 30 Aug. 1904). The barefooted dwellers on the Congo strew thorns along the path from the house to the grave (ZVV xi. 260). In the Solomon Islands 'the return from the funeral is by another road than that along which the corpse was carried, lest the ghost should follow' (Codrington, 254)—a practice likewise followed in Corfu (Rodd, 124). Many peoples erect barriers a the bouse to prevent the deceased from appearing as a 'wandering spirit.' It is a common belief that supernatural beings
must in such a case count the seeds—a task that will occupy
them until daylight. The practice of strewing seeds is, in
fact, another attempt to puzzle and confuse the ghost. So
the Swedes also strew hay-seed on the road and about the
grave, bolieving 'that Satan is thereby deprived of his power
over the deceased'—which may be a Christianized form of the
superstition (Lloyd, 131, 184). Among the lban of Sarawak,
ashes are strew over the hotoprints of the bearers to prevent

(Jaussen, Coutumes des Arabes au pays de Moab, Paris, 1908, pp. 100, 105). The Negroes of Jamaica aver that, when a dead body wishes to go forward, it is easily carried; when it does not wish to go, it gives great trouble (FL xv. 453).

A ceremony is performed on Car Nicobar which is perhaps A ceremony is performed on Car Nicobar which is perhaps a dramatic representation of the unwillingness of the dead to be buried. The funeral procession is met by another band of men who drive the bearers back by force, struggling over the corpse, some draggling it towards the grave and others towards the village, until it often falls to the ground. An eye-witness on one occasion tells us that the women and children, who stood at a distance, began to cry out for fear lest the corpse should forcibly enter the village. In the end, however, it was picked up and thrown into the grave in a heap, and then the usual sacrifices were offered (JAI xxxii. 218, 221). The ceremony was said to be performed only in the case of men of the highest repute (tb. 222). repute (ib. 222)

7. Farewell speeches.—Men, however, have not been content with such broad hints to the dead and defences against their return as described in previous paragraphs. They have told them in plain terms that they are not to come back, that the separation is definitive; and a considerable part of the funeral ceremony is often devoted to this purpose, enforced both by speech and symbol.

this purpose, enforced both by speech and symbol.

Among the Bataks of Sumatra, prior to the burial the begu (soul or individuality of the deceased) is made to understand by a Shamanistic ceremony that it belongs no more to the living, and must not consort with them. Then, after a dance, a vessel filled with derange (a specific against the begu) is carried round it. Some parts of the body are rubbed with a piece of it, and it is thrown on the corpse with the words: 'Thy younger brother (or nother, or other relative) will converse with thee no more' (ARW vii. 503). During cremation among the Chams, a man, who bears the significant title of Master of Regrets, is left behind at the house. His business is to curse it and then to adjure the deceased not to come back to torment his family (Cabaton, 48). The Muong or Mon of Northern Tongking perform an elaborate series of rites with this object. They begin on the night following the death. The witch-doctor comes and recites invocations, accompanied by a bell to drive away evil spirits. He advises the soul of the departed to go to the other world and find relatives who have preceded him thither. In order to guide him in his journey he enumerates these relatives by name, pointing with his finger towards the spots where they have been buried. Then he casts lots to ascertain whether the dead man has understood him. If the lots be unfavourable, he begins again as many times as may an accerver.

chip to and fro behind the corpse when it is taken out of the house or tent, crying: "There is nothing more to be had here!" (Crantz, i. 237). In Central Africa, likewise, as among the Awembe, a speech is made over a man's grave, promising that the survivors will take care of his wife and children, and expressing the hope that he will become a good spirit in the next world (JAI xxxvi. 157; cf. Journ. Afr. Soc. v. 430).

8. Death at a distance from home.—The desire to find one's last resting-place at home, among one's kindred and friends, is natural to man; and it has been translated into a number of ceremonial prescriptions which emphasize the necessity of such a burial.

Sometimes, as among the Lillooet of British Columbia, the deceased is buried in a temporary manner where he dies, and the following year his bones are brought home to be buried with his kindred. If this is impossible, the body is burnt and the ashes carried home (Jesup Exped. ii. 270). Sometimes only a single bone is brought home, as in the case of Roman soldiers. Among the Ho of Togoland, when a man of importance is killed in war, he is buried on the spot; but later the grave is opened, his bones, hair, and nails are taken out, put into a cotlin, and carried home, or at least his brothers on the maternal side must bring home his finger- and toe-nails and his hair (Spieth, 277). A large proportion of the modern Albanians (at least of the men) die away from home, owing to their migratory habits. Their bones are collected and sent home; or at any rate the skull or a single bone is brought back (Rodd, op. ctt. 127). When a Spartan king was killed in war an image was buried in his place (Herod. vi. 58). In some of the villages around Cosenza an image is made of a member of the family dying away from home, and laid on his bed, and the rest of the family dying away from home, and laid on his bed, and the rest of the family dying away from home, and laid on his bed, and the rest of the family standing around bewail him (Dorsa, Ust e nelle credenze pop., 1884, p. 98). At Ouessant in Brittany, when a sailor died at sea, a cross was taken to the house and made to represent the corpse. In the isle of Sein his portrait was laid on it, or, in default, some object that had belonged to him. The clergy attended, and a funeral procession and service took place over this representative of the body (RTP vi. 1891] 156, xiv. 346). When a man belonging to the Man Tien of Northern Tongking dies at a distance from his home, the priest calls bach his souls (for a Man Tien is endowed with a plurality of souls), and causes them to enter a doll made for the purpose, to which negro a dummy body is made with the clothing of the deceased; wa Sometimes, as among the Lillooet of British Columbia, the ningham, 118).

Proceedings like these are doubtless much more than mere make-believe to the people who indulge in them. Probably in the first instance a relief to the feelings of the survivors, they must be held to be of real value and importance to the deceased, who attains by their means his due place in the other world and the rest which can come only by means of the proper ceremonies. See, further.

§ XI. X. Grave furniture and food.—The dead must be gratified with food, and with some or all of his most cherished worldly possessions. The practice of depositing these, either in the grave or upon it, is literally world-wide. Both fear of the dead and affection for him have concurred to carry it very often to extravagant lengths. Few examples will be required of a rite so well known.

I. Food and drink .-

I. Food and drink.—

In Tanembar and Timorlaut, two of the Moluccas, when children under two years of age die, the mother milks her breast into their mouths before burial (Riedel, 300). So, when an Urali of the Dimbhum jungles is about to be buried, a cow buffalo is brought near the car on the burial-ground, and a little milk drawn and poured three times into the mouth of the corpse (Thurston, vil. 255). The practice of placing food and water on the grave is recorded of several of the Australian tribes; it is sometimes continued for many days (Howitt, pp. 448, 455, 407, 474). Among some of the Hill Tribes of Assam, these offerings to the dead are kept up for a year (ARW xii. 453). Some of the Papuan tribes plant tare boside the grave (EVRW xix. 163). The Iroquois, who practise sub-aerial burial, deposit with their dead a sack of flour, flesh-meat, his spoon, and generally wint-dead a sack of flour, flesh-meat, his spoon, and generally wint-dead a sack of flour, flesh-meat, his spoon, and generally wint-dead a sack of flour, flesh-meat, his spoon, and generally wint-dead a sack of flour, flesh-meat, his spoon, and generally wint-dead fish, roots, herbs, etc. (ab. 151). In Guatemala, provisions of maize and flesh were given (Stoll, Due Ethnologie der Indianerstämme von Guatemala, Leyden, 1889, p. 71). The Warraus of Guiana laid round the body bread, truits, and drued fish (Int. Arch. xiii., Suppl. 55). And it may be said generally that similar practices are recorded of all the tribes on the American continent.

The Agni of West Africa provide the deceased with blood The Agni of West Africa provide the deceased with blood (reminding us of the neidents recorded by Honer, Od. xi.), food, and drink (Clozel and Villamur, 25). Of drink, brandy, pombe, or rum is commonly given among the Negroes. On the Lower Niger, two casks of rum or palm-wine are poured over the grave to supply the departed with spirit to entertain his friends in the next world (Leonard, 166). These customs are followed not only by the Negroes, but by most of the branches of the wide-spiread Bantu race. The Kafiir tribes in the south slaughter an ox and lay a portion of its entrails on the grave. The Baganda in the north bring food and pour beer over the grave.

But it is not only in the islands of the Indian and Pacific Oceans, and among the ruder peoples of Asia, Africa, and America that the practice of providing the dead with food and drink obtains. The civilized Korcans agree with the Mannans, one of the IIII Tribes of Travancore, in putting into the mouth of the corpse a quantity of rice (JAI xxv. [1896] 347); Ind. Cons. Rep. 1901, xxvi. 349). The carcasses of sheep and oxen, with jars of honey and oil, were among the gifts added by Achilles to the pyre of Patroclus (II. xxiii. 166); and remains of the funeral banquet have been found carefully placed in graves of the pre-instoric population of Greece. Nor has the custom of giving food to the dead ceased even yet in the south-east of Europe among populations of Greek tradition. In Bulgaria, for three days after a burial, women go every morning to the grave, kindle tapers, funigate it with incense, and pour over it wine and water. On the fortleth day a woman goes with a priest carrying a cake, some kolliva (a funeral food made of boiled grain, sugar, almonds, sesame, parsicy, and pomegranate seeds), But it is not only in the islands of the Indian and Pacific grain, sugar, almonds, sesame, parsicy, and pomegranate seeds), and a bottle of wine, all of which she places on the grave, 'that the earth may be cleared from the eyes of the departed.' The grain, sugar, almonds, sesame, parsicy, and pomegranate seeds), and a bottle of wine, all of which she places on the grave, 'that the earth may be cleared from the eyes of the departed.' The priest repeats prayers, fumigates and levels the grave, digging a hole in it, into which he pours water and buries some of the food. Nor is this all. On every commemorative festival for the dead, the women go to the grave with their tapers and lineanse, and pour wine or water over it. Moreover, fruit (formerly also other food) is often laid on the grave. Widows whose deceased husbands were much addicted to coffee have been known to pour black coffee daily into an opening in the gravemound (Strausz, Die Bulgaren, 1898, pp. 451-53). In Macedonia, an apple, a quince, or some other fruit is thrust between the feet of the corpse before the funeral (Abbott, Macedonian FL, 1903, p. 197). In Montenegro, apples are thrown into the grave; and, in some parts, oranges and bits of bread are among the objects hung on a young tree planted at the head of the grave (JAI xxxix. 93). Elsewhere, some of the kallion cakes baked for the commemorative festivals are broken up over the grave, the rest being consumed by the mourners or given away (Rodd, 126). Amelineau, the distinguished Egyptian scholar, reports that at Chateaudun, in France, he has known a widow place a cup of chocolate on her husband's grave every day, for more than a year (RHR ili. [1905] 10 n.). The Wends and Kashuls, Slav populations of North Germany and Prussia, put a lemon into the hand of the corpse; and, among the Wends, children are said to be supplied with eggs and apples; while men addicted to drink are given pipe and brandy-flask, otherwise they will have no rest in the grave (Tetzner, Die Slawen in Deutschland, 1902, p. 462; von Schulenburg, Wend. Volkst., pp. 118, 110). In Croatia there is a wide-spread custom of setting eggs, apples, and bread on the newly made grave for the hungry soul, and offerings of food are brought at every Hallowmass (Globus, Ixxxx, [1904] 30

These examples might without difficulty be added to; but a more or less permanent communication between the living world and the interior of the grave was sometimes, as we shall find hereafter, made for other purposes than the supply of food.

2. Wives and dependents.—Another custom, almost too well known to need illustration, is that of killing, or burying alive with the corpse, his wives, his slaves, and other dependents or friends. This custom attains its greatest extension, of course, at the funeral of a chief or king. Its object is to provide for his comfort and his dig-Its object is to provide for his comfort and his arg-nity in the other world, by giving him suitable companions and retinue. The best-known example is that of sati (q.v.), by which the Hindu widow was burnt alive on her husband's pyre—a rite abolished in British India in 1829, but still surviving in the native State of Nepāl. The rite was probably common to Aryan-speaking peoples while in a state of savagery, but abandoned as they progressed in

civilization, and re-introduced, after centuries of disuse, among the Aryan conquerors of Upper India, for reasons that can now only be the subject of conjecture, and perpetuated under the ecclesiastical influence of the Brahmans. Several of the non-Aryan tribes of India practised, until quite recent times, the analogous rite of burying alive slaves, or making a raid for heads to adorn the tomb (Crooke, Things Indian, Lond. 1906, p. 446, also Anthropos, iv. 473).

tomb (Crooke, Things Indian, Lond. 1906, p. 446, also Anthropos, iv. 473).

We need not follow the custom throughout the world. But, as showing that it prevailed among Aryan-speaking peoples, it may be of interest to recall that it is recorded by Gesar and Mela of the Gauls, who practised cremation (Cres. Bell. Gall. vi. 19; Mela, iii. 2), and the Thracians (Mela, ii. 2); that it is known in the Irish legends (O'Curry, Munners and Gust., Dublin, 1873, i. cccxx.); and that the slaughter and cremation by Achilles of the twelve valiant Trojans on the pyre of Patroclus are only to be thus explained, though the fashion had changed before Homer's day. Among the Bulgarians of the Volga it was found by the Arab traveller, Ibn Fadhlan, in the year 921 or 922, when he witnessed the immolation, on a young chief's funeral pyre, of a girl, who seems to have been formally wedded to the dead youth before being thus sacrificed (RHR lii, [1905] 325). The old Slavs appear likewise to have put to death wives, companions, and slaves at the funeral of a person of importance; and, when they buried an unmarried man or woman, a wedding scene was enacted during the ceremonies—an obvious relic of such incidents as that recorded by Ibn Fadhlan.

Such relics are found elsewhere. Among the Bavenda in the Transvaal, if a virgin boy dies, a girl is sent after him into the other world to be his wife there. She is not now actually put to death; the witch-doctor knows of a ceremony which is quite as effectual for the benefit of the dead boy as her death (JAI xxxx. 381). Among the Wadjagga, or Wachaga, a Bantu tribe of Central Africa, another series of coremonies is appointed for each of the widows, whereby 'she frees herself from death'—possibly here the contagion (Golus, Ixxxix. 198). The Tolkotins of Oregon, with whom cremation is the rule, force the widow on the funeral pile; but, though they scorch her more or less severely, they do not burn her to death (I RBEW 145).

It is, for obvious reasons, rarer to find a husband out to death with a

It is, for obvious reasons, rarer to find a husband put to death with a wife than the converse. But probably the story told in the Arabian Nights of Sinbad, who was buried alive with his dead wife, was founded on a barbarous custom really practised by some tribe in the East.

The husband of a woman of the blood-royal of the Natchez was required to submit to this rule (1 RBEW 187). In Ashanti, with the king's permission, any of his sisters may marry a man who is pre-eminently handsome, no matter how low his rank and position may be. But a man of low rank who may have thus married one of the king's sisters is expected to commit suicide when his wife dies, or upon the death of an only male child; and any attempt to evade compliance is promptly defeated (Ellis, Tshi-specking Peoples, Lond. 1887, 287).

After the abandonment of the custom of putting to death relatives and dependents, its relics continue to exist often for ages. Centuries ago it was abolished in Japan, China, and Korea; but the living slaves once sacrificed were for long, and indeed still are in places, represented by figures in permanent or perishable material, according to the wealth or lavishness of the survivors. To the same origin are due the statues and statuettes of servants and family found in Egyptian tombs. The Man Quang Trang, of the province of Hung-Hoa in Northern Tongking, build a small hut beside the barrow, and place near it a doll representing a man or a woman, to be the companion of the deceased. Striking the doll, they bid it look well after him (Lunet, op. cit. 275).

It is perhaps necessary to add that many of our accounts of the immolation of human victims on accounts of the immolation of numan victims on the occasion of a death represent some, at all events, of the victims as dying willingly, or even committing suicide. It is conceivable that volun-tary deaths may, in a certain number of cases, be the result of intense grief. The vast number, how-ever, of deaths apparently voluntary are, as in the case of the Hindu widow or the dependents of a Gaulish chief, constrained by custom and the knowledge that refusal, while it destroys the religious merit of the act, will entail compulsion, or at least that life will be speedily rendered intolerable.

3. Property.—It is probable that in the begin-

nings of human civilization, when a man died, his nings of human civilization, when a man died, his entire property was destroyed, or left with the body, whether buried or simply exposed. This, in fact, is still done by many tribes in various parts of the world (see § XIX.). Its primitive purpose may have been to escape the death-pollution which would attach to everything closely associated with the deceased. His meagre property would be in a sense identified with him, and must therefore be put away from among the living therefore be put away from among the living. Such a practice, it is obvious, if everywhere persisted in, must have prevented that accumulation of wealth which has rendered progress in the arts of life possible. Consequently, most peoples have learnt to cut it down to comparatively small dimensions, giving only a selection from the goods left behind by the deceased, or reducing their gifts to a mere symbol.

learnt to cut it down to comparatively small dimensions, giving only a selection from the goods left behind by the deceased, or reducing their gifts to a mere symbol.

(a) Domestic animals.—In a comparatively early stage, domesticated animals are often the chief wealth. Such animals are slaughtered not merely as food, but to accompany their owner into the other world. When a Herero dies, certain of his favourite actite are after one threely expressly in order to prevent the ghost from returning and molesting the survivors. On the following day the rest of his favourite cattle are stain as a sacrifice to the dead, and the horns are arranged on a tree adjacent to the grave (Danner, 40). The Abipones of South America, who bury with their dead their entire property, or burn it in a bonfire, when a chief or a notable warrior dies, ceremonially stab the horses that were dearest to him, and fix them on stakes around the grave (Tat. Arch. xii. Suppl. 61). The Tangkhnis of kianipur kill a buffale, in order that the creature may go with the dead into the next world and but open the gates of heaven, which are kept shut against him (All xxii. 307). Here the buffale in the theorem is a supplementation of the continues at a finite continue at a fin

have been not unusual, in various places, to put a knotted cord either into the hands of the corpse or upon the grave. The object of doing so, it may be conjectured, was to enable the dead to perform a penitential exercise neglected during life, or to deceive the powers of the other world into the belief that he was an assiduous penitent. However that may be, the practice was condemned as superstitious by the Synod of Ferrara in 1612, but with so little effect in France that Thiers, in his Traits des superstitions 2 (1697), thought it necessary to repeat the prohibition (Liebrecht, Gerv. Tib., 1856, p. 226). In the same century a French physician and traveller found among the Russian Lapps the custom of putting into the corpse's hand a purse with money, to pay for entrance into Paradise, and a passport addressed to Saint Peter and signed by a priest. A variant custom was to put a number of kopecks, or other small coins, in the mouth of the corpse, and in its hand a testimonial to the character of the deceased, addressed to Saint Nicholas by the bishop of the locality (ZVV xi. 434, 435). The anxiety shown in Europe to provide the dead with every comfort sometimes goes beyond the verge of grotesqueness. The Prussian Lithuanians, when the coffin has been put into the grave, open it, put a few coins under the corpse's head, a piece of earth on either shoulder, adding some of the small treasures of the deceased, and, if he were a magistrate, his whip (Tetzner, 85). In Voigtland, where the objects which the departed most delighted in are assiduously laid in his grave, his umbrella and goloshes have been known to be included (Köhler, Volksbrauch im Voigtlande, 1867, p. 441). In some ancient graves in Würtemberg, attributed to the Alamanni, is found on either side of a body a wooden foot in the form of a last. It is conjectured that these artificial limbs are intended as toll to the ferryman, or to the keeper of the bridge of the dead, or the porter of the under world, in redemption of the real limb (ZVV xi. 457). But

the dead.

Perhaps the most pathetic of all objects found in graves are the toys buried with children. They are found almost all over the world, not less in Europe than elsewhere. The sarcophagus of a child named Crepereia Tryphæna, of the time of the Antonines, found at Rome in 1889 and now in the Antonness, found at Rome in 1889 and now in the museum of the Capitol, contains, besides her betrothal ring, her jewels and her doll. The Masurs lay nosegays and gilded apples in the hands of children, so that when they reach Paradise they or children, so that when they reach Paradise they may be able to play on the great meadow provided for that purpose (Töppen<sup>2</sup>, l.c.). The Wends give eggs and apples to their dead children (von Schulenburg, l.c.). The sterner Bosnians consign them to the other world with their school copybooks and slates (ZVV x. [1900] 119).

To women, who frequently own no property except their tollet utensils and personal adornments, household implements and those of their daily occupations are given. But all the objects buried with the dead are by no means his property. It is a widely spread custom for the survivors to add contributions, sometimes of large amount—a custom practised in all stages of civilization, equally by some of the Australian tribes and by the Bulgarians of Europe, who throw money into the grave before it is filled up (Strausz, Bulgaren, 450).

The tendency to economy in these deposits begins with the accumulation of property, though its operation is sporadic and uncertain. It may be operation is sporadic and uncertain. It may be said in general terms that among most peoples the entire property of the deceased is not buried or destroyed at his death. The greatest sacrifices of property would, as a rule, be on the death of a king or great chief. And even in those cases a part would be given for the whole, or a symbol for the reality. In burials of the Late Bronze or Early Iron ere at Hallstatt and in Schleswig rude images. the reality. In burials of the Late Bronze or Early Iron age at Hallstatt and in Schleswig, rude images of oxen have been found (ARW v. [1902] 5); and Capt. Lyon found a decayed model of a canoe under a cairn beside an old Eskimo grave on Southampton Island (Boas, Eskimo of Baffin Land, p. 61). The models of boats, granaries, houses, and so forth, recovered from Egyptian graves, were doubtless all intended to do service in the other world for the originals. Gaulish warriors were buried sometimes in their charjots with their were buried sometimes in their chariots with their horses; but often enough, both in England and in France, excavations reveal the fact that no more than the wheels had ever been placed in Late

Celtic graves (Greenwell, 455 fl.). The coin so frequently put into the mouth of the corpse, from the far east of Asia to the Atlantic Ocean, is usually interpreted as an obolus for the ghostly ferryman or the porter of the other world. This may be its use; but it is probably only an economic survival of the practice of giving a larger amount of property as an outfit for the other world and for the journey thither. Sometimes only old and worthless things are given; sometimes merely a pretence of giving is made. Both customs are illustrated in funerals of the natives of the Tami Islands, to the north-east of New Guinea. The ancient practice was to set the body afloat on the ocean in a cance. Those of them who cling to the ocean in a cance. I nose of them who cang to the practice provide an old and miserable cance, with mast, rudder, and sails equally bad, often merely indicated. The valuables of the deceased are laid on the platform of the cance, with a couple of coconuts, but taken away again before the canoe is pushed into the sea (ARW iv. [1901] 344). In some parts of the Tyrol the convenient theory is held that the dead man cannot be happy if buried with any money or rings about his person. Careful search is therefore made, and these objects are removed to avoid any such misfortune (Zingerle, Sitten des Tir. Volkes, Innsbruck, 1871, p. 49).

The objects buried or left on the grave are often broken and rendered useless. This is said to have been done in order to prevent stealing. Thus,

been done in order to prevent stealing. Thus, among the natives of British Central Africa, ivory among the natives of British Central Africa, ivory and beads are first ground to powder, in order, we are told, to make them useless to witches and robbers (Werner, Natives of Brit. Cent. Afr., 159). The real reason for this widely diffused custom lies deeper. In the eyes of the people who practise it the breaking of the object is the equivalent of the death of the human lains to relate against it. death of the human being to whose service it is dedicated. It is thus killed in order that its ghost may follow the ghost of the dead into the spirit-world, there to serve the purposes which it served in this world when whole. Thus the Ho of Togoland lay broken cooking-pots on the grave, rogoland lay broken cooking-pots on the grave, expressly to serve the deceased for cooking-pots in the other world (Spieth, 634). The Hupa of California lay in the grave, with the corpse, his clothing, weapons, and other property, shell-money and dance-regalia—all first destroyed by breaking. On the grave are placed dishes and utensils, four large burden-baskets, each with a hole burnt in the bottom and a stake driven through it. Clothes, torn into strips, are hung on the poles laid across the grave. The reason for destroying the articles buried is said to be to prevent grave-robbery. But the same people tell us that all the objects accom-pany the spirit to the under world (Goddard, 71). We are, doubtless, justified in believing that the prevention of grave-robbery is a secondary reason.

prevention of grave-robbery is a secondary reason.

An interesting case is reported from Lincolnshire, in which a widow put her husband's mug and jug on his grave, having first broken them. She told the rector: 'I was that moidered with crying that I clean forgot to put 'em in t' coffin. . . . So I goes and does t' next best. I deads 'em both over his grave, and says I to mysen, My old man, he set a vast of store, he did, hy yon mug and jug, and when their ghoates gets over on you side hill believe to them as would stop him a-having of them an' all' (FL is see them as would stop him a-having of them an' all' (FL is for the other world, which is the real intention of the customs just passed in review, whatever secondary motives may have come to be mixed up with it, lingered in England down to the last quarter of the 19th cent., and perhaps lingers even yet in remote districts.

A. Objects used in the fameral wites.—We have

4. Objects used in the funeral rites.—We have now reached a class of objects put in, or upon, the grave for a different reason. They are not necessarily the property of the dead; but, having been used in the funeral rites, they are contaminated with death, and are no longer fit for the service of the living, lest they spread the infection further. further.

Hence the Yakuts break and throw on the grave-mound the shovels, the sledges, the stakes—in a word, everything used in the funeral (RHR xlvi, 211). The Apache also leave the shovel on the grave (Am. Anthr., new ser., vii, [1905] 493); the Melanesians of Efate throw it into the sea (Rep. Austr. Ass. iv. 727). The Warundi, in Central Africa, throw on the temb the door of the hut, and the basket with which the earth has been taken out of the grave (van der Burgt, 39). Among the Baganda, all who have taken part in the burial must wash their hands with moist plantain fibre, and the fibre thus used is put on the grave (AI xxxii, 47). The Negroes in Jamaica, as we have seen, often throw on the grave the water in which the corpse was washed (§ VI. g). In Europe similar practices are found. In France the bowl which has contained the holy water used for aspersion during the ceremonies is thrown into the tomb; and formerly in Brittany the incense brazier was buried with the coffin (Laisnel de la Salle, ii. 79). In Central Silesia everything used for the toilet of the corpse—the comb, sponge, rags, soap, and so forth—is put into the coffin. Even the needle and thread used for sewing the shroud must not be removed, but left hanging to it (ZVV in. 151). But economy sometimes prevails. In some parts of Brunswick the bier and tools remain only for a few days on the grave (ib. viii. [1989] 437). It is as if the infection were then at an end. Another motive may, nowever, be present: they may be placed there to keep the dead man down as long as there is any chance of his returning, and be removed when this is over. The author cited adduces in the haste with which the relatives left behind in the house, when the funeral procession has started, shut the dead betayed in the haste with which the relatives left behind in the house, when the dead may not fetch any one else. But this is a wide-spread custom. Hence the Yakuts break and throw on the grave-mound the

Blood and hair.—Among many peoples, the delirium of grief, or more often perhaps (in accordance with well-established custom) the desire to divert suspicion of having caused the death by witchcraft, and the fear of the deceased himself, lead the mourners frantically to cut and wound, and even to mutilate, themselves.

and even to mutilate, themselves.

The practice was forbidden to the ancient Hebrews by the Deuteronomical legislation (14<sup>1</sup>); hence we may conclude that it had been previously in use among them, as well as among their neighbours. It is universal among the Australian Blackfellows, and is reported from Polynesia, Melanesia, the East Indian islands, and from North and South America. In very many of these cases the oustom is to let the blood drip over the corpse. Of Australian tribes, we are definitely informed that after the body was placed in the ground the mourners stood or knelt over it in turn, and were struck by a large boomerang on the head until the blood flowed over the corpse. In other cases the blood drips upon the grave after it has been filled in (JAI xxiv. [1895] 187; Curr. Austr. Race. Melbourne and Lond. 1886-87, ii. 179; Spencer-Gillena, 507, 509; FL xiv. [1903] 336). Among the Orang Sakei of Sumatra the kindred, making a cross-cut with a knife on their foreheads, drop the blood on the face of the corpse (Wilken, Hauropfer... bei den Völkern Indonesiens, Amsterdam, 1886-1887, p. 19). Four North American Indians from Montana, who were executed for murder at Helena, on the head-waters of the Missouri, in December 1890, were mourned by two squaws. One of the squaws cut off two of her fingers and threw them into the grave. The other gashed her face. Both caused the blood to flow into the grave (Letourneau, V.Ev. vel., Paris, 1892, p. 187).

We may assume, without much risk of mistake, that the rite in its complete and undegraded form included the dropping of the blood upon the dead body, and where this is not done the rite is in decay. Probably also it is only persons standing in certain specific relations with the dead who are commonly expected to perform it. This is certainly the rule with some of the Australian tribes. We may suspect it of other peoples also. If it has not been recorded, that may be because the point would be likely to escape not merely the the point would be likely to escape not merely the casual traveller, but any one whose attention has not been specially drawn to it. But it is by no means invariable (e.g. the Arawaks mentioned below, § XVII. 1). The meaning of the rite has been the subject of much discussion. It is not merely a propitiatory offering; it may be this, but it is much more. A comparison of the blood-covenant and other blood-rites renders it almost certain that and other blood-rates renders it almost certain that one object, at least, is that of effecting a corporal union with the dead. But is that the only object? First of all, there can be no question that the intention is to cause suffering to the survivors. This will be better discussed when we come to the section on 'Mourning' (§ XVII.). Further, human blood is frequently given for medical purposes, or to strengthen the recipient (Strack, Das Blut, 1900,

27 ff.; Spencer-Gillen a, 461). It is, therefore, not impossible that the object of letting the mourners' blood drip over the corpse may be to strengthen the dead man for his life in the next world. This the dead man for his life in the next world. would be quite consistent with the avowed intention of expressing sorrow or pity (Torres Str. Exped. vi. [1908] 154). But there is, so far as the present writer is aware, no evidence pointing decisively to this interpretation. Moreover, it is always necessary to remember that rites different in intention are often similar in expression—a fact which makes their interpretation a matter of peculiar difficulty.

peculiar difficulty.

Parallel with the rite of dropping blood on the corpse is another mourning rite—that of cutting or tearing the hair and burying it with the corpse, or dedicating it at the grave. It is even more widely diffused than the former.

dedicating it at the grave. It is even more widely diffused than the former.

At the cremation of Patroclus his comrades cut off their hair and heaped it on the body; and Achilles, cutting off the golden lock that his father had vowed to offer at his return home to the river Sperchelos, put it into the dead hands to bear away (II. xxiii. 185-141). So the mourners among the Sloux cut locks of their hair and fling them on the body; and these locks are bound up with it, and with the dead man's valuables, before it is put into the grave-box or coffin (IRBEW 189). Locks of human hair have been found with nummes in the ancient cemetery on the bay of Chacota, in southern Peru, and a large lock of soft human hair was found beneath the head of an infant (Rep. Peabody Mux. xi. [1878] 285 ff.). Arab women cut their hair on the death of a husband, or of a father, or other near relation, and spread the tresses on the tomb, or hang them on stakes or cords above it (Jaussen, 94; Hartland, LP ii. 220); while among the Râji of the United Provinces of India 'the children of the deceased and his younger brothers get their heads, beards, and moustaches shaved, and the hair is thrown on the grave' (Crooke, TC iv. 213). Among the Chechenes of the Caucasus the long queue of hair of the widow of the deceased is cut off and thrown into the grave; down to the middle of the 18th cent., it is said, her ear used to be thus sacrificed (Anthropos, iii. 785). The practice is not yet obsolete in modern Europe among the Montenegrin women. Not very long ago, indeed, when the men habitually shaved their heads and suffered only one long crown-look to grow, that was cut off and thrown into the grave (JAI xxxix, 98).

But, as with the dropping of blood, it is by no means averywhere that the heir is dedicated in

But, as with the dropping of blood, it is by no means everywhere that the hair is dedicated in this way. It is often burnt.

, ''t

The Bilqula of British Columbia, and some of the Central Tribes of Australia, e.g., dispose of it thus (Brit. Assoc. Report, 1891, p. 419; Spencer-Gillen b, 507, 520). The latter, indeed, sometimes mix it with some of the hair of the deceased and make it up into a girdle, which is worn by the avenger of the dead during the punitive expedition (Spencer-Gillenb, 543; cf. 514). More usually, however, we are not told what is done with the hair. In some instances this may be due to omission to observe, or forgetfulness to record, on the part of the reporter, a portion of the rite that is of importance. In the majority of cases we are probably right in assuming that the disposal of the hair is not an integral portion of the rite—that, in fact, the rite has ended with the cutting of the hair. Whether the dedication of the locks at or in the grave, or by burning, has in such cases ceased by ritual decay, or whether the dedication never took place, it is difficult to say. One object, at all events, of the dedication of the hair is, like that of the blood, to form a bond of union with the dead. The converse rite of tak-ing a lock of hair of the dead may be said to be world-wide. Nor is it confined to a lock of hair: it extends in some cases to the nails and pieces of the garments. In the West Indian island of St. Croix the persons who wash the corpse prior to burial always take a lock of hair, a garment, or at least a fragment of a garment, in order to prevent the spirit from molesting them (Hartland, LP ii. 319). It must be borne in mind that, according to the theory of sympathetic magic, any portion of a human being, such as hair, nails, skin, bones, and so forth, which has become detached, is still, in spite of separation, in effective sympathetic union with the body of which it once formed part; for the personality inheres in every part of the body. The doctrine extended to the effigy, the

clothes, the property, and even to the personal name; so that anything done to any of these objects affects the owner as if it were done directly to him. He is in a sense present in each of them. Not only, therefore, if I take a lock of a dead man's hair do I establish effective union with him so as to prevent him from inflicting any harm upon me; but, conversely, if I give him a lock of mine or a drop of my blood, we are bound together by a similar bond. It is sometimes suggested that, as in the case perhaps of the dripping of blood, the throwing of hair on, or giving it to, the corpse is an attempt to endow the dead with some of the vital strength of the survivors. This is, according to savage theory, not impossible; but there is no direct evidence in support of it. Another suggestion is that it is a relic of human sacrifice to the dead—the gift of a part for the whole, or a mere symbol. Human sacrifices, as we have seen, are common enough. Evidence, however, of the intention of a gift of hair, as a commutation of the practice of human sacrifice, does not, so far as we know, exist. It would seem more likely in the gift of blood or of severed members, such as those of the Montana squaws above cited; but even there proof is wanting. On the other hand, there is evidence that sometimes where the rite is not completed by giving the hair to the corpse the intention is merely purification, as where the hair is cut at the end of the mourning.

Before leaving the subject it may be added that, while among many savage peoples there is weeping as well as blood-letting over the corpse, in Europe it is believed that tears ought not to be allowed to fall on the body. Even to weep overmuch, apart from the corpse, is wrong, because it provents the dead from resting in the grave. There are many stories in European folklore of the dead who have appeared to survivors to reproach them with their excessive grief, and have exhibited their shrouds wet with their tears. Further, it is most import-ant not to allow anything worn by a survivor to be buried with the corpse, or put into the grave. To do so means decline and death to the person to whom the article belongs; hence it is sometimes

done maliciously, and is reckoned witcheraft.

6. Fire.—In the lower culture it is not unusual to light a fire at or on the grave—a practice common in Australia, where the reason assigned is to warm the ghost. The tribes about Maryborough add a further reason: to keep away the spirits of dead blacks of other tribes, or of bad men of their own

further reason: to keep away the spirits of dead blacks of other tribes, or of bad men of their own tribe (Howitt, 470).

These fires at or on the graves are maintained for varying periods, according to the tribe, or the amount of affection for the deceased; and sometimes several are lighted. The same custom is found on several of the Melanesian islands and those of the East Indian Archipelago (Planthrop. xiii. 775; JAI xxxiii. 120; Rep. Austr. Ass. iv. 711; Anthropo. xii. 275; JAI xxxiii. 120; Rep. Austr. Ass. iv. 711; Anthropo. i. 23, iv. 465; Haddon, Torres Str. Rep. v. 240, 200; Riedel, 142, 143; Kruit, 310), among various peoples of Further India and Assam (Lunet, 380; JAI xxxii. 185, xxvi. 200), among the insular Caribs and tribes of South America (Int. Arch. Xiii. Suppl. 57, 59, 81). In North America, the Tarahumares of Mexico, who bury in caves, light a fire the first night after burial. All their burial-caves are consequently blackened with smoke (Lumholtz, Unknown Mexico, N.Y. 1903, i. 70, 283). The Seminoles of Florida make a fire at each end of the grave and keep it up for three days, while after nightfall torches are waved in the air, that the had birds of the night may not get at the dead man (5 RBEW 521). The practice of lighting fires at the grave is reported of the Hupa (Goddard, 70, 72) and the Yurok on the other side of the continent in California (Powers, Contrib. N. Am. Ethnol. iii. [1877]68). The latter believe the fire is necessary to light the spirit of the departed on its perilous journey to the other world. The same belief and consequent practice were known to the Algonquins; and the Klamath of the North-West keep up a fire for the three days which are occupied with the uneral ceremonics, holding that, until they are finished, the soul of the dead is in danger from O-mah-á, said to mean the devil. In addition to lighting the fire, the survivors how around the grave in order to scare away the demon (1 RBEW 107).

From the munerous remains of fires in the pre-historic burial-mounds of th

From the numerous remains of fires in the pre-historic burial-mounds of the United States there seems reason to conjecture

that at one time the practice of lighting fires at the grave extended over a wide area, of which the modern instances cited may be the survival (5 RBEW 17, 25, 47, 71, 78).

More than one reason, as we have seen, is alleged for the custom. On the one hand, it is to warm the ghost, and to light and comfort it on its way to the other world; on the other hand, it is to drive away evil-disposed beings. The use of fire and lights for the latter purpose is widely extended. It is, beyond reasonable doubt, the origin of the European practice of the lights in the death chamber, of the candles sometimes put into the dying hands, of the consecrated tapers that sur round the coffin at the funeral. Similarly, lights are kept burning in the chamber with a new-born child and its mother, as a protection against witches and fairies; and they are used for the like purpose on many other occasions. But there is another reason equally potent, namely, to keep away the dead man himself. This reason may not be operative in all cases, as in Australia where it is definitely believed that the ghost haunts the fire on the grave, or among the Yurok where it is required to light the ghost in its perilous passage of a greasy pole across the chasm to the other world. But in other cases it is clear that the fire is a defence against the dead man himself.

world. But in other cases it is clear that the fire is a defence against the dead man himself.

One Australian tribe is said to go the length of cutting off the corpse's head and roasting it in the fire made upon the grave. When the head is thoroughly charred, it is broken up into little bits, which are left among the hot ocals of the dying fire. 'The theory is that the spirit, rising from the grave to follow the tribe, misses its head, and goes groping about to find it; but, being bereft of its head, it is, of course, blind, and therefore, not being able to see the fire, gets burnt. This frightens it so terribly that it retires into the grave with all expedition, and never again presumes to attempt a renewal of social intercourse with the human denizens of this world '('Al xiv. [1885] 88). We have already seen that among the Eskimo of Greenland a lighted chip is waved behind the corpse when it is taken out of the house, with a clear intimation to the dead to be gone (S.X. 7). In the Southern Nicohars a fire is made, even before the burial, at the entrance of the hut, out of chips from the bler and coco-nut husks, on purpose to bar the ghost; while, before the grave is filled in, the spirits of those present are waved out of it by a torch, thus rendering unmistatable the intention to place a barrier of fire between the living and the dead (Ind. Cens. Rep., 1901, iii. 209). So, too, among the Ewhe of Togoland, who bury under the hut, a fire is maintained during the whole period of mourning, and strongly smelling herbs are burnt in it to keep the ghost at a distance (Globus, kxxxi, [1902] 190). The same motive may account for the practice in some districts of Europe of burning on the road from the house to the cemetery, after the funeral procession has passed, the straw on which the corpse has lain (Am Urquell, vi. [1896] 201).

XI. Precautions against haunting.—I. Burying

XI. Precautions against haunting .- r. Burying the soul.—Ceremonies of the kind referred to in § IX. 8 seem to be directed to securing the soul, in default of the body, and performing over it the funeral rites. This was expressly the case in China (de Groot, iii. 847). But it is not only where the body is not obtainable that the soul is buried.

(de Groot, iii. 847). But it is not only where the body is not obtainable that the soul is buried.

Several of the tribes of Northern Tongking collect the souls of the deceased and bury them, either with the body or apart in a separate grave (Lunet, 163, 244, 274). The mixed Melanesian and Polynesian population of Savage Island stand in great fear of the aitu, the spirit of the departed. Their injunction to a dying man is: 'If you leave us, go altogether.' At the burial, heavy stones are thrown upon the grave to keep the aitu down. Prior to the burial they spread a piece of white bark-cloth beside the body, and the insect that first crawls upon it is carefully wrapped up and buried with the body; it is the mo'ut, the soul. Further, a dome of concrete is made over the grave to prevent the ghost from rising (Thompson, Savage Island, Lond. 1902, p. 52; JAI xxxi. [1901] 139). So the inhabitants of the Nicobar Islands bury beneath the body a cloth carefully wrapped up, which is believed to contain the soul (Int. Arch. vi. [1893] 24). Among some of the Ewhe of Togoland, when one has been fatally bitten by a snake (one of the kinds of evil death), on the ninth day after burial the witch-doctor starts before dawn for the place in the bush where the deceased was bitten. His object is to fetch the soul. He takes only one man with him, so as not to frighten it. He performs incantations, summons the soul, and addresses soothing words to it. Prosently he is joined by the young men of the village, who unite in endeavouring to console the ghost. They dig up the earth from the spot where the fatal wound was given, and put it in a jar, which is bound with some white fabric. The jar is put on the head of somebody who has previously met with the same accident, but has recovered; and with the firing of guns the procession returns to the house. Thence, accompanied by those

who have remained at home, they proceed to the place in the bush where the unfortunate man has been buried. They set the jar upside down on the grave and leave it there: it contains the soul (Spieth, 290; cf. 756, 760). Among the Brassmen of the Lower Niger a man who dies with unhealed sores (therefore 'a bad death') is buried apart from the ordinary burial-place. But his soul is afterwards evoked, and with an elaborate ceremony embodied in a wooden figure and buried in the proper place (Leonard, 168).

2 Binding and mutilating the hoder—The in-

2. Binding and mutilating the body.—The intention of burying the soul is to prevent its wandering about, haunting the survivors, and perchance causing them misfortune or death. This is, of course, by no means the only precaution. We have already met with many, and there are some others which must be noticed here. The binding of the body in the attitude proper to burial (see § VIII. 2) has this at least for one of its objects. It is indeed often expressly reported as the object (e.g. JAI x. 145). It is said in Lincolnshire that 'when the corpse is placed in the coffin you must never forget to the the feet, else the dead may return, or some other spirit may take possession of the body for his own purposes' (Gutch and Peacock, Lincs. County FL, 1908, p. 240). The practice of tying the feet, or at least the great toes together, is, in fact, not uncommon in Europe.

But binding is not enough. We saw that the sinews and the backbone were sometimes cut.

sinews and the backbone were sometimes cut.

The Basuto and Bechuana are not alone in these practices; they are found in other African peoples. The customs of Australia are even more revolting. The Herbert River tribes heat the corpse with a club, often so violently as to break the bones; and incisions are made in the stomach, on the shoulders, and in the lungs, and are filled with stones (Howitt, p. 474). A tribe in Western Australia, as has been mentioned, burns the head and breaks up the charred bones, for the express purpose of preventing the deceased from haunting the survivors. It is said that certain of the Negroes of Bahia break all the long bones and twist the neck of the corpse (Rodrigues, L'Animisme Aitichiste des nègres de Bahia, 1900, p. 119). When one has been killed by lightning, the Omaha of North America are accustomed to bury the body on the very spot where the death occurred, face downwards, and the soles of the feet previously slit (JAFLi i, 11839 1190). The practice in Europe, though not literally identical, has been parallel down to within the lifetime of the present generation. It is not very long since suicides were buried at cross-roads with a stake through the body. Another way of dealing with them was to cut off the head and place it between the legs. A mediaval corpse which had suffered this mutilation was found a few years ago in a stone coffin in Royston Church, near Barnsley (FL xii, 101). Bodies have been found with the same mutilation in a cemetery in Abania, dating probably from the 4th or 5th cent. Another way of the thurshing population of Somenishit in the Goment of Kovno (Am Urquell, v. (1894) 87), in the latter cas, vowedly that the deceased might not be in a condition to alk' and injure the fields; for suicides are believed to 'wall' in the shape of Germans, or else as he-goats, to mislead wayfarers, or with the weapon or cord in their hands with which they have taken their lives. They injure the fields by causing hail and storms; and the touch of their bodies blights the The Basuto and Bechuana are not alone in these practices

causing hall and storms; and the touch of their bodies blights the earth: hence they are buried in waste places (Am Urquell, iii, Ils92] 50, 52, 58.

The cremation of vampires has already been mentioned (§ VII. 3 (p)). A dead man who gave trouble among the ancient Norse by haunting was often taken up and burnt. Sometimes milder measures were successful, as in the case of Thorolf Halt-foot, who was removed to another grave with a wall so high that none but fowl flying could cross it (Morris, Bre-dwellers, 1892, p. 92). The fencing of graves is by no means always to protect the dead; probably it is quite as much for the protection of the living. Thus the Cheremiss fence the grave with stakes that the dead may not get out and walls the fields (Smirnov, Pop. fannoises, i. 138). Many of the South American tribes with the same object stamp down the earth upon the corpse; and the Achagoas even cover the grave with mortar and carefully fill up every morning any cracks that may have taken place (Int. Arch. xiii., Suppl. 98, 98). Cists, urns, coffins, and grave-boxes also serve the purpose of shutting in the dead, that they may not torment the survivors; and perhaps this was their original intention. Among the natives of South Australia it seems to have been the custom to stop and fasten up all the orifices of the body, doubtless to keep the ghost within (JAI viii. [1879] 393)—61). The inhabitants of Nias bind not only the fingers and toes, but also the jaws, and put stoppers in the nostrils to keep in the soul (Modigliani, Nias, 1890, p. 283). A more barbarous precaution is practised in Bulgaria, where sometimes a needle is stuck into the navel of the corpse (Strausz, Bulgaren, 454). On the islands of Ambon and Uliase, in the Moluccas, this form of protection is used only in the case of women dying in child-bed. In such a case thorns and pins are stuck between

the joints of the fingers and toes, in the knees, shoulders, and elbows, eggs of hens or ducks are laid under the chin and armpits, and a portion of the corpse's hair is brought outwards and nailed fast between the coffin and its lid. These elaborate precautions are intended to prevent the deceased from getting out of the cofin and flying away in the form of a bird, to plague men and pregnant women. Even if she succeeded in getting out, it is believed that she would not forsake the eggs (Riedel, en)

out, it is believed that she would not lorsane the value (181).

It should, however, be said that the corpse is sometimes wounded with quite a different intention from that just mentioned. The Puri of South America open the breast to let out the soul (Int. Arch. xiii., Suppl. 87). Another South American tribe, the Lengua of the Paraguayan Chaco, in accordance with a well-known principle of sympathetic magic, cut open the stomach of one whose death they attribute to witchcraft, and insert a stone and some charred bones. This is supposed to revenge the death by killing the wizard (JAI xxxi. 290; cf. Hartland, LP ii. 109). Some of the Naga tribes of Assam wound the corpse on the head, that the deceased may be received as a warrior with distinction in the other world (JAI xxxi. 198; ARW xii. 454).

ARW xii. 454).

XII. Return from the funeral.—The deceased being thus comfortably provided for and admonished by word and deed to stay where he has been put, or to go into the other world, and in any case not to meddle with the living, the mourners return from the grave. What they have to dread is that, in spite of these and other precautions, the ghost may attach himself to them and thus succeed in getting home again. For, as is obvious from what has already been said, the dead man is regarded as by no means willing to be deprived of the society to which he has been accustomed. Accordingly the

which he has been accustomed. Accordingly the burial is often conducted with the greatest haste. Thus among the Bontoe Igorot of Luzon, when the corpse has been put into the coffin, it is hustled away with the help of nany willing hands; no time is wasted at the graveside; the filling up of the grave is done in the shortest possible time-probably, in the case witnessed by Jenks, not over one minute and a half; and away the mourners hurry, most of them at a dog-trot, to wash themselves in the river (A. E. Jenks, Bontoe Igorot, 1905, p. 78). On the other hand, so deeply defiled are the members of the family considered by the Papuan tribes, and so impossible is it for them at once to get rid of the ghost, that they erect a hut on the grave and there camp for six weeks or more, the widows in particular huddled in one corner away from the rest, invisible and unwashed (ARW iv. 345). The Ojibwa widow springs over the grave and then runs zigzag behind the trees, as if she were fleeing from some one. She thus dodges the ghost of her husband, that it may not haunt her (Jones, Ojebway Indians, 1861, p. 90).

Specimens of the obstacles put in the way of the

Specimens of the obstacles put in the way of the ghost have already been given. Without going over the same ground, a few examples may here be noted of the methods of preventing the ghost from attaching itself to those who have taken part in the last rites.

attaching itself to those who have taken part in the last rites.

The Batak priest, as the grave is being closed, beats the air with a stick to drive away the souls of the living men (ARW vii. 504). In the Southern Nicobar Islands the tamily return to the hut, where they sleep. The next day it is purified by brushing and washing, the mourners bathe and are anointed on the head and shoulder by a priest, and a lighted torch is wared to drive away the spirits' (Ind. Cans. Rep., 1901, iii. 209) In North-Eastern Rhodesia all spit on the grave when it is filled up, and return to the village without looking back. This is now said to be a precaution against giving a clue to some watchful hyæna to dig up the body; it is more likely that the custom originated in a precaution of a different sort (Journ. Afr. Soc. v. 436). The Masurs of Eastern Prussia hold that the deceased accompanies the first bearer home, whereupon the latter asks him: 'Have I made thy bed properly? If not, I will make it better.' Only then is the ghost appeased and goes back to the grave (Töppen?, 110). The Mordvin mournerstop a little distance from the graveyard, and one of the grave diggers, with the same tool that he has used to dig the grave, draws a circle round them. This is repeated twice. When they reach the house, the oldest woman of the family throws in their way a log and a cutlass, over which they step. The intention of the cutlass is to frighten the deceased, who, according to popular belief, is at their heels (Smirnov, I. 364). In the Babar Archipelago four stakes with cross-beams are set up over the grave and a piece of coarse red cotton stuff stretched across them in the form of a canopy. A piece of rotan is fastened to one of the stakes, and one end of it is held by the villagers present. The rotan being held taut, the head of the household, counting from one to seven, cuts in two with one blow of his parang. The end left in the hands of the survivors is brought back by one of the kin to the house of the departed, as a symbol that all

A common superstition in Europe is that a motio on leaving a suckling returns for six weeks after the control of the little one. According to the Bulgarians wed to lingers for forty days in the house, and returns at apart first Easter Day until the first Whitsunday after the little one of the Minangkabau Malays of the rille Highlands keep the seat and bed of the deceased clean and bidy for a hundred days, lest the ghost be oftended; for it haunts the house during that period (Bijdragen tot de Taal-Land-en Volkenkunde van Nederlandsch-Indie, xxxix, [1800] 70). Among the Yakuts the ghost wanders round the body, visits the places the dead man frequented in his lifetime, and tries to complete any work he has left unfinished. In the silence of the night the ghosts of men attend to the cattle and meddle with the harness, while the ghosts of women may be heard washing up the dishes, sweeping the rooms, tidying the granary or the chests, sighing and whispering the while. The survivors may sometimes even see them sitting tranquilly in the firelight or walking about the fields (RHR xivi. [1902] 222).

XIV. Purification of the survivors.—When the

XIV. Purification of the survivors.—When the funeral is ended, all who have taken part in it must commonly be purified. As the necessity for purification attaches also to all mourners, and is sometimes deferred until, or perhaps more frequently repeated after, the completion of the death rites, the examples following are, in order to avoid

quently repeated after, the completion of the death rites, the examples following are, in order to avoid repetition, not confined to the immediate return from the funeral. The most usual methods of purification are by fumigation and bathing.

The Euahlayi of New South Wales fumigate themselves beside the grave at and after a burial. A widow covers herself with mud and sleeps beside a smouldering fire all night. Three days afterwards she and her sisters (who might have been her husband's wives) are chased down to the creek, where a fire has previously been lighted. She catches hold of the smoking bush; putting it under her arm she jumps into the creek with it and extinguishes it in the water. As it goes out, she drinks some of the smoky water. On emerging she is smoked at the fire and calls to her husband, who is supposed to answer her. Not until then is she allowed to speak; the only utterances permitted to her up to that time have been lamentations. On her return to the camp another fumigation, apparently of the entire population, is made, and she continues to wear mourning for many mouths (K. Langloh Parker, Buahlayi Tribe, pp. 86, 88, 89). Almong the Northern Tribes of Central Australia the women are released from their ban of silence by a ceremony, of which the chief item consists in their brushing themselves all over with burning twigs taken from a fire they have lighted for the purpose (Spencer-Gillenb, 554). Yakut gravediggers, on returning from the cemetery, purity themselves at a fire made of chips of the coffin, before they enter the year (RHR xivi 211). When a Bechuana widower is married, both he and his new bride must undergo an elaborate tunigation (IAI xxxix.) The Manganja mourners not only bathe, but rub thenselves with 'medicine-water' (Rattray, Some Folk-lore Stories

XIII. Lingering of the soul. —The unwillingness of the soul to sever its earthly ties is not easily overcome. So far from retiring into the other world when the last heath has left the body, it habitually lingers at the place of death, or with the corpse. The flurou ghost walks in front of the funeral procession and remans in the cemetry until the least of the dead; by night, however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & A. 1998), however, it stalks through the village and east the samp of the food to the living (Le Jeune, Jesut & Jesut

which requires every one who has touched a corpse to cover his head until purification, 'lest the world be spoiled' (Goddard, Hupa Texts, 1904, p. 224 n.). In Europe similar beliefs and practices have pre-

vailed throughout historic times

In Europe similar beliefs and practices have prevailed throughout historic times.

The ancient Greeks put at the door of the death-chamber a vessel full of pure water obtained from another house, so that all who came out might purify themselves (Rohde, Psyche, i. 219). It is still a very wide-spread custom on the Continent to meet the funeral party, on returning to the house, with water and towel, that all who have taken part may wash their hands before entering. In Istria the water is poured over a firebrand (Flobus, xcii. 119071 88). In Central France, two generations ago, the members of the funeral party used to hasten to the nearest brook or pool. In some of the villages so contagious was the pollution held that, if the funeral procession passed any clothes hanging out to dry, the clothes were always washed again (Laisnel de la Salle, ii. 79, 80). In the Tyrol all inhabitants of the house are assembled and fumigated by the house-father before the corpse leaves the house; to be absent from this ceremony is to run the risk of a speedy death. In another district when a dead body is carried out, every one must forthwith wash his clothes, otherwise a second corpse will soon be borne out (von Zingerle, pp. 49, 50).

XV. Funeral feasts.—A feast is usually (in the lower culture invariably) a part of the funeral rites. Frequently, indeed, a feast is partaken of in the presence of the corpse, another (somotimes kept up for days, or repeated at stated intervals) on the return from the funeral, and a third when the rites are closed by the second funeral, or re-burial of the bones (§ XXI.), and the mourning comes to an end. \*

comes to an end.

1. Before the funeral .-

Among the Gilbert Islanders, when the corpse's toilet is completed, the wailing begins. In the meantime a feast with dancing and songs is prepared outside the but where the body life's and every one in turn, after his wailing is over, goes and joins the feast, which lasts for three days before the interment takes place (Int. Arch. ii. [1889] 42). In the Canca Valley, Colombia, the dried corpse was kept in the house for two mouths before burial, and during the whole of that period

drinking-bouts, dirges, and singing-contests took place in honour of the departed (Globus, xc. 305). The relatives and friends of a deceased Araucanian sit round the corpse on the bare ground and weep for a while. Others, weeping, bring food and drink, of which all partake (Int. Arch. xiii., Suppl. 105). At the death of an Ainu, a large cup of food or a cake of millet, and water or sake, are placed by the head of the corpse after it has been laid out. The corpse is addressed in a farewell speech, and invited to partake, before he quite leaves the survivors, of food and drink such as he loved, 'for this is our good-bye feast made specially for you.' After the food has remained by the corpse for some time, it is taken and reverently divided among the nearest relations. Millet cakes and sake are also brought into the hut and handed round to all present, every one, before drinking, offering two or three drops to the remainder buried in the ashes of the hearth, a little piece by each person. After the burial these pieces are collected and carried out of the thut to the domestic shrine (Batchelor, Ainu and their Folkk., Lond. 1901, p. 556). Among the ancient pagan Prussians the body was dressed and placed upright on a bench. The nearest relations then sat down beside it, carousing with beer and walling (FL xii 300; Tetzner, 23). The ceremony among the Masurs is more elaborate. A messenger is sent through the village to summon to the burial, and the company is usually numerous. On one side of the room where the corpse, while all around it are seats for the men. The women sit at another long table, the middle of which is occupied by the corpse, while all around it are seats for the men. The women sit at another long table, the middle of which is socupied by the corpse, while all around it are seats for the men. The women sit at another long table on the other side of the room. After two tedious funeral songs have been sung, schnapps and turd-cakes are served. The schnapps for the men is served in bottles with one glass

elsewhere; further examples will be adduced hereafter.

2. After the funeral.—A feast follows the disposal of the body.

2. After the funeral.—A feast follows the disposal of the body.

The Ainu mourners return to the hut; the men make sacred willow emblems, called inao, pray, eat, drink, and get helplessly intoxicated (Batchelor, 559). Among the Uriya of Orissa the feast occupies several days (Rice, Occasional Essays, Lond. 1901, p. 56). So the pagan Norsemen feasted for three nights. The Masurs, whose ceremony prior to the burial has just been described, on returning find the tables and benches so arranged that men and women, who had previously sat apart, can sit together; and the schnapps is mixed with honey and served in bottles. Sometimes it is burnt before being mixed, and is then called by a special name. At noon a meal of fleshmeat, fish, and groats thickened with honey is served. All day the men remain in the house conforting the bereaved, and likewise comforting themselves with the remains of the food and with drink; nor do they separate until the evening (Toppen2, 104). In some places the corpse, before removal, is covered with a table-cloth, and the same table-cloth sput on the table at the subsequent funeral meal (ib. 111). In Ille-et-Vilaine neither wine, nor cider, nor coffee, nor liqueur appears at the table; the conversation is carried on in a low tone; as the guests finish they retire (A. Orain, FL de l'Ille-et-Vilaine, population of the marshes on the right bank of the lower Weser. They hurry from the church to the house, where piles of cakes, long rows of wine-bottles, clay pipes, plates of tobacco, matches, and cigars await the guests, and the feast begins. Hitherto stillness and whispering have reigned in the house. Now eating and drinking know no bounds; soon the tobacco-smoke fills the house, until it is impossible to see three paces ahead; all tongues are loosened; chattering and jesting, laughing and drinking, the clinking of glasses and the general good humour increase from hour to hour (ZVV ix. [1899] 55). In various parts of Europe it has been found necessary to put a limit by statute or local regulat

Among many peoples the feast is held at, or even upon, the grave.

even upon, the grave.

The Ojibwas, who deposit their dead on the ground and cover them with a light roofing of poles and mats, as soon as this is finished, sit in a circle at the head of the grave and present an offering to the dead of meat, soup, or 'fire-water.' This, except a certain quantity kept for a burnt-offering, is consumed by the mourners (P. Jones, loc. cit.). In the Nicobar Islands, the day after the funeral a least is held at the grave 'in the presence of the dead,' at which the relatives and friends bind themselves, according to their degree of kindred with the departed, to abstain from certain food, drink, and enjoyment for a longer or shorter period, the longest terminating with the great feast of the dead, when all the ceremonies are concluded (Int. Arch. vi. 25). The Gilyaks burn their dead. When the cremation has been accomplished, they sit round and partake of the flesh of dogs, killed there and then at the burning-place to accompany the soul of the deceased. They eat a portion of it and throw the rest about in all directions, probably for the deceased, afterwards adjourning to the yeart, where further refreshments are provided (ARW viii, 473). The ancient

Romans used to offer to the manes on the ninth day after the funeral at the grave; and the meal was taken there. The funeral meal is still, or was quite lately, taken in the cemetery at Argentière in the Department of the Hautes Alpes, France; and the curé and the family of the deceased sat at a table placed upon the grave itself. As soon as the meal was over, every one, led by the next-of-kin, drank to the health of the departed (Laisnel de la Salle, ii. SI). The custom is not merely wide-spread; it descends demonstrably from a great antiquity. Neolithic graves are often found containing remnants of a feast, in the shape of broken bones of animals and traces of a fire.

As already mentioned, the feast following the funeral is by no means always concluded at one

the ancient Norse were, and the Uriyas are, however, quite abstemious in this respect compared with some other peoples. In the Moluccas, on the island of Reisar, the kunsmen ordinarily feast for twenty days in the house of the dead, and, after enjoying all sorts of delicacies, wind up the solemnity with dog's flesh. The Tanembar and Timorlaut Islanders enjoy from ten to a hundred days' festivities (Riedel, 421, 306). The Lepers Islanders go on 'eating the death' for a hundred days' (Codrington, 287); while the Malagasy outdo them all. The length and brilliancy of their feasts are, of course, proportioned to the wealth of the deceased. Rum flows without stint from morning to night; and every one present is more or less plunged in drunkenness. So long as there is anything to eat and drink the feast goes on, and nobody thinks of going away. The functurent feasts of high and noble persons have been known to last for months (Mad. au xx² sizele, 284). Or, on the other hand, the least may be renewed at stated intervals. The ancient Prussians held their funcal meals on the third, sixth, ninth, and fortieth days (Toppen, 111 n.). The Muhammadan Malays feast on the day of the funeral, and on the third, sixth, and fourteenth days (Skeat, Malay Magic, 497). The Ohinese of Northern Tongking feast every seven days for a month (Lunet, 89). On the death of a Buriat shaman the funeral feast is held at the burning-place, and repeated on the third day, when his remarked those ser collected and denotited in a block heur in 89). On the death of a Buriat shaman the funeral feast is held at the burning-place, and repeated on the third day, when his cremated bones are collected and deposited in a hole hewn in the trunk of a big fir, and the rites are at an end for the time (JAI xxi. 138). This simplicity may be contrasted with the Fijian custom, which requires that wailing proceed in the house for four days after the death. On the fourth day a feast is held, and it is followed by others on the tenth, thirtieth or fortieth (when the tomb is dressed), and the hundredth days (Anthropos, ii. 74). Among the Patagonians the wailing lasts for fifteen days after a death. It is accompanied with feasting on horsefiesh and chinking-bouts, and is renewed every month under the same stimulating influences, and closed at the end of a year with a three days celebration (Int. Arch. xiii., Suppl. 138).

A feast is often held at the completion of the funeral ceremonies or of the period of mourning (see § XXI.).

3. Object of funeral feasts.—The object of these feasts is not simply hospitality to the invited guests; they indeed very often contribute their full share in kind. Nor is the object merely the reaction from sorrow, or ostentation on the part of those who provide them. Doubtless some or all of these impulses do enter into the motives for the frequently repeated and usually extrava-gant displays, and the gluttony and carousing inseparable from them. But there are deeper reasons for the observance. The above reasons would be insufficient of themselves to account for the practice, shared by civilized Europeans with savage Ainu, of holding the first formal meal in the presence of the corpse, or on the grave, if they would not indeed positively repel it. Moreover, the ceremonial of such a meal is not always that of abandonment to the pleasures of the table and of social intercourse; and, finally, the deceased is himself, even after cremation or burial, regarded as one of the convives. The belief that the dead man is present and joins in the feast is very widespread, and is evidenced in more ways than one.

spread, and is evidenced in more ways than one. In the German districts of Prussia a seat is left for the dead man, and food and drink are placed for him. The old Prussians used to throw the food and drink destined for him under the table (Toppen<sup>2</sup>, 111 n.). The Thlinket of British Columbia are divided into two intermarrying classes, descendible exclusively through women. When a man dies, his body is carried out by raembers of his wife's class, and the members of his own class give them a feast. Before distributing the food the name of the dead is pronounced, and a little of the food is put into the fire. By this means he is believed to receive it (26 RBE W 431; cf. 462). The utterance of the name is a call to its owner to come and receive his portion. In various Melanesian islands, when the name is pronounced, the chief mourner with some

of the food in his hand says expressly, 'This is for you,' and throws or puts it aside for the deceased (Codrington, 271, 282, 284). Among the Chinyai or Chinyungwe, on the Zambesi, a portion of the drink and the blood of the slaughtered sheep are poured into the grave, through a hole made for the purpose (JAI xxin. 421). The Veddas make an offering to the newly dead, and afterwards consume it themselves (Rep. Oxford Cong. Hist. Rel. i. 62). On some of the Moluccas the soul after burial is believed to haunt the neighbourhood of the house. On the fifth day a wooden image of the deceased is prepared, the soul is enticed into it, and a meal of rice, pork, and chicken is presented. The mouth of the image is daubed with some of the food, and the deceased is addressed: 'Eat, drink, and watch over us, that no sichness arise.' After the deceased has finished, the teast of the survivors begins, and lasts all night (Riedel, 395). It is not quite clear from the report whether they partake of the identical food that has been placed before the image; but probably they do. The Cherenness, on the fortisth day, go to the cemetery to invite the dead man to join the feast and to bring him back. In one district one of the convives impersonates him dressed in his best clothes. He is seated in the place of honour, and is treated as the master; the widow of the deceased addresses him as husband, the children as father. All night he eats, drinks, and dances with the rest. In the intervals of the dances he relates his life in the other world and his pleasure at meeting again those who have predeceased him; he begs them not to sorrow on his account—rather let them oftener repeat the feast of commemoration (Smirnov, i. 143). So, the Kols of Chota Nagpur provide a meal in the dead man's house, to which they summon a man from the Mahali, a neighbouring mongrel tribe with whom they never otherwise eat. He comes to the banquet, and there represents the deceased. Until he has done this, no meal can be eaten in the house. When the meal is fin

The ritual character of the meal is rendered obvious also by the fact that very often it consists, wholly or in part, of a special kind of food. Pulse was partaken of by the Romans, and it figures prominently in the funeral feasts of many parts of modern Europe. Cakes and biscuits of various kinds are also used, from Wales to the Volga and the Greek islands. It is probable that this ritual food represents the flesh of the corpse, and is a long-descended relic of funeral cannibalism. The Abbé Dubois, describing the ceremonies attending the cremation of the king of Tanjore, who died in 1801, and two of his wives, informs us that some of the bones which had escaped complete destruction were ground to powder, mixed with boiled rice, and eaten by twelve Brahmans. The object of this rite was the expiation of the sins of the deceased; for these sins, according to popular opinion, were transmitted into the bodies of those who ate the ashes (Dubois-Beauchamp, 366). This is precisely parallel to the old Welsh custom of 'sin-eating,' whereby, when the corpse was brought out of the house and laid on the bier, a man was found whose profession it was to perform the ceremony. A loaf of bread was handed to him over the corpse before the funeral procession started, and a mazar-bowl full of beer with a piece of money (in John Aubrey's time sixpence), 'in consideration whereof he tooke upon him (ipso facto) all the Sinnes of the Defunct, and freed him (or her) from walking after they were dead' (Aubrey, Remaines, ed. 1881, p. 35). In the Bavarian Highlands a different interpretation was put upon a similar practice. Formerly, when the corpse had been laid on the bier and the room carefully washed and cleaned, the housewife prepared the Leichen-nudeln, or corpse-cakes. Having kneaded the nudeln, or corpse-cakes. dough, she placed it to rise on the dead body before baking. Cakes so prepared were believed to contain the virtues and advantages of the departed, and to transmit to the kinsmen who consumed them his living strength, which thus was retained within the kin (Am Urquell, ii. 101). Perhaps we may interpret in the same way an obscure rite at the funeral feast of the Man Côc in Tongking. Before the moal begins, the priest presents to all the relatives in turn a piece of flesh to be smelt. At the meal each of the guests

receives a piece of flesh, and the priest is paid with a leg of pork (Lunet, 245).

a leg of pork (Lunet, 245).

Similarly, in a MS of the 18th cent., preserved in the British Museum, it is related of the tribes about Delagoa Bay that they 'generally kill some beast in proportion to the ability of the deceased, and, digging a round hole, they lay the deceased at his full length; when, opening the beast, they take out the paunch yet reeking, and lay it upon the face of the deceased, and, after dancing round the corpse, tear this paunch to pieces and tunnultuously eat it. This done, they bend the corpse round while warm and lay him in the hole, casting in some part of the guts [of the slaughtered beast], and closing the hole up; ending this odd funeral with dancing' (Rec. S.E. Africa, it. [1898] 460).

Ritual food with another meaning is found among the Baganda, where fowls are, as a rule.

among the Baganda, where fowls are, as a rule, tabu to women. The reason they assign for this tabu is that death came into the world by the disobedience of a woman, who insisted on returning to heaven for food for a fowl (see § II.). But at the death of a man a fowl is cooked, and each of his widows eats of it prior to the distribu-tion of his widows and effects (JAI xxxii. 48).

The distribution of articles of food to persons, whether relatives, friends, or the poor, who do not share in a formal meal is an extension of the

feast.

feast.

In Sardinia, on the seventh or ninth day after death savoury cakes are prepared and sent hot from the oven to all the relatives and neighbours, and to all who have joined in the funeral ceremonies; but the funeral supper is confined to the immediate family (Rivista Trad. Pop. Ital. i. [1893] 959). At Gainsborough, penny loaves used to be given away at funerals to all who asked for them (Ant. xxxi. 331). In Bulgaria the villagers bring fruit for the departed, or for the previously dead, and it is distributed among the children at the funeral (Strausz, 440). Among the Uriyas, on the death of a rich man, copper coins and fried rice are scattered as the funeral procession passes (Rice, 55). On the island of Mabulag a heap of food is piled up close to the platform on which the body lies, and afterwards divided among those present. Again, a few days afterwards, when the skull has been removed and cleaned and is handed over to the relatives, another quantity of food is provided by the mourners, and distributed to those who have assisted at the funeral. In both cases it seems to be consumed at home (Torres Str. Rep. v. 250, 251).

The money doles given to the poor in our own

The money doles given to the poor in our own country are probably a commutation of the distribution of food (see Brand and Ellis, ii. 192). The analogous customs in India and elsewhere may be set down to the same cause. Doubtless, however, all have been affected by ecclesiastical influences. The fact that the gifts frequently include lavish doles and entertainments to ecclesiastics, both in Europe and in Asia, is evidence very difficult to gainsay.

Often the feast is merely a farewell banquet—a send-off of one who is unwilling to go-at the termination of which the deceased is formally but

firmly shown the door.

termination of which the deceased is formally but firmly shown the door.

Thus about Königsberg, in Prussia, a place is set for the dead man at the feast, in order that he may share it; and, when it is over, the bearers open all doors, that the ghost may depart (Am Urquell, it. 80). The ancient Prussians used to drive the ghost out, saying: 'Be off! you have eaten and drunk' (Tetzner, 23). Among some of the Brazilian tribes, at the end of the feast, the widow, accompanied by the other women, and weeping, used ceremoniously to thank the men for their presence and help, and in the name of the deceased to call for a parting drink, that he might forthwith enter on his journey; for he could not set out while his friends tarried with him (Int. Arch. xiii., Suppl. 112). The Tarahumares of Mexico hold three feasts for a man, but four for a woman (see § XVIII.). These begin within a fortnight after the death and are increasingly elaborate, each lasting a day and a night. All the mourners talk to the departed. He is told to take away all they have given him, and not to come and disturb the survivors. The second least is given half a year after the first, the third and largest later still. The sacred cachus, hikuti, is thought to be very powerful in chasing away the dead, driving them to the end of the world, where they join the other departed. Hence it is steeped in water and the water sprinkled over the people; and hikuti-dancing and singing always play a prominent part in all festivities. At these feasts for the dead other dances also take place; tessino, the national stimulant, is drunk; and the survivors drink with the dead. At the third feast a large carthen bowl full of water is the subject of a ceremony by the shoman, at which he finally lifts it up and throws it in the air. It falls shattered to pieces, and the people dance and trample on the fragments. The function concludes with races by the young people. 'The mon have their ball, and as they run they scatter ashes to the four cardinal points to

cover the tracks of the dead. They return rejoicing, manifesting their delight by throwing up their blankets, tunics, and hats, because now the dead is at last chased off. Not until after the last function will a widower or a widow marry again, being more afraid of the dead than are other relatives (Lumholtz, Unknown Mexico, i. 381 ff.).

Elsewhere the motive is stated to be the rest or the happiness of the deceased-often, however, with somewhat more than a hint at the benefit of the survivors.

or the happiness of the deceased—often, however, with somewhat more than a hint at the benefit of the survivors.

Thus, among the Bulgarians of Hungary, before the burial a meal takes place, at which every one receives a loaf of bread and a taper wound with a cloth. The tapers are kindled in the house, and then extinguished. The bread is then eaten, and it is believed that the soul is now saved. In a room adjoining that where the corpse is being waked another meal goes forward, 'for the well-being of those who are left behind and that he may stumber for ever' (Globus, xc. 140). The Igorot dead in Luzon is admonished not to come and make the survivors sick, but to protect them from other anito (manes); he is reminded that, when they make a feast and invite him, they want him to come, but that, if another anito kills off all his relatives, there will be no more houses for him to enter for feasts. The Igorot are very fond of feasts; it is assumed that death makes no difference in this respect; consequently this last argument is considered very weighty (Jenks, 79). Among the Yakuts the horses or cattle killed for the feast are ridden or driven by the dead to the other world, and so add to his comfort or his state (RHR xivi. 208). The Barotse take the same view. They no longer kill slaves, but they kill and eat the cxen, which will secure to the dead a favourable reception at the hands of his ancestors (Beguin, Les Ma-Rotse, 116). So, again, the Melanesian population of Aurora think that, if they do not kill many pigs, 'the dead man has no proper existence, but hangs on tangled tring. That is the real reason why they kill pigs for a man who has died; there is no other reason for it but that.' The deceased and the ghosts of others who have previously died are believed to come back to earth to attend his tuneral feast (Codrington, 282, quoting a native account). In Angola it is held that the condition of the dead in the other world will depend upon the amount of dood and drink consumed in their tambit, or mourning, wh

XVI. Funeral games and dances.—Funeral games, familiar to us in classic literature, are of very wide distribution. They cannot be separated from dances, for there is no hard and fast line between the two. Many dances are mimic contests, and the ceremonies are by some observers reported as dances and by others as games. Whether dances or games, however, it would appear that the object is the same, viz. to drive away either the dead or the evil spirits to whose influence death is due, and to free the living from the resulting fear-a purpose which in process of decay first becomes divination as to the state of the deceased, and then is explained more simply as for the mere amusement of the deceased or the survivors. Naturally this object is not clear in every reported instance. Insufficient attention on the part of the reporter is sometimes the reason for this; but perhaps quite as often the decay of the ceremonies themselves, and the loss by those who practise them of their real meaning, are as much to blame.

Among the Bongo of the Egyptian Sudan a

large heap of stones is erected over a grave, and upon it a number of votive poles are erected, adorned with notches and incisions, with their

forked tops made to resemble horns. ing of these poles or stakes is said to have passed from the memory of the inhabitants; at all events. Schweinfurth (*Heart of Africa*, Lond. 1874, i. 304), during his twelve months' stay in the country, failed to obtain any information on the subject. However, there is no doubt as to what is done. The entire village takes part in the digging of the grave, in covering it, and in planting the votive poles; and, when this is finished, they all equally shoot at the poles with arrows, which are left where they strike. The Vānādis of Southern India perform, on the sixteenth or some later day after death, a ceremony called peddadinamu. A handful of clay is squeezed into a conical mass representing the soul of the deceased, and stuck up on a platform, where the eldest son spreads cooked rice before it, lights a lamp, and burns incense. It is then taken with the rest of the cooked rice to a tank. There the recumbent effigy of a man is made close to the water with the feet to the north. This effigy is anointed with shikai (fruit of the Acacia concinna) and red powder. The conical image is set up at its head; the rice, made into four balls, is placed near its hands and feet, together with betel and money, and the son salutes it. The agnates then seat themselves in a row between the effigy and the water, with their hands behind their backs so as to reach it. In this way they slowly move it towards the water, into which it finally falls and becomes disintegrated (Thurston, vii. 428). These two customs of widely differing peoples are manifestly directed excitent the decomposite. festly directed against the deceased.

A Sioux practice known as the 'ghost-gamble' presents the deceased as engaged in the contest. His effects are divided into many small piles. man is selected to represent the ghost, and he plays for these piles of goods against all the other players. The playing is with wild plum-stones, which are marked like dice. When the deceased is a man, marked like dice. When the deceased is a man, only men play; when a woman, only women play (1 RBEW 195). Of the real meaning of a contest of this kind we get a glimpse in the custom of the Bulgarians of Hungary, who while away the tedious hours of the wake with games, among others with card-playing to divine whether the soul of the departed is saved or not. At an earlier stage it probably did not merely divine, but determined, the fate of the soul, or its relations with the survivors (Globus, xc. 140). In the south of Ireland, formerly, on a similar the slipper, and and stories, blindman's buff, hunt the slipper, and and stories, bindinan's bull, inthe the supper, and dancing were among the amusements. We are told also that 'four or five young men will sometimes, for the diversion of the party, blacken their faces and go through a regular series of gestures with sticks, not unlike those of the English morris-dancers.' This disguise and these evolutions in the presence or immediate neighbourhood of the corpse, there can be little doubt, were more than mere diversion. Comparison with other customs suggests that the players represented supernatural personages-ghosts or devils (Croker, Researches,

This is certainly the case with savage dances in which masked and disguised figures appear. The assumption of the disguise is, according to the almost universal view of savage peoples, enough to cause the performer not merely to represent, but actually to be for the time, the supernatural being represented; and the appearance of such figures is quite common at death-dances.

Thus in the western islands of Torres Straits the performers personly the ghosts of persons recently dead, and they mimic in the dance the characteristic gait and actions of the persons opersonified. 'The idea,' writes Haddon, 'evidently was to convey to the mourners the assurance that the ghost was alive and that in the person of the dancer he visited his friends; the assurance of his life after death comforted the bereaved ones'

(Torres Str. Rep. v. 256). In conformity, probably, with this object, a buffoon is provided, also disguised, whose antics as he follows the other performers are provocative of mirth. But the object is not the same in all savage death-dances. Among the object is not the same in all savage death-dances. Among the Bataks the dance seems to be performed by the guru alone. The guru in such cases is a woman; it is her business to protect the living against ghosts. She dances both before and after the burial. As the grave is filled in, she lays about her with a stick, not, however, to drive away the ghost, but the souls of living persons—obviously to prevent their getting into the grave, or into the undesirable society of the dead (ARW vii. 503).

Among the Beni Amer of Abyssinia, in spite of Islām, women occupy a privileged and almost a sacred position. It is the women who perform the funeral-dance; and one of the sisters of the deceased, having dressed her hair in masculine fashion, parades with his sword and shield while his praise is sung (Munxinger, 327). The sex of the performers renders it probable that the object of the dance is prophylactic, and the appearance of a personification of the deceased is intended to do more than give assurance to the relatives of his continued lite: it is to mollify him by singing his praise, so that he may do no harm to the survivors. So to ward off evil influences (probably to drive away the ghost) is the object of the dance practised by the Damaras and performed backward and forward over the grave (Kidd, Ess. Kair, 251). On the burial of a chief among the lbouzo on the Niger the last ceremony is called i kwa ota, 'bending the how.' The young men, clad in shord trawers and wearing caps of monkey-skin, soour the town, brandishing shields and cullasses, as if they were starting on a warlike expedition. With an urgent air and panting as they go they utter a feroclous chant. Advancing in serried ranks they brandish the cultasses over one another's heads, and the clash of the weapons is heard from afar. From time to time they strike their shields and leap to right and left as they chase the evil spirits before them (Anthropos, it. 105). Among the Beni Amer of Abyssinia, in spite of Islam, women

But there is another kind of dance sometimes performed on these occasions, of which we have had a glimpse in some of the foregoing—the comic or burlesque.

or burlesque.

Among the Indians of the Paraguayan Chaco a woman who has lost a child joins in a procession in circuit round a fire made outside the house. Young men appear dressed up as dragonflies, and flit to and fro, provoking laughter by their antics and the capital imitation of the insect they present' (Grubb, 45). We are not told here the nature of the pranks played; but in many cases they are certainly of a priapre and what we should call obscene character. The description of the funeral of a king of Loango in the ninth decade of the 18th century reports performances of this kind carried out by players who were clad in feathers and masked with the heads of spoonbills. Similar dances are performed on the island of Yap on various (not necessarily funeral) occasions, especially on the death of a young girl (Globus, lxxxvi, [1904] 381); and in the Aaru Archipelago they are presented at the termination of the mourning an intimation to the widow that she is now processing, and as an incitement to her to desiral mans.

It was such a dance as this the property of the content of the mourning the content of the mourning the content of the conten

it may stand as a type of many others. But it is more particularly the near relatives and those who have been brought into contact with the corpse who are affected by the death-pollution, most of all the widow or widower. Moreover, the period of mourning, and therefore of tabu, varies among different peoples, and according to the relationship of the mourners to the deceased, or his rank, from a few days to many months and even years.

## Practices.

a few days to many months and even years.

I. Practices.—

On Teste Island, off the coast of New Guinea, death lays the whole settlement under tabu. Dancing is forbidden, and no traveller may enter. A circuitous path must be taken through the surrounding bush in silence (Chalmers, 41). Among the Manganja, on the occurrence of a death, strict continence is required of the chief mourners and the elders of the village (Rattray, 95). On the island of Aurora the wives and parents of the deceased abstain from going out as usual for a hundred days. The restriction is particularly severe on female mourners, who are forbidden to go into the open; their faces may not be seen; they stay indoors and in the dark, and cover themselves with a large mat reaching to the ground. The widow, however, goes out thus covered morning and evening to weep at the grave. All who are in mourning retrain from certain food; the immediate relatives may not eat any cultivated food. They are restricted to gigantic caladium, bread-fruit, coo-nuts, mallow, and other things which must be sought in the bush where they grow wild. A cord is worn round the neck to indicate mourning and abstinence from 'good food' (Codrington, 231). In the Nicobar Islands the mourning begins from the feast at the grave 'in the presence of the dead.' Two degrees of mourning are distinguished: the lighter, in which all relations and friends abstain until the torch-feast, three months later, from singing, gambling, dancing, adornment of the person, and in the house of mourning from certain food; and the deeper, which concerns the immediate relations (especially the husband or wife), and extends over a longer period until the great feast of the dead, and in which, in addition to avoiding the enjoyments just mentioned, they must abstain from certain foods, from smoking and betel-chewing (Int. Arch. vi. 25). The ancient Hurons likewise observed two degrees of mourning: the greater lasted for ten days. During that time the mourners remained lying on their mats with their face may be set down to the same cause. Doubtless, however, all have been affected by ecclesiastical influences. The fact that the gifts frequently include lavish doles and entertainments to ecclesiastics, both in Europe and in Asia, is evidence very

official to gainsay.

Often the feast is merely a farewell banquet—a send-off of one who is unwilling to go—at the termination of which the deceased is formally but

firmly shown the door.

termination of which the deceased is formally but firmly shown the door.

Thus about Konigsberg, in Prussia, a place is set for the dead man at the feast, in order that he may share it; and, when it is over, the bearers open all doors, that the ghost may depart (Am Urquell, ii. 80). The ancient Prussians used to drive the ghost out, saying: 'Be off! you have eaten and drunk' (Tetzner, 23). Among some of the Brazilian tribes, at the end of the feast, the widow, accompanied by the other women, and weeping, used ceremoniously to thank the men for their presence and help, and in the name of the deceased to call for a parting drink, that he might forthwith enter on his journey; for he could not set out while his friends tarried with him (Int. Arch. xiii., Suppl. 112). The Tarahumares of Mexico hold three feasts for a man, but four for a woman (see § XVIII.). These begin within a fortnight after the death and are increasingly elaborate, each lasting a day and a night. All the mourners tells to the departed. He is told to take away all they have given him, and not to come and disturb the survivors. The second feast is given half a year after the first, the third and largest later still. The sacred cactus, hikuti, is thought to be very powerful in chasing away the dead, driving them to the end of the world, where they join the other departed. Hence it is steeped in water and the water sprinkled over the people; and hikuti-dancing and singing always play a prominent part in all festivities. At these feasts to the dead other dances also take place; testino, the national stimulant, is drunk; and the survivors drink with the dead. At the third feast a large earthen bowl full of water is the subject of a ceremony by the shaman, at which he finally lifts it up and throws it in the air. It falls shattered to pieces, and the people with races by the young people. 'The men have their ball, and as they run they scatter ashes to the four cardinal points to

mothers-in-law of the deceased. They are not released from this ban until the final mourning ceremonies have been completely enacted—a period which may cover one or even two years (Spencer-Gillen), 521, 525). Among the Ewhe of Togoland the mourning lasts for six months, that being the time taken by the deceased to reach the kingdom of the dead. He is buried beneath the hut; and for the first six weeks of mourning a widow must remain in the same hut concealed, only leaving it to bathe and for other absolutely necessary purposes. When she goes out she goes entirely naked, with bowed head, eyes bent down, and arms crossed over her breast, 'that no mischief may befall her from the dead man.' In fact, she has nothing so much to fear as the deceased. She carries a club to drive him away, for he may wish to renew marital relations with her, and that would be death. For greater security she sleeps upon the club. She must not answer any call. Beans, flesh, fish, palm-wine, and rum are forbidden to her; and the food and drink that she is allowed must be sprinkled with ashes, to prevent her deceased husband from sharing the meal, in which case she would due. By way of further protection, on the charcoal fire that burns by night in the hut she strews a powder consisting of peppermint-leaves dried and rubbed down, mingled with red pepper. This produces a smoke such as the dead man is naturally averse to encountering. A man undergoes similar seclusion on the death of his wife, but only for seven or eight days. In Agué the widows are not let out of the dead-hut until after six months; and even then they must submit to tedious purification ceremonies before they are quite tree (Globus, Ixxii, 22, Ixxxi. 120).

Among the Matse tribe of Bwhe the mourning for the oldest man or woman in the family lasts from five to seven months, for others one to two months. The entire period does not last hey one of the submit of the hut; instead of on a stool she must sieep on the mat on which the deceased lay until his burial; she must remain mothers-in-law of the deceased. They are not released from this ban until the final mourning ceremonies have been com-

XVI. Funeral games and dances.—Funeral games, familiar to us in classic literature, are of very wide distribution. They cannot be separated from dances, for there is no hard and fast line between the two. Many dances are mimic contests, and the ceremonies are by some observers reported as dances and by others as games. Whether dances or games, however, it would appear that the object is the same, viz. to drive away either the dead or the evil spirits to whose influence death is due, and to free the living from the resulting fear-a purpose which in process of decay first becomes divination as to the state of the deceased, and then is explained more simply as for the mere amusement of the deceased or the survivors. Naturally this object is not clear in every reported instance. Insufficient attention on the part of the reporter is sometimes the reason for this; but perhaps quite as often the decay of the ceremonies themselves, and the loss by those who practise them of their real meaning, are as much to blame.

Among the Bongo of the Egyptian Sudan a large heap of stones is erected over a grave, and upon it a number of votive poles are erected, adorned with notches and incisions, with their

must be done. For some time after the funeral there must be no washing in the house, and the mourning clothes must not be changed on a Sunday (Wuttke?, 161, 467). In the North Rading of Yorkshire the fire was put out at the moment of death and not lighted again until the body was carried forth. In Cleveland, however, this seems to have been disregarded in favour of the requirement to keep a fire lighted for purposes referred to above (§ X. 6) (Gutch, PL Yorkshire, 1901, p. 300).

2. Garb.—Everywhere mourning garb is an essential part of the observances. Primarily it seems intended to distinguish those who are under

seems intended to distinguish those who are under the tabu. For this reason it is usually the reverse of the garb of ordinary life. Peoples who wear their hair long cut or shave it; those who habitually cut or shave it allow it to grow. Those who paint omit the painting. Those who braid their hair unbind it and wear it loose. Those who wear clothing go naked, or wear scanty, coarse, or old worn-out clothes. Ornaments are laid aside or covered up. Those who habitually dress in gay clothing put on colourless—black or white—gar-ments. Ainu mourners at a funeral wear their coats inside out or upside down (Batchelor, 106). Among the Bangala a man sometimes wears a woman's dress in token of sorrow (JAI xxxix. 453). Peoples who ordinarily cover their heads uncover them, and vice versa. Women, especially widows, cover themselves with a veil, and hide in the house—a practice pointing probably to the contagiousness of the tabu. But mourning garb is more than merely distinctive: it is, like other mourning rites, intended to express sympathy for the deceased and grief at his loss; it is intended to call forth pity, to avert the suspicion of foul play on the part of the mourner, and to depre-cate the anger or ill-humour of the deceased at his separation. It has sometimes been suggested that there is a further motive, namely, the desire to escape by means of disguise the persecution of the deceased. A careful examination fails, however, to disclose sufficient evidence in favour of this interpretation. Protection is often held to be needed; but it usually takes a different form. The Charrua mourner is armed with a stick, the Ewhe widow with a club. And various other means are taken or "res or lights, incense and foul smells, exorthe teduc drive off the ghost or to hold it at arm's others with short, open war rather than guile is soul of the departance. available. All that can here be done is to note a few examples showing how it is reckoned in some typical cases.

In the Babar Archipelago mourning lasts to the next new moon, and is brought to an end by bathing in the sea (Riedel, 363). Among the Lenguas of Paragnay the relatives cut their hair, and the mourning lasts until it has grown again (Int. Arch. xii., Suppl. 76). Among the Musquakies it lasts for thirty days. At the end of that time the mourners wash and paint themselves, relinque-hing the old torn garments they have been wearing for whole ones, and a feast is set. The deceased is summoned, and a representative appears, who joins in the festivity. He is called the 'ghost-carrier.' When sunset is near he departs toward the west with an escort of young men. It is believed that he carries the ghost to the Happy Hunting Ground, and on his return he is called by the name of the dead man whom he has represented (Owen, FL of Musynakie Indians, 80). In the New Hebrides the mourning lasts for 100 days (Codrington, 231). A year is supposed to be the period of mourning among the Agni of Baoulé on the Ivory Coast; but very often it is reduced to 6 or even 3 months, except for the widows, who must always mourn the full year. Although funeral ceremonies are proceeding during this period, the actual burial may be postponed for years (Clozel and Villamur, 115). In Korea the length of mourning depends on the degree of kinship. For father, mother, husband, adoptive parents, or first-born son, it is '27 months, though nominally 3 years; for relatives under 19 years of age it may be as little as 3 months (JAI xxv. 342). Among the Ewhe the survivors mourn in the hut for eight months. A feast is then held, the remains of the food when it is finished are thrown away, and the mourning is over: 'they say they have to-day sent the dead to his brethren—those who have gone before' (Spieth, 258). Among the Dayaks all the kindred are 'unclean.' Then fowls are slaughtered, the mourners and the entrances of the house are daubed with

4. No mourning.—Attention has been drawn to the common rule that the mourning tabus weigh more heavily on the women than on the men. The necessity of the labour and vigilance demanded from the latter for the provision of food, and for protection from wild animals and human foes, may probably form at least an excuse for their com-parative exemption. Instances of total exemption are not quite unknown. In ancient Greece it is said the men of Keos wore no mourning garb (Rohde, Psychs, i. 257 n.); and the same statement is made of the inhabitants of some of the Molucas (Riedel, 395). Where there are no Molucas (Riedel, 395). Where there are no outward signs there is probably (not certainly) no tabu. In the district of Kita (French Sudan), however, we are told, mourning is almost un-known for either sex. When a married woman dies, her sister is offered to the widower, even before the funeral is over; and the widower often narries again in eight days, though some wait longer—a month or two months; while others take a concubine at once. If a man dies, his widow may marry as soon as she likes, unless she is pregnant, when she must wait until the child is born (Steinmetz, 156). In Seguela, on the Ivory Coast, the burial and funeral dance take place the

ing is quite unknown (Clozel and Villamur, 337), Among the Meo of Northern Tongking the funeral rites last for three days, during which the only sign of mourning is that the hair is untied and allowed to hang down upon the shoulders. There are no other mourning customs and apparently no For a day or two some food is laid on the grave for the deceased, and then he is forgotten

(Lunet, 318).

XVIII. Purification of house and village.—In spite of the elaborate precautions to prevent the dead man from returning (§§ IX. 5; XI., XII.), he is often thought to be present in the dwelling after the actual disposal of the corpse (§ XIII.). Accordingly, either after the body has been removed or at the completion of the ceremonies (which may be long subsequent), measures must be taken to

long subsequent), measures must be taken to purify the place and remove the tabu. This is accomplished by driving away the ghost.

At the last of the funeral feasts of the Tarahumares the deceased, as we have seen, is driven away. Three feasts are required to get rid of a man, but four to get rid of a woman, because she cannot run so fast, and it is therefore harder to chase her off (Lumholtz, i. 387). Noise is a potent means of driving away ghosts, and indeed all inconvenient and hostile spirits. For, though often dangerous, they are all fortunately not only easily dangerous, they are all fortunately not only easily deceived, but possessed of very weak nerves. In these ceremonies there is often no clear distinction drawn between the different kinds of spirits, all alike being liable to be bluffed and tricked and frightened by the same means. It is impossible to say whether the guns universally fired in West Africa at Negro funerals are directed against the ghost or against other spirits. In South America the Macusi fire before the hut in which the corpse is lying, to scare off both the ghost and the evil spirit that has caused the death (Int. Arch. xiii., Suppl. 88). Drums, trumpets, musical instruments of all kinds, shouts, and yells are all very commonly employed. Among the ancient Greeks, brass was beaten to drive away spirits (Rohde, *Psyche*, ii. 77). In the Tyrol an approved method to banish a ghost is for the householder to collect his keys and jingle them. He can thus drive the ghost to the boundary of his property. Over the boundary, however, he must not step on peril of being torn to pieces (Zingerle, 57). Many of the funeral dances, as already mentioned, have the same intent.

(Zingerie, 57). Many of the funeral fances, as already mentioned, have the same intent. In various parts of Europe, especially among Slav populations, the house is solemnly swept out after the funeral. Among the Dayaks, after the timen, or final feast of the doad, the priests take a besom made of the leaves of certain plants, moisten it with blood and rice-water, and asperge all who have taken part in the feast and everything in the house, 'to sweep away the pollution.' The priests then start in procession for the river. As they set out, the others beat the walls and floor, and the priests invite all causes of ill-luck to mount on them; they pretend to totter beneath the weight; and arrived at the river they load little floats with the mistortunes thus cleared out, and send them to the great black ship in the middle of the sea, where the king of the small-pox dwells (Int. Arch, ii. 201). When a death among the Thompson Indians of British Columbia took place in a winter house, it was purified with water in which tobacco and juniper had been soaked, fresh firboughs were spread on the floor every morning, and tobacco and juniper placed in various parts of the house. But, if more than one death took place in the house, or if a death took place in a summer house, then the house was burnt (Jesup Exped. 1. 381). The ancient Greeks employed black hellebore in the purification of their houses and flocks (Rohde, ii. 73). An 'evil death' requires special ceremonies of purification, as among the Ewhe, where the whole village is defiled by a suicide, and the kindred are called upon to pay special compensation for the defilement and the risk of drought (Spitth, 274, 276; see § VII. z (c)).

§ VII. z (e)).

XIX. Destruction or abandonment of house and village property.-The purification of house and village presupposes a settled life and a certain advance in civilization. At a lower stratum of culture, where the huts are of little value and easily erected, or where economic, defensive, or sentimental reasons same day, and there is an end of the matter: mourn- | have not as yet rooted the population to one spot,

the house is destroyed or abandoned, or the whole settlement may be quitted and a new site chosen. In many of such cases, it may be noted, the deceased is either buried beneath the hut, or left unburied within it.

is either buried beneath the hut, or left unburied within it.

The Australian natives commonly remove the camp when a death occurs. Among the Bantu it is usual only to burn or pull down the hut of an ordinary person; but if a chief dies the entire kraal is quitted, at all events for a time; among some tribes it is burnt down. The reason given by the Ngoni for abandoning the house is not that the ghost of the deceased always lives there, but that it may return to its former hannts (Elmslie, Among the Wild Ngoni, Edinh. and Lond. 1890, 71). The coast is therefore left clear for it. Similar customs are reported of various tribes of Negroes, North and South American Indians, the Andaman Islanders, the Karens, the Yakuts, the Kamtchadals, of many of the peoples inhabiting the great Eastern Archipelago and the Melanesian Islands, the Central Eskimo, and others. The Ainu assert that it was customary when the oldest woman of a family dued to burn down the hut, because they feared the ghost would return malignant and bring evil upon them. She is now given a tiny but to herself, and when she dies it is burn (Batchelor, 130). In earlier times at the death of a Japanese sovereign the capital was removed to a fresh site (Aston, Shinto, 1905, p. 252). A relic of the custom of destroying the house is found in some of the Nicobar Islands, where the supporting post is cut through, or so severely notched that it requires renewal (Ind. Cens. Rep., 1901, iii, 209). The Cheremiss, more economical still, when the coffin is placed on the cart, pray the dead man not to take away his house, but to leave it to his heirs (Smirnov, i. 187). A relic of the abandonment of the house may perhaps be found in the modern Roman custom by which 'the family, if they can find refuge anywhere else, abandon the house and remain away a week' (Hare and Baddeley, Walks in Rome, 1909, p. 433, quoting Story).

At an early stage of culture all the property of the deceased was buried with him or destroyed at his death. Either the custom or relics of it are reported from every quarter of the globe. Its object seems to have been not merely to give the property over to the deceased, that he might enter the spirit-world with all his earthly possessions and state, but to prevent his haunting them to the discomfort of the survivors. Originally, no doubt, it was to get rid of the death-pollution, for the practice often extends beyond his pro-perty to all objects associated with him. On the Melanesian island of Bougainville a man's work and its produce are regarded as the supreme manifestations of his personality, inseparably linked with their author (ZVRW xxiii. [1910]351). Doubtless the same view was taken elsewhere; and it accounts for the destruction of his crops and fruittrees so constantly reported from the East Indies and Melanesia. Naturally his garments and bedding, where such things are in use, are impregnated with his personality, are indeed a part of himself. The superstitions connected with witchcraft afford abundant evidence of this.

craft afford abundant evidence of this.

In Europe the Votlaks throw away in the forest or into a lake all the clothing of the deceased (RTP xiii. [1898] 254). In Worcestershire it is ominously said: 'The clothes of the dead will not wear long' (FL xx. [1909] 346). In Lincolnshire it is believed that, even though they be put away, they will rot as the body decays in the grave (Antiquary, xxxi. [1895] 382). In the French Department of Ille-et-Vilaine it is believed that everything belonging to the departed will soon disappear: his clothes, despite all that can be done to preserve them, will be promptly eaten by maggois; his cattle will die by accident or disease, it not sold to the butcher (Orain, ii. 299). From the Hebrides to the Caucasus the bed on which death took place is burnt or thrown away (see § IV. 3).

A custom so hostile to the growth of civilization and to the individual greed of survivors could not maintain its ground. Hence all sorts of com-promises to satisfy the consciences, the fears, the affection, and the avarice of the survivors.

affection, and the avarice of the survivors.

Among the Hareskins of North America part of the clothing is distributed among the relations, part interred with the body, and the rest tabued and burnt, or thrown into the water or to the winds (Petitot, 272). In some of the villages of Serang a part of the sago-plantation of the deceased is destroyed; in others a tabu is merely laid upon it, redeemable by a third person on payment of a large gong, a sarong, and ten dishes. He thus appropriates it, and afterwards gives it back to the blood-relations (Riedel, 142, 143). In others of the Moluccas the dead man is allotted a share of the trees of various kinds in his plantation, and these are cut down; the rest remain to the survivors (ib. 860, 394). A similar practice prevails on the Tami

Islands. There the cances are too valuable to be destroyed; accordingly a few chips are cut off them, and a figure-head detached (ZVRW xi. 1900) 3879. The same principle is applied in Malta, where the hair is cut off the tail of every horse in the stable. The hired mourners cut away branches of such vives as form arbours in the courts, disturb the furniture in the house, overturn the flower-pots in the windows, break some of the ornamental furniture, and, carrying the fragments to a retired spot, throw them into a cauldron of boiling water, in which they mix soot and ashes, afterwards staining all the doors in the house with the liquid (Busuttil, 180, 128). Among the Kirghiz no one will mount the steed of a dead man without first reversing the saddle, with the object, no doubt, of unhorsing his former owner (ZVV xii, 1902) 16). The Sloux used to gamble away the effects of the dead in a ceremony called the 'ghost-gamble,' in which the dead man himself was conceived to take part (IRBEW 196); or his effects were given away among those who took part in the funeral rites, even though the family might be left destitute; and one or more of his horses was shot and placed under the burnal-scaffold (ib. 159, 164). The Nicobarese, before appropriating anything belonging to one who has died, require it to be purified by the conjurations of a minioven (priest or sorcerer) (Featherman, Races of Mankind, ii. [1887] 250).

Many peoples, however, consider it sufficient to delay the appropriation and division of the goods for such a period as is requisite to elapse before the departed attains his final destination in the land of the dead—a period often coinciding with the com-pletion of the mourning rites. During this time the property, like the widows, remains under

ta.hm

the property, like the widows, remains under tabu.

In New Georgia the final rites are performed and the bones disposed of at the end of 100 days. Not until then can the property be touched (JAI xxvi. 403), Among various Bantu tribes nothing is touched until the mourning is at an end. Among the Minangkaban Malays of the Padang Highlands in Sumatra, where the husband goes to reside with his wife in her village, his goods are divided the day after his burial, because his soul at once goes back to his own family village. When the wife dies, on the other hand, the husband has the right to remain in the house for 100 days. During that time the marriage-bond is deemed not to be entirely sundered, and he has common use with his wife of her property. On the 100th day she departs for good to the land of souls. The property can then be disposed of (Bidiragen, xxxix. [1380] 71). The property of the deceased in or near his grave. Such as was not so given up to him was divided among his relatives. But no one could with impunity take possession of his bow and arrows, leggings, or moccasins; nor was it safe for any one who had not a strong guardian-spirit to smoke his pipe. Clothing taken was washed or put for some time in running water, and afterwards hung out for several days; while the traps and snares of the deceased were hung up in a tree a considerable distance from human habitation or graveyard, for a long time before being used (Jesup Expéd. i. 331). In Europe, among the Sorbs of the Spree Valley deep mourning lasts for four weeks. The inheritance remains untouched until it comes to an end; though the nearest relations are mourned for a year (Tetzner, 325).

XX. Tabu of name.—Many peoples avoid mentariance the dead by neare or over probability.

XX. Tabu of name. - Many peoples avoid mentioning the dead by name, or even prohibit it. some cases the intention seems to be to forget the deceased. This is expressly stated of the Arawak, Salivas, and other South American tribes. But

Relivas, and other South American tribes. But the intention to forget probably arises from fear.

The Insular Caribs feared the souls of their forefathers as evil spirits, and never named them. The Guaycurus and Lenguas not only never mentioned the name of the deceased, but on the occasion of a death the survivors changed their own names so as to baffle the dead man for death, or the evil spirit which had caused the death) when he came again to find them. Among the Guajiros, if the name of the dead was mentioned in the family-but the penalty was death, or at least a heavy fine (Int. Arch. xiii). Suppl. 199). The Yabim of New Guinea avoid mentioning the names of the dead, lest their ghosts may be disturbed at their occupation in the forest of eating otherwise uneatable fruits, and their anger be thus incurred (ZVRW xiv. 339). Among the Lillocet the name of a dead person must not be uttered for a year or more, 'not so much out of regard to the feelings of the surviving relatives, as on account of the mystic connection which is supposed to exist between names and their owners. To utter or use the name of a dead person is to affect and disturb his ghost or spirit, and draw it back to its earthly hunts. This is intimical both to the ghost itself and to the person using the name, and thus attracting the ghostly influence. But time removes the danger (JAI xxxv. 188).

It should be observed, however, that this widely

It should be observed, however, that this widely spread tabu is not inconsistent with the cult of the dead. On the islands of Nossi-Bé and Mayotte near Madagascar a king at his death becomes sacred; he is believed to have taken his place among the gods; yet no one in the district dares henceforth to utter his name (Steinmetz, 383). So

400

among many Bantu tribes, where ancestor-worship is the religion, the name of the dead and all similar sounds are tabued—a custom that frequently leads to considerable, though usually not permanent, changes in the vocabulary. This extension of the rule of avoidance is not confined to the Bantu: it

is found in other parts of the world.

The tabu of the name of the dead is very well known, and need not be further illustrated here. If widely spread, it is not universal. Among the ancient Egyptians the opposite rule prevailed. The great desire of an Egyptian was to continue his ghostly existence. To be remembered by the living was one means to this. Accordingly the statue of a high official under Psammeticus I., in the Museum at Berlin, bears the following remarkable sentences in the course of its inscription: 'May the gods of this temple recompense you if you pronounce my name! He whose name is pronounced lives; and if another see that you act thus towards me, he will do the same for you' (RHR lix. [1909] 185). There is in the contemplation of many peoples more than a mystical connexion between the name and its owner; the name is part of its owner, and while it lives the owner too survives.

XXI. Second funeral. Ossuaries.—Among a very large number of peoples who practise earthburial in one form or another, the ceremonies are not completed until the bones have been taken up, cleaned, and put into a place of final deposit. many of the cases of sub-aerial deposit, also, the bones are collected at the end of a certain period and put into the tribal or local ossuary. Until this rite has been performed, the dead man is not at rest, and in many cases the mourning is not at an end.

I. Decay or destruction of the flesh .- Not merely is the journey of the soul often long and difficult: it is bound to the body until the process of decay is complete. Indeed, so refined a conception as that of the soul immaterial and independent of the body is beyond the imagination of the lower

the body is beyond the imagination of the lower culture.

A Wonkatjerri man told a missionary in South Australia that in the grave the flesh separates from the bones; the bones that remain are the kutchi, the ghost; while the flesh goes as mingara, the soul, to heaven, where it reveals itself as still living, by thunder and lightning (Globus, xcvii. 56). So at the other end of the world the Hurons called the bones of the dead attaken (souls), believing 'that we have two souls, both divisible and material, and yet both rational; one leaves the body at death, but remains, however, in the cemetery until the feast of the dead [see below], after which either it is changed into a turtle-dove, or, according to the more general belief, it goes immediately to the village of souls. The other soul is attached to the body; it marks the corpse, as it were, and remains in the grave after the feast, never to leave it unless it be born again. 'This is why they call the bones of the dead attaken, "the souls." 'G RBEW 114, translating Jesuit Rel. 1630. The Tornaljas of Celebes hold that the soul cannot enter the village of the dead so long as the body stinks, that is, until the soft parts have perished. 'So long as the soul [ste] stinks it is still a human being (Mensch), and the dwellers in the land of souls will not admit it into their territory' (Kruijt, 230.) The Carlbs likewise were persuaded that the dead did not go to the land of souls so long as the flesh remained. Rites performed by the Betsileo of Madagascar are intended to facilitate putrefaction and the transformation or re-incurnation of the dead in a snake called the functory, supposed to issue from the decaying corpse (van Gennep, Rites de passage, 1909, p. 213, Tabou et totsnisme a Madagascar, 1004, p. 277. In the Aaru Archipelage all the possessions of the deceased are collected on his grave, and his relatives must lay food there every day, until all the flesh has rotted away from his bones and they can be ceremonially transferred to the family burial-place. The

the departed. A common curse accordingly is 'May the earth not consume your body!' (Abbott, Mased. Folks., 210; Rodd, 127). This is m curious contrast to the belief in the Western Church, as well as among the Chinese and other nations of the East, that total absence of decomposition is an infallule mark of saintship. Such contrasts are, however, by no means uncommon mall kinds of superstition.

The process of decomposition is, therefore, frequently assisted by artificial means. Some examples of this have already been incidentally given (§ VI. 6). Thus the deceased is the more speedily dismissed to his final destination, alike to his comfort and that of the survivors. A different motive, however, some-times underlies the practice. In the Solomon Islands the souls of chiefs and others who are held to have saka (to be hot with spiritual power) become ghosts of power. At Saa, on the island of Malanta, common people are buried in a common burial-place, and their flesh is allowed to decay in a matural way. But it is believed that even a ghost of power is weak so long as the corpse continues to smell. Hence water used to be, and still is in some places, poured over it to hasten decay. Exposure, sinking in the sea, and cremation—all of them occasionally practised—probably owe their use to the same motive. For, by taking the skull, hair, or nails of the corpse, the wonder-working power—what elsewhere is called the mana—of the ghost is then secured for the benefit of the survivors (Codrington, 260 fl.).

Nor is it only by such indirect means that the final ceremony is accelerated. Some of the South American tribes wait no more than ten to fourteen days. After the lapse of that time they disinter the body, strip the flesh from the bones, and after an elaborate ceremony re-bury the latter (von den Steinen, 458, 505; JAFL xv. [1002] 290). The Choctaws were said to have 'a set of venerable old gentlemen,' with very long nails, whose business it was to tear the flesh of the bones and burn it with the entrals preparatory to th

Where the decay of the flesh is left to natural means, the length of delay before the bones are finally disposed of differs very widely among different peoples in different climates.

ent peoples in different climates.

The Kulsis of Manipur are satisfied with the decomposition of 'a month or so': they wrap what remains in a new cloth and bury it (JAI xxxi. 305). 'Fifty or a hundred days' suffice in the Banisi Islands (Codrington, 267). Few tribes elsewhere exhume their friends in less than a year. Many wait two years or more. The Chinese of Tongking after three years take the bones from the coilin, enclose them in Jars, and re-bury them in the grave, over which a small mausoleum is erected, or in columbaria on the hillsides (Lunet, 90). There is some evidence that a similar custom was formerly followed in China itself (de Groot, iii. 1070). Among the Bulgarians the parents of a dead child after three—in some districts, after as long as nine—years dig up the bones, wash them with wine, and let them lie for a whole year in the church before they are again buried (Strusz, 458). Throughout Europe it was customary during the Middle Ages and later to dig up the bones after a certain period and place them in a charnel-house. This custom is usually ascribed to want of room in the churchyard. The explanation is hardly sufficient: the origin of the custom is more likely due to causes considered here. considered here.

Feast of the Dead.—The tendency to postpone the final ceremony, where it involves exhumation or the collection of exposed bones or of ashes, is accentuated among small but closely organized communities by making a common ceremony, often called the Feast of the Dead, for a number of the departed. Even among the Bororo of Brazil, where the exhumation is so speedy, the relics of one person cannot be disposed of alone: one dead man must wait for a second, and the two leave the village in company (von den Steinen, 510). In these cases there is usually a common grave or place of deposit. The stock example is that of the Hurons, who every twelve years used to dig up the bones of those who had died since the last Feast of the Dead. The bones was first fell closed. the Dead. -The bones were first of all cleaned. corruption had not finished its work, all the remaining flesh was stripped off and burned, unless the body was so newly buried as to be practically whole. The bones were then wrapped in sacks or blankets, covered with rich robes of beaver-skin, taken severally into the cabins, and mourned over. They were afterwards brought together, and a feast was held in their presence, with funeral games. On a subsequent day they were taken to a large pit, where they were all buried together, with much

ceremony and the distribution of gifts (5 RBEW 112). We need not determine whether these rites are more elaborate than those of other nations, or whether they are only more vividly described. It is certain that similar rites take place elsewhere. The Khasis, who burn their dead, deposit the ashes in small cairns. Thence they remove them to larger bone repositories, of which one belongs to every branch of a clan. The contents of these repositories are periodically, after the settlement of all outstanding disputes between the members of the clan, removed, with sacrifices, dancing, and other rites, to the common sepulchre of the clan, a massive stone building, where the remains of all the departed members of the clan eventually rest (Gurdon, 140). Corresponding ceremonies are observed elsewhere in India, and are common in the East Indian islands. They economize the energies of the survivors, and concentrate them on one occasion; but their chief value is to bring home to the members of the clan or community their common life, with its common sorrows and joys—in a word, their unity among themselves and with their dead.

3. Destination of the remains.—The final destination of the remains, like the preliminary disposal, is by no means the same everywhere. This will have been inforred from the examples just cited.

have been inferred from the examples just cited.

Various Australian tribes, after carrying the bodies or the bones about with them for a time, either bury or deposit them in the branches of trees (Howitt, 467, 470, 471). The Choctaws of Carolina had a common bone-house (I RBEW 109), which doubtless was regarded as a socred building. The name of temple is expressly given by older writers to the repositories of the dead Indians of Louisiana and Virginia, where religious rites were constantly performed, at all events to departed chiefs (I RBEW 124). Of the natives of Sofala, in S.E. Africa, it was reported by the old Portuguese writer, João de Barros: 'After the flesh of the body is consumed they take the bones of their ancestors or descendants, or of the wife who bore many children, and keep them, with signs to denote whom they belonged to, and every seven days in the place where they keep these bones, as in a garden, they spread cloths and lay a table with bread and boiled meat, as if they were offering food to the dead, to whom they pray,' afterwards eating the food thus offered (Rec. S.E. Afr. vi. [1900] 113, 269). The Caribs hung the cleansed bones in a basket from the ratiers of their dwellings (Boyle, Archaeol. Rep., 1903, 142); and in the Banks Islands, while the hones of a favourite son were hidden in the bush, some of them would be hung up in the house (Codrington, 267). Among the Andaman Islanders the relatives weep over the bones, each of them taking a bone, and carrying them about for morths suspended from the neck. Sometimes the bones are bound to posts of the hut (Trans. Ethnol. Soc., new ser., ii. [1863] 37.

4. Object of the practices.—The rite of exhuming or collecting the bones and making a permanent disposition of them is thus generally connected with or has for its object, the definitive severance

4. Object of the practices.—The rite of exhuming or collecting the bones and making a permanent disposition of them is thus generally connected with, or has for its object, the definitive severance of the dead from the society of the living, and their union with the fathers in the life beyond. The ceremonies for this purpose, however, are not

of the dead from the society of the living, and their union with the fathers in the life beyond. The ceremonies for this purpose, however, are not always concerned with the bodily remains.

On the Timorlaut and Tanembar Islands, ten days after the burial of a warrior who has fallen in battle, the people of the village assemble on the shore, the men armed and the women in festival array. An old woman calls back the soul with wailing. A bamboo with all its leaves is then erected in the ground, a loin-girdle on the top. This bamboo is regarded as a ladder, up which the soul climbs to its destination. The servitu (a sort of priest or shaman) pronounces a culogy on the deceased, punctuated by the appliause of the audience. When from the movement of the bamboo it is judged that the soul has climbed to the top, the bamboo is severed in two and the loin-girdle burnt, to prevent the soul from subsequently wandering about or causing mischief. A dish containing rice and an egg, previously provided for the ecronomy, is also broken to pieces. Appeased in this way, the soul betakes itself to the little island of Nusnitu, off the north-west coast of Seelu, one of the islands of the group which is believed to be the dwelling-place of souls. The bones, it would seem, are disposed of at a later time (Riedel, 307). The Checkenes of the Caucasus hold what is called a Bed-memorial-feast a short time after the funeral. It is believed that the deceased has then reached the other world, but lies in bed there fore held as soon as possible, and consists of funeral games—theigh shooting and horse-racing—followed by eating and drinking. The honour done to the deceased is measured by the drunkemess. Before it is over the four best horses which have taken part are consecrated—the horse which has won the first

prize to the deceased in whose honour the feast is held, and the others to three of his ancestors hyname. This consecration does not involve the entire loss of the animals by their owners, but only permission to the dead to whom they are consecrated 'to ride them whither they will.' The final or great memorial-feast is, however, not held for two years, when it is given by the widow. She then lays aside her mourning, and may marry the brother or some other relative of the deceased (Anthropos, iii. 736).

As to the races and other contests at the Bedmemorial-feast, see § XVI. They are expressly intended to affect the condition of the deceased in the other world. Pre-historic remains in various parts of both the Old World and the New point to the great antiquity of practices of exhumation and re-burial of the bones comparable with those discussed above.

5. Disposal of the skull.—Among the practices which we have just considered, special mention has several times been made of the skull of the deceased. The skull is sometimes worn or carried about for a time, most frequently that of a man by his widow. In such a case it is perhaps merely a dear memorial of the deceased, or at most an amulet. Thus in the Andaman Islands, where the bones are broken up and made into ornaments, and the skull is 'worn down the back tied round the neck, usually, but not always, by the widow, widower, or nearest relative,' not only is great importance attached to them as mementoes, but 'they are believed to stop pain and cure diseases by simple application to the diseased part' (Ind. Cons. Rep., 1901, iii. 65). But amulets are on their way to become objects of cult. Accordingly, wherever we find bones, especially skulls, preserved in the house or in a special shrine, whether common or not to other similar relics of the family, or clan, or even of a larger community, we may suspect a more or less developed cult, though it may not be expressly recorded by our authorities. In many instances, however, this cult is recorded.

Instances, nowever, this cult is recorded.

Folk-tales of the western islands of Torres Straits, in accord with the practices which obtain in those islands, describe the hero picking scented leaves, with some of which he rubs the skulls of his father and mother, and on others of which he beds them. They describe his telling the skulls his adventures, and inquiring as to the future. They tell the responses made to him by the skulls in his sleep, and the success which attended his following their directions and observing their warnings (Torres Str. Rep. v. 41 ff., 47; cd. 250, 251, 257, 258, 261, 362). In the Solomon Islands the skull is regarded as hot with spiritual power; and by its means the help of the ghost can be obtained. At Santa Oruz it is kept in the house in a chest, and food is set before it, for 'this is the man himselt' (Codrington, 262, 264). Similarly, a Fan chief in West Africa keeps in a chest the heads of his ancestors, and invokes its contents on the eve of great events, such as war or the chase (Roche, Au Pays des Pahoutns, 1904, p. 91).

It is this belief in the spiritual power associated with the head even of an enemy that forms the foundation of the practice, common in the East Indies, of head-hunting. The head is not a mere trophy; 'it is an object of heart-felt veneration, an earnest of blessing to the whole community.' 'Those who were once our enemies hereby become our guardians, our friends, our benefactors' (Furness, op. cit. 65, 59). They are addressed, soothed, and propitiated on all proper occasions; and it is to them that the happy owner ascribes his plentiful harvests, and his immunity from sickness and pain.

XXII. Effigies of the deceased.—Many peoples complete their funeral ceremonies by the erection of an effigy of the dead. Thus the Kāfirs of the Hindu Kush, one year after the death of an adult, set up a coarsely carved wooden statue, and inaugurate it with a feast (Robertson, p. 645). The Thompson Indians of British Columbia erect on the grave a wooden figure, carved and painted as nearly as possible in the likeness of the deceased—a practice of considerable antiquity, since posts carved with human faces are found on ancient graves, the ownership of which has passed out of memory (Jesup Eaped, i. 329, 335, 405). In such cases the

effigies are, so far as our reports go, simple memo-In other cases they seem to be something

rials. In other cases they seem to be something more than that.

'When a respected Ostiak dies, his nearest relations make a figure of him, which is kept in the tent of the deceased, and enjoys the same honour as himself when alive. At every meal the figure is brought in; every evening it is undressed and put to bed; every morning it is dressed and set in the usual seat of the deceased. The figure is honoured in this way for three or four years and then thrown into the grave? (Abercomby, Finns, Lond. 1898, i. 169). An Ojibwa widow ties up a bundle of clothes in the form of an infant; she lies with it and carries it about for twelve months, 'as a memorial of her departed husband.' Then she discards it with her mourning, and is free to marry again (Jones, Ojeb. Ind., p. 101). Among the Maidu in California a periodical burning of gifts in honour of the dead of the tribe or village takes place. On the first such occasion after the death of a person an image representing him is often made of skins, stuffed, and burnt, along with the gifts (Bull. Am. Mus. Nat. Hist. xvii. [1902] 36). In a certain Turkish tribe a wooden image of every dead man is laid in his grave (ARW v. 31). How far effigies like these may be identified with the departed may be questioned. In any case, they are only of temporary use, or entitled to respect for a very limited period. Elsewhere, however, images are expressly made as an embodiment for the spirit. Among the Bantu people of Bondei, on the east coast of Africa, when the head of a house dies he is washed and shaved by his maternal uncle. His hair, finger-nails, and toe-nails are taken and incorporated in an earthen image, which thereupon becomes a mazimu, the object of religious rites paid to the dead (/AI xxv. 236). On the islands of Leti, Moa, and Lakor, in the Molucas, there are men who carve statues of a special sort of wood for funeral purposes. On the fifth day after burial one of these statues is procured, and the soul of the deceased is, by means of an offering of food, enticed int wide-spread. But at this point funeral ceremonies merge into cult of the dead (see ANCESTOR-WORSHIP).

(Babylonian). — In common with other Semitic races, the Babylonians regarded the present life as incomparably superior to that beyond the grave. It is not likely that the Sumerians, whose religion forms the principal element in the religious ideas of the Babylonians, differed from this pessimistic view of death so universal in antiquity. For the Sumerian period we have no direct statement con-Sumerian period we have no direct statement concerning the life beyond the grave; but the evidence concerning their burial customs, their sacrifices to the dead, their communion meals with the souls of the dead, etc., is abundant. The word employed by them for the soul is zid, lit. 'the rush of wind,' and is translated into Bab. by napistu, 'breath,' which may also mean 'throat and organs of respiration.' The dread of death is revealed in the expressions for dying. In Sumerian the word is dig, lit. 'to seize away.' The early Bab. expression is, 'his god has gathered him' (ilu-su ikter-su), as yet found only for women in the phrase, 'when stonis, 'ms god has gathered him' (un-su inter-su), as yet found only for women in the phrase, 'when her god gathers her' (see Cunciform Texts of the Br. Mus-1, ii. 24, 27; viii. 5a, 17; 12c, 18; 17c, 18; Meissner, Assyr. Stud. iii. [Berlin, 1905] 53; Schorr, Allbab. Rechtsurkunden, i. [Vienna, 1907] 1 Hereafter cited as C.T.

85, who compares Gn 25°), or 'she has gone to her fate' (ana simati-sa illiku [C.T. vi. 47b, 13 f.]; ana simtim ittalak [Code of Hammurabi, viii. 5 l. and passim]), or 'fate has carried him away' (simtu ubbil-su). Ashurbanipal, describing the death of Tarķū, says that 'the fate of his night came upon

The life of man is fleeting and determined by the decrees of the gods of the lower world, says

the poet:

Build we an house for ever? seal we (our tablets) for ever? Do brothers divide their inheritance for ever? Shall hatred exist in the land for ever? Doth the river rise bringing floods for ever?

He that sleepeth, he that dieth when together [they lie?], In death they preserve not their (solid) form. When the gallib 1 and the guardsman have greeted them, The Anunnaki, the great gods, assemble. Mammit, fashioner of destiny, with them fixes destiny. Death and life they arrange. But of death the day they make not known.'2

Thus man, whose destiny at birth had already been fixed by Mammit, identical with Bau, goddess of childbirth, must pass a second ordeal before the same goddess and the judges of Arallū.<sup>3</sup>

After mortal dissolution the soul descended to Arallū, 'the desolate land,' to pass at best a dreary existence, in the dust and shadows of Hades. The body, in which the departed soul had still a lively interest, was either buried or burned, and the kinsmen supplied it with food, drink, clothing, and the implements which characterized the occupation of the person on earth. Cremation and body-burial existed side by side from the earliest times. In cases of cremation, the ashes were gathered carefully in an urn, in which jars of drink (beer in the early period, water in the later), bread, etc., were placed, to provide for the immediate needs of the soul. At Nippur funeralurns of this kind were found in the court of the stage-tower in the earliest period (before 3000 B.C.). Two vast fire-necropolises have been partly excavated near Lagash, at modern Surghul and el-Hibba. Here the bodies were placed in narrow clay easings upon a brick platform, wrapped with inflammable material and covered with soft clay. The body was reduced to ashes by burning wood over the clay casing. After the fire was excasing, which was now baked and quite imperishable, and the results of the cremation were examined. In cases where the heat reduced the body to ashes, these were removed, placed in an urn, and buried in the family plot. If, however, the heat did not reduce the body to ashes, the clay easing became the tomb and was left in situ. The more important families owned vaults, or rather narrow brick rooms, in which the urns of the family were placed, the pavement being drained by tile sewers descending to the water level. [These sewers were wrongly taken for wells by certain archæologists.]

Cremation appears to have been the rule in certain parts of ancient Sumer and Akkad, as in the region south of Lagash; but in other parts interment in coffins and vaults is more frequent. In the case of those burials in which bodies were committed directly to the earth (as represented on the Vulture Stele, c. 3200 B.C., where soldiers are buried in a huge pile, being covered with earth simply), every vestige has long since disappeared. Preservation of the body seems to have been a sentimental rather than an essential matter; never-

1 A conductor of the shades to the lower world (cf. Oraig, Assyr. and Bab. Religious Tests, Leipzig, 1895, lxix. 9, and Langdon, Sumer. Bab. Pealms, Paris, 1909, pp. 314, 26).

3 Nergal, god of Aralli, is called 'the god of investigation, and of judgment' (C.T. xxiv. 41, 67 f.); and as a star lic appears as the kulkub kipt mitiati, 'star of the judgment of the dead' (ii. R. 49, no. 3, 40).

theless both Sumerian and Semite exercised much care in this respect. At Ur brick vaults of considerable size containing several skeletons were excavated by Taylor. Ordinarily each skeleton is accompanied by jars, platters for bread and food, the deceased's seal, combs, and, in case of women, even brushes (for colouring the eyes?). The cheaper method of interment consisted in placing the body upon a slightly raised platform of bricks, which was first covered with a reed mat. Over the body was fitted a large cover, made of one or two pieces of baked clay, and large enough to admit both the body and the articles of food and raiment. Taylor found round platforms, in which case the body lay with knees drawn towards the chest. A still more with knees drawn towards the chest.\(^1\) A still more economical method of burial consisted of a clay or porcelain coffin of capsule form, made by fitting together two huge bowls. Bodies were even mutilated and crushed into a huge vase, accompanied in all cases by food and drink. Common in later times is the bath-tub-shaped coffin, deep but not long, in which the body sits upright, with the back against one end, and the limbs stretched out along the bottom, the whole being of course, protected against one end, and the limbs stretched out along the bottom, the whole being, of course, protected with a clay covering. The flask-shaped coffin, bulging towards the base, is common in the late period. The excavators of Assur found many elaborate stone family-vaults, probably of kings and priestly families. To each of these an opening the base of the protection of the stretch post too difficult. at the west end, closed by a stone not too difficult to be moved, made access to the vault possible. Stone staircases led down to these openings. At the east end the vaults at Assur generally contain a small niche for a lamp. The Assyrians tain a small niche for a lamp. The Assyrians employed such vaults both for body burials, the skeletons being found in orderly rows side by side on the pavement, and for cinerary urns. The latter are cone-shaped and made of baked clav

Thus we see that cremation was practised at all periods—probably for sanitary reasons. earliest graves are found in the temple courts, but these sacred spots must have proved altogether inadequate for the vast populations of Sumer, Babylonia, and Assyria. The only practical method

would be to set aside certain parts of the city (as at Ur), or whole districts (as at Surghul).

The Sumerian word for the departed soul is gidim, 'creation of darkness' (gig-dim), which, by apocopation of the initial letter, became idim, edim, and passed into Semitic as edimmu.2 There is no doubt that the Babylonians regarded the souls of the dead as minor deities, capable of interfering for good and evil in the affairs of men. Whether, in fact, the entire conception of divinity rests ultimately upon the notion of ancestor-worship cannot be determined from our sources. We can no longer doubt that the Bab. conception of the devils, spirits of disease and misfortune, rests absolutely upon the notion of evil ghosts which rise from hell to torment humanity. See DEMONS AND SPIRITS (Assyr.-Bab.).

Although the souls of those whose bodies were improperly buried, or whose memories were not cherished at the parentalia, return to the earth and must be driven back to the nether world by incantation and ritual, yet the vast majority of souls lead a shadowy existence in the dreary land of the dead. See STATE OF THE DEAD (Assyr.-Bab.).

We come now to that significant part of Bab. religion—the communion with the souls of the dead. We have seen that the kinsmen of the dead provided the soul with food and raiment in the grave. These are remnants of an ancient belief that the

1 The coffins in which the body lay in a cramped position appear to have been called napatsubu (v. R. 16, 44).

2 Possibly connected with dam, oppressed, weak and miserable (see Langdon, Sumer. Gram., Paris, 1911, p. 221).

soul actually consumed the elements and wore the raiment left for his use. Although the Sumerians and the Babylonians continued to deposit these symbols of the material needs of man in the graves of the dead, they soon rose to a more spiritual interpretation, in which, behind the symbolic bread and drink, lay the mystery of communion with the deified souls and with Divine life itself. Each family seems to have made monthly offerings to the shades of its ancestors, which consisted in a communion meal at which images of the departed were present. In official accounts of the early period we find frequent reference to offerings made to the statues of deceased persons. A list of official sacrifices in the period of Sargon of Agade mentions a lamb offered to the statue of an ancient Sumerian king, Entemena; and Gudea, a later priest-king (c. 2400 B.C.), prays for his own statue that it was results as the statue of the statu that it may receive mortuary sacrifice. Entries in official documents occur, stating the items of the monthly sacrifice for the souls of deceased persons whose service to the State had been great. This is especially true of kings and priests. More This is especially true of kings and priests. frequently the documents mention the mortuary sacrifices for all the souls who have died, a Feast of All Souls, occurring monthly and performed by the priests in various temples. The word ordi-narily employed in the ancient inscriptions is kianag, 'place where one gives to drink'; but the notion of 'place' is often lost, and the idea of drinking is made to cover sacrifices of animals, bread, cakes, etc., as well as of liquors. That these sacrifices really consisted in a communion meal is made evident from one inscription which states expressly that the kianag was eaten.

Another word—also Sumerian, and employed for the parentalia less frequently in the early period, but ordinarily by the Semites—is kisig, breaking of bread, where the emphasis is laid upon the eating of bread at a common meal (kispa kasāpu). The word occurs in the most ancient name of the fourth month as sig-ba, and later as kisig-ninazu, or month of the breaking of bread to Ninazu, god of the lower world. This month was followed (in the calendar of Nippur) by the month of the feast of Ninazu. These two months correspond with our December and January, or the period of greatest darkness, when the gods of the under world, as deities of the shades, whither the sun-god and the god of vegetation had descended, were particularly honoured. We fortunately possess a letter from Ammiditana, a king of the first Semitic dynasty, concerning the feast of the breaking of bread for the fourth month (December):

'Unto Summa-ili, son of Idin-Marduk, say, Thus saith Ammiditana: "Milk and butter for the kisigga of the month Nenenig are withheld. As soon as thou readest this tablet, may thy superintendent take 30 cows and 60 ka of butter and come to Babylon. Until take sigga is finished, may he supply milk."

Here we have direct evidence for a communion meal, 'breaking of bread,' for the souls of the dead, permanently adopted by the Semites at an early period. At Eski Harran an inscription has recently been found containing the autobiography of the high priest of the temple of the moon-god of Harran. In col. iii. he refers to the monthly sacrifices which he performed for the souls of the departed. After a reference to the raiment which

he wore for the service he says:

'Fat sheep, breads, date wine, cypress oil, fruit of the garden . . I broke unto them. As incense offering, the choice incense as a regular offering I fixed for them and placed before them.'

The high priest here performs for the kinsmen 1 Thursau-Dangin, Recueit de tablettes chaldéennes, Paris, 1903, p. 247, obv. i. 12; de Genouillac, Tablettes archaigues, Paris, 1909, p. 35, obv. v. 9.

the sacred ceremony of breaking bread for the souls of the dead. The expression placing incense before them' refers to the statues of the departed, whose souls are thus represented at the communion meal, and whose portion is the incense. In an incantation service against evil souls, stools are brought for the souls that they may sit at the service of breaking of bread. Ashurbanipal restored the memorial services for the souls of his royal predecessors, of which he says: The regulation for the brooking of breaking of the says. lations for the breaking of bread and the pouring of water for the souls of the kings who preceded me I arranged for.' The king himself was sup-posed to perform this ceremony, as appears from another passage: 'The regulations of the day of offerings the king gave not, but the high priest gave.'s The practice of pouring water to the soul in connexion with the common meal gave rise to the title 'pourer of water,' applied to one's nearest kinsman. This appears in the terrible curse so common in the Semitic period, 'May God deprive him of an heir and a pourer of water 1'4

The repose of the soul, we may say even its immortality, depends upon the communion sacriimmortality, depends upon the communion sacrifice performed monthly for it by its kinsmen. Real immortality consists, therefore, in leaving male descendants; and the prayers of kings seldom fail to plead with the god for male lineage. In actual practice the family paid the priests for performing the ceremony of the breaking of bread, and consequently separate temples, called & kisigga, or bit kasap kispi, were built for this purpose. It is highly probable that the State had a regular fund to provide for the Feast of All Souls, for we find official accounts containing entries for this

fund at all periods.

Concerning the wailing for the dead our sources are meagre. In an ancient Sumerian inscription there is a probable reference to an official wailer, whose pay is mentioned along with the food placed in the tomb. Wailings at the death of a king are in the tomb. Wailings at the death or a king are described in a letter of the period of Ashurbanipal. The chief great men clothe themselves in garments of mourning, and wear rings of gold, and the official singer sings. The burial of an official (?) is reported to the king in the following manner:

The tomb we made; he and the woman of his palace rest in peace; the psalms (?) are ended; they have wept at the grave; a burnt-offering has been burnt; the anointings (?) are all performed; rites of loosing in the house of washing and the house of baptism, ceremonies of incantation, penitential psalms . . . they have finished. '9

Gilgemes weighed for his deported accorded.

psaims... they have imissed."

Gilgames wailed for his departed comrade Eabani six days and nights. When the mother of Nabonidus, last king of Babylon, died, the king's son and all his troops put on mourning and wailed three days. The following month was entirely devoted to official mourning for the king's mother. In

Traces of embalming have not been found, but Herodotus says that the Babylonians embalmed in honey, <sup>12</sup> and a text has been cited which men-tions embalming with cedar oil. <sup>13</sup> At any rate, embalming is not characteristic of Bab. burials,

and the custom may be due to Egyptian influence.

LITERATURE.—(a) BURIALS.—Perrot-Chipiez, Histoire de l'art, Paris, 1882-90, ii. 247-878, based principally upon the reports of the explorers Layard at Nineveh, Taylor at Ur and Eridu, and Lotius at Warka; for the fire-necropolises at Surghul and el-Hibba, see Koldewey, ZA ii. (1887) 403-80;

for the necropolises at Fara and Abu-Harab, see Mitteil d. deutschen oriental. Gesellschaft, Berlin, 1896-1911; for tombs and coffins at Babylon, ib. xxxvi. 12, xxxviii. 13; at Aššur, ib. xxi. 36, xxv. 48, 55, xxvii. 29, xxxi. 10, 18, xxxvi. 23, etc.; ib. xxi. 1903, passim (also a discussion of the whole subject); at Sippar, V. Scheil, Une Saison de fouilles à Sippar, Paris, 1902, p. 55 ff.

(b) Burial ousroms, Bellers, Ero.—Meissner, Zeitschr. für Kunde des Morgenlandes, xii. (Vienna, 1898) 59-60; A. Jeremias, Leben nach den Tode: Hölle und Paradies ('Alt. Orient' i. [1900] 8); M. Jastrow, Rel. of Bab. and Assyria, Boston, 1808, pp. 595-611; S. Langdon, 'Bab. Eschatology,' in Theological Essays, New York, 1911.

DEATH AND DISPOSAL OF THE DEAD (Buddhist).—I. Death inevitable and painful.— There are certain questions that must have an absolute and definite answer (ekāmsavyākaraņāt). As a type of these the commentators cite: 'Will all beings (sattva) die? Buddha said: "Short, O monks, is the life of man . . . we must do good; it is impossible that what is born should not die." In other words, 'Life, indeed, ends in death.' 'All men fear death.' For death is accompanied by physical and moral suffering; the formulæ of dependent origination enumerate 'sorrow, lamentation, misery, grief, despair' as the companions of death. For death is only the beginpanions of death. For death is only the beginning of a new existence for the punishment of sins: death and punishment (danda) are almost synonymous. It is in order to avoid death, and the consequent second death—in order to gain immortality—that the Hindus practise the religious life, the holy behaviour (brahmacharya) which enables one to pass above the sun, which is death (Brühmanas).  $(Br\bar{a}hmanas).$ 

If death inspires fear, it also generates that salutary emotion (sanvega) which ends in a distaste for pleasure and existence. Death must be thought of. Visits to the 'cemetery,' the place of cremation, or the place where dead bodies are left, and meditation upon the corpse and the various aspects of decomposition, play an important part in the spiritual hygiene of the Buddhist monk, be he a beginner (navalca), a more advanced disciple (saiksu), or a perfect disciple. They even become absorbing for some, who are called 'cemetery monks' (see TANTRAS). We find a number of details regarding the treatment of the dead in

the Buddhist texts.

To know that 'life ends in death,' and to be resigned to this law, is, as we learn from several conversion-stories, to know the essentials of Buddhist doctrine and to escape from the fear and the control of death. To detach oneself from the things of which death will deprive one, to detach oneself from the body itself, is to abolish pain: thus a man suffers when he sees a woman whom he loves in the possession of another man; he ceases to suffer

in the possession of another man; he ceases to suffer

whenever he ceases to love (Majjhima, ii. 223). Thus the saint (arhat) has no fear of death (Anguttara, ii. 173); he awaits his time without desire and without fear (Therigatha, 196, 703; see art. Suicide [Bud.]), for he is freed from desire, he knows that this existence is the last existence for him (Therigāthā, 705; Dhammapada, 39). For others death is only a passing; for the saint it is 'interruption' or 'annihilation' (samuchchheda).<sup>1</sup>

'interruption' or 'annihilation' (samuehekheda).'

If death is hateful to men, it is not less so to the gods (devas), though certain texts say that the gods are perfectly happy (Anguttara, v. 201). It is not that death for them is accompanied by the sufferings of human death, for they usually die without suffering (A.K.V., fol. 2540). But, the greater the enjoyments of the gods, the more painful it is for them to give them up; death for them is not 'suffering consisting in suffering,' suffering of death' (Mahāvyutpatts, § 112, 4), but it causes 'suffering consisting in the change' to be accomplished at death (see II. C. Warren, Buddhism, Cambridge, Mass., 1836, p. 181). The Brāhmanic views are all alike, or very similar (see, e.g., Vishņu Purāṇa, vi. 5, in Wilson, Works, London, 1870, \$1, 208).

2. Definition of death.—The Buddhist doctrine is opposed to that of the 'unbelievers' (deniers [of the other life]), according to whom the intellect (vijñāna) scatters into the ether, while the material (vyjūāna) scatters into the ether, while the material elements (bhūta) of the body return to the mass of the earth, sea, etc. (cf. Dīgha, i. 55; Samyutta, iii. 207); it is also opposed to the popular idea of the transmigration of the soul, well expressed by comparison with a bird flitting from tree to tree (Sumangala-vilāsinī, p. 114; S. Hardy, Manual of Budhism, London, 1860, p. 390). Death is the end of life—the end of a life or of an existence (see below, § 2); or, more exactly death is the discorder. below, § 3); or, more exactly, death is the dissocia-tion of the organism constituted at birth to experience the fruits of a certain set of actions. organism, both material and mental, does not contain a single stable principle; it continues to renew itself moment by moment; in other words, it undergoes an 'incessant death' (cf. Warren, Buddhism, p. 252; Madhyamakavrtti, p. 174, n. 4); but death marks the end of this homogeneous renewing: it is the separation of the constituent elements of the pseudo-individual, the dissociation of the elements (skandha), i.e. of the gross elements (mahābhūta, rūpakāya) and of the vijāāna, or intellect.<sup>3</sup>
We must consider for a little this idea of vijāāna.

There is nothing permanent or individual in the complex union of the shandhas, which lasts from birth to death. Men were led, however, to regard it as 'individualized,' like a town with the vijñāna as master. The later works of Abhidhamma teach that, from the origin of an existence, the first thought, the thought which gives rise to the formation of the new being in the matrix (pratisamdhi-vijñāna, 'conception-intellect'), gives birth to certain thought, which is the master part of the existence, and is called bhavanga, or bhavanga-santati, 'existence-limb,' 'existence-limb-series,' because it is the limb of existence.' This thought evolves into an uninterrupted and relatively homogeneous mental series, like the flow of a river. To look at it in a somewhat different way, this thought constitutes what we might call the foundation of the soul, the support and origin of particular thoughts, which interrupt it. At the end of life, at death, it disappears by being transformed into thought in a dying state, 'dying thought,' falling or emigrating thought.' Existence, i.e. one existence in the series of existences, is ended

one existence in the series of existences, is ended 1 see, e.g., the story of 'Gotami the Thin,' in J. H. Thiesen, Die Legende von Kisagotami, Breslau, 1830; Rogers, Buddhaghoga's Parables, London, 1870, p. 98; E. Hardy, Buddhismus, Münster, 1830, p. 124.

2 see Wenzel's tr. of 'Nāgārjuna's Friendly Epistle,' 98 f., JPTS, 1886, p. 27. On 'the five prognostics announcing death in heaven' (body becoming ugly, decaying of flower-wreaths, etc.), Wenzel refers to Itivuttaka, § 83, and Divydwadāma, p. 193.

3 See Dipha, ii. 805 (= Warren, p. 363); Visudahimagga, in Warren, pp. 241, 252; Vibhanga, p. 137.

4 Abhādhammatihasangaha, in JPTS, 1834, p. 25; see S. Z. Aung and C. A. F. Rhys Davids' tr. and notes, Compendium of Philosophy, PTS, 1910 (Index, s.v. 'Bhavānga').

at the disappearance of the bhavānga; a new exat the disappearance of the *bhavdinga*; a new existence commences, in a new status, since the 'thought in a dying state' is reflected (we dare not say continued) in a 'thought in a state of being born.' Death, then, is the transformation of this 'fundamental thought' called *bhavdinga*, 'limb of existence,' into 'emigrating thought' (chyutichita).<sup>2</sup>

When the dead man is laid out man binded of a the character of the state of the character of

(chyutichitta).<sup>2</sup>

'When the dead man is laid out upon his bed of death, the sintul action for which he is responsible, or the motive (or sign) of this action, presents itself at the door of his spirit. Then there is maugurated the series of rapid intellectual operations (javana='swiftness') which ends in absorption with this object action or motive) (tadärammana,) and there is intriber produced the "emigrating thought" depending upon the bhavanga (bhavanga-visayam ārammunan katvā). When that disappears, the "thought in a state of being born" is produced; and this, because of that action (or that motive for action) which presents itself before the spirit, moved by uninterrubed passion, belongs itself before the spirit, moved by uninterrupted passion, belongs to an evil destiny. 4

On the other hand, death is often regarded as the end of a particular organ or sense, the jivitendriga, the vital sense. Life, the activity of the organs, 'the persistence, subsistence, going on . . . of the bodily and mental functions or states' presupposes a 'vital organ's supporting the living complex as the water supports the lotus, and complex as the water supports the lotus, and playing a part analogous to that assigned by the Vedānta school to the 'principal breath' (or 'breath in the mouth,' mukhya prāṇa). Death, therefore, will be 'the interruption of the series [of evolution] of the vital organ corresponding to a given existence' (Nettippakaraṇa, p. 29).

[of evolution] of the vital organ corresponding to a given existence' (Nettippakarana, p. 29).7

Leaving out of consideration the schools which pay little attention to the 'vital sense,' some schools do not make it die at death. The theologians who admit an 'intermediate state' (antarābhava) between two existences properly so called assign a special rôle to the 'vital sense' in the mechanism of transmigration. 'Life' would then be prolonged from existence to existence, as long as these continue to be existences belonging to the same category (nikāya-sabhāya) (after A.K. V., Burnouf MS, 68a).

The schools are not agreed as to the nature of the fivitendriya, as may be seen from Kathāvatthu, viii. 10. Pāli theology appears to regard it as the eighteenth term of the rūyakhhavida (S. Hardy, Manual, p. 899). But the Dhammasanyant treats it successively as mental and as material (rūya). The Abhādharmakośa makes it an arūpa chittaviprayukta, 'immaterial, having no connexion with thought' (see Dharmasanyarda, p. 69), as do also the Yogāchāras (see Museon, vi. 1905) 1781.)

It must not be forgotten that 'ihe' is attributed to the body (A.K. V. 313a: 'The body lives when it is endowed with sense (sendriya), i.e. life is of the body endowed with sense, and not of a soul (ātman): and it is the body [and not a soul] which, when robbed of sense, is called 'dead''). By 'sense' or 'senses' must be understood either the organs of sense which depend upon the fivitendriya, or the jivitendriya, which is just the same as the kāyendriya, 'body-sense.' The working and persistence of the intellect (wijnāna) depend upon the kāyendriya, 'body-sense.' The working and persistence of the intellect (wijnāna) depend upon the kāyendriya, 'body-sense.' The working and persistence of the intellect (wijnāna) depend upon the kāyendriya, 'body-sense.' The working and persistence of the intellect (wijnāna) depend upon the kāyendriya, 'body-sense.' The working and persistence of the intellect (wijnāna) depend upon the kāyendriya, 'body-sense.' The wo

Instead of jivita, jivitendriya, we sometimes find the terms āyus, 'life,' and usman, 'heat'—a popular conception of life.' What is the ground of persistence or continuity of the five senses?'—'Life'—'And of life?'—'Heat'—'And of heat?'—'Life.' (Just so the radiance of a lamp depends on its flame, and vice versa [Majjhima, i. 295].) Similarly, death is defined as the disappearance

Similarly, death is defined as the disappearance <sup>1</sup> We read, however, in A.K.V. 218a: 'the 'conceptional' state (at conception), upapatithhava, forms a series with the 'mortal' state (at death).

<sup>2</sup> There is no death without 'emigrating thought,' therefore trance or rapture is an obstacle to death (cf. Dhammapada, ed. Frausbill, Copenhagen, 1855, p. 299).

of heat (Muhāvyutpatti, § 245, 53). An ancient stanza associates the intellect (vijñāna) with āyus and uṣman.¹ The Dignāga school defines death as the 'destruction of the vijñāna, of the organ, and of life,' and claims authority from this definition to deny (in opposition to the Jains) that trees 'die.'

'die.'

In the old version of the 'last days of the Buddha' (Digha, ii. 106; SBE' xi. 44), it is said: 'The Blessed One rejected the ayusamkhāra' (according to Rhys Davids = 'the rest of his allotted sum of 'life'). In the Sanskrit sources (Divyāvadāha, p. 203; Mahāyyutpatti, § 225, 52) we have: 'The Blessed One enters such concentration of thought as to control his 'vitality-virtualities' '(jvitasamskārān adhishtāya), and he begins to reject his 'life-virtualities' (dyuhsamskārān).' The plural ('virtualities', 'co-efficients of life') indicates, according to a commentator, that life is not one thing but a collectivity. The Sautrāntikas say that āyus, 'life,' means the multiple samskāras which co-exist (having for nature the four or five skanāhas), and is nothing beyond these saṃskāras (A.K.V., fol. 74). The Majhima (i. 206) enumerates the āyusaṃkhāras as follows: āyus, heat, and intact senses, which disappear at death, but persist in life even when plunged into the deepest ecstasies (see Warren, p. 389).

As to the vital breath (prāṇa), it is a wind (vāyu) which depends on both the body and the thought—

As to the vital breath (prāna), it is a wind (vāyu) which depends on both the body and the thought—for it disappears during the so-called 'cessation-trance' eestasy (Sarvāstivādin Abhidharmasāstra, quoted A.K.V. 312; see Rhys Davids, Dialogues of the Buddha, i. 71, London, 1899-1910 [= Sacred Books of the Buddhists, vol. ii.]). Although the Buddhists deny the existence of a prānin, anima, 'being endowed with breath,' they use this expression; but, for them, to kill a prānin is only to stop the future production of the prāna.

3. Duration of life.—What is meant by an existence, ātmabhāva, and why is the) eternal transmigration divided into this succession of fragments called lives or existences? Actions are by nature very variable, and very different actions are performed by the same person; in strict language—for Buddhism does not admit of the existence of a person, of an author of actions—actions very different from each other are 'caused' in one and the same series of states of consciousness, and must be rewarded in the same series. It is necessary, then, that the agent (to use a convenient expression) should pass through varying conditions,—god, man, animal, damned,—for it is not the nature of actions to get their reward in any state whatever. And, by a mechanism which will be explained in art. KARMA, a certain existence (ātmabhāva) falls to the lot of the agent, as the reward for a certain set of actions,² and this existence will be followed by another determined in the same way. Death marks the moment of the exhaustion of the actions called to 'ripen,' to fructify in some one existence, and of the maturity of actions called to ripen in the next existence.

In certain states of existence the length of life is fixed; the number of actions to be rewarded in the course of a divine existence of a certain class always corresponds exactly with the normal length of life of the gods of this class (see Cosmogony and Cosmology [Buddhist]); the god will die at the exhaustion of the meritorious actions to be rewarded and the exhaustion of life. But it may happen that a life ends by the exhaustion of the actions, before the normal time: if, e.g., a certain good action has caused a certain divine existence, and is not good enough to prolong this existence against the influence of evil actions striving to ripen. It is also possible to die by the exhaustion of life, without the merit being exhausted; in this case, re-birth takes place into a condition similar to that just left. Lastly, if one commits one of the sins demanding immediate retribution (anantarya) and immediate dispatch into hell, one dies without the exhaustion of the vital forces: the retribution of

1 Samuutta, iii. 143; and A.K.V., Burnouf MS, 453b.
2 Of. the ayuykakarman of the Jains (SBE xlv. 165, 192).

by an 'action cutting off [the fruit of] action. The Death is called 'timely' (kālamarana) when it occurs at the end of a life of normal duration (see AGES OF THE WORLD [Bud.], vol. i. p. 189). It may be caused by a trouble of the bile (the essential fire-element of the body), of the phlegm (water-element), or the wind, either singly or all together: there are, therefore, four illnesses; for every class of illness, there are 100 deaths 'before the time' (akālamartyu)² and one timely death: or else there are 404 illnesses causing death (Bodhicharyāvatārapañjikā, ii. 55; A.K.V. 254b). A kindred expression to akālamartyu is antarāmartyu or antarena kālakriyā, 'death during the time, during the course of the normal duration of life': a

the set of actions, begun at birth, is interrupted

tārapañjikā, ii. 55; A.K.V. 2540). A kindred expression to akālamrtyu is antarāmrtyu or antarana kālakriyā, 'death during the time, during the course of the normal duration of life': a death, which, according to certain sources, occurs even in the ārūpya, and in all stages of existence, except among the Uttarakurus (Abhidharmakośa). According to the Sautrāntikas (A.K.V., fol. 218), it is a mistake to explain the phrase antarāparinirvāņin with certain (Pāli) scholars as meaning 'a saint who attains to nirvāṇa, by antarāmrtyu, during the course of a heavenly existence, and before the close of this existence.'

existence, and before the close of this existence.' The reference is to a saint who attains nirvāṇa in the intermediate period between two existences (antarābhava).

The Buddhists believed that, just as the saint can abandon the 'co-efficients of life' (see preceding column), so he can also stop them (sthāpayati). According to the Vaibhāṣikas (A.K.V., Burnouf MS, fol. 74), the saint says: 'May [the action] that is to ripen for me in enjoyment ripen in life!' By its nature, life (or the vital organ) is 'ripening' (vipāka), and it can replace any enjoyment which, normally, ought to ripen from a former merit, and which the saint no longer desires and has escaped by his sainthood. By this process, 'vanquishing death,' the Buddha prolonged his life three months for the salvation of men, and the disciples employ this to assure the duration of the law.

death,' the Buddha prolonged his life three months for the salvation of men, and the disciples employ this to assure the duration of the law.

This term of three months seems to be given as a maximum, and as the mark of the victory of the Buddha over Mrtyumāra, 'Mara (=death, Satan), who is death.' The 'dominion of death,' which is a 'dominion of life' (Mañāvyutpatts, § 27, 1), is much more powerful in the Mañaparintbāna (Digha, ii. 103=SBE, 4.42), and in Sitejāsamwachāva, p. 189, where the Bodhisattvas enjoy a life of almost infinite length by the protection of the Buddhas and 'deities' (devatā).

A. The last thought and re-birth.—Most of the Hindu theologians teach that the last thought, the thought of the dying, is of prime importance with regard to the future lot. This doctrine is particularly dear to the devout sects: thinking of Kṛṣṇa on the death-bed assures salvation. The Brahmans everywhere believe as a rule that the Lord (z̄svara) establishes the moral balance-sheet of the whole life, in order that the agent may be re-born into the world at the proper stage. In conformity with their psychology and their metaphysics, the Buddhists have to assign capital importance to the last thought. For not only dothey refuse to admit a Lord, judge of all the 1 See Abhidhammasangaha, v. 12 (JPTS, 1834, p. 25); Visuddhimagga, in Warren, p. 252; Sumangalavitāsini, p.

Visuddhimagga, in Warren, p. 252; Sumangalavilāsinī, p. 110.

<sup>2</sup> The Śaivite Buddhists have made a deity of 'premature death' (Wilson, Works, ii. 24).

<sup>3</sup> See, e.g., Bhagavad-Gtla, viii. 5 f. (A. Barth, Religions of India, London, 1891, p. 227; R. Garbe, Bhagavadgtla übersetzt.

• Leipzig, 1905, p. 52); 'Remembering whatever form of being he in the end leaves this body, into that same form he ever passes, assimilated to its being '(Thibaut, Vedāntasūtras, iv. 1, 12=SDB xxxviii. 352); 'Whatsoever being a man at his end in leaving the body remembers, to that same he always goes, inspired to being therein' (L. D. Barnett, The Lord's Song, London, 1905). See also the sources cited in Vedāntasūtras, loc. cit., and Cowell, tr. of Aphorisms of Sāndilya, Calcutta, 1878, § 31; for the Jain sect, see Majhima, i. 376. Folk-lore is abundant on this subject; see, e.g., Kathā-surtsāgava, tr. Tawney, 1880, i. 242, and passim. Rhys Davids compares Plato, Pheedo, 69 (Indian Buddhism, London, 1881, App. viii., Dialogues of the Buddha, i. 298).

actions of a life, but they do not even admit of a permanent soul which would be responsible for all the actions. At the time of death, all that exists is the 'dying thought' (chyuttchittu) and the 'skandhas (dispositions, etc.), which come to an end at death.' The 're-birth thought' (pratisamdhio, upapattichitta)—and the skandhas associated with it—can be determined only by the 'dying thought,' which it continues. Hence it follows that, if the mental state at death is good, Hence it a pleasant birth will take place; if it is bad, an unpleasant one. The agent will be re-born into the spheres of desire, matter, non-matter (see Cosmogony, etc. [Bud.]), according to the futerum (alambana) of the last thought (Abhidhumma-sangaha, v. 12-13 [JPTS, 1884, p. 25]); and 'to die with the thought fixed on space [or the void]' is

But, if the last thought (or last action) is, according to the principle of the Buddhist system, the sole determining cause of the future life, good sense and equity require that the previous thoughts (or merit) should come into account in the retribution. Buddha was very categorical on this point. The conclusion arrived at will be that, if the last thought, in the quality of act 'close at hand' (āsanna), determines the future life, the latter may be conditioned by other acts, important

from other points of view.

The difficulty or contradiction may be resolved by affirming that the last thought is the resultant of the life or of a former act which, by its importance or repetition, has to be rewarded in the next existence:

'It is at the moment of death (chyuti, 'fall of thought') and of re-birth that the thoughts are enabled to ripen' (A.K.V., Burnouf MS, fol. 1220. 'The Karnan remembered at death springs up in re-birth' and is therefore named 'close at hand.'

At death the mental working is weak and dull; therefore any passion which has been intense or habitual during life enters upon a state of activity (A.K.V. 249a). In short, the treatises of Abhidharma teach that the object of the last thought is either present (pachchupanna) or past (atita), being determined both by the life that is completed, and by the state in which it is proper (by reason of this life or of even earlier merits) for the new life to be passed. It is, therefore, by the 'force of the merit' that there presents itself to the spirit of the dying either the action (accomplished previously by him) which is to determine the re-birth 2 (and above all others the 'heavy' action, guru, the reward of which comes before all others [A.K.V., Burnouf MS, fol. 482]), or the object forming the action, or the motive or means of the action, or, lastly, the picture of the state about to be reached by the re-birth, the sign of the future lot. (sensation, etc.) experienced at the time of per-

But this theory, that the last thought is the resultant of the life, is discouraging to piety. It is certainly the opinion of the Buddhist that we should not wait for death to become 'converted.' for the agonies and suffering of the last moment make thought very feeble (Bodhicharyāvatāra); the good thoughts of the last hour are by nature very weak: they may procure a little of paradise,

very weak: they may procure a little of paradise,

1 See Madhyamakurtti, p. 228 f., and sources cited.

2 See Surangamasütra quoted from the Chinese by Beal,
Catena, p. 43: 'At the end of life, before losing animal heat,
the good and the evil deeds are summoned up, as it were, in a
moment.' Then the dying one thinks of his sin and of his good
action, and, by a process well described by Nagasena (Milinda,
p. 297, tr. Rhys Davids, SBB xxxvl. 155), becomes absorbed
into the sin committed, even while regretting it.

3 Aung and C. Rhys Davids, op. cit. p. 149. See Avatamakasütra, quoted by Beal, op. cit. 44: 'If he possesses a bad
karman, he beholds all the miseries attending a birth in hell
... he sees the internal lictors.' Cf. the 'death of the sinner'
in the Bodhicharjävatära of Santideva, ii. 41 (Poussin's tr.,
Introd. à la pratique des futurs Bouddhas, Paris, 1907, p. 41;
L. D. Barnett's tr., Path of Light, London, 1909, p. 42).

VOL. IV.—29

but they cannot prevent a fall back into hell immediately after, if it is merited (Spence Hardy, Manual, p. 489). But numerous writings show that the last thought is not always determined beforehand, that it is possible to prepare oneself and others for death, and to make sure of a good re-birth by helping the 'production of good dis-

positions.'

We may quote some examples. Milinda says: 'Your people [Buddhsis] say . . . that, though a man should have lived a hundred years an evil life, yet if, at the moment of death, thoughts of the Buddha should enter his mind, he will be reborn among the gods. . . And thus do they also say: "By one case of destruction of life a man may be re-born in purgatory." When asked if this was not a contradiction, Nagarjuna replies: 'Would even a tiny stone float on the water without a boat? . . . Would not a hundred cart-loads of stone float on the water if they were loaded in a boat? . . . Well, good deeds are like the boat' (Müinda, p. 80, tr. Rhys Davids, SBE xxxv 123 t.)

the water if they were loaded in a boat? . . . Well, good deeds are like the boat' (Milinda, p. 80, tr. Rhys Davids, SBE xxxv 123 f.).

Mahāmoggallāna sees a poor wretch, condemned to death, to whom the compassionate Sulasā has just given some cakes He thinks: 'This man, with no merits, a sinner, will be re-born among the terrestrial deities.' He presents himself before the condemned man, who thinks, 'What is the good of eating these cakes, let it give them away, they will serve me as a viaticum for the other world.' But, as he thinks also with affection of Sulasā: 'It is through Sulasā's kindness that I was in possession of this alms,' his thought, purified by the gift to the samt and soiled by thus affection, causes him to be re-born as a tree-deity (interior deity) (Petavatthu, Commentary, p. 5).

The deities of the gardens, the woods, the trees, and plants crowd around the master of the house, Chitta, who is very ill: 'Make your resolution, utter your prayer: ''May I be a chakravarthi king in a next existence'' (Sumyutta, iv. 30; cf. Rhys Davids, Early Buddhisma, London, 1998, p. 77).

A man is stained (sänyana); he acknowledges his stain and does his utmost by prayer, effort, and exertion to wipe it out; he will die free from attachment, from hate, from stain; he knows it; he then conceives complacence, and, through this, attachment enters into his thought; he will die re-clothed in attachment, hate, error, stain, with impure thought (Maijhima, i. 20).

The Buddhists began early to think of prepara-

The Buddhists began early to think of preparation for death. Asoka grants three days for this purpose to the damned (Pillar-Edict, iv.; see V. A. Smith, Asoka, Oxford, 1901, p. 165). The Mahāvagga commands the monks to attend, even during the rainy season, at the bed of a sick layman (iii. 5, 9=SBE xiii. 304). The Visuddhimagga (xvii. line 1190) explains the ceremonies performed for the dying. The friends say to him: 'We are about to perform the  $p\bar{u}_j\bar{u}$  (cult) of Buddha for you, quiet your spirit [in Buddha]. The  $p\bar{u}_j\bar{u}$  includes flowers, etc.  $(r\bar{u}pa, \text{ 'form' or 'colour'})$ . includes flowers, etc. (rūpa, 'form' or 'colour').

'See this offering we are making for you,' they say to the sick man—the recitation of texts and music (sadda, 'sound')..., perfumes (gandha, 'smell'), honey, etc. (rasa, 'taste'), and cloths (potthabba, 'tangible')—'Touch this offering.'
Thus by the five senses the impressions penetrate which will be the object of the less theorets. which will be the object of the last thought.

which will be the object of the last thought.

Spence Hardy (Manual, 489) tells the story of a fisher who is made to recite the five precepts by a monk ('I renounce murder'...), and this wins a heavenly re-birth for him; and, when he recites them again in his last moments, he obtains re-birth among the higher gods.

Tantrism substitutes formule in abracadabra for the 'thought of the Buddha' and the repetition of precepts: the our many padme hum plays a great part (see C. F. Köppen, Die Religion des Buddha, pt. ii. 'Die lamaisshe Hierarchie,' Berlm, 1859, p. 59); the cults of Amitāhha substitute the repetition of ejaculatory invocations to Avalolities are or Amita: 'Whosever shall have heard the name of Buddha Bhaisayaguru, to him will eight Bodhisativas come at the noment of death to show him the way [to paradise]' (Sikpācamuchchaya, p. 175). In Karangavyhha (Calcutta, 1878), pp. 23, 95, twelve Buddhas surround the dying; in Sukhāvatīvyhha (Oxford, 1833), p. 47 (=SBE xiix, 45), Amitāhha hinself appears surrounded by Imagic) monks. 'Seeing Bhagavat, their thought is quieted, and, falling from this world, they are born in Paradise' (cf. Samādhirāja, iv., at the end). In Sangautta, iv. 302, it is the forest-deities who care for the dying man and suggest to him the wish for such and such a re-birth.'

LITERATURE.—This is given throughout the article

<sup>1</sup>We need not spend time over the acts and ceremonies for the benefit of the dead. Some bibliographical indications may be useful. Pall sources (gifts for the dead): Anguttara, v. 296, Petavatthu, I. 5 (Paramathadipani, pt. iii. pp. 23, 35),

VOL. IV .-- 29

Chinese).—The Chinese discriminate between premature death and the inevitable ending of the term of natural life. The pictogram for untimely death is composed of the radical denoting 'evil' (originally depicting the cutting up of bones) and that for 'man,' the combination being interpreted by S. Wells Williams (Syllabic Dict., Shanghai, 1889, p. 836) as 'the evil which parts men.' The character thus formed is explained as conveying the idea of 'the running out of the vital issues,' 'the emptying out of the breath'; whilst that for normal death, i.e. in old age, represents the end of a cocoon or ball of silk. The express mention of death is generally avoided, the Chinese prefering to employ some euphemistic phrase such as 'passed away,' 'returned to Heaven,' 'no more,' etc., or sometimes an expressive gesture—the hands tightly clenched, and the head thrown slightly back.

back.

The customs which prevail in different parts of China in connexion with the treatment of the dying and the disposal of the dead are so dissimilar that a complete statement of them would be impossible; it will be sufficient to describe the observances which may be regarded as fairly characteristic. The details which follow do not apply in the case of children and unmarried persons. In these instances the dead are disposed of with as little ceremony as possible; in many cases the bodies of infants are simply rolled up in a coarse wrapper of matting, and deposited in a convenient spot of open ground, perhaps in a 'baby tower' specially intended for the purpose. The conduct of funeral rites is described as early

The conduct of funeral rites is described as early as the Chow dynasty (1122-255 B.C.), and it is evident that burial¹ has always been the mode adopted for the disposal of the dead. In the Chinese sense this does not consist in the lowering of the remains into a dug-out grave, but in the placing of them in a sarcophagus upon the surface of the ground, and the piling up of earth in the form of a mound, as a result of the annual visits to the place of interment. It was usual in early times to place in the coffin certain articles which the deceased valued during life; and specimens of jade, chess-men, etc., are frequently discovered in ancient tombs. In the case of kings it was often difficult to ascertain where the royal corpse was actually buried, as sometimes a number of separate coffins were interred in different places, each nominally containing the 'remains' of the late monarch, in order to render more remote the possibility of rifling the tomb.

The custom of immolating a number of slaves or relatives of the deceased was sometimes practised in China. Cases are quoted as early as the 10th cent. B.C., as, e.g., that of the Duke Muh, at whose funeral some 177 persons were buried alive. References to the practice are found in the time of Confucius (551-478 B.C.), and even as late as the present dynasty an instance is quoted in connexion with the Emperor Shun-che (A.D. 1644-1661). The burning of paper effigies of servants and attendants

1 The practice of cremation is repugnant to the Chinese view of the necessity of preserving the body intact as far as possible, and is employed only in the case of Buddhist monks and nuns, though historical references may be cited in proof of its frequency in certain periods, probably as a result of foreign influences.

at the present day may be a survival of this barbarous custom.

1. Importance of the subject.—The importance of the subject will at once be evident when we consider that there is, perhaps, no event in the 'pilgrimage' of the 'Chinaman' which demands so great attention, such scrupulous observance of immemorial custom, and such lavish expenditure of labour and capital, as the carrying out of a 'decent funeral.'

2. The dictum of Confucius.—Confucius lays down no rules with regard to the treatment of the dead, beyond the admonition that all things should be done 'decently and in order'; that the family circumstances should be taken into account, and that the various classes of society should be guided by the precedents which obtain in each class. The tradesman should not seek to emulate the official, and so forth; but Confucius enunciates one general principle which should govern the conduct of the entire affair: 'In mourning it is better to be sorrowful than punctilious.'

It is hardly necessary to say that the observance of the conventional funeral customs is inseparably connected with the extraordinary development of the idea of filial piety, and the ancestral worship of which it is the inspiration and the key.

3. Treatment of the dying.—When all remedies have failed to retain the departing spirit, the dying man is prepared for entering the presence chamber of the gods, before whom he must appear: the god of the local temple, the god of the city walls and moats, and the god of Hades. His head is shaved; his body and extremities are washed; the nails of his hands and feet are cut, the parings being carefully preserved; and his underclothing is changed. When in articulo mortis he is supported in a sitting posture, it being believed that the soul makes its escape from a recumbent figure by the lower part of the body, and, as a result, on re-incarnation will be gross and stupid; whilst from the upright body it flies aloft through the mouth, and re-appears eventually, by transmigration, in a highly developed condition. Tinsel money and charms are burnt before him, and the ashes are collected, wrapped in paper, and placed in his hand, whilst he is informed that the expenses of the journey have all been provided. Sometimes a small lantern, obtained from a Buddhist temple, and already used in the worship of Heaven, is placed in his hand, and he is advised to hold it fast, as the way before him will be dark. If the family can afford it, a sedan-chair with two bearers, all of paper and bamboo, is purchased. To die in the early morning is in some places considered felicitous, because there are three meals left for the dead man's posterity to enjoy; but to die after the consumption of the evening meal is considered to be ill-omened, for then, by implication, there is nothing left for his successors. It is important that the sons of the dying man and other relatives should be present to attend the death-bed; and, as they weep, they call upon him not to leave them but to awaken from his sleep. The cries of daughters are considered to have special virue in opening Heaven's gate, and a man who does not possess a daughter or two is much to be pitied—contrary to a prevailing but very erroneous idea current among Europeans.

4. First duties of mourners.—As soon as death takes place, an elder conducts the proceedings, and orders the queues of the sons to be unravelled, and candles to be lighted before the ancestral shrine and the god of the hearth, because the warrant for the capture of the departed soul is supposed to have arrived from the god of Hades, and it must be countersigned by the ancestral spirits, or their representatives, and by the god of the hearth.

5. The dread messengers.—The messengers of the god of Hades are said to be two, viz. the living Wu-ch'ang and the dead Wu-ch'ang, the word vu-ch'ang meaning 'uncertain,' and being explained by the uncertainty of the summons of death. The living Wu-ch'ang is not a demon, but the soul of a living man who is employed by the Wu-ch'ang to guide him to the house of his victim. The true 'Uncertain,' as coming from the hidden world, is unable to find his way in the light of day, and requires a mortal spirit to guide him. Some say that these two characters represent, not individual agents of the god of Hades, but only the two souls (the animal and the spiritual, i.e. the psyche and the pneuma)—the hum and the p'o, as they are called in Chinese. The first of these is written in Chinese with a character which means 'black' attached to the word for 'spirit' or 'demon,' and hence represents 'black spirit,' and the other has the character which stands for 'white' prefixed to the same word meaning 'spirit,' and hence represents 'white spirit.' These have been personified, by the ignorant, as the lictors who come to carry off the soul; whereas they themselves are the essential parts of the soul which of its own accord is about to leave its tenement. The hum, in conformity with its nature, soars aloft and is dissipated; the p'o descends into the element of earth and haunts its old neighbourhood.

6. Post-mortem lustration.—The matting on bigh the deceased is lying is given a pull, with which the deceased is lying is given a pull, the idea that this will prevent a lingering illness in the next incarnation. The chief mourner, generally the eldest son, invests himself in the clothes which are eventually to be put upon the corpse, and, holding a bucket in one hand and a burdle of incorns in the chort walls are in the bundle of incense in the other, walks, or, in the case of an infant, is carried, to the waterside, an umbrella being held over his head all the time, as the is impersonating the dead and must be screened from the eye of heaven. In some cases he is escorted with music and fireworks. Paper money of different kinds is burnt; a coin, with a large nail fastened in the centre, is thrown into the water; and the water is thus supposed to be bought, and is drawn up and taken to the house. Here it is warmed, and a few rubs are given to the chest of the corpse by way of a bath. The to the chest of the corpse by way of a bath. The hair of the dead man is next combed by the daughters and daughters-in-law, each taking a turn, kneeling and weeping at the same time; and then it is rolled up into a kind of knot on the top of the head, somewhat like the top-knot worn by the Chinese of the Ming dynasty, thus exemplifying the popular proverb, 'The living submit [to the Manchus], the dead do not.' After this perfunctory washing the dead man is removed from his bed and supported on a chair; and the matting and straw on which he has been lying are burned in the open street. It is of the utmost importance that the feet of the corpse should not touch the ground, and they are generally covered with a cotton cloth, and supported in the lap of the daughter-in-law. A small table is spread before the body, holding two bowls—one of rice, and the other containing vegetables with long stalks, to represent and bespeak a long life and firm root in the next stage of existence.

7. Announcement of the death.—The sons of the deceased, with the braid removed from their queues, wearing white gowns, aprons, and white fillets round their heads, and shod with straw sandals, take candles and paper money of two kinds, and proceed to the temple of the god of agriculture. On arrival at the temple, the eldest son, as chief mourner, lights the candles, makes his prostrations, and burns the paper money; this

money is supposed to act as a guerdon to the god of agriculture, who is represented as the agent of the god of Hades in the arrest of the soul, and hence requires remuneration. The whole process is described as p'u t'ung, or 'strewing the hall'—a phrase applied in real life to 'squaring' the officials at a Yamen in order to be assured of 'justice'; and it is fairly inferred that the officials in the nether world are equally amonable to a 'consideration'.

world are equally amenable to a 'consideration.'
8. Removal of the corpse.—On returning to the dead to the middle hall, which also contains the ancestral shrine. The position of the corpse is first reversed, indicating the hope that the dead man may return from the hidden world, and this is illustrated by the transposition of the fœtus before birth. A meal is laid out on a large sieve and placed before the dead, with wine and candles, and is then carried in procession to the front of the house and laid outside the door; the members of the family, in white clothing, kneel on a piece of or the taminy, in wintertotting, kneet on a piece of coir matting, weeping and prostrating themselves alternately. The body is next carefully secured to a chair by broad bands, and four strong men are selected to convey it to the state apartment; the head is supported by the eldest son, and the feet by the daughter-in-law. The burden must on no account belaid down until its destination is reached; a fall would be considered a frightful calamity. a fall would be considered a frightful calamity. An umbrella is held over the chair as it moves, to hide one who is now a denizen of the shades from the light of heaven, and handfuls of rice are thrown upon it, with the idea of expelling all evil influences. The corpse is then placed on the bed and a coverlet spread over it. A sheet of white paper is laid upon the face, and the feet are placed close together and propped in position; to allow them to fall apart would involve the death of the nuptial partner shortly after.

9. The public announcement.—A messenger is then sent to a Taoist priest to inform him of the date of the deceased's first attack of illness, the time of his death, and the number of his years. The priest writes a large sheet of yellow paper mentioning these particulars, and the date on which the spirit may be expected to return, together with the classes of persons, born under certain auspices, whose presence at the coffining is contra-indicated. On obtaining this information, which is sometimes pasted up diagonally on the wall of the house, the family is able to prepare for the return of the departed spirit and his attendant.

A large sheet is hung to screen the body from the observation of people passing the door, and a rude lamp, consisting of a bowl of oil with a wick in it, contained in a basket of lime, is kept constantly alight, day and night, so that the deceased may have 'a lamp to his feet' wherever he journeys.

ro. Ceremonies connected with death in old age.

—If the deceased happens to be aged, say seventy years old or more, the curtain at the foot of the bed is red in colour, to show that death, in his case, should not be considered an occasion of sorrow; and no word of consolation is spoken or sign of grief shown by the visitors; on the contrary, nothing but compliments are heard that such a happy consummation has been reached, full of years and in the midst of a numerous posterity. Winedrinking, the 'Morra,' etc., are all the rule, and any one would be langhed at who insinuated that there was any occasion for grief. It is to be noted that, until the actual collining takes places, the candles used are of the usual red variety; white candles are not employed until all hope of revival has departed, and the body is about to be placed in the coffin. The head and feet of the corpse are

supported on specially-made pillows of yellow cotton, stuffed with paper waste, or, in country districts where cotton is manufactured, a reel on which cotton is wound is used instead.

II. Notifying the relatives.—A swift messenger is dispatched to inform the relatives, who are expected to send gifts to the bereaved family. The presents consist of small quilts, about three feet long and a little more than a foot wide, which are carefully marked and reserved for placing in the coffin in due course; they are thus marked to ensure that those furnished by important members of the family shall have a first place.

12. Visits to the house of mourning.—Notice of the arrival of visitors is given by the gateman, who beats three times on a drum; a trumpet is sounded and a hand-cannon discharged. The musicians then strike up, and the mourners are warned of the approach. The chief mourner kneels at the side of the spirit table; the stewards escort the visitor to the curtain, where he kneels four times and bows

13. Coffins. - The style of the coffin varies throughout the empire. In some places it represents the trunk of a tree; in the north the lid projects considerably over the head. The quality is determined by the circumstances of the family. Wealthy people prefer to buy their own coffins beforehand and keep them stored either in an outhouse or in a temple. Some buy the planks, keep them till seasoned, and then employ carpenters to make the coffin when required; whilst others buy theirs from a coffin-shop or from one of the Charitable Societies. At the end of the coffin a lotus flower is carved, expressing the hope that the de-ceased may become a Buddha and take his stand on

a lotus, as Buddha is represented doing.

14. The process of coffining.—The time for coffining in some places is at full tide, and preferably after dinner, so that the deceased may not be put hungry to his 'narrow bed'; but in others it put hungry to his 'narrow bed'; but in others it must be before daylight in the morning, or in the dark of evening, or on a day bearing an odd number, 3, 5, 7, etc., for fear of another death taking place if an even day should be selected. The floor of the coffin is covered with a layer of fine sifted lime or charcoal; then five large squares of coarse paper; upon these a narrow strip of matting, sometimes manufactured of special material like lampwick is placed and upon the top of all a cotter. wick, is placed, and upon the top of all a cotton mattress. The garments for the dead are specially made for the occasion, if the family can allord it, made for the occasion, it the family can afford it, and are fashioned after the pattern of the old Chinese costume, like that of the present Koreans; no buttons or knots are permitted—the Chinese word for 'knot' being pronounced like that meaning 'difficulty' or 'trouble,' and all such difficulties must be prevented from accompanying the traveller. The son now divests himself of the clothes he has assumed, taking them all off in one movement. without separating the several garments; and they are suspended over the backs of two chairs and perfumed or aired, by means of a brazier, containing fragrant herbs, placed underneath. Furs and leather of any kind whatever are carefully excluded, lest the dead should be turned into an animal in his next re-incarnation. The clothes are laid out on the inverted lid of the coffin, and the dead man is carefully placed in position for convenience of dressing; his arms are drawn through the sleeves; a long cord, which runs through the sleeves, is then fastened in a 'lucky' knot, and the clothes are carefully smoothed into position. The hands are placed crosswise over the lower part of the body, the left hand uppermost in the case of males, and the right in the case of females. A pair of cheap shoes are placed on his feet, and an official hat with a red tassel is put on his head. In upper-

المن المناف

class families a winding sheet of deep red is used, sometimes of satin and elaborately embroidered, forming a sort of large bag like a sleeping-bag, in which all but the head is enclosed, and it is fastened at one side with tapes. A satchel containing paper money, a piece of silver, and the Taoist placard is put on his shoulder; and a piece of silver is placed under his tongue. A small pearl, called 'tranquillizing the heart pearl,' is placed on his breast; and, in the case of a woman, a small pearl is in-

serted in the toe of each shoe.

The corpse is now lifted and placed carefully in the coffin, the son supporting the head and the daughter-in-law the feet, with others assisting at the sides. It is important that it should rest exactly in the centre. Small bags of lime are then inserted to keep the head and feet in position; the pipe, fan, and handkerchief of the deceased are also inserted, and five small bags of different colours, inserted, and five small bags of different colours, containing nail-parings, old teeth which have fallen out from time to time, tea, and rice; a small casket containing a rosary, and the undress cap and 'riding-jacket' are also added; for the garments which the dead is at present wearing are his ceremonial clothes, required for his audience with the gods; these others he will wear on his journey. Then each person present takes from his breast a small piece of cotton wool, called 'warm the heart cotton,' and, relling it up into a small ball, throws cotton, and, rolling it up into a small ball, throws it into the coffin; the relatives are invited to take a last look, and care must be taken that no tears are allowed to drop in, lest the corpse should be found in another existence with marks or stripes on his face. Then the various coverlets are laid on in regular order, those presented by near relatives being given first place, and so on in order of pre-cedence, until the coffin is quite full; whatever quilts are unable to find a place inside the coffin are burned. Before the lid is put on, all who are re-garded as representing astral influences inimical to the deceased are requested to withdraw, and are allowed to return only when the lid has been put in place. The lid is smeared with crude varnish, to make it air-tight, or sometimes a cement made of rice, vinegar, and flour is used. Usually four large nails are employed to fasten the lid; but sometimes a sort of double wedge, fitting into a socket in the lid above and another in the side of the coffin, is used instead. The nails are driven in by a senior, the sons and, in some cases, the daughters meanwhile crouching under the trestles on which the coffin rests, lest the eyes of the departed should start out at the hammering.

15. Preparation for removal.—When the lid is fixed in position, the mourners are allowed to plait their queues with hemp-cord, and wear coarse shoes instead of the straw sandals they have been wearthe deceased are requested to withdraw, and are

instead of the straw sandals they have been wearing, and they are permitted to eat. Food is now placed at the side of the coffin, and the dead and his gaoler are invited to partake; the friends and relatives kneel to pay their last respects, and the chief mourner returns the compliment on behalf of the departed. Two piles of paper money are then burned, one for the dead and the other for his

guardian.

16. Meals served before the coffin.—The 'filial curtain,' made of white cotton, is next hung up before the coffin, drawn partially back at both sides, with a table and chair placed at the opening, a white cover like an altar-cloth draping the table. Regular meals are served to the deceased on this table every day, and, each time a meal is served, the server is expected to wail and cry. This continues until the funeral.

17. The fairy guides.—On each side of the chair are placed tall paper structures representing hills, one called the 'golden,' and one the 'silver' hill, intended to indicate the vast sums which the fond

relatives have provided for the voyager, and behind these are tall figures of the 'Golden Youth' and the 'Jade Maiden,' bearing streamers to guide him across the 'Fairy Bridge.' The portrait of the deceased is hung up, behind the chair, supported on each side by scrolls bearing doleful inscriptions, and with white candles placed in front. The chair is occupied by the ancestral tablet, mounted on an inverted tub, and crowned by a piece of red silk fastened with red cord. The wording of the tablet

fastened with red cord. The wording of the tablet reads: 'Ch'ing (dynasty) of the Rank of such-and-such, Master so-and-so's Spirit Chief.'

18. Untying the knots.—The day before the funeral, Bonzes and Taoists are invited to conduct 'masses,' called 'the Water Mass,' the object of which is to cleanse the departed of all sins and transcription of the committed during highlife. In the transgressions committed during his life. In the afternoon a bowl containing rice, and a thread rope consisting of seven strands, on which are threaded and tied twenty-four copper coins, is presented to a Bonze, who places it on a table in front of the table already referred to, and, as he recites the virtues of Buddha in releasing souls from pain and trouble, unties the knots in succession, putting the coins one by one into his vest. This untying of knots is meant to illustrate the release from all

tightness and difficulties in the next world.

19. The journey through the 'shades.'—A Taoist takes his stand at the corner of the table, holding a bell in his hands, and, as he rings it, he chants a sort of sermon whose text is 'All is vanity,' and whose language has a remarkable similarity to the twelfth chapter of Ecclesiastes. He then describes the different stages of the journey to Hades. The journey is divided into seven periods of seven days, or 'weeks,' which correspond with the various stages of the spirit's wandering in the infernal regions. These stages are described in detail, with a wealth of impromptu illustration and elaboration; and the moral of all is the importance of repentance for not having spent one's days in vegetarianism and the repetition of Buddha's days in vegetarianism and the repetition of Buddha's all-potent name, in order to avoid such horrors as have been related. When this long discourse is finished, a space is cleared in front of the 'spirit table,' and a large square with ornamental borders is mapped out on the floor with chaff; twelve oil lamps, provided by the Taoist priests, are disposed round the sides of the square, and are supposed to illumine the darkness of the gate of Hades.

20. Funeral frivolities.—A table is placed at

20. Funeral frivolities.—A table is placed at which a Bonze and six Taoists sit, each performing on a different instrument. In the intervals they sing ribald or humorous songs, with the intention of exciting laughter. They also sing the 'Flower Song of the 12 Moons,' describing the different flowers which bloom in the different months, and other compositions which have apparently very little funereal reference.

little funereal reference.

21. Offerings to the spirits.—After supper the ceremony known as 'Fang Yen-kow' takes place. The spirit table and chair are removed; another chair is substituted, on which a priest takes his seat. Two tables, supporting two large candles and twenty-four bowls of vegetable food, are placed at a little distance in front, intended for the delectation of the various gods. Four other tables are disposed at the sides of the hall, two on each side, intended for the sacrifice to the family ancestors; a small table a little lower down contains the a small table a little lower down contains the offerings intended for the dead person; and the spirit tablet sits at this table in the chair as before, attended on each side by relatives in light mourning garments. When the priests have finished their reciting, a quantity of paper garments and money is burned outside the house.

22. Sacrifice to the dead .- The apartment is now re-arranged, and preparations for the sacrifice | about the tomb, which is repeated three days later.

to the dead are made; musicians are requisitioned; large quantities of flesh and fowls are laid out; lamps are hung all over the room, and the chief namps are nung an over the room, and the enter mourner appears from behind the curtain, leaning upon the 'filial staff,' and supported by attendants. He kneels before the tablet and makes humble offering of the meats, etc. As he prostrates him-self, a person standing at the side reads a long panegyric on the dead in a melancholy voice, and panegyric on the dead in a metancholy voice, and the chief mourner weeps as he lies upon his face. He is then escorted to the rear of the screen, and repeats the process three times; all the relatives and friends present follow him in his genullexions. When all is finished, the offerings and all the temporary fittings are removed, and preparations are made for the funeral.

23. The funeral procession.—In some places the funeral takes place in the fifth watch, i.e. between 4 and 5 in the morning, perhaps in the fifth week, or as late as one hundred days after death, sometimes even later, and in cases of poverty the coffin is left in the house, or put in a mortuary

the coffin is left in the house, or put in a mortuary chamber for the time being.

Every one is awake and stirring at daylight when the day arrives, and arrangements are made for the start. An immense paper figure, representing the 'Clear-the-way god,' leads the van; next come two large bamboos bearing streamers, and four 'wagheads'—paper figures of men, whose heads bob continually as they are carried along. The son-in-law or nephew carries a dish containing rice, in which is placed the ancestral tablet. In wealthy families the tablet is placed in a sedanchair, which is supported on each side by a son-inchair, which is supported on each side by a son-in-law or nephew. The bearer of the tablet is robed law or nephew. The bearer of the tablet is robed entirely in white, and the friends of the family walk on either side of him. Then follows the coffin, borne by four men or a larger number, according to the rank of the deceased, and covered with a red pall or with a satin embroidered cover. After the coffin comes the chief mourner, wearing a head-dress of coarse hemp gauze, shaped some-what like a biretta, with 'pom-poms' of cotton-wool placed at the intersections of the frame, and worn over a small white cap. He hangs his head as he walks, and is followed by the relatives, male and female. The daughter-in-law wears a cowl or hood of coarse gauze over her head, and a jacket and skirt of the same material; she also carries a staff or wand like that borne by the chief mourner; she sometimes sits in a sedan-chair, and the heavy head-dress is then placed on the top of the chair instead of on her head. She weeps and cries aloud as she goes, like the 'keener' at an Irish wake. Rice is thrown over the coffin and chief mourners as soon as they move towards the outside door. The figure of a crane, with outstretched wing and uplifted foot, is placed upon the centre of the coffin, and is supposed to convey the soul to the 'Western Heaven.'

24. The entombment.—When the place of burial is reached, the coffin is temporarily supported by a couple of blocks, whilst the exact location is being considered, with special reference to orienta-tion. In wealthy families, a stone receptacle is prepared beforehand, and the coffin laid very carefully in the exact centre. A meal is laid out, to which the deceased and also the denizers of the which the deceased and also the denizens of the neighbouring tombs are invited. The mourners' head-dresses and cinctures are burnt, with a quantity of paper money, and the streamers and staves are left at the grave. All present now set up a cry; the stone door of the tomb is placed in position, and the tomb scaled. The head-stone is set up, bearing the names of the deceased, with the date of erection. The mourners then join hands and perform a sort of 'merry-go-round' about the tomb, which is repeated three days later.

25. Return of the ancestral tablet.-The procession returns in the same order as before, escorting the ancestral tablet to the home, with crying and burnings. On arrival at the house a great bonfire is made outside the door, and all who have attended the funeral are expected to step across it before gaining the threshold; no one is exempted. In some places a little water is sprinkled over each person by the Taoist priests. The son, in (lighter) mourning garments of blue, kneels and offers the viands prepared, and burns a quantity of paper money. He next climbs by a ladder to the ancestral shrine over the central partition, lights candles before each shrine, and then carries up the new tablet and places it in position. All present are invited to partake of the feast which follows. On the third day a visit is paid to the tomb, and offerings of food, etc., are presented. Those who are present join hands, forming a ring round the grave, and circle round in one direction three times and then reverse three times; this is with the idea of confining the spirit in his proper

26. The seven 'weeks.'—On the seventh day a number of Taoists are hired, seven in all, to 'open the road,' and a great variety of ceremonies take place on this day—morning, afternoon, and evening. In the evening the hall is again arranged, with a table and chair, and a portrait of the deceased hanging behind the chair. Two cups of tea are put on the table, and two bowls of light food, together with candles and incense. The daughter-in-law weeps before the picture, as she 'invites' the spirit to partake of refreshment, and a quantity of paper money is also burned. At daylight, tea, etc., is laid as before. At breakfast-time, food of different kinds is offered and candles are lighted. The performance is repeated at noon, with this difference, that the viands are more elaborate. This takes place every 'week' until the seventh, the only exception being that in the 26. The seven 'weeks.'-On the seventh day a the seventh, the only exception being that in the the seventh, the only exception being that in the fifth week a further meal is laid in the death chamber. In the fifth 'week,' Taoists are called to 'force the city,' or 'force the gate of hell.' A paper city with men, horses, etc., is set up, and, when night comes, a Taoist priest in full robes breaks through the city with the sword he carries, and liberate the imprised sale of terms. and liberates the imprisoned soul; afterwards a great bonfire is made in the open air, and three or four priests take their stand around it, holding long bamboos, to which are attached elaborate 'fireworks.' In the sixth 'week' the daughters are expected to provide a feast for the dead, and they are given a share in the division of the clothing which he has left. At the end of the seventh week' the chief mourner is allowed to shave his hair for the first time, but, if the coffin has not yet been removed, he is not permitted to do so until one hundred days have expired. The next year the mourners, wearing white garments, pay their first annual visit to the grave on the day known as 'clear bright,' and on this day the sounds of wailing may be heard in all directions. A further visit is sometimes paid in the ninth moon; and at the winter solstice paper garments, representing warm winter clothes, are presented and burnt.

27. The spirit's homecoming.—On the night appointed for the return of the spirit, a table of eatables is laid in the death chamber, which is then evacuated by the relatives. In the kitchen a quantity of lime is placed beneath and around the fireplace. When the hour arrives, as announced by the Taoist priest, a procession is formed, the priest leading, and all enter the chamber. The kitchen is then visited and the lime examined, the traces of the spirit's presence being discovered by the marks, as of the feet of a goose, upon it. A white cock is caught and carried in one hand in

front of a basket-lid, and, as the lid is struck by a measure held in the other hand, the cock crows; This represents the sending off the spirit's escort.

A white cock is said to be a protection against baneful astral influences, and to be the only

capable guide of transient spirits.

DEATH AND DISPOSAL OF THE DEAD (Coptic).—When the decaying religion of ancient Egypt gradually gave place before the advance of Christianity, many of the beliefs, and much of the symbolism that had been so dear to the Egyptians for over three thousand years, survived the change of religion for some considerable time, and, as was to be expected from a people by whom burial rites had been magnified into a great and complicated magical system, the old customs were given up only gradually and reluctantly. To the Egyptians, Christianity presented itself in a somewhat different light from that in which it appeared to the other civilizations of the ancient world. From the dawn of history they had believed in a continuation of life after death, in a future existence that was well defined; and in order to secure this existence for the soul of man they had elaborated countless magical rites which were performed at the burial of the dead. They had also a god of the dead—a god who had once lived an earthly life, who had been slain by the power of Evil, and who by certain magical ceremonies had come to life again, and ruled as King of the under world. It was thus that in Osiris lay their hope of living again, and with him they considered the dead identified. The Christian belief in a resurrection was therefore not, in certain aspects, a new one to them, and the doctrine that the dead in Christ shall live in Christ was strangely familiar to all who had been reared in the Osirian creed. Thus it is not strange that, when Christianity began to be accepted in Egypt, the early believers continued to practise the ancient funeral rites, only slightly modified to meet the requirements of the new religion.

The chief concern of the pagan Egyptians had been the preservation of the bodies of the dead by embalming, so that the spirit of the deceased might pass to and fro between the kingdom of Osiris and the earthly shell which lay in the tomb; and the early Christians of Egypt saw no reason to alter the custom of their forefathers, more especially since the Christian and pagan doctrines of the resurrection had so much in common. Mummification of the dead, therefore, continued to be practised by the Christians until the beginning of the 5th cent., and only died out after that owing to the general opposition of the Church. Mummies of anchorites and holy men and women have been found in various parts of Egypt, one of the most notable cemeteries containing Christian dead being the recently excavated burying-ground at Antinoë. The bodies are usually well preserved, the head being sometimes adorned with a garland. In the case of the men, the beard was allowed to grow, contrary to the ancient usage, and when the face is thin or emaciated it represents very much the type of the Good Shepherd as depicted in later iconography, but unlike the criophoric figures in the catacombs. The hody was carefully wrapped in bandages, usually intercrossed, and sometimes

<sup>1</sup> Anthony, the founder of Christian asceticism, had so great a dislike to it that he desired to be buried secretly, in order that his body might, not be subjected to the general custom. It was probably his opposition that led to the suppression of the practice.

2 Gayet, AMG xxx.

the face was covered with a painted plaster mask, as was the pagan custom of the time. In the case of a supposed Christian priest found at Deir el-Bahari, the outer wrapping was painted to represent the deceased holding the Eucharistic cup in his hand. On his left shoulder was the swastika ornament, which was much adopted in early Christian symbolism, while the lower part of his robe bore a representation of the boat of Isis.

But it was not only the belief in the efficacy of embalming that survived the change brought about by Christianity, for many of the other old to decide how far their import was understood by the Christians. There is some evidence to show that offerings of food continued to be made to the dead. In the Christian cemetery in the oasis of el-Khargeh the tombs follow the ancient design, the body being laid at the end of a long shaft, at the opening of which is a chamber containing niches for offerings.<sup>2</sup> Wine-jars and baskets for food were sometimes buried with the dead, and in a will made by a Christian at Antinoë the deceased requests that the holy offerings may be made for the repose of his soul. This, however, may refer to an agape, or a kind of mass said for the dead.<sup>3</sup> It is interesting that at the Synod held at Hippo in A.D. 393, at which Augustine was present, the habit of placing the host in the mouth of the dead, which had become general amongst Oriental Christians, was strongly condemned. It was apparently also the custom to enclose some of the holy elements in the coffin. Some other pagan usages seem to have continued. As the dead were formerly buried with amulets and little figures of formerly buried with amulets and little figures of protecting gods, so the pious Christian was buried with figures of St. George and the Evangelists. In one case, at least, at Antinoë a sort of ivory praying-machine, a kind of primitive rosary, appears to take the place of the papyrus inscribed with prayers and magical formulæ. There was also found, held in the hands of this body, a flower of Jericho similar to the mystic rose which was supposed to be the emblem of immortality, and to flourish every year on the day Christ was born. Hitherto this symbol was not considered to have been employed before the Crusades, but its presence in the cemetery of Antinoë points to its use in very early times. It is interesting also to note that the body of a monk named Serapion, from the same burial, was encircled by an iron band from which hung a cross.4 In cases where portraits of the deceased were painted on the outer coverings of the body, the ancient sign for life, the ankh, 1, is sometimes represented grasped in the hand. This symbol is very frequent in Egyptian iconography, and was often employed where the cross would have been expected. Its use was so persistent that it afterwards became identified with the cross, and was known as the crux ansata. art. Cross.

As the influence of the Bishop of Alexandria increased over the remoter parts of Egypt, many customs which appeared semi-pagan died out, and the funeral rites were performed more in accordance with orthodoxy. After the Council of Chalcedon (A.D. 451), when the Coptic Church was definitely separated from the orthodox body, was definitely separated from the orthodox lody, there could be but few remaining. From descriptions in the Coptic writings, it would appear that the dead, wrapped in a winding sheet, were immediately carried out into the desert and buried. Persons of peculiar sanctity it was the custom to bury in a reliquary. The Coptic Life of Shnoute states that he was buried in a reliquary vierced with holes probably in order that pilgrims pierced with holes, probably in order that pilgrims

might have the benefit of gazing on the holy As these relics are usually described as bones, it is evident that embalming had by then been abandoned. A Mass, or offering of the Eucharist, was sometimes performed before the funeral, but Masses for the repose of the dead in the Roman sense seem to have been unknown in the Coptic Church. The use of tombstones at this period was almost universal. They usually contain period was almost universal. They usually contain the words: 'One God who helpeth,' and the date on which the deceased 'fell asleep' or 'entered into rest.' Occasionally they contain pious ejaculations and quotations from Scripture. Rarely they are conceived in a more pagan spirit, with such phrases as 'Grieve not, no one is immortal,' an especially good instance of this being a tombstone in the British Museum [no. 400] which runs: 'O how dreadful is this separation! O departure to the strange land which removes one departure to the strange land which removes one for all time! O condition of Hades, how do we come to thy gate! O Death, name bitter in the mouth! . . . Let all who love to weep for their dead come to this place and mourn greatly.' This recalls the ancient Egyptian funeral prayer to the passer-by: 'O ye who love life and hate death . . . pray for the deceased.'

The Contra baye undergone centuries of convergence of contracts.

The Copts have undergone centuries of oppression under Muslim rule, which has driven many to embrace Islām. The Khalīf al-Mutawakkili (850) even went so far as to interfere with their burial customs, and ordered that all the graves of the Copts should be level with the ground. Possibly owing to the influence of Islam, which has surrounded them on all sides for so long a period, the funeral rites of the Copts to-day have become very similar to those of their Muhammadan fellow-countrymen. The corpse is borne to the cemetery on a bier, followed by the female relatives and women of the house wailing and mourning. At the burial-ground a sheep is often killed by the more well-to-do, and its flesh given to the poor; the poorer give bread alone. Professional mourning women are hired to wail in the house for three days after death—a survival, perhaps, of the ancient Egyptian custom, or possibly only a ceremony borrowed from the Muslims. The lamentations are renewed on the seventh and fourteenth days after death, and sometimes for longer still. On the eve of the festivals of al-Milad, al-Ghītas, and al-Kiyamah (i.e. the Nativity, the Baptism of Christ, and Easter), it is the custom of the Copts to visit the cemeteries and spend the night there, many of the richer having houses built specially for these occasions. The women spend the night in the upper rooms, the men below. Next day an ox or sheep is killed, and the flesh distributed among the poor. Lane (Modern Egyptians, p. 296) states that the Copts say that these visits to the tombs are merely for the sake of religious reflexion. This custom, however, together with the practice of slaughtering animals for food, possibly goes back to pre-Christian times in Egypt, when the relatives of the dead made periodical visits to the tombs, and brought food-offerings for the ka of the deceased to refresh him in the under world. The funeral services of the Copts are according to the liturgy of St. Mark. One is in use for ordinary pariods of the very and one sin use for ordinary pariods of the very and a special use is amplexed. are renewed on the seventh and fourteenth days the liturgy of St. Mark. One is in use for ordinary periods of the year, and a special one is employed during Easter (Tuki, *Rit. Copt. Arab.* p. 525).

DEATH AND DISPOSAL OF THE DEAD (Early Christian).—1. During the earlier years the Christians followed in general the burial customs of the Jews. But a livelier hope in the resurrection robbed death and the grave of many of their terrors. This gradually modified inherited funeral rites. To the followers of Jesus death was a sleep, and the grave a resting-place (κουμπτήριον) for those who had died in the faith (Jn 11<sup>13</sup>, Ac 7<sup>60</sup>, 1 Th 4<sup>13t</sup>, 1 Co 15<sup>18-20</sup>). Not less but more respect was accordingly paid to the mortal remains of the departed, for their bodies had been 'temples of the Holy Ghost,' and were to rise and be glorified (1 Co 3<sup>16</sup>, 6<sup>19</sup>, 15<sup>12</sup>, Rev 7<sup>13</sup>). When death ensued, the eyes 316, 613, 1542, kev 744). When death ensued, the eyes were closed, the body washed, the limbs swathed, the whole body wrapped in a linen sheet with myrrh and aloes, and laid upon a couch in an upper room (Ac 9376; cf. Mk 1546 161, Jn 1144 19396 20057). These acts were performed by the elder women kindred and friends of the family. Relatives and intimates were admitted to view the face of the deceased, and an interval of eight or more hours was required before burial. The younger men carried the bier to the place of interment, followed by the relatives and friends (Ac 56; cf. Lk 714). Flute-players, hired mourners, and noisy demonstrations of grief were doubtless dispensed with (Mt 923, Lk 852, Ac 82, 1 Co 15541). The place of burial was outside the city or village, in a natural cave, or in a tomb cut out of the rocky hill-side, or in a subterranean chamber, or simple grave. Local conditions were determinative. The descripand of that of Jesus will hold for the early Christian Palestinian place and form of burial (Jn 11<sup>88</sup> 19<sup>41</sup>; Gosp. of Peter, chs. 6 and 10). In fact, the form and character of Jesus' entombment influenced all subsequent Christian practice (1 Co 15201.). Tombs were, as a rule, private family possessions (Mt 27<sup>57f.</sup>), and were large enough to receive several bodies, which were laid upon the ledges or in the niches cut in the sides. The brotherhood, however, from the beginning undoubtedly provided for the burial of its own poor (Ac 244; Aristides, Apolog. [Syr.] xv. 18). A large (Ac 2\*\*; Aristides, Apolog. [Syr.] xv. 18). A large stone, rolling in a rabbet, closed the door of the hill-side sepulchre against prowling beasts and robbers (Mk 16\*). It is altogether probable that the Jewish Christians whitewashed their tombs, as did their compatriots (Mt 23\*\*). In Rome and in general throughout the West, as well as in Egypt and North Africa, the Jews had already adapted the Palestinian form of interment to local conditions, and the early Christians modified this still further to meet their own peculiar requirements. further to meet their own peculiar requirements. Of course they borrowed this and that local practice from the current pagan usage. The wide-spread development of 'catacombs' (q, n) as places of Christian burial was but a re-adaptation of Jewish and pagan burial customs. Simplicity and even plainness must have characterized the earlier forms of Christian entombment in all lands, partly on account of the poverty of the brotherhood, and also because of the hope of a speedy resurrection. A brief inscription expressing the hope of immortality (elopon ou, tion expressing the hope of immortality (elphηη σοι, κοίμησε ἐν εἰρὴνη, in pace, etc.), sometimes accompanied by a consecrated symbol (a palm-branch or anchor, fish or dove), was the final tribute to those who had died 'in the Lord' (Bingham, Antig. of Chr. Church, ed. 1870, bk. xxiii.; Am. Cath. Quart. Rev., 1891, xvi. 501 f.; Kaufmann, Handb. d. chr. Arch., 1905, pp. 74f., 111 f., 205 f., 277 f.; art. 'Koimeterien,' in PRE³ x.).

2. But changing conditions produced manifold developments. The wide-spread and increasing alienation between Jews and Christians in the early decades must often have sucrested. If it did

2. But changing conditions produced manifold developments. The wide-spread and increasing alienation between Jews and Christians in the early decades must often have suggested, if it did not compel, separate burial arrangements. And

the rapid increase of the Gentile element in the various churches throughout the Empire naturally tended strongly in the same direction. The Jewish cemeteries, indeed, would hardly have been open for the interment of deceased Christians with pronounced pagan antecedents. Our sources, it is true, are practically silent regarding the progress of this development, but it is safe to say that separation between Jews and Christians as regards cemeterial requirements had taken place before the close of the first century, especially in prevailingly Gentile Christian communities. And a similar separation must have been going on as between pagans and Christians. Hostility between them became and Christians. Hostility between them became marked towards the close of the 1st century (Ac 8<sup>1f</sup>· 15<sup>28f</sup>·, 1 Co 7<sup>12f</sup>·, 2 Co 6<sup>14f</sup>·, Col 2<sup>8</sup>·, 1 Jn 2<sup>18f</sup>·, 3<sup>13</sup>, Rev 2<sup>10.20f</sup>·, 3<sup>1f</sup>· 6<sup>1f</sup>·, and chs. 8–20), and martyrdom was not uncommon (Clem. Rom. ad Cor. 5–7; Tac. Ann. xv. 44; Suetonius, Nero, 16; Melito ap. Euseb. HE iv. 26, iii. 17–20; Pliny, Ep. ad Traj. x. 96, 97; Ign. Ep. ad Rom. 5, ad Phil. x. 2; Polyc. ad Phil. 1). The Christians would naturally wish to ensure the sencitive of the grayes of their martyred. ensure the sanctity of the graves of their martyred dead, but in order to do so they had to provide separate cemeteries. That this began to be done in Rome by the opening of the 2nd cent. is generally admitted (de Rossi, Roma Sott. 1864-77, i. 343 f., iii. 386 f.; Bull. 1865, p. 36 f., 1886, p. 136; Nuov. Bull. 1901, p. 71 f., 1902, p. 217 f.; Bosio, Roma Sott. 21650, p. 141 f.; Armellini, Gli Antiche Cimit., 1893; V. Schultze, Katakomben, 1882, p. 307; Kaufmann, I.c. 111 f.). But that it did not come to pass throughout the Empire is abundantly proved (Ramsay, Cities and Bishoprics of Phrygia, 1897, i. 500 f. and 717 f.). Influences other than hostility would often operate to hasten or prevent the institution of separate Christian cemeteries. In some lands, such as Syria and Asia Minor, it took even centuries to accomplish the separation of Christians on the one hand, and Jews and pagans on the other, as regards burial accommodation (Ramsay, l.c.)

3. The earliest distinctly Christian cemeteries of which we have any knowledge are to be found in the neighbourhood of Rome. The Neronian persecution, followed by that of Domitian, doubtless constrained the Christian brotherhood to provide separate resting-places for their honoured heroes who had 'fallen asleep.' And, as martyrs to the faith multiplied, such cemeteries became consecrated ground, and the tombs of the martyrs were ere long places of pious meditation and devotion. In certain communities this often necessitated chapels, where the brethren could gather without imminent danger of molestation. Then funeral rites and ceremonies soon shared in the general development, and these in turn reacted powerfully upon the whole manner and mode of burial. The entire catacomb development at Rome, Naples, Syracuse, Alexandria, Trèves, and elsewhere, for example, is adequately explained only on such presuppositions. Instead of family tombs and brief temporary resting-places for the dead, the Church, especially in the West, gradually made provision for the burial of all its deceased members (by A.D. 250). There accordingly arose, in the suburbs of every considerable Occidental city, Christian burying-grounds. And, where the remains of noted martyrs were laid, chapels were erected, and the brethren gathered to observe the Holy Eucharist and to hold fellowship with the 'saints who had gone before.' The chapel was named after the martyr; often the title was given to the whole cemetery; more frequently the cemetery bore the name of the patron who had provided the ground; occasionally of the bishop who enlarged and elaborated it. Instances of each are the cemetery of the martyr Prætextatus, of the patron Priscilla, and

of the bishop Calixtus-all in the neighbourhood of Rome. In the Orient, developments were dif-ferent. Palestine is rich in rock-tombs, and so is the whole of Syria. Asia Minor has few ancient church-cemeteries; it has mostly family burial-places. And this is largely true of the whole Orient. Stone sarcoplagi with Christian inscriptions are frequently found. These were placed in simple graves beneath the surface, or in tombs areated on the bill-side with more or less alchorate. erected on the hill-side, with more or less elaborate façades. In all this there is little that was distinctively Christian (Ransay, op. cit. i. 500 f., 717 f.). But in the West the pre-Constantine developments were quite unique. Beginning with the Jewish or pagan type of family tomb, the Christian churches con varyided constants for all Christian churches soon provided cemeteries for all their dead (Aristides, xv. 8, 11; Tert. Apol. xxxix.). The most common form of these was that which was later known as 'catacombs' (q.v.). These underlater known as 'catacombs' (q.v.). These underground cemeteries are enormously extensive in the neighbourhood of Rome, and were used as burial-places by the Christians down into the 5th century. They give us the larger part of our information on the theme in hand. The transition, for example, from the private family-tomb to the common church-cemetery is illustrated by the St. Lucina crypt and the Calixtus catacomb, by the so-called spelunca magna and the Prætextatus catacomb, the Flavian vestibule and the Domatilla catacomb. the Flavian vestibule and the Domatilla catacomb, and the 'Acilii Glabriones' chamber and the Priscilla catacomb. The growing use of obituary inscriptions can also be seen in the catacombs, from the simple  $\epsilon l \rho \eta \nu \eta$  or to the most elaborate personal tribute on the tomb of Sixtus II. (A.D. 258). The development of Christian symbolism can likewise be traced therein, from the rude but suggestive 'anchor' to the portrayal in fresco of the Last Supper or of the story of Jonah. Christian art in general had its beginnings and early elaborations in the catacombs, and every early elaborations in the catacombs, and every phase of it was closely related to the burial of the dead. This is especially true of painting, sculpture, and church architecture. The same is also true of the development of the liturgical and sacerdotal rites in the early Church, and the worship of the dead. The ante-Nicene development of burial customs is, however, quite amply reflected also in the current literature. The Martyrium S. Polycarpi speaks of celebrating 'the anniversary of his martyrdom,' or birthday, at his tomb (xviii.). Tertullian says: 'As often as the anniversary comes round, we make offerings for the dead (martyrs) as birthday honours' (de Cor. iii.; see also de Monog. x., and Cyprian, Epp. xii., xxxii., xxxvi.2; cf., further, art. Commemoration of the

DEAD).

The Christians did not fear cremation, though they preferred 'the ancient and better custom of burying in the earth' (Min. Felix, Oct. xxxiv.; cf. Mart. Polyc. xviii.; Tert. de Anima, Ii., de Res. Car. lxiii., Apol. xlii.; Origen, c. Cels. v. 23, viii. 30; Lactantius, Div. Inst. vi. 12; Euseb. HE v. 2, vii. 22; August. de Civ. Dci, i. 12, 13). Simplicity prevailed throughout the 2nd cent. (Min. Felix, Oct. xii. and xviii.), but by the opening of the 4th cent. everything had become elaborated. Associations had been formed in the West to hold the property; space was sold in the cemeteries; the property; space was sold in the cemeteries; gravediggers (fossores=κοπιάται) had become a gravediggers (fossores=koritral) had become a separate class, and there were artists, stonecutters, painters, sculptors, and architects. The anniversary festival had been extended so that the third, seventh, and perhaps the thirtieth and fortieth days after burial were celebrated (Apost. Const. viii. 41 and 42). Prayers were made at the tomb, psalms sung, and the Eucharist celebrated as fellowshipping with the dead; lighted tapers were placed at the grave; personal ornaments,

toilet articles, bottles, vases, etc., were interred with the corpse (Synod of Elvira, can. 34; of Laodicea, can. 9; of Gangra, can. 20; Euseb. *HE* vii. 16, *Vita Const.* iv. 66, 67, 70, and 71; Epiph. *Hav.* lxxv. 3; Socrat. *HE* i. 40, iii. 18; Jerome, *Ep.* 

Her. IXXV. 3; Socrat. HE 1. 40, In. 18; Jerome, Ep. XXVII. [cviii.] ad Marcellam).

4. With the recognition of Christianity by Constantine a new era opened. Recent martyrdoms had multiplied the number of saints and holy places, furnishing fresh sites for sacred buildings as well as holy relics for altars. Imperial favour and funds now facilitated the erection of churches throughout the Empire and the recent of constless. throughout the Empire, and the graves of apostles, martyrs, and honoured saints were soon covered by martyrs, and honoured saints were soon covered by imposing basilicas or mausoleums. In the suburbs of Rome, for example, the basilica of St. Peter arose on the Vatican Hill, that of St. Paul on the Via Ostiensis, that of St. Lawrence on the Via Nomentana, and that of St. Agnes on the Via Nomentana, and that of St. Marcellinus and Peter on the Via Prænestina. These all were, or became, cemeterial churches, with which Imperial mausoleums were frequently connected, as in the case of the mausoleum of St. Helens, near the last-named the mausoleum of St. Helena, near the last-named church, and that of Constantina, near St. Agnes. All around this latter basilica were placed minor monuments in a large open-air cemetery. The 'churchyard' now soon becomes the prevailing type of cemetery throughout the West, including North Africa. Persecution having ceased, the Christians were free to bury sub divo, yet the martyr graves beneath the altars usually drew the cemeteries near the churches. Of course, local conditions were determinative. Churches within the walls of the cities could not have extensive cemeteries, though their crypts were used for burial purposes. Western Europe followed in general the lead of Italy and Rome as regards cemeterial churches and churchyards. North Africa seems to have early developed the open-air cemetery, independent of particular churches. Egypt continued for the most part the ancient repeties of the native Egyptian and naturalized. practices of the native Egyptians and naturalized Jews. Syria also persisted in its old burial customs, though the elaborate mausoleums of antiquity were not erected as Christian tombs; and the same was true of Asia Minor.

5. The elaborate funeral ceremonies and the interment of the Emperor Constantine in Constantinople (Eusebius, *Vita Const.* iv. 60 and 66-72) indicate the stage which the development had reached and also lines of future progress:

reached and also lines of future progress:

The body 'was placed in the principal chambor of the palace, and surrounded by candles,' and 'encircled by a numerous retinue of attendants, who watched around it incessantly night and day'; the second son, Constantlus, himself headed the procession, 'which was preceded by detachments of soldiers in military array, and followed by vast multitudes, the body itself being surrounded by companies of spearmen and heavy armed infantry. On the arrival of the procession at the church dedicated to the apostles of our Saviour, the coffin was there entombed. . . . As soon as Constantius had withdrawn himself with the military train, the ministers of God came forward, with the multitude and the whole congregation of the faithful, and performed the rites of Divine worship with . . . prayers for his soul. . . . His statue was erected . . in every province.'

The funeral and entombment of Basil. Bishop of The funeral and entombment of Basil, Bishop of Cæsarea, as described by Gregory of Nazianzus, is likewise instructive (Paneg. on Basil, 80):

'The saint was being carried out, lifted high by the bands of holy men, and every one was eager to selze the hem of his gavenent, or to touch his shadow or the bier which bore his holy remains. The psalmody was overpowered by the lamentations. the body was consigned to the tomb of his fathers. and now he is in heaven, where, if I mistake not, he is offering sacrifices for us and praying for the people.'

August. Conf. ix. 12; Jerome, Epp. lxi. etc.). The anniversaries of famous martyrs were also occasions for elaborate discourses on their virtues. And their tombs now became the resort of pilgrims from far and near. The relics of martyrs and saints were frequently disinterred and sent to important churches for re-burial in the crypts, where shrines were erected and services held. The Synod of Gangra. (c. 358 A.D.) declares: 'If any one shall, from a presumptuous disposition, condemn and abhor the assemblies (in honour) of martyrs, or the services performed there, and the commemoration of them, let him be anathema' (can. 20). Yet the Synod of Laodicea (before A.D. 381) announced that 'members of the Church shall not be allowed to frequent cemeteries or so-called martyries of heretics for prayer or worship' (can. ix.). Many councils in Spain, France, and Germany during the 6th cent. tried to stop burials in martyries and churches. Pelagius II. (A.D. 578) protested against the growing custom, but with slight effect. Burial around churches, or in porches, vestibules, and cloisters, soon became universal. Gregory the Great (c. 600 A.D.) complains about exactions of cemetery officials as a price of burial, but says: 'If parents or others wish to offer anything for lights, we do not forbid, but you must not ask it' (bk. ix. Ep. iii.). Jerome and Chrysostom had spoken approvingly of giving alms at funerals, for the relief of the souls of the dead.

6. A summary of the theme in hand may be given under the following heads. (1) The simple funeral rites and burial customs of the early days gradually gave way to more and more elaborate ceremonies and practices. (2) These developments were different in different lands, but they all tended in the same general direction. (3) Two universal influences were at work to produce these manifold changes: one arising out of the persistent faith and life of the Church, the other pressing in from the universal pagan environment. (4) Funeral rites were extended so as to include the elaborate ceremonials which have been described above, most of which were drawn more or less unconsciously from the surrounding pagan practices, although the Christians never lost the primitive faith and feeling which distinguished their early funeral customs. (5) The manner and forms of entombment were also steadily influenced by the various pagan practices, and yet to the Christians the grave remained the 'sleeping-place' for those who were to arise to 'newness of life.'

entombment were also steadily influenced by the various pagan practices, and yet to the Christians the grave remained the 'sleeping-place' for those who were to arise to 'newness of life.'

DEATH AND DISPOSAL OF THE DEAD (Egyptian).—Of no other country in the world

DEATH AND DISPOSAL OF THE DEAD (Egyptian).—Of no other country in the world have the burial customs always attracted so much attention as have those of ancient Egypt. The artificial preservation of the body, the elaborate care with which it was provided with covering and ornament, the monumental nature of the tombs which were built or excavated to contain it, struck the earliest foreign observers with astonishment, and are still the theme of wonder and admiration in our own day. Moreover, the dry and microbe-free climate of Egypt, in which nothing is destroyed by the disintegrating action of the atmosphere or the attacks of bacilli, has helped the artificial aids of mummification and carefully-sealed burial to preserve the human body and its appurtenances intact just as they were placed in the tomb. Even if

removed from its wrappings, it is but rarely that a mummy is affected by any agency except damp; while the textile fabrics, the mats and baskets, and even the loaves of bread sometimes placed with it, are, if delicate and brittle and without elasticity, to all outward appearance the same now as when they were buried with the mummy. It is chiefly to their preservative methods of burial that we owe our present remarkable knowledge of the ancient Egyptians and their manners and customs, whereas in the case of Greece and Rome we have become acquainted with the course of daily life, and the objects of daily use, mainly through the medium of literary descriptions or the representations on painted vases. In Egypt we have the actual objects themselves, from the precious ornaments of gods and kings to the humblest bead-necklaces or rude idols of the fellahîn; we have chariots perfectly preserved, splendid furniture and marvels of cabinet-making which furniture and marvels of cabinet-making which once adorned palaces, simple wooden benches, and the shoes, mallets, and baskets of the common peasants. The majority have been preserved in the tombs. Naturally we possess actual objects of daily use from Greece and Rome also, but they are rare, and tell us little compared with the vast corpus of knowledge which we have derived from the sepulchres of Egypt. And one thing we have from Egypt which is the most wonderful of all, and this we can never have from Greece of all, and this we can never have from Greece and Rome. No man has seen the actual face and form of Themistocles, Pericles, or Cimon, of Solon, or of Socrates, of Alexander, Hannibal, or Augustus; yet every man now who wishes may gaze upon the actual bodies of kings whose may gaze upon the actual bodies of kings whose ancient names were told by the priests to the Father of History, whose deeds as they were written on temple-walls were recounted to the nephew of Augustus, and whose statues were venerated as those of deities by the Emperor Hadrian. Sesostris, Ramses, and Osymandyas, who were ancient names to Hellenes and Romans, and were actually contemporaries of Carlo king. and were actually contemporaries of Greek kings who were actuary contemporaries of Greek kings who were the heroes and demi-gods of the classical period, lie now in the glass cases of the Cairo Museum. Mycerinus, of whom Herodotus (ii. 129–134) tells a merry tale, is No. 6006 of our national collection in the British Museum. Their preservation to the present day is due to the peculiar burial customs of their nation, and was intended.

The chief peculiarity of the Egyptian burial customs is the artificial preservation of the body. No doubt in later times a theory of resurrection was adopted, according to which, after a space of three thousand years, the several parts of a man—his ikhu, or spark of intelligence which had rejoined the gods, his ba, or bird-like soul which fluttered around the tomb, his khaibit, or shadow, and the ka, or double of him, which was born with him and accompanied him on earth during life and in the tomb during death—rejoined his sahu, or noble and venerable mummy, which had lain so long in solitary majesty in the tomb, and then the whole man rose again from the dead. But it is not clear that this actual man was to live again on earth as he had lived before. He was to live with the gods rather. According to another theory, the sahu was not the actual mummy, but a sort of spiritual body which germinated in the khat, or corruptible body, and sprang up out of it just as the wheat springs up out of the seed: so the dead Osiris gave birth to a new living Osiris. It was in this sahu that the concomitant parts of the man were re-united. A symbol of this belief is found in many tombs; it is a figure of Osiris on his bier, made of earth, in which seed was sown just

before the burial; as we find it now, we see the wheat which grew up and withered in the darksahu probably arose from two different ideas of the actual dead body. In one aspect it was a mere dead thing, not different from a dead fish—the khat of a man like the khat of a fish—and was expressed in the hieroglyphic writing by the figure of a dead fish. But in another it was a fearful and wonderful thing—the sahu, dwelling in majestic loneliness and silence in the tomb, and endued with marvellous magical powers, which naturally included the power of summoning back to it at will the departed principles of life and intelligence, the shadow, the heart, and the name, ever regarded with awe by primitive races. So the sahu is represented as the human mummy lying on its bier. The two ideas were combined rying on its her. The two ideas were combined in later times by regarding the sahu as a spiritual body (which originally it was not) which sprang from the khat. The khat was simply the profane name for a dead body of any kind. In the oldest religion, when the actual human mummy was alluded to, it was called the sahu, and one prayed to the gods to allow the ba to re-enter the sahu and re-vivify it, so that it could feed upon the offerings which its descendants brought to it. It was probably out of this idea that the conception of a resurrection, whether of a spiritual sahu or of the actual man, grew. The real origin of mummification is to be found in a simple desire to preserve the dead man to his family. In the dry soil of Egypt bodies were found by experience not to decay utterly when they were buried in shallow graves, and the simple expedient of smoking or scorching was no doubt resorted to in order to stave off putrefaction even more. How far smoking is responsible for the crouched and drawn-up position of the oldest Egyptian bodies is doubtful. Real mummification was not known to the oldest Egyptians, but that it was introduced before the close of the Neolithic period is shown by the hieratic use, even in the very latest time, of a flint knife only, in order to make the incision through which the entrails were removed. Herodotus records for us this use of 'an Ethiopian stone' (see below). The ancient and holy stone-knife alone could be used for this act; the new-fangled metals were profane. Of this desire to preserve the dead as long as possible to 'those on earth who love life and hate death,' in the words of the Egyptian funeral-prayer, we may find a proof in the custom of keeping the mummy above ground for a specified period, in its own home, before it was finally committed to the

above ground for a specified period, in its own home, before it was finally committed to the tomb (see below, p. 462).

Wiedemann regards this custom, which we shall discuss further later on, as a survival of what he calls 'secondary' interment. In the most ancient days he considers that the primitive Egyptians buried the body first in ground near or under the house till it had partially decayed, and then transferred it to its final resting-place in the desert necropolis. In this way he explains, too, the fact of the disturbed condition of the bones in most of the Neolithic graves, which Filnders Petrie explains as due to a ceremonial cannibalism. Wiedemann thinks that the body was intentionally cut up after putrefaction had set in during the first burial in order to clean the bones before the second and final burial. He finds confirmation of this view in many texts of the 'Book of the Dead,' in which the cutting off of the limbs of the dead is referred to, while the deceased prays that his limbs may be restored to him, and that he may be whole. There is also the legend of the cutting up of the body of Osiris. That these passages are rightly interpreted as referring to a primitive custom of cutting up the body is possible. At Deshasha, Flinders Petrie found definite proof that the reason for the practice is that advanced by Wiedemann. And, as a matter of ract, dismemberment was not so usual as has been thought, for much of the disturbance of the remains in pre-bistoric graves is no doubt due merely to predatory beasts and to wady-torrents (selts).

The primitive custom of burial in a crouched-up posture gradually gave place, during the early

dynastic period, to that of burial at full length, with which real mummification is associated. Mêdûm, Flinders Petrie found both customs existing side by side in the graves of the age of the IIIrd-IVth Dynasty. It was probably not till the time of the Vth Dynasty, when Egyptian customs became crystallized in the form which they more or less retained ever afterwards, that the old custom of the Neolithic people finally died out and the burial customs of the Egyptians took the final shape which we know so well. At least from the time of the HIIrd Dynasty, prayers were made for the dead in the ancient form: 'May Anubis [the protector of the tomb at Abydos] or Osiris [the Busirite god of the dead] grant a royal offering: may be give thousands of flesh, fowl, and everything good and pure on which the god there liveth, to the ka of N., justified and venerated' (see below). And the piety of those 'on earth' erected a gravestone 'in order to make his name to live on earth,' This was as far as the Egyptians ever went in the direction of ancestor-worship. As has been shown in the art. ANCESTOR-WORSHIP (Egyptian), the belief that the dead man was absorbed in the personality of the great god of the dead, Osiris—a belief universal throughout Egypt by the end of the 'Old Kingdom'—prevented any worship of him under his own name: he was venerated as being himself Osiris, not as an ancestor. Otherwise a developed ancestor-worship would, no doubt, soon developed ancestor-worship would, no doubt, soon have grown up; for family life was close and affectionate in Egypt, far more so than among the surrounding nations; and the names and figures of parents, children, and other relatives were constantly commemorated on the gravestones of the dead. 'Those living on earth who loved life and dead. 'Those living on earth who loved life and hated death' (ankhiu tep ta mer ankh mestjetj mut) were always full of sympathy with and affection for those who had gone down before them into the mysterious tomb-world, and to this is due the whole elaborate paraphernalia of Egyptian burial. The smoked body of the earliest period was provided with a mat on which to lie peacefully, with jars of food to live upon, and with flint weapons to use if it could. For how did one know what Would not ka and ba return to it, bringing back beloved life? That he who had been alive was now absolutely and irrevocably dead was as inconceivable to the childlike mind of the oldest Egyptian as it was to that of any other primitive man. And among this most conservative of all races, the primitive idea merely became more elaborate and overgrown with ritual as civilization progressed.

A better means was devised of preserving the body in order that ka, ba, and ikhu might come back to it and give it life and intelligence to live upon the offerings of its pious friends on earth, to go whithersoever it would, to take any form it pleased, to exercise its undoubtedly magical powers (was not death itself magic?) for good. The easily putrefying entrails and brain were removed, and the body, reduced to skin, flesh, and bone only, was salted in natron, filled with spices, and carefully bound up, in order that decay might never come to it. The removed portions were not cost soids but were else mynymifed, and stored cast aside, but were also mummified, and stored in four special jars, which we call 'canopic jars,' each under the protection of a certain demon, so that the dead man could have them at his need. And the shallow grave on the sand became for the well-to-do Egyptian a great sealed tomb in the rock, in which he could rest with his body, safe from the prowling jackal or hyæna, and with his protective amulets and funerary furniture, often made of precious materials, guarded from the impious hands of human robbers. For in Egypt, as elsewhere, lust of gold drove men to theft; and even in Egypt, the most pious of lands, many could at all times be found who would brave the anger of gods, priests, and the outraged dead themselves to obtain riches. Many tombs were violated within a century of the burial of their owners, in spite of all the precautions taken in order to hide them. That of Thothmes IV. was already violated during the troubles of the reign of the heretic Ikhnaten, and the royal burial was 'restored' in the reign of Horembeb. The knowledge shown of the precise position of the carefully-hidden tombs makes it evident that the thieves, no doubt, came from among the ranks of the priests and guardians of the necropolises themselves; and in the reign of Ramses IX. the scandal had become so great that a royal inquisition into the robberies of tombs was held, which resulted in the conviction and punishment of many offenders. But tomb-robbery went on gaily; the prizes were worth having; and fifty years later all the royal mummies at Thebes had to be taken out of their original tombs and hidden in remote hiding-places, where they remained till discovered in our own time, and placed in the Museum of Cairo. The primitive Egyptian, however, had no fear of tomb-robbers, or of any dis-turbance beyond that of a storm-flood which might descend from the hills and lay his bones bare to the winds, or of the prowling jackal. This last was a very real danger, and a naive way of forestalling it was devised by regarding the magic-working beast who lived among the tombs as their protector as well as their ravager, and praying to him to take care of the resting-places of the dead and to allow the offerings of the living to remain in peace, and himself to give funerary offerings of the very best ('a kingly offering'), of thousands of flesh, fowl, and everything good and pure on which the god there (the dead man) lives, to the ka of the dead man. This is the origin of the well-known di-hotopauten Anun formula, which we have already quoted (p. 459b)—'May Anubis (the jackal) give a royal offering,' etc., which was inscribed on every Egyptian gravestone, till Osiris or another god took the place of Anubis, in which case, however, the formula remained the same. Another theory has explained the occurrence of the word suten, 'king,' in this formula as referring to an actual intervention of the earthly reigning king on behalf of the dead man. It is known that the kings often provided magnificent burials for favourite courtiers or nobles; but whether in the early period the monarch was always expected at least to make offerings vicariously at the grave of every subject is very doubtful.

The process by which Anubis lapsed into the position of a mere satellite of Osiris, whose worship as god of the dead spread from Busiris in the Delta over the whole of Egypt, has already been traced (see ANCESTOR-WORSHIP [Egyptian], B). The inscriptions and decorations of the tombs, especially those of the royal tombs at Thebes, exhibit to us a temporary degeneration of Osiris himself, at any rate at Thebes. During the Theban period Theban ideas naturally coloured the beliefs of the majority of Egyptians, and Osiris had become largely identified with Amen-Rā. The ideas of Busiris, Sakkāra, and Abydos as to Osiris-Sekri-Khentamenti had all become blended with the Heliopolitan idea of the dead sun-god who, after his midday glory as Rā, set as Tum, and during the night sailed through the tombworld beneath the carth in his barque, attended by the souls of the blessed; and to this was added the identification of the ram-headed Amen of Thebes with Rā. So that we find the dead Amen-Rā-Osiris, blue in colour like the dead Osiris but ram-headed like Amen and called by the mystie name

of Auf, 'his limbs,' passing, attended by Isis and Nephthys, the companions of Osiris at Busiris, through the lower world. The Theban priests developed a set of the ancient systems of spells and incantations designed to protect the dead man in the under world and describing his proceedings there (which the Egyptians called 'The Book of Coming Forth from the Day,' and we have named 'The Book of the Dead') into two 'books,' entirely separate from the ordinary 'Heliopolitan' and other recensions of the Book of the Dead. These they called 'The Book of the Gates,' and 'The Book of That-which-is-in-the-Underworld,' which are written and pictured on the walls of the royal tombs at Thebes. There is no doubt that the Egyptians pictured the *Duat*, or Underworld, as actually beneath the earth. This arose from the fact of the tomb being excavated in the earth. The houses of the dead in the necropolis, the the foliation of divine under-place, as the Egyptians called it, formed in their ideas a subterranean world of their own, in which the salus resided in awful majesty each in his tomb, while the ghosts could pass from tomb to tomb through the mazes of the under world. Later, the boat of the sun, in which the god of light crossed the heavens by day, was thought to pass through this dead world between his setting and his rising, accompanied by the souls of the righteous. this under-Egypt, over which Osiris presided as the mortal king presided over the living Egypt above, and to which a dead sun gave illumination as the living sun gave light to living Egypt, the soul was supposed by some to live very much as the man had lived on earth: there were rivers and lakes to be navigated and fields to be tilled there, and the dead might be called upon to do But surely work as he had worked on earth. rest was the guerdon of a man who had lived a laborious life, so that with the dead were buried boxes full of little Osiris figures called ushabtiu, or 'answerers,' because, as the sixth chapter of the 'Book of the Dead' inscribed upon many' of them said, 'If one calleth Osiris at any time to do any labours which are to be done there in the under world, to plough the fields, to fill the canals with water, to carry sand from east to west, behold! say, "Here am I when ye call!" They answered for the dead man. There is little doubt that these ushabtiu were the descendants of very real 'answerers' in the shape of dead slaves, who in very ancient times were strangled and buried with their lords in order to serve them in the other world as they had done in this. Growing humanity and culture substituted wooden and stone slaves for real ones; but it may be that the custom of giving real 'answerers' was continued in the case of the kings till quite a late date. It may be even that the dead bodies found lying by the wooden boat in the tomb of Amenhetep II. (1450 B.C.) were murdered slaves. In the earlier days of Mentu-hetep II. (2200 B.C.?) priestesses of Hathor who were members of his harem seem to have been killed and buried in the precincts of his tomb-temple at Deir el-Bahari in order to accompany him to the next world. And naturally enough we find the bodies of slaves in the tombs of the Ist Dynasty kings at Abydos.

Although in later times the Egyptians were certainly more humane than either the Greeks or the Assyrians, it would be a mistake to suppose that they had always been so. In carlier days they had been, like all semi-civilized races, more or less children, and a child has no idea of the sanctity of life. Certainly the Egyptians had originally no conception of the sanctity of human life as distinct from other life. The slaves followed their masters

1 Some have merely the inscription 'Illuminate the Osiris N !'

to the tombs as the food did, or the caskets, or the

jewellery.

In the tombs, if they are tombs, of the kings of the 1st Dynasty at Abydos, we find an immense bandobast for the journey to the next world. There were stacks of great vases of wine, corn, and other food, covered up with masses of fat to preserve the contents, and corked with a pottery stopper, which was protected by a conical clay sealing, stamped with the impress of the royal cylinder-seal. There were bins of corn, joints of oxen, pottery dishes, copper pans, and other things which might be useful for the ghostly cuisine of the tomb. There were numberless small objects, used, no doubt, by the dead monarch during life, which he would be pleased to see again in the next world-carved ivory boxes, little slabs for grinding eye-paint, golden buttons, model tools, model vases with gold tops, ivory and pottery figurines, and other objets d'art, the golden royal seal of judgment of king Den in its ivory casket, and so forth. There were memorials of the royal victories in peace and war, little ivory plaques with inscriptions commemorating the founding of new buildings, the institution of new religious festivals in honour of the gods, the bringing of the captives of the royal bow and spear to the palace, and the discomfiture of the peoples of the North-land. All these things, which have done so much to re-constitute for us the history of the earliest period of the Egyptian monarchy, were placed under the care of the dead slaves whose bodies were buried round the tombehamber of their royal master at Abydos.

Passing over a space of two thousand years, we see the burial of Iuaa and Tuyu, father and mother of Queen Tii, the consort of Amenhetep III., at Thebes. Here we have the same bandobast for the next world: beautifully carved chairs and beds, boxes for wigs and garments, even a chariot, besides all the regular appurtenances of the dead as besides all the regular appurtenances of the dead as now prescribed by religion. But the place of the dead slaves is taken by the stone and wooden ushabtiu. All this funerary pomp and circumstance grew up from the simple burial of the Neolithic Egyptian with his mat, his pots, and his flints. What kind of religious services were celebrated at the grave in the earliest period we do not know, but it is certain that they contained the germs of the later ritual as it was carried out in Pharaonic times. The descriptions given by Herodotus and Diodorus of the different processes Herodotus and Diodorus of the different processes of mummification and the funeral ceremonies are well known. They were eye-witnesses of what they describe; and their descriptions, with exceptions in the case of Diodorus, tally entirely with what we know from the monuments and inscrip-The account of Herodotus (ii. 85 ff.) is as

follows:

follows:

'When in a house a man of any importance dies, all the women in that house besmear their heads and faces with mud, and then, leaving the body in the house, they wander about the city, and beat themselves, with their clothes girt up and their breasts exposed; and all their rotations accompany them. And on their part the men beat themselves, being girt up in like manner. After they have done this, they carry out the body to be embalmed. There are those who are appointed for this purpose and practise this art: these, when the body has been brought to them, show to the bearers wooden models of dead men made exactly like by painting. And (they show) the finest style (of embalming), which they say is His [4.e. Osiris' whose name I do not think it right to mention in connexion with this matter. And they show the second style, which is cheaper; and the third, which is cheapest. Having explained them all, they learn from them in what way they wish the body to be prepared; then the relations, when they have agreed upon the price, depart; and the embalmers remaining in the workshops thus proceed to embalm in the finest manner. First they draw out the brain through the mostrlis with an iron hook, taking part of it out in this manner, the rest by pouring in medicaments. Then with a sharp Ethiopian stone they make an incision in the flank, through which they take out all the bowels; and, having cleansed the interior and rinsed it with palm-wine, they next sprinkle it with pounded incense. Then, having filled the belly with

pure myrrh pounded, and cassia, and other perfumes, with the exception of frankincense, they sew it up again; and, when they have done this, they pickle it in natron, entirely covering it for seventy days. longer than this it is not allowable to pickle it. When the seventy days are expired, they wash the corpse, and wrap the whole body in bandanes of flax cloth, smearing it with gum, which the Egyptians ordinarily use instead of glue. Then the relations, having taken the body back again, make a wooden case in the shape of a man, and, when it is made, they enclose the body in it; and thus, having fastened it up, they store it in a sepulchral chamber, setting it upright against the wall. Thus they embalm bodies in the finest manner.

Those who desire the second method, in order to avoid great expense, they prepare in the following way: when they have charged their syringes with oil made from cedar, they fill the abdomen of the corpse with it without making any incision or taking out the bowels, injecting it at the fundament; and, having prevented the injection from escaping, they pickle the body in natron for the prescribed number of days, and on the last day they let out from the abdomen the oil of cedar which they had before injected; and it has such power that it brings away the intestines and vitals in a state of dissolution, while the natron dissolves the fiesh, and nothing of the body is left, but the skin and bones. When they have done this, they return the body without any further operation.

The third method of mummification is this, which is used only for the poorer people: having thoroughly rinsed the abdomen with a purge (overlata), they pickle it in natron for seventy days, and then deliver it to be carried away.

Diodorus gives much the same account; he adds that the first method cost one talent of silver (about £150), the second twenty mine (about £60).

that the first method cost one talent of silver (about £150), the second twenty minæ (about £60), the third much less. He gives additional details about the mourning, saying that during the interval between the death and the burial the relatives abstained from the baths and from wine, ate the simplest food, and wore no fine clothes; and also with regard to the embalmers themselves, adding the picturesque detail of the stoning and flight of the paraschistes, which is of considerable religious interest.

flight of the paraschistes, which is of considerable religious interest.

He says (3. 91) that, after the 'scribe' had made the mark on the body indicating the place where the incision was to be made by the paraschistes, or 'ripper,' the latter performed his duty with the 'Ethiopian stone' (as Herodotus says), and then immediately fled away, pursued by a volley of stones and imprecations from the other embalmers, for the Egyptians held in abomination any person who wounded or committed any act of violence on the human body. We can see that this reason was not quite the correct one. The ceremonial stoning and fleeing away of the paraschistes was, like his ceremonial use of the 'Ethiopian stone' for the performance of his duty, an act of religious significance: the necessary cutting of the holy body of the Osiris had from the first been regarded as an impious act though one necessary for the preservation of that body; therefore a religious act of disapprobation and punishment had the paraschistes was universally regarded as unclean, however, is certain; whether the actual embalmers, or choachytae, shared this reputation to any extent or not is uncertain. Diodorus says that they consorted freely with the priests, to whose lower orders they in fact belonged, and were allowed to enter the sanctuaries. Diodorus also mentions the practice, to which we have already referred, of knepting the munmy in the house after death, with considerable detail, even going so far as to say that the richer Egyptians kept their dead in magnificent chambers, and enjoyed the sight of those who had been dead for several generations. There is little doubt that this is rather a misunderstanding than an exaggeration: the magnificent chambers can hardly be other than the real tombs, in which the Egyptian could always, if he were so disposed, see the sarcophagi which contained the bodies of his ancestors. In all probability the tombs of private persons were not entirely covered up and hidden away, as those of the kings were, for many years aft

---

may the Egyptians well have felt satisfaction in seeing the coffins which contained their dead, and have regarded the dead, to a certain extent, as contemporaries, as Diodorus says they did, though we know that they never looked upon the actual bodies themselves, as he seems to think. Yet that the dead were actually kept in the houses for some time before their burial seems certain, and Lucian gives his personal testimony to the fact: ποιχεύει δὲ ὁ Αἰγύπτιος οὖτος μέντοι—λέγω δ' lδών—ξηράνας τὸν νεκρὸν ξύνδειπνον καὶ ξυμπότην ἐποιγσατο (de Luctu, § 21). This may have been a very ancient custom,—we may compare the way in which barbarian tribes still preserve the bodies of their deal shift partied by the still preserve the bodies of their deal shift partied by the still preserve the bodies of their deal shift partied by the still preserve the bodies of their deal shift partied by the still preserve the bodies of their deal shift partied by the still preserve the bodies of their deal shift partied by the still preserve the bodies of their deal shift partied by the still preserve the bodies of the still preserve the still preserve the bodies of the still preserve the still preserve the still preserve the bodies of the still preserve the st their dead chiefs or the dried heads of their enemies, e.g. the Dayaks of Borneo,—but we have no illustration of it on the Egyptian monuments, and we cannot doubt that Diodorus' account is due to a misunderstanding. The 'storehouse' in which Herodotus says the body was kept (θησανρίζουσι ἐν οίκήματι θηκαίω, Ιστάντες όρθον προς τοίχον [see above]) may either be a place for the temporary storage of the mummy, or the actual tomb. The detail as to the position of the coffin might seem to point to the former alternative, as the proper thing for the coffin was to be placed horizontally on the ground; but in later times it would seem that the coffin was often actually placed on end in the tomb, probably to economize space. Diodorus gives the same detail about placing the coffin on end, but says that this was done in a chamber which those who had not private tombs built on to their houses, in order to contain the mummy. Now it seems very probable that something of this sort was done by poorer Egyptians. Children are often found buried under the floors of the ancient houses, and during his recent examinations among the brick ruins of the ancient Thebes burnt by the generals of Esarhaddon in 668 B.C., Legrain found a burial chamber containing a mummy with ushabtiu of the 7th century B.C. This was undoubtedly a chamber built on to a house. Perhaps this may be the explanation of Herodotus' οικημα θηκαΐον, and of Diodorus' apparent statement as to the retention of the body for a long period above ground. Ordinarily, however, the body of a well-to-do person would be buried in a tomb when the to-do person would be buried in a tomb when the period of mourning was over and the tomb ready, till which time it was, no doubt, kept in a special chamber in the house. The time between the death and the actual burial is given differently by different authorities as from three to ten months. According to Gn 50°, the embalming occupied forty days, and the period of mourning seventy days.

With regard to the actual funeral ceremonies Diodorus (i. 93) gives some details which are not borne out by the monuments, and are evidently due

borne out by the monuments, and are evidently due to misunderstanding. His description of the exaggerated mourning at the death of a king is probably correct, but the details about the funeral oration pronounced over the body by the priests, and the liberty allowed to the people to express their disapproval of a bad king and so prevent his proper burial, have no actual authority to back them up, and seem highly improbable. Yet we have a curious sentence in the inscription describing the battle of Momemphis, in which Amasis says that he gave Apries proper burial, in order to that he gave Apries proper burial, 'in order to establish him as a king possessing virtue, for His Majesty decreed that the hatred of the gods should be removed from him'—which seems to tally somewhat with Diodorus' statement. Evidently a king not considered to be neb menkh, 'possessing virtue,' could be debarred proper burial as an Osirian. But the judge would doubtless be a successful rival or usurper, not the common people. No doubt all usurpers had not always. people. No doubt all usurpers had not always been so politie as Amasis was, and we know that |

the bodies of rival kings were often torn from their tombs and cast to the winds by their enemies, whether usurpers or 'usurpees': Amenmeses, of the XIXth Dynasty, is an instance in point.

whether usurpers or 'usurpees': Amenmeses, of the XIXth Dynasty, is an instance in point.

A funerary ceremony of very peculiar character which was actually carried out in the case of the kings is not mentioned by Diodorus. This is the remarkable 'Festival of the End' (literally, 'of the Tail'), or \*Heb-sed\*. It would seem that in primitive times, as has been the case among many semi-savage peoples, the Egyptian king was not allowed to live beyond a certain term. He was then killed, and another took his place upon the throne, only to be killed himself eventually unless he died or was killed before his term had expired. The term was one of thirty years; at the end of his thirty years' reign the monarch was solemnly murdered and buried with all pomp and ceremony. But, as in the case of the human ushabtu mentioned above, the growing humanity of later days, and doubtless the growing reluctance of the kings to let themselves be slaughtered, brought about a compromise. The king was no longer killed, but all the paraphernalia of the ceremony of his 'end' were preserved: he himself celebrated his own funeral ceremony, and performed mystic ceremonies before his own image as Osiris beneath the standard of the funerary wolf-god of Suft, Upuaut (sometimes called Seds, the god 'with the tail'). At the same time his eldest son or other heir-apparent was usually associated with him on the throne, so that a new king appeared in fact as well as in theory. We have illustrations of the 'Festival of the End' from the time of king Den, or Udimu, of the 1st Dynasty; well-known later representations of the are taken from the temple of Amenhetep III. at Sulb in Nubla and the 'Festival lost all significance, and Ramses II. and other kings celebrated it at far shorter intervals than thirty years. In the old days, even so late as the time of the Middle Kingdom, so far did the presence of killing and burying the old king go, that very probably an actual Heb-sed tomb was made for his supposed dead body, a statue which was ferried over the

Connected with Diodorus' statement as to the popular judgment of the virtue of a deceased king is his remarkable description of the carrying of the body of every man to a certain lake, where it was judged by forty judges, before whom any one was judged by forty judges, before whom any one could make accusations against the dead man: if these were substantiated, he was adjudged unworthy of proper burial; if not, his traducers were heavily mulcted, and his body was placed in a baris, or boat, and ferried across the lake to the place of burial. There is no doubt whatever that nothing of this kind actually took place, and that Diodorus or his informants were misled into thinking that the judgment of the dead man by Osiris and his forty-two assessors happened upon earth instead of in the next world: the lake and the boat are equally taken from the pictures of the 'Book of the Dead.' A full description of what is known to us from Egyptian sources as to the real proceedings at the funeral of an Egyptian of high rank will be found in Wallis Budge's book The Mummy, p. 153 ff. This account is based largely upon the evidence of the well-known 'Papyrus of

Ani,' in the British Museum.

In accordance with Egyptian conservatism in religious matters, the bier and the various chests containing canopic jars, etc., which were borne to the tomb, were not till a comparatively late period placed upon wheels. The ancient sledge-runners of the days before the invention of the wheel were still used when the funerary rites were elaborated, and, when, at a later period, wheeled carriages and, when, at a later period, wheeled carriages were introduced for the funerary procession, the old sledge-runners were still preserved, and the wheels were placed beneath them. Oxen were used to drag the carriages to the tomb. The chief priestly participants in the procession and in the rites performed at the tomb were the kher-heb, or capter, as the word is sometimes translated the 'cantor,' as the word is sometimes translated, the sem or setem, and the an-mut-f. The kher-heb seems to have acted as a sort of general director of the funeral; he was often a relative of the deceased.

He read the appointed prayers and spells. The function of the an-mut-f is not clear. He seems to have represented the god Osiris, and walked in the procession, bearing the crook and flail, the emblems of the god. The sem had very peculiar duties. On the night before final burial, after the procession, he proceeded to the tomb, and there laid himself down to sleep, covered with the mystic cow-skin, before the upright coffin containing the mummy. During his sleep he was supposed to see all the transformations of the god, i.e. the dead man, in the next world. In the morning three persons preceded the procession and solemnly aroused the sem, who then took part with the kher-heb in a sort of antiphonal service, in which the two took the parts of Horus and Isis, that of Osiris probably being taken by the an-mut-f. Finally the sem donned the skin of a leopard, and performed the very important ceremony of the 'Opening of the Mouth and Eyes,' in order that the dead man might be able to see and eat the offerings brought to him. The 'opening' was performed by touching the mouth and eyes of the mummy with a model adze or chief of antique form. The ordinary ceremonies of offering at the grave were performed by the hen-ka, or 'servant of the ghost,' in the case of a private person a near relative, in that of the king a regularly appointed priest. The funerary chapels of the kings had broad lands assigned to them for their maintenance, and in the time of the XIXth Dynasty developed into huge temples, of which the Ramesseum and Medinet Habu at Thebes are examples. These, like the royal tombs, were decorated with funerary subroyal tombs, were decorated whon interary subjects taken from the Theban 'Books of the Under World,' already mentioned; but in the royal temples scenes of the ordinary life of the monarch were also introduced. The private tombs are almost exclusively decorated with such scenes, as they had been in earlier days.

An interesting circumstance in connexion with the funerary chapels and tombs may be mentioned here. Since Osiris had become, in succession to Anubis, pre-eminently the god of Abydos, the necropolis of that place became, so to speak, the metropolis of the under world, to which all ghosts who were not its rightful citizens would come from afar to pay their court to their ruler. So the man of substance would have a monumental tablet put up to himself at Abydos as a sort of pied-à-terre, even if he could not actually be buried there; while for the king, who, for reasons chiefly connected with local patriotism, was buried near the city of his earthly abode, a second tomb would be erected, a stately mansion in the city of Osiris, in which his ghost could reside when it came to Abydos. We know that both Senusret III. and Aahmes I. had second tombs, which they never occupied, made for them at Abydos; queen Teta-shera, grandmother of Aahmes, had an imitation pyramid made for her there by her grandson (see ANCESTOR-WORSHIP [Egyptian], B); and it is by no means improbable that the so-called royal 'tombs' of the kings of the Ist Dynasty, the contents of which have already been described, were in reality cenotaphs also, the monarchs being buried elsewhere. And Seti I. and Ramses II. had funerary chapels at Abydos, which, as at Thebes, are large temples.

From this sketch it will be seen that, in spite of

From this sketch it will be seen that, in spite of the conservatism of the Egyptians, especially in such matters as these, considerable development and alteration took place in their burial customs and cult of the dead during the course of centuries. A difference is noticeable between the appurtenances of the mummy under the Old and Middle Kingdoms and under the New Kingdom. In the earlier period ushabliu of the conventional type were rare, but wooden models of boats and boat-

men, butchers and bakers at work, field-labourers, soldiers, women carrying baskets, and other figures of the same kind, which were all ushabtin, were de rigueur. Under the New Kingdom these all disappear, with the exception of an occasional boat, and their place is taken by the boxes of conventional ushabtin in the form of a munmy holding two hoes for agricultural work in the next world, and by a much greater number of amulets than had been usual before. Chief among these were the 'pectoral' and the 'heart-scarab,' often combined in one, and inscribed with a certain chapter of the 'Book of the Dead.' The ordinary small scarab is, of course, constantly found, but was quite as much an amulet of the living as of the dead. As a matter of fact it is commoner as an amulet of the dead under the Middle Kingdom than under the New Kingdom. The names of dead persons are constantly commemorated on scarabs of the Middle Kingdom, very rarely on those of the later period, except during the Saite archaistic revival. It must be remembered that, although the idea of the design or inscription on the base of a scarab was originally derived from the inscription of a seal, and although actual scarabs were often used as seals, yet the scarab itself was always an amulet, typifying 'coming into being' or 're-birth,' expressing the hope that the 'members' of a man would ultimately re-unite in a new life. From the time of the Theban domination on-

From the time of the Theban domination onwards, papyri containing chapters of the 'Book of the Dead' were always buried with the mummy, so that he could have with him his guide to the next world and its dangers. In earlier times this was not done; only in the case of kings were the older series of spells, out of which 'The Book of Coming Forth from the Day' developed, inscribed upon the walls of their tombs. These are known to us as the 'Pyramid Texts,' and they are a most interesting monument of the archaic stage of the Egyptian language. Later such kings, as we have seen, had the spells of 'The Book of the Gates' and 'The Book of That-which-is-in-the-Underworld' similarly painted on the walls of their tombs. The style of mummification and of the coffin varied at different periods: the great rectangular coffins and sarcophagi of the early period are very different from the gaily painted cartonnage coverings and coffins in the human shape which were usual in later days. Later still a casket-like form was again preferred, and in the Roman period painted portraits of the dead, either on flat panels or modelled in plaster in the round, were inserted in the coffins. The ushabtiu, which from the XIXth to the XXIInd Dynasty often represented the deceased in his habit as he lived, not as a mummy, in later days reverted to the mummy-form, till in early Ptolemaic days their use was practically abandoned. One of the latest known (now in the British Museum) is of the Roman period: it is of faience, but very rude in style, and bears in Greek letters the simple inscription \( \textit{\textit{Darting}} \) pairings — 'Soter, a sailor.' By this time the Egyptian mummies and funerary ceremonies had become the theme of the half-derisive wonder of the rest of the world, and indeed we need hardly be surprised at the derision, for the whole spirit and practice of the ancient rites had degenerated utterly and they became mere ridiculous exhibitions, while the ideas which they were supposed to express became the sources of religious

DEATH AND DISPOSAL OF THE DEAD (Europe, Pre-historic).—r. Palæolithic period.— Owing to the negative evidence of archæological researches, there are no data with which to combat the supposition that during the earlier stages of the evolution of humanity little or no attention was paid to the disposal of the dead, the deceased members of a family or community being simply abandoned by the way, like those of the lower animals. Nor is it known in what precise phase of social culture the custom of burial became recognized as a sacred duty of the survivors, for it is still a debatable problem among archæologists whether the reindeer hunters of the Palæolithic period, who frequented the caves and rock-shelters of the Dordogne and other parts of Western Europe, were in the habit of systematically burying their dead. The few human remains hitherto encoun-tered in the débris of these inhabited sites, which are accepted without cavil as belonging to the people of that period, are held by some archæologists to be those of persons who had been ac-cidentally killed by the fall of materials from overhanging rocks, and their skeletons are now occasionally met with under circumstances which clearly establish the above sequence of events. On the other hand, those which show from inherent evidence that they had been intentionally deposited in the Palæolithic débris and attended with sepulchral rites are still regarded by some anthropologists as interments of later times. three well-known skeletons found in the rockshelter of Cro-Magnon have long been regarded as representing the people of the later Palæolithic period; but, as they were lying on the surface of the culture strata of the shelter, in a small open space between it and the roof which only became

of the delivis in the Schwaizerchild rode solution. of the débris in the Schweizersbild rock-shelter, a Neolithic civilization was attested, not only by a characteristic assortment of relics, but also by the fact that the shelter had been latterly made use of as a cemetery which contained no fewer than 22 interments. The graves were dug into the underinterments. The graves were dug into the underlying Palæolithic deposits, and ten of them contained the remains of children, as well as those of adults. Fourteen adult skeletons reported on by Kollmann belonged to two very different races, one of a fair size (5 ft. 3 in.), and the other so small as to be characterized as a race of pygmies. Dr. Nüesch, the explorer of this rock-shelter, thought that man in the Neolithic time visited it only for the purpose of burying, or perhaps cremating, the dead—an idea suggested to him by the large quantity of ashes in the upper strata. It would appear, from the facts disclosed during the exploration of this early inhabited site, that there had been no discontinuity in the human habitation of this part of Switzerland since the reindeer hunters made

this rock-shelter their rendezvous up to the Bronze Age; but no evidence of systematic burial had been detected till the true forest fauna of the Neolithic period had taken possession of the land (New Denkschriften der allgem. schweizerischen Gesellschaft fur die gesammten Naturwissenschaften, vol. xxxxv.).

The celebrated station of Solutré (Saone-et-Loire), which has given its name to one of the intermediate phases of Palæolithic civilization in de Mortillet's classification, had also been subsequently utilized as a cemetery up to, if not beyond, Roman times; but, although some of the graves were clearly shown by their contents to be of greater antiquity than others, it was impossible to assign any of them with certainty to the Solutréen period. Moreover, the cephalic indices of 18 crania submitted to Broca varied from 68 34 to 88 26—an extent of variability which could be better accounted for by a post-than by a pre-Neolithic population.

Palæolithic buriuls.—Formerly it was commonly

held among anthropologists that the Palæolithic people had no religion. But a fresh examination of old materials and some more recent discoveries supply data which modify this deduction, if, indeed, they do not prove the contrary. It is difficult to epitomize the facts and arguments thus raised, but the effort must be made, as otherwise our evidence would resolve itself into a series of bare assertions.

The sepulchral phenomena associated with some of the human skeletons disinterred in the Mentone caves (Balzi-Rossi), notably those known under the names of Barma Grande and La Grotte des Enfants, leave no doubt that the bodies had been intentionally buried with their personal ornaments, coiffures, necklets, pendants, etc., made of perforated shells, teeth, fish vertebræ, pieces of ivory, etc. Among the grave-goods discovered along with some of these skeletons, were one or two well-formed implements of flint, which differed from those met with in the surrounding matrix in being made of large flakes of foreign material, and showing a style of work-manship more akin to the Neolithic period. The discovery of two skeletons, of a negroid type, in the Grotte des Enfants, which Verneau describes as belonging to a new race, intermediate between those of Neanderthal and Cro-Magnon, marks an

important addition to human paleontology.

The Chancelade skeleton, found in the small rock-shelter of Raymonden (Dordogne) and described as that of a man of about 60 years of age, lay at a depth of 5 ft. from the surface, in Magdalénien débris, on the left side, with the hands and knees strongly bent towards the face.

L'Homme écrasé de Laugerie Basse (Dordogne)

is here noted, because the evidence is conclusive that during life this individual had been crushed, probably while asleep, by a fall of rock from the roof, and that consequently the victim must have been contemporary with the Magdalénien débris in which he reposed. He lay on his side, with the knees bent upwards in front of the breast, and appeared to have been adorned with a series of shells distributed symmetrically on different parts of his person. The corner of a great stone, part of a fallen mass, lay across his spine, and doubtless had caused his death, as the underlying bones were crushed.

A remarkable contrast to the skeletons of Chancelade and Laugérie Basse is that recently found in a small grotto at La Chapelle-aux-Saints (Corrèze).

It is described as that of an aged man, about 5 ft. 3 in. in height, who had been buried in a prepared grave beneath a bed of undisturbed Mousterien débris, 12 to 16 in. thick. The grave measured 4 ft. 8 in. in length, 3 ft. 3 in. in breadth, and 1 foot in depth. The body lay on the back, with the legs bent upwards, the right hand flexed under the head, and the

left extended. Around the body were bones of various animals broken for their marrow, together with a few flint scrapers and bone pointers—supposed to have been the remains of a funeral feast (L'Anthropologie, xix. 519).

Another skeleton, which has a striking resemblance to that just described, was recently found in the under strata of the rock-shelter of Le Moustier, in the upper valley of the Vezère.

It is described as having been buried intentionally in the attitude of sleep, beneath undisturbed strata of Moustérien age. The right arm was folded under the head, and the lett extended. Near the left hand laya pointed flint implement of the coup-de-poing type (6\frac{3}{4}\) in. long), and a little further on a flint scraper. The cranium is described as having the osteological characters of the Neanderthal and Spy skulls. The face was strongly prognathic, and there was no chin. The skeleton was that of a young man, about 4 ft. 10 in. in height, whose wisdom teeth had not yet been fully developed. Bones of various animals, some of them being described as partially calcined, were close to the body. Both the discoverers and Dr. Klaatsch, who examined this skeleton, formed the opinion that it had been intentionally buried with sepulchral rites (ZE, 1909, p. 537).

A further discovery of a portion of a human skull has been announced, at a place called Combe-Capelle, near the town of Montferrand-du-Périgord (Dordogne). From its osseous characters and associated relics this individual is regarded as occupying a chronological horizon intermediate between the Moustérien and Magdalánian porieds. dalénien periods.

It is a fact of some significance that all the races hitherto recognized as coming within the Palæolithic range of Western Europe are dolichocephalic, and that brachycephalic skulls are rarely found outside Neolithic burials, and they call in deposits of the transition paried to then only in deposits of the transition period, to

which reference will now be made.

2. Transition period.—Outside the haunts of these highly skilled hunters, artists, and workers in stone and bone, there existed, in certain parts of Europe, other communities, probably emanating from the same stock, who, owing to the exigencies of a changing climate and the gradual dis-appearance of wild animals from the plains, began to exploit new sources of food, which, in the course of time, caused a considerable divergence in their domestic economy. Thus, while the Chelleen and Moustérien culture relics can be more or less paralleled throughout the whole of Southern Europe, the artistic phases of the later civilization of the reindeer hunters are not forthcoming beyond a limited area, mostly in Southern France. Implements of Mousterien types have been found in the Mentone caves, but not a trace of the relics characteristic of the Magdalénien stations of France; and yet both sets of cave-dwellers may have been contemporary.

have been contemporary.

Perhaps the most interesting feature of the investigation of the 'kitchen middens' of Mugem, in the valley of the Tagus, was the discovery of upwards of a hundred interments at various depths in the shell-mounds; but it does not appear that any special grave-goods had been associated with

them.

From the data at our disposal the point of most importance to the present inquiry is that the recently discovered skeletons at Moustier and Chapelle - aux - Saints, which undoubtedly were survivals of the earlier types of humanity, appear to have been interred with sepulchral rites, so circumstantially carried out as to suggest that they were founded on an already established cult of the dead. But, however this may be, it cannot be gainsaid that, during the Neolithic civilization, there is unmistakable evidence to show that the disposal of the dead had become a sacred obligation on the surviving relatives and friends. By this time the sepulchral materials are overwhelmingly conclusive in support of the doctrine that religiosity and a belief in a future life were

the dominating factors in the social organizations of the period.

3. Neolithic period. — During the Neolithic period the cult of the dead prevalent among the peoples of Western Europe was the outcome of psychological ideas which linked human affairs with the souls of men, animals, and things in the spirit world. The writer agrees with the animistic theory of Tylor, which represents man as first attaining to the idea of spirit by reflexion on various physical, psychological and psychical

on various physical, psychological, and psychical experiences, such as sleep, dreams, trances, shadows, extending the conception of soul or ghost till all Nature is peopled with spirits. However this Nature is peopled with spirits. However this may be, there can be no doubt that the religion of these pre-historic peoples, as disclosed by their sepulchral remains, involved a belief in intercommunications between mankind and the supernatural world. When a prominent man died, his weapons, ornaments, and other cherished objects were placed in the tomb along with suitable viands for his supposed journey to the Unseen World; and, indeed, there is evidence to show that in some instances his favourite wives, slaves, and pet animals were sacrificed, and buried in different corts in the world. parts of the mound. The selected grave-goods were appropriate to the standing and tastes of the individual, so much so that on this ground alone the graves of distinguished men, women, and children are readily recognizable. Such facts undoubtedly suggest that the people of those times did not regard life beyond the grave as differing widely from that on earth. To them differing widely from that on earth. To them death was the portal to the community of departed heroes and friends, to which they looked forward, across the span of human life, with hopeforward, across the span of intinant the, with hopeful anticipation of a more perfect state of existence. Hence the abodes of the dead were considered of greater importance than those of the living. Constructed of the most durable materials, and generally placed on a commanding eminence so as to be seen from afar, the tomb became an enduring memorial for many genera-tions, till eventually its actual purpose and meaning became lost amidst the changing vistas of succeeding ages. One of the most common and effective methods of perpetuating the memory of the dead was by rearing a mound of stones or earth over the grave. To this custom we owe some of the grandest monuments in the world's history—the Pyramids of Egypt, the topes and dagobas of India, the mighty mounds of Silbury and New Grange, the megalithic circles of Stonehenge and Avebury, together with the numberless rude stone monuments known as dolmens, cromlechs, menhirs, etc., scattered along the western coasts of Europe and extending into Africa. To comprehend fully the motives which underlay the construction of ancient sepulchral monuments, it would be necessary to examine not only their structural peculiarities and contents, but also their structural peculiarities and contents, but also their surface accessaries, such as stone circles, cairns, mounds, menlirs, earthen ditches, etc. Although a strong family likeness permeates the whole series in Western Europe, they differ so widely in certain districts that to deal with their local peculiarities and distribution alone would entail at least as many chapters as the number of countries within that area. Then the attentions paid to the dead before, at, and subsequent to, the burial disclose a wide field of speculative research, involving the foundations of religion,

ancestor-worship, and general cult of the dead.
(1) Inhumation and cremation. — Pre-historic sepulchres vary so much in form, structure, position, and contents that to make a systematic classification of them on the lines of their chrono-

VOL. IV.-30

logical development is almost an impossibility. One special element which complicates such an inquiry was the custom of cremating the dead, which appears to have originated in Eastern lands, and to have spread westwards, reaching the British Isles towards the close of the Stone Age. This practice, of course, introduced various innovations on the sepulchral customs previously in vogue. Burial by inhumation, which, according to Greenwell, was much more common in the Yorkshire Wolds, is thus described by that veteran explorer:

plorer:

'It [the unburnt body] is almost always found to have been laid upon the side, in a contracted position, that is, with the knees drawn up towards the head, which is generally more or less bent forward: the back, however, is sometimes quite straight. So invariable is this rule, that out of 801 burials of unburnt bodies, which I have examined in the barrows of the Wolds, I have only met with four instances where the body had been laid at full length' (British Burrows, p. 22). 'In most cases there is nothing to protect the body against the pressure of the overlying soil, but now and then a few large blocks of flint or thin slabs of chalk have been placed round it, thus forming a kind of rude covering; and from the appearance of the earth immediately in contact with the bones, it would seem that turfs had sometimes been laid over the corpse' (tb. p. 13). (ib. p. 13).

On the other hand, when the body was cremated, the incinerated remains were carefully collected and usually placed in an urn, and then buried. When no urn was used, the remains were laid in a little heap, either in the grave, over which a mound was subsequently raised, or in a hole in earth already consecrated to the dead, such as a former barrow. The corpse, thus reduced to a few handfuls of ashes and burnt bones, required no great space for its preservation either in a public cemetery or in a family burying-ground. Hence sprang up a tendency to diminish the size of the grave, and thus megalithic chambers gave place to short stone cists containing the body

placed in a contracted position.

Simple inhumation, i.e. placing the body in a hole in the earth and re-covering it with the excavated earth, was probably the earliest method of disposing of the dead; and to mark the site the survivors naturally raised over the spot a mound of earth or stones. Among a sedentary population the next step in advance would be to protect the body from the pressure of the surrounding earth. This was usually done by lining the grave with flagstones set on edge, over which a larger one was placed as a cover, thus forming the wellknown cist; sometimes, instead of flagstones, wooden planks were used in the shape of a rude coffin. The material used was not always a matter of choice, but rather depended on what was most readily procurable in the neighbourhood. Green-well tells us that in the Yorkshire Wolds the stone cist, so common in other parts, was almost entirely wanting, because in chalk districts the requisite slabs were unprocurable. On the other hand, wood is so liable to decay that it is rare to find evidence of its having been used.

find evidence of its having been used.

On one occasion the writer of this article was present at the excavation of a barrow, near Brillington, under the guidance of Greenwell, and on reaching the primary interment there was only a large empty cavity, with nothing but the enamel of a few teeth lying on the floor to show that a burial had taken place. Greenwell, however, soon cleared up the mystery by pointing out the unmistakable impression of wooden beams on the clay walls of the empty space, which, doubtless, had formed some kind of coffin. A few instances of tree coffins have been discovered both in this country and on the Continent. One well-known specimen from a barrow at Gristhorpe is now preserved in the Scarborough Museum. It consisted of the trunk of a large oak, 74 ft. long and 8 ft. 3 in. wide, roughly hewn and split into two portions; one of the portions was hollowed out to make room for the corpse, and the other formed the lid of this improvised coffin. Among the grave goods were a small bronze fagger, § in. long, containing 2 rivet holes for the handle, fragments of a ring and of an oval disk both of horn, together with a few filmt objects (Jewitt, Grave Mounds, p. 48). Another remarkable discovery of a grave was made at Treenhoi, in Jutland, which contained a woollen garment, leg bandages, a horn comb, a small bronze

knife, and a bronze sword in its wooden sheath. The whole of the deposit in the grave was wrapped up in a large deer-skin, which probably had served as the warrior's outer cloak (Worsaae, Danish Arts, London, 1882, p. 52).

The stone-lined cist is perhaps the most widely distributed type of early grave known. From this to the megalithic chamber, with its sepulchral compartments, entrance passage, and superincumbent cairn, was an easy transition. But the chronological sequence thus suggested is of little value in dating these monuments throughout the British Isles, as there is evidence to show that some of the chambered cairns and long barrows were constructed before the introduction of cremation. Thus, in the counties of Gloucester, Wilts, Somerset, and some neighbouring localities, there are chambered cairns in which the primary burials were by inhumation, and the human skulls found in them belonged to a dolichocephalic race. Similar chambered cairns, containing remains of a dolichocephalic race, have been found in the Island of Arran; but as regards the analogous groups of sepulchral monuments further north, such as those in the counties of Argyll, Inverness, Sutherland, Caithness, and the Orkneys, it is conclusively proved that cremation and inhumation were contemporary from the very beginning; and the same remarks apply to the dolmens of treland. It would thus appear that, subsequent to the erection of the early chambered cairns of the Stone Age in Britain, there was a period of degradation in this kind of sepulchral architecture, during which the well-known barrows of the Bronze Age became the prevailing mode of burial. In Scandinavia the Giant graves belonged to

the Stone Age, but gave place during the Bronze Age to large stone-lined cists, suitable for more than one corpsc. Finally, in the early Iron Age, both these monuments were discarded for simple burial, either by inhumation or after cremation; and there were then raised huge earthen tumuli, Such as the mounds of Thor, Odin, and Freya at Gamla Upsala, and the ship barrow at Gokstad. The dolmens of the Iberian Peninsula, known as antas in Portugal, belonged to the Stone Age, and their interments, which were almost ex-clusively of unburnt bodies, showed that the people who constructed them were a dolichocephalic race—a remark which also applies to the cephalic race—a remark which also applies to the cave burials of that country, some of which were older than the dolmens. Cremation appeared at a comparatively late period in the Bronze Age, probably owing to the distance of the Iberian Peninsula from the seat of its supposed origin.

The primary object of inhumation might have been nothing more than protection of the corpse from enemies and wild beasts; but, in the evolution of the grave from a mere hole in the earth up to the elaborately constructed chambered cairn, we must seek for a higher motive than a pious act of respect to the memory of a departed friend. The general idea entertained by archeologists on the subject is that the grave was looked upon as also the temporary abode of the ghost, who was supposed to hover around the corpse till the natural decay of the latter had been completed —a process which took some time, and entailed on the ghost the irksome ordeal of passing through a sort of purgatory, or intermediate stage, between this life and that of the spirit-world. It is now as a means of purifying not only the body, but also the soul, from the pollution which death brings with it-an opinion which may account for the finding of so large a number of partially burnt bodies in graves, even before cremation was generally adopted. As soon as it became fully realized that burning was merely a speedy method of accomplishing the dissolution of the body,—now regarded as nothing more than a mass of corrupt matter,-cremation became the culminating point of a religious cult, which taught that it was a most desirable object to set free the soul from its association with the corpse as speedily as possible.

But, whatever were the motives which led to the adoption of cremation, whether religious or sanitary, there can be little doubt that burial by inhumation was associated with religious rites and ceremonies long before its introduction into Western Europe. Subsequently both methods were practised concurrently during the whole of the Bronze Age, and down to the time when Christianity superseded paganism. According to classical writers, the Greeks and Romans practised both methods, but in fluctuating proportions, probably due to the influence of fashion or current religious opinions. That cremation was more prevalent among the richer classes was partly due to its being an expensive process, and, therefore, beyond the means of the common people. But one has to be cautious in drawing deductions founded on motives, as the predominance of one or other of these burial customs varied in separate districts, even within such a limited area as the Wolds of Yorkshire. On this point Greenwell writes (op. cit., p. 21):

'In some localities on the Wolds it has been seen that cremation prevailed, though inhumation was the general custom throughout the whole district. In other parts of Yorkshire, however, cremation was all but universal; as, for instance, in Cleveland, where Mr. Atkinson's very extensive investigations did not produce a single instance of an unburnt body; and near Castle Howard, where a large series of barrows contained nothing but burnt bodies.'

Burial mounds are called 'cairns' when their constructive material consists of small stones, and 'barrows' when that material is ordinary soil; but not infrequently both substances were used in the same mound—a small cairn being often inside an earthen barrow. Their great diversity in external form gave rise to a number of qualifying epithets, such as 'long,' 'round,' 'oval,' 'bell-shaped,' etc. Sometimes the mound was surrounded by a ditch, or a stone circle, or both; and instances are on record in which one or both of these features were found within the area covered by the mound. Also, an interment, whether by inhumation or after cremation, may be found beneath the natural surface without any superincumbent mound, or any surface indications whatever. At other times, when the mound or cairn is absent, a standing stone, or a circle of stones or of earth, or a ditch may indicate the site of a burial. Sometimes the mound may be raised over an interment, whether burnt or unburnt, which had been simply laid on the surface of the ground. At other times a mound, seemingly of earth, and covered with vegetation, may contain a megalithic chamber with an entrance passage, and sometimes divided into sepulchral compartments. Structures of the latter kind were evidently family vaults, and often contained

simplest form, may be defined as a rude stone monument, consisting of at least 3 or 4 stones, standing a few feet apart, and so placed as to be covered over by one megalith, called a capstone or table.

or table.

A well-known example of this kind in England is Kits Coity House, near Maidstone, which in its present condition consists of three large free-standing stones supporting a capstone measuring 11 ft. by 8 ft. Originally the spaces between the supports had been filled up by smaller stones, so as to enclose a small sepulchral chamber, and after interment the whole was then covered over by a mound of earth, but without an entrance massage.

entrance passage.

Between this simplest form and the so-called Giants' Graves, Grottes des Fées, Allées couvertes, Hunnebedden, etc., there is an endless but regular gradation of structures in proportion to the number

gradation of structures in proportion to the number of supports and capstones used.

The well-known Allée converte of Bagneux, near the town of Saumur, measures 18 mètres in length, 6:50 in breadth, and 3 in height. It is constructed of huge flagstones, standing on edge, 4 on each side, with 4 capstones—the largest of which measures 7:50 mètres in length, 7 in breadth, and 1 in thickness. Another, near Esse (Ille-et-Vilaine), called La Roche aux Fèes, and about the same length, is constructed of thirty supports and eight capstones, including the vestibule.

Although many of these free-standing dolmens show no signs of having been at any time embedded

show no signs of having been at any time embedded in a cairn or mound, some archæologists maintain that that was the original condition of all of thema theory which derives some support from their present dilapidated condition, for many of them may be seen throughout the whole area of their distribu-tion in all stages of denudation. Were the materials which compose the tumulus of New Grange, in Ireland, removed, leaving only the large stones of which its entrance passage and central chambers are constructed, there would be exposed to view a rude stone monument similar in all essentials to that at Callernish in the Island of Lewis.

The covered dolmens greatly vary in shape and appearance, owing to vegetation and other natural surface changes; and, as to size, they range from that of an ordinary barrow—a few yards in diameter—up to that of New Grange, which rises, in the form of a truncated cone, to a height of 70 ft., with a diameter at the base of 315 ft. and of 120 ft. at the top. Silbury Hill is 170 ft. in height, and over 500 ft. in diameter at the base.

There is no rule as to the position of the entrance gallery, it being attached, sometimes to the side, as in the Giant's Grave at Oem, near Roskilde, in Denmark, and sometimes to the end, as in the tumulus of Gavr'inis (Morbihan). The Drenthe Hunnebedden, which in the present day are all uncovered, had both ends closed and the entrance passage on the side facing the sun, as was the case in all the dolmens.

In all the dolmens.

Ruined dolmens are abundantly met with in the provinces of Hanover, Oldenburg, and Mecklenburg. According to Bonstetten, no fewer than 200 are distributed over the three provinces of Lüneburg, Osnabruck, and Stade; but the most gigantic specimens are in the Duchy of Oldenburg. In Holland they are confined, with one or two exceptions, to the province of the Drenthe, where between 50 and 60 still texist. The Borgen Hunnebed, the largest of the group, is 70 ft. long, 14 ft. wide, and in its primitive condition contained 45 stones, ten of which were capstones.

In Scandinavia the dolmens are confined to Danish lands and

compartments. Structures of the latter kind were evidently family vaults, and often contained the osseous remains of several generations. As the abodes of the dead, specially adapted for the burial of unburnt bones, were continued after cremation began to be practised, it often happens that both burnt and unburnt remains are found in the same barrow. We have already seen that the earliest interments in the chambered cairns in the North of Scotland were burnt bodies.

(2) Dolmens.—Among the sepulchral monuments still extant in Europe, the megalithic graves, known as 'dolmens,' take the first place, not only for the wealth of evidential materials which they have supplied, but also on account of their great number, imposing appearance, and wide geographical distribution. A dolmen, in its

entire structure, now partially exposed, was originally covered with earth, forming a mound 100 ft. in diameter. In Africa, dolmens are met with in large groups throughout Morocco, Algeria, and Tunis. According to General Faidherbe, who has examined five or six thousand specimens, they are quite analogous to those on the European Continent, with the exception that, in his opinion, none of them had been covered with a mound (Congrès Internat., 1872, p. 408). In Great Britain, Ireland, and the Channel Islands every type of the sepulchral monument is met with, especially chambered cairns, stone circles, and barrows.

The manner in which these sepulchral monuments are distributed along the Western shores of Europe, to the exclusion of central parts of the Continent, in which no dolmens are found, has given rise to the theory that they were erected by a migratory race called 'the people of the dolmens,' a migratory race cancer the people of the dolmens, moving, according to some, from Scandinavia to Africa, and, according to others, in the opposite direction. But this theory has fallen into disrepute. Their magnitude and local differences in structure, even in districts bordering on each other, show that their builders were a sedentary population. Besides, the skeletons found in their interior belonged to different races. Against the theory advanced by Aubrey and Stukeley, that these rude stone monuments had been used as Druidical altars, there is prima facis evidence in the care taken by their constructors to have the smoothest and flattest surface of the stones composing the chamber turned inwards. Also, cup-marks and other primitive markings when found on capstones are invariably on their under side, as may be seen on the dolmens of Keriaval, Kercado, and Dol au Marchant (Morbihan).

(3) Cromlechs.—The word 'cromlech,' as used by some English archeologists, is almost synonymous with 'dolmen'; but, as defined by Continental authorities and adopted by the present writer in this article, it is exclusively applied to enclosures (enceintes), constructed of rude standing stones placed at intervals of a few feet or yards, and arranged roughly on a circular plan—circle, oval, horse-shoe, or rectangle. In this sense it comprehends the class of monuments known in this country under the name of 'Stone Circles' or 'Circles of Standing Stones.' Stone circles are, or were formerly, more numerous in the British Isles than elsewhere in Europe. They generally consist of one line of stones, but not infrequently two or more circles are arranged concentrically, as may be seen in those at Kenmore near Aberfeldy, and Callernish in the Island of Lewis. At Avebury one large circle, 1200 ft. in diameter, surrounds two other circles placed eccentrically to the former, and each containing a second circle arranged con-

centrically.

Cromlechs may also be associated with alignments, menhirs, and other megalithic monuments, as at Carnac, Callernish, etc. In the British Isles, Scandinavia, some Departments of France, and elsewhere, they surround dolmens, tumuli, and cairns. Outside the ordinary stone circle there carms. Outside the ordinary stone circle there is often a ditch, as at Avebury, Stonehenge, Arbor Low, Ring of Brogar, etc. The most remarkable monument under this category now extant is Stonehenge, which differs from all others of its kind in having the monoliths of the outer circle partially hewn and connected at the top by transverse lintels. That most of the smaller circles have been used as sepulchres has been repeatedly proved by the finding of urns, burnt bones, and skeletons, sometimes deposited in the centre and sometimes at the base of the standing stones, or indeed anywhere within the circular area. It is difficult to believe that burial was the sole purpose of the large cromlechs such as Avebury, Stonehenge, the Giant's Ring near Belfast, Mayborough near Penrith, etc. This last consists of a circular mound composed of an immense aggregation of

small stones in the form of a gigantic ring, enclosing a flat space 300 ft. in diameter, to which there is access by a wide break in the ring. Near the centre of the area there is a fine monothe area there is a fine mono-lith, one of several known to have formerly stood there. It is more probable that such en-closures were, like our modern churches, used not only as cemeteries, but for the performance of religious ceremonies in connexion with the cult of the dead.

(4) Sepulchral caves.—The custom of burying the dead in natural caves, to which we have already referred as having been met with in the Palæolithic period, was continued throughout the Neolithic and Bronze Ages. Discoveries of this character have been recorded in numerous localities throughout Europe, and especially in France. Professor Boyd Dawkins informs us that the most

throughout Europe, and especially in France. Professor Boyd Dawkins informs us that the most remarkable examples of caves used as sepulchres in Britain are to be found in a group clustering round a refuse-heap at Perthi-chwareu, a farm high up in the Welsh hills, in Denbighshire:

'The human remains belong for the nost part to very young or adolescent individuals, from the small infant to youths of 21. Some, however, belong to men in the prime of ilie. All the teeth that had been used were ground perfectly flat. The skulls belong to that type which Professor Huxley terms the "river-bed skull." All the human remains had undoubtedly been buried in the cave, since the bones were in the main perfect, or only broken by the large stones which had subsequently fallen from the roof. From the juxtaposition of one skull to a pelvis, and the vertical position of one of the femora, as well as the fact that the bones lay in confused heaps, it is clear that the corpses had been buried in the contracted posture, as is usually the case in Neolithic interments. And, since the area was insufficient for the accommodation of somany bodies at one time, it is certain that the cave had been used as a cemetery at different times. The stones blocking up the entrance were probably placed as a barrier against the inroads of wild beasts. . . The Neolithic age of these interments is proved, not merely by the presence of the stone axe or of the finit flakes, but by the burial in a contracted posture, and the fact that the skulls are identical with those obtained from chambered tombs in the South of England proved to be Neolithic by Dr. Thurnam' (Cave-Hunting, pp. 155-158).

The same writer describes similar remains from caves in the limestone cliffs of the beautiful valleys of the Clwwd and the Elwv. near St. Asaph. He

caves in the limestone cliffs of the beautiful valleys of the Clwyd and the Elwy, near St. Asaph. He has also shown that the people who buried their dead in these caverns were of the same race as the builders of the neighbouring chambered tomb of Cefn, just then explored. The crania and limb bones were identical, and in both the tomb and caves the dead were buried in a contracted posi-

tion.

In Scotland, human remains regarded as sepulchral have been found in some caves at Oban, which had been exposed by quarrying operations at the foot of the cliff overhanging the ancient raised beach on which part of the town is built. In one of these caves (M'Arthur Cave), along with some fragmentary skeletons, were two skulls sufficiently preserved to enable Sir William Turner to take correct measurements of their special character, from which it appears that their special character, from which it appears that their owners belonged to a dolichocephalic race, their cephalic indices being 70.2 and 75.4. Although no grave-goods are known to have been associated with these bodies, there is sufficient evidence from collateral phenomena to show that the chronological horizon to which they must be assigned is the Neolithic period.

Of all the countries of Western Europe, France has yielded by far the largest number of burials under this category. De Mortillet, writing in 1883 (Le Préhistorique, p. 598), states that he could count 117 in France distributed over 36 Department. ments, 24 in Belgium, 8 in Italy, and only 1 or 2 specimens in each of the other countries.

The following epitomized notices of one or two examples will give the reader some general idea of the importance attached to this class of sepul-

chral remains:

In the course of exploring the natural cave of Casa da Moura, near Lisbon, a large quantity of human bones, representing some 150 individuals, was disinterred. It appears that the Neolithic inhabitants had converted the grotto into a cometery—which would account for the large number of bodies it contained. The bones were much decayed, only three or four entire skulls being amongst them, which so far indicated a dolichocephalic race. The upper portion of one of these skulls is of exceptional interest, inasmuch as it furnishes positive evidence of having been partially trepanned, thus disclosing the initiatory stage of the method of performing that operation (Cartailhac, Lex Agas prohistoriques de l'Espagne, p. 84).

Of the French caverns which contained only long skulls, the two most remarkable are those of L'Homme Mort and Baumes-Chaudes, both in the Department of Lozère. In the former were nineteen skulls sufficiently well preserved to furnish the necessary measurements. Of these the cephalic indices of seventeen varied from 68.2 up to 76.7, and the other two were 78.5 and 78.8. There were, therefore, no brachycephalic skulls in this sepulchre, so that the race appears to have been comparatively pure. It may also be mentioned that some of the crania had been trepanned—a feature which, though at first overlooked, subsequently became the subject of much interest to anthropologists. The animal remains were those of the Neolithic epoch, but among them were none of the reindeer, horse, ox, or stag. Among the relics were a lance-head, and a portion of a polished stone axe. Drs. Broca and Prunières were of opinion that the individuals whose remains had been consigned to this ossuary belonged to an intermediate race, who flourished in the transition period between the Palaolithic and Neolithic civilizations, and thus became connecting links between the people of the reindeer caves and the dolmens.

The crania recorded from the station known as Baumes-Chaudes were found in two natural caverns distinct from each other,

average height of this race was calculated to be about 5 ft. 3½ in.

As examples of sepulchral caverns in which brachycephalic crania formed the majority, a series of caverns at Hastières and Furfocz in Belgium may be cited. Of 33 skulls from the former measured by Professor Houzé, six are dolichocephalic, eleven measticephalic, and sixteen brachycephalic. The well-known cave at Furfocz (Trou du Frontal) was merely a rock-shelter with a projecting cavity extending inwards for some 2 mètres, and about one mètre in height and one mètre in breadth, and closed in front by a large slab. This cavity was filled with human bones mixed with earth and stones, but none of the bones refained their relative positions as regards the rest of the skeleton, so that dismemberment must have taken place before their final deposition in the cave. From the number of lower jaws, whole or broken, it was calculated that this sepulchre contained 16 individuals, of whom 5 were children. The cephalic index of some of the skulls was over 80. A disturbing element in the conclusions suggested by this discovery was the presence of fragments of pottery among the contents of the cave; while outside the slabstone there was an accumulation of debris and food refuse, which, judging from the fauna represented by its osseous remains, belonged to the Palæolithic period. Hence, at the time, the human remains of Furfocz were regarded as belonging to that period—an opinion which is no longer held, as the sepulchre is now admitted to be of the Neolithic age (Rev. de l'école d'anthr., 1896, p. 155 f.).

Artificial caves used for sepulchral purposes have

Artificial caves used for sepulchral purposes have also been discovered in certain Departments of France, more especially those with chalky formations, like the Marne district. Here upwards of a dozen stations, each containing a number of artificial caves excavated in the flanks of low hillocks, have been most successfully explored by Baron de Baye (see his Archéologie préhistorique, 1880). Among some hundreds of interments, over 120 crania, including various trepanned specimens and cranial amulets, have been collected and are now preserved in the Château de Baye. Associated with them were a number of implements, weapons, and ornaments of Neolithic types, such as stone axes and their handles, arrow points, flint knives, bone pointers, polishers, beads and pendants of amber, bone, stone (one of callais, like those of the tumuli of Brittany), fossil shells, teeth, and so on. Of the crania, 44 were submitted to Dr. Broca for examination, and are thus

classified: -dolichocephalic (71.6 to 76.7), 15; mesati-

classified:—dolichocephalic (71.6 to 76.7), 15; mesaticephalic, 17; and brachycephalic (80 to 85.7), 12.

Dr. Broca recognized in these human remains the union of two races analogous to those of Furfooz and Cro-Magnon—the latter having already been identified by him as of the same type as the dolichocephalic people of L'Homme Mort and Rauges Cheroles. and Baumes-Chaudes.

Some of these caves, especially those of Petit-Morin, are supposed to have been constructed in imitation of the dolmens, as they were preceded by an entrance passage and occasionally a vestibule, from which a low door, closed with a stone slab, led to the samplehool chamber. Borney descriptions led to the sepulchral chamber. Baron de Baye thinks that some of them had been used as habitations for the living before being appropriated to the dead, as they had sometimes niches and shelves cut out of the solid chalk walls, on which various industrial relies had been deposited. A rudely executed human figure with a bird-like nose, two eyes, a necklet, and breasts, together with the form of a stone axe in its handle, was sculptured in relief on the wall of the vestibule of one of the larger caves. This cave appeared to have been much frequented, as the threshold was greatly trodden down by the feet of visitors. M. Cartailhac explains this peculiarity by supposing that it was a place for temporarily depositing the dead before transferring them to their final resting-place. All these caves contained abundance of relies character cut out of the solid chalk walls, on which various these caves contained abundance of relics characteristic of an advanced Neolithic civilization, but without any trace of metals, and the surrounding neighbourhood is rich in flint objects of that period,

Finally, it may be observed that sepulchral phenomena and grave-goods associated with the artificial caves of France are precisely of the same character as those of the neighbouring dolmens and natural caves, thus conclusively showing that all these monuments belonged to the same epoch and the same civilization. Their relationship to the rock-cut tombs of Egypt, Etruria, Palestine, and other countries, we must leave to readers to work out for themselves.

(5) Grave-goods.—The gifts to the dead, as already mentioned, bear some relationship to the social position among the community in which the deceased lived. They include all manner of things -ornaments, weapons, tools, utensils, pet animals, —ornaments, weapons, tools, utensils, pet animals, and even the wives and slaves of great heroes. When a departed friend appeared in a dream dressed in his usual garments and armed with his favourite weapons, it was natural to suppose that these objects, as well as their owner, had shadowy existences in the spirit world. From this it is supposed that the pre-historic people believed that not only men, but animals and inanimate objects, had souls—a belief which may account for the frequency with which weapons and other grave-goods were broken. goods were broken.

goods were broken.

The quality of grave-goods varied according to the culture and civilization prevalent at the time of the interment. During the Stone Age they consisted of perforated shells, teeth, pendants of ivory and coloured pebbles, stone axes, spear-heads, arrow points, bone pins, buttons, and other objects of the toilet. During the Bronze and early Iron Ages, to the shove objects were added necklets made of the above objects were added necklets made of beads of jet, amber, and coloured glass, rings, armlets, and fibulæ of bronze, and sometimes gold rings. The stone weapons gave place to others made of metal. In the absence of written records, the objects thus collected and collated form the principal materials on which archeologists base a more or less positive system of chronology. Among the calcined bones of cremated subjects, small articles such as pins, beads, buttons, etc., are occasionally found, showing that the corpse had been clothed when subjected to the fire. When deposited in the earth without an urn, it has been argued that such objects had been used for binding the cloth or skin in which the calcined bones were wrapped up. From the quantity of objects some-times deposited in the grave, it has been surmised that, when a person was possessed of property of rare and exceptional value, it was customary to bury it along with him, evidently with the intention of its being utilized in the world of spirits. As an illustration of this the following notice of a remarkable discovery of axes made of jade and other materials will be of interest:

other materials will be of interest:

The tumulus of Mont-Saint-Michel, which occupies a conspicuous position among the Carnac group of antiquities, rises to the height of 10 metres, on an elongated base measuring 115 metres in length by 58 metres in breadth. In recent times the top of the mound was flattened, and the eastern third is now occupied by a chapel, while at the other extremity there are the ruins of a modern observatory. In 1862 a small megalithic chamber, some two metres square and rather less than one metre in height, was discovered, and on the floor of the chamber, amidst a thick deposit of dust, the following objects were found: (1) Eleven beautifully polished axes of jade, varying in length from 9½ to 40 centimetres. Two of these celts were pierced near the point for suspension. One was broken into three portions, two of which were lying at one end of the crypt and the other at the opposite end. (2) Two large celts of a coarser material, both broken. (3) Twenty-six very small celts of fibrolite. (4) Nine pendants of jasper and 101 beads of jasper and turquoise, supposed to have formed a necklet; also a number of very small beads made of some kind of ivory. After the entire debris had been removed from the floor of the chamber, there were found, under a flagstone, remains of an interment occupying a shallow space between the floor and the natural rock (René Galles, Bull. de la soc. polym. du Morbiham, 1862).

(6) Pottery.—The pottery found with pre-historic burials consists of a variety of vessels collectively called 'urns'; but, as they are found in graves containing either burnt or unburnt bodies, they could not all have been intended for cinerary purposes, so that they have to be classified according to their ascertained special functions. Vessels associated with inhumed bodies are supposed to have contained food and drink—hence they are called 'foodvessels,' and 'drinking-cups' or 'beakers.' The cinerary urns, used exclusively for the purpose of preserving the cremated remains of the corpse, vary considerably in size, form, and ornamentation, being generally 10 to 18½ in. in height. They are narrow-based and wide-mouthed, with a broad overhanging rim to which the ornamentation is commonly confined; or they may be flower-pot-shaped, and ornamented by one or two transverse ridges. The food-vessel, which is considerably smaller, more globular, and more highly ornamented than the cinerary urn, is also wide-mouthed and narrow-based. As a rule it was placed with an unburnt burial in the vicinity of the head of the corpse.

Drinking-cups, or beakers, are tall, highly ornamented vessels, narrowing from the mouth to near the middle, then bulging out and again narrowing at the base. A few specimens have been found with a handle like a jug. Beakers are almost invariably associated with unburnt burials—only two out of 24 having been found by Greenwell in the Wold barrows, with cremated burials. Very small cup-shaped urns, often pierced with two or more holes in the side, and generally found inside a large cinerary vessel, are known under the name of 'incense cups'; but there is no evidence to support this suggested use of them, and they are now regarded as einerary urns for infants.

The Hon. John Aberromby holds that the beaker is not only the oldest Bronze Age ceramic in the British Isles, but also an imported type from Central Europe by way of the Rhine Valley (VAX xxxii. 878 ft.). As an interesting corollary to Mr. Aberromby's views, it has been observed that, in almost all the instances in which the beaker has been found associated with human remains, the skull was brachycephalic.

That sepulchral ceramics of the beaker type have rarely, if at all, been found in Ireland may be accounted for on the supposition that the Continental brachycephali were later in penetrating

as far as Ireland; or, perhaps, that the few who did find their way to that country did so by a different route from those who entered Britain by way of the Rhine Valley. Anyhow, the rarity of both beakers and brachycephalic skulls in the prehistoric burials of Ireland is a suggestive fact to the student of Irish ethnology

(7) Cemeteries.—As population increased and the influence of religion became more powerful as a governing factor in social organizations, the isolated and sporadic graves of the earlier people gave place to their aggregation in the form of cemeteries in certain selected localities, which were thus, as it were, consecrated as common burying-grounds for the disposal of the dead. The remains of such cemeteries may be found dispersed throughout the whole of Europe. There is documentary evidence that in pagan times the Irish had regal cemeteries in various parts of the Island, appropriated to the interment of chiefs of the different races who then ruled the country, either as sole monarchs or as provincial kings.

This authority consists of a tract called Senchusna-Relec ('History of the Cemeteries'), being a fragment of one of the oldest Irish MSS, and in it reference is made to the cemetery of *Taillten*, which Mr. Eugene Conwell of Trim has identified as a group of chambered cairns on the Loughcrew Hills, near the town of Oldcastle, Co. Meath. Mr. Conwell also quotes the following stanza, among others, from a poem in the same old MS, viz. Leabhar na

h Uidhre:

'The three cemeteries of Idolaters are The cemetery of Taillten, the select, The ever-clean cemetery of Cruachan, And the cemetery of Brugh.

On the ridge of this range of hills, which extends for a distance of about two miles, are situated from 25 to 30 chambered cairns, some measuring as much as 180 ft. in diameter, while others are much smaller and nearly obliterated. They were examined in 1867-8 by E. A. Conwell, and an account of his discoveries was published in 1873 under the title of Discovery of the Tomb of Ollamh Fodhla.

An analogous group of dilapidated chambered

at Clava near Inverness, and other localities in Scotland. Stonehenge is in the centre of a vast burying-ground consisting of barrows in groups

over the downs.

Urn cemeterics, without any external markings to indicate the site of the burials, are frequently met with in the British Isles, being exposed by agricultural operations, and especially by the removal of clay beds for the making of bricks. As the underlying clay slides from under the covering of soil to a lower level, urns are frequently seen sticking in the broken margin of the surface soil. A small urn cemetery was recently discovered at the digging of the foundation of a villa in the town of Largs. The site was a low gravelly mound, and the cemetery disclosed an unique feature in the finding of a stone-lined cist covered over with a large flagstone and containing seven flower-pot-shaped urns, all having more or less calcined bones in them (Archæologia, Ixii. 239-250).

In 1886, in the course of removing the surface-earth above a gravel- and sand-pit at Aylesford in Kent, the following relics were discovered: a wooden pail or situla, with a bronze band orna-mented with late Celtic designs; a bronze jug (oenochoe); a long-handled pan and two fibulæ, also of bronze, together with calcined bones and frag-ments of pottery. These objects were discovered in what had been a round burial-pit, about 31 ft. deep, the sides and bottom of which had been coated with a kind of chalky compound. The bronze situla contained burnt bones and the fibula,

the bronze vase and pan lying outside it, while around were the remains of several earthenware uins, some of which had been used as cineraries. The discovery, fortunately, came under the notice of Dr. A. J. Evans, who lost no time in making a full inquiry into the circumstances. The result of his researches was a paper, 'On a Late Celtic Urn-Field at Aylesford,' which appeared in 1890 (ib. lii.). The conclusion to which Dr. Evans comes, after a wide comparison of Continental ceramics, is that the Aylesford urns are 'the derivatives of North Italian, and in a marked degree old Venetian prototypes.

Perhaps the most instructive cemetery in Europe is that of Hallstatt, of which the present writer has elsewhere given the following brief account:

Perhaps the most instructive cemetery in Europe is that of Hallstatt, of which the present writer has elsewhere given the following brief account:

'The ancient necropolis, known as Hallstatt, lies in a narrow glen in the Noric Alps, about an hour's walk from the town of Hallstatt, situated on the lake of the same name. Discovered in 1846, and systematically explored for several years under the superintendence of Bergmeister G. Ramsauer, the results were published by Baron von Sacken in 1828, in a quarto volume with twenty-six plates of illustrations. One of the peculiarities of this cemetery was that it contained burials by inhumation and inclineration indiscriminately dispersed over the entire sepulchral area, both, however, belonging to the same period, as was clearly proved from the perfect similarity of their respective grave-goods. The graves were thickly placed over an irregular area, some 200 yards in length and about that in breath, but there were no indications above ground to mark their position. They were not arranged in any order, and their depth varied within the limits of 1½ to 5 ft.—a disproportion partly accounted for by the sloping nature of the surface, which caused a considerable rain-wash of the soil to the lower levels. Out of 993 tombs described in v. Sacken's work, 526 contained simple interments; 455 had incinerated human remains; and in 18 the bodies had only been partially burnt before being interred. The inhumed bodies lay, generally, from east to west, having the face towards sunrise with the head occasionally resting on a stone. At other times, the body lay on a prepared bed, or coarse casing, of hardened clay. In two instances traces of a wooden coffin were observed. Sometimes two or more skeletons were found in the same grave, while, at other times, some portion of the skeleton was wanting. The skeletons were not so scientifically examined as could be desired, but, according to Dr. Hoernes, they belonged to a well-developed dolichocephalic race, of medum height (6 ft. 6 to 8 in.)

It may be noted as a point of some significance, that neither silver nor lead has been found in Hallstatt. Their absence, together with that of money, has been used to support the opinion that the cemetery was discontinued before these metals came into general use about the beginning of the 4th cent, B.C.

4th cent. B.C.

Baron von Sacken assigned the Hallstatt cemetery to the second half of the millennium immediately preceding the Christian era, and thought that it might be in continuous use till the advent of the Romans into that part of Europe. But, according to other writers, this range ought to be extended further back by several centuries, even to 1000 s.c. Owing to commercial currents from Eastern lands, especially by way of the Adriatic, and also, no doubt, to changes initiated by native skill, we might expect a considerable variation in the technique of the Italistati relics, even on v. Sacken's hypothesis of the more limited duration of the cemetery. The collection as a whole is thus a mere jumbling together of an assortment of objects, influenced not only by a rapidly progressing civiliza-

tion, but also by a continuous importation of new materials; hence the difficulty of classifying them into a more precise division than earlier and later.

In the cemetery of S. Lucia, near Tolmino, above the head of the Adriatic, in which incineration was almost exclusively the mode of sepulture-there being only three internents by inhumation out of 3000 tombs examined by Dr. Marchesetti—the warlike element was represented by only one sword, two spears, and seven lances (all of iron). The sword is distinctly the La Tène type—thus suggesting that the peaceful ways of the people had been disturbed only in later times, probably during one of the marauding excursions of the Gauls into Italy. On the other hand, the fibulæ numbered 1629 of bronze and 108 of iron; of which 248 were of the 'Cortosa' type—i.e. not much earlier than 400 B.C.—and 3 of the La Tène type. Of metallic vases there were eighty of bronze and one of iron, among the former being six ciste a cordoni. A few of these bronze vessels were decorated with dots, circles, and perpendicular flutings, but rarely with animal figures, and all in the same style of art as

the analogous objects from Hallstatt.
(8) The proto-historic people of Western Europe.—
As a general result of the preceding remarks on the sepulchral phenomena of Western Europe, the following propositions may be accepted as a fair summary of the ethnic elements, so far as these have been determined by modern research, which have helped to mould the physical characters of the highly mixed population now inhabiting the British Isles, but, of course, altogether apart from the influence of the environment.

(a) Anthropological researches have shown that during the Neolithic Age a long-headed race, of short stature but strong physique (average height 5 ft. 5 in.), who buried their dead in rudely constructed stone chambers, had spread over the whole of Western Europe, from the Mediterranean to the south of Scandinavia. Tacitus informs us that he identified the Silures, a people then occupying South Wales, as Iberians, on account of their swarthy complexion and curled hair (Agricola, xi.). The inference that these Silures were the direct descendants of the primitive long-headed people was not unreasonable, more especially as by that time the eastern parts of Britain had been taken possession of by successive waves of Gaulish and Belgic immigrants from the Continent—thus caus-ing the earlier inhabitants to recede more and more westwards. And, if this is so, it follows that the long-headed men of the chambered cairns of Britain, Ireland, and France, as well as many other parts of the Continent, had a swarthy complexion, with dark hair and eyes, like so many people still inhabiting the more secluded parts of these locali-

(b) The incoming brachycephali were taller than the dolichocephali already in possession of the country—a statement which is proved by actual measurements of skeletons (average height 5 ft. 8 in.). Although they have been described by many modern writers as 'light in hair and complexion' (Greenwell, op. cit. p. 636), there does not appear to be any archeological evidence to support this assertion. The mistake seems to have arisen from assertion. The mistake seems to have ansen from inadvertently applying to the Bronze Age brachycephali qualities which were undoubtedly applicable at a later period to the Celts of history. The former buried their dead in short cists and round barrows, and carried with them a knowledge of bronze. While these two early races (the dolichoward) is the complexity of the com cephali and brachycephali) were living together, apparently in harmony, the custom of disposing of the dead by cremation spread over the land—a custom which was introduced from the Continent, and had its origin probably in the strong religious

elements of the time, as it was practised by both

(c) At a considerably later period, but not many centuries prior to the occupation of Britain by the Romans, there was another Continental wave of immigrants, generally regarded as an offshoot of the Galli of classical authors, and probably the Belgæ of Cæsar, who introduced the industrial elements of the civilization known in this country as 'Late Celtic.' These newcomers differed radias 'Late Celtic.' These newcomers differed radi-cally from the former so-called Celtic invaders in having dolichocephalic heads — a statement which is supported by archæological evidence; for example, a skull found in a characteristic Late Celtic tumulus at Arras, Yorkshire, was described by Dr. Thurnam as having a cephalic index of 73.7. They were a branch of the Celts of history, whose very name at one time was a terror in Europe; and by classical writers they are described as very tall and fierce-looking, with fair hair, blond complexion, and blue eyes.

(d) The next and last of the great racial elements which entered into the ethnic composition of the British people of to-day were the successive Teutonic invasions from Germany, Denmark, and Scandinavia, all belonging to a tall blond delichocephalic people who existed in Central Europe from time immemorial—possibly the descendants of the Neanderthaloid races of Palæolithic times.

There is no reference made here to the Roman occupation as a factor in British ethnology, because the Romans were a mere ruling caste, who, although they introduced new arts, industries, and customs into the country, kept themselves aloof from the natives, and did not, as a rule, intermarry with them. Hence, when they finally abandoned Britain they left its inhabitants racially unaffected, much as would be the case with India if the British were now to retire from it. To-day we hunt for remains of military roads, camps, ac-contrements of war, and other relics of their civilization, but of their skeletons we know very little, and of their British offspring nothing at all.

little, and of their British offspring nothing at all.

R. MUNRO.

DEATH AND DISPOSAL OF THE DEAD (Greek).—Burial was the method of disposing of the dead followed by all the Mediterranean peoples during the Neolithic epoch, and the same custom obtained in Greece, and was continued without interruption at least until the Homeric period. That the Greeks of the pre-Mycenæan and Mycenæan civilization buried their dead is evident from the tombs discovered in Crete, in the Cyclades, at Mycenæ, Orchomenus, and Vaphio. It has also been proved that Schliemann was mistaken in believing that he found in the Mycenæan tombs indications of a partial cremation of the dead. In the island of Crete, Evans and Halbherr, who discovered many tombs of the Mycenæan epoch and others of different periods, found burial to be I

the invariable custom without any sign of cremation, either partial or total.

Apparently, then, the first notice of cremation occurs in Homer; it is described with grim vividness, especially in the account of the obsequies of Patroclus (II. xxiii. 110 ff.). Homer also offers an explanation of this new funerary custom, which appears to be contrary to the beliefs of the Greek people. He makes Nestor say that it is necessary to burn the bodies of those who died in battle, in order that the bones might be carried back to their native land to the sons of the dead (II. vii. 331 f.). But this reason is inadequate to account for so profound a change of custom. The change from burial to cremation must already have taken place in the Homeric age, just as it had previously been made in Central and, in part, in Southern Europe. It was then introduced into Greece as it had been into Italy, and very probably by the same races who were afterwards known under the name of Aryan, and who originated many other changes in the customs of the peoples subdued by them.

While in some regions of Europe there was a period during which cremation prevailed (and among these regions must be included Northern and also, in part, Southern Italy), in Greece the ancient and the new practices flourished for a long time side by side, just as was the case in Rome; but in Rome, from the discoveries in the Forum and from those made in other parts of the city and in Latium, we can plainly recognize the substitution of cremation for burial. This does not appear so clearly in Greece; but it cannot have happened otherwise. At the time of the Homeric rhapsodies, cremation must have been in use quite as much as burial. In succeeding epochs both methods were employed, as may be gathered from Greek authors, who attest the existence now of the one custom

and now of the other.

We have at the present day full information regarding the forms of the tombs used by the Greeks previous to the classic epoch, and especially in those characteristic periods which are to be referred to pre-Mycenean and Mycenean civilization both on the continent and in the various islands. The funerary architecture of these periods may be classified under four chief forms: (1) dome-tombs, (2) chamber-tombs, (3) shaft-tombs, and (4) pit-tombs.

The finest example of a dome-tomb is that of the tomb called the Treasury of Atreus at Mycenæ, discovered by Schliemann. Then come those of discovered by Schliemann. Then come those of Orchomenus, of Vaphio, of Heraion, of Eleusis, and of other places, which are magnificently and splendidly decorated, not indeed like that at Mycene, although they have the same architectural form.

The chamber-tombs are distinguished from the dome-tombs by the rectangular form of their plan, the dome-tombs being circular; by their more or less flat roof; and also by the diminished height of the mortuary chamber. But, like the others, they have a corridor (δρόμος) for entrance, with a door of ingress, and they may also have a varying number of lateral chambers. These tombs were excavated in the rock, and are found throughout the whole of Greece and in the islands, especially in Crete, where they were discovered by Evans and Halbherr. Sarcophagi are found in them sometimes one, two, or even four—made of terra-cotta and painted on the outside; or else there is a trench in them in which the corpse has been placed; or sometimes the corpse was laid upon the floor of the sepulchral chamber (Evans, Prehistoric Tombs of Knossos, p. 5; Orsi, Urne funebri cretesi, p. 2 ff.).

The shaft-tombs were dug in the ground and

covered with either rough or squared slabs of stone. In these graves the body was usually placed on its back; sometimes it was curled up.

The pit-tombs consist of a kind of well which was almost always excavated in the rock, with steps to descend into it; at the bottom an arched aperture is found which gives access to the sepulchral cell. The cell is generally supported by a double wall of rude blocks, and is sufficiently long to contain a skeleton stretched out at full length. But Evans remarks that this type of tomb, although it has different characteristics, resembles in its cell the shaft-tombs.

In the island of Crete no dome-tombs have been discovered like those of Mycenæ or of Orchomenus; but the royal tomb of Isopates described by Evans and re-constructed by Fyfe (Evans, op. cit.) fills up

It appears to have been the primitive custom of the Greeks to bury their dead in the village where they dwelt, and sometimes in the houses themselves. It is certain that at Mycenæ tombs have been found in the houses, here and there in groups of five, or even of twenty, among the remains of habitations. At Athens, also, houses with tombs have been discovered. Plato makes mention of this custom, and calls it barbarous (Min. 315). It seems to have been abolished by the laws of Solon. The agora also appears to have been used for burying: Mycenæ supplies an example of this. Further, it is well known that in the classic epoch many Greek cities had, or believed that they had, in the agora the burial-place of their more renowned heroes.

It appears, further, that the Greeks in primitive times offered human sacrifices at funerals. This seems certain not only from the Homeric account of the obsequies of Patroclus, but also from some indications in the tombs of Mycenæ. In the dromos of the rock-tombs, human bones have often been found, and in front of one sepulchre there were discovered six human skeletons placed crosswise and mingled with the bones of animals and broken pieces of common utensils. From this it has been suspected that the bodies were those of victims sacrificed to the dead (Perrot-Chipiez, Histoire de l'art, vi. 564). Further, Plato says (ib.) that human sacrifices were offered in Lykaia (Aukaia), and also by the descendants of Athamas, although they were Greeks and not barbarians.

From the most remote antiquity, as we gather from the pre-historic tombs, the Greeks had a religious cult for their dead. They considered the right of sepulture as sacred, and consequently as a law. This sentiment was handed down to the historic Greeks, the true "Ελληνες. It was also a duty and a kind of Pan-Hellenic law (Πανελλήνων νόμος, Eurip. Suppl. 524) to give sepulture to enemies who died in battle. The law of Solon, which exempted a son from the obligation to support a father who had rendered himself unworthy, imposed upon him the duty of burying him with all due honours (Æsch. in Timarch. 13; the very words δίκαια, νόμιμα, affirm the right of the dead to sepulture). In the classic epoch, religious belief was permeated with the notion that the spirit of the dead could not enter into the subterranean realm if the body had not received burial—the soul (ψυχή) would wander about without a resting-place, and would not be able to pass over the fatal river in order to enter Hades.

We do not know how the primitive Greeks conducted themselves between the death and the burial of the deceased; but from what we know of the historical epoch we may infer without any doubt what were their customs in primitive times.

In the pre-historic tombs of Knossos the corpse was buried in a grave, or else was laid on the

pavement of the sepulchral chamber, or in a sarcophagus in a larraax of clay. It was usually placed stretched out at length, or sometimes curled up, either in the grave or in the sarcophagus. There was no fixed direction or orientation of the position of the dead. In tombs of every type, objects belonging to the decased are found, according to sex and condition: weapons, swords, knives, arrows, razors, ornaments of gold and of bronze, rings, seals, lamps, and so on. Tombs like those of Mycenæ and Vaphio have furnished objects of great value both as to their material—principally gold—and as to their artistic make. Objects which were most dear to the deceased, and which he had possessed when living, were placed with him in the tomb. This usage continued without interruption into the historic epoch, together with other usages which were gradually abolished by various successive laws, because they were held to be barbarous. We have proof of this in the Homeric period, which may be regarded as an intermediate one between the pre-historic and the historic periods, primitive funeral customs being still found which were no longer practised in the period which followed, as well as others which were retained.

In order to give an idea of this, it will be sufficient to relate in full what was done at the funeral of Patroclus, so admirably described by Homer (II. xviii., xxiii.). We shall follow the poet's order:—

poet's order:—

The corpse of Patroclus was washed with hot water (Il. xviii. 345 ff.), then anointed with unguents and oil, and covered from head to foot with a thin linen cloth. It was laid in state on a bed (in keykerar, 352), and was wept over with great lamentation by Achilles and the Myrmidons (315 ff.). On the return from the fight in which Hector was slain, Achilles and the Myrmidons again wept over the bier of Patroclus, since weeping is an honouring of the dead (b yâp yépes êcrê Oavôrrou, xxiii. 9). A funeral meal follows the weeping. The corpse is to be cremated, and accordingly an immense pyre is prepared which is to receive the body of Patroclus. When the pyre is ready, the transportation of the body takes place in the midst of a great cortège of armed men: Achilles supports the head of his deceased friend, while the Myrmidons cut off their locks and cast them upon the corpse, thus covering it. Achilles also sacrifices his hair, which he puts into the hand of his dead friend. During the night those who attend to the preparation of the following day the body of the deceased is placed in the midst of the pyre, and is covered from head to foot with fat taken from the oxen and sheep which have been sacrificed; alongside are placed the dead animals, and amphore of honey and of oil. Four horses are sacrificed, and two of the nine dogs which the deceased possessed, together with twelve young Trojans who are to be burnt on the same immense pyre. The pyre burns all the night. In the morning the order is given to extinguish it with libations of wine, to pick out the calcined bones of the dead from among the other bones of men and animals—an easy task, since the body of Patroclus had been placed in the centre separate from the rest—and to enclose them in a cinerary urn between two pieces of fat. Finally, a tumulus of earth receives the urn, and is the sepulchre of Patroclus. But the funeral rites do not end here: Achilles orders funeral games, and distributes rewards to the victors (258 ff.).

In the classic

In the classic period the dead body was washed, anointed with unguents and oil, and wrapped in a white garment. It appears, however, that the garment was not always white; it might be black. The eyes were closed, and the jaw was bound to the head in order that the mouth might remain shut when rigidity came on. The care of the dead was the business of the people of the house, especially the relatives, and among these the women. Further, a garland was placed on the head of the deceased. Afterwards the corpse was laid on an ordinary bed  $(\kappa l \nu \eta)$ , and was exposed to view. This exposing  $(\pi \rho \delta \theta e \sigma u)$  took place, in the house, the feet of the dead being turned towards the door; a law of Solon prohibited an exposing before the door, as seems to have been done at first. This exposing took place the day after death. An earlier time was prohibited in order, naturally, that there might be a summance that

actual death had taken place; and, on the other hand, a too prolonged exposing was not allowed. According to Greek beliefs, the dead must be buried relatively soon in order that the soul might be able to enter the realm of the dead and might not wander about. Patroclus, whose body, on account of the solemn funeral rites, was exposed account of the solemn linetal frees, was exposed for twelve days after his death, says to Achilles, to whom he appears in a dream, θάπτε με ὅττι τάχιστα, πύλας Ἰίδαο περήσω (II. xxiii. 71).

At what seems to be a late period, a piece of money was placed in the mouth of the deceased as

a rabhor to pay the ferryman who transported him to the further side of the river into the realm of the dead. A honey cake  $(\mu e \lambda \iota \tau o \hat{\nu} \tau a)$  was buried with him, as an appropriate offering to the guardian of the doors of the infernal regions (Aristoph. Lys. 599). The scholiast on Aristophanes adds that the cake serves for Cerberus (q.v.), the piece of money for the ferryman, and the dead man's garland is for the struggle which

the deat man's gatant's to the struggle which he has undergone in issuing from life.

Upon the bier was placed a vessel of earth, usually a λήκυθος, which contained an unquent. On this vessel, which was of a characteristic form, were depicted appropriate funeral scenes; and, in fact, it represented the deceased. At the door of ingress was placed an earthen vessel (ὅστρακον) containing spring water (Aristoph. Eccl. 1033), which was to serve for purifying those who had been in contact with the dead, and in general all

those who were in the house.

The exposing of the body was followed by its being carried (ἐκφορά) from the house to the place of sepulture, and this could be done only by day; criminals alone were buried by night (Eurip. Troad. 446), when sepulture was granted them at all. The dead person was carried on the bed upon which he had been exposed to view; but it is not which he had been exposed to view; but it is not easy to say exactly who were the bearers, although there are expressions like νεκροφόροι, νεκροθάπται, νεκροπάφοι, which imply persons specially employed in this duty of carrying and of burial. However, we gather from Plato, Plutarch, Lucian, and others that these bearers were young men who lent themselves to this pious duty. Plato speaks of young men of the gymnasium (Legg. xii. 947). When the conveyance of the body took place, it was attended by a corther which accompanied the when the conveyance of the body took place, it was attended by a cortège which accompanied the bier as it made its way to the sepulchre. According to the laws of Solon, the men must go first, the women must follow; the latter, moreover, must not be less than sixteen years of age (Demosth. Arist. i.). Plato describes at length (Legg. xii. 947) how the funeral cortège was to be formed, and he also notes that the women who took part in it must not be younger than the shild beging age. The not be younger than the child-bearing age. The sepulchre  $(\theta \eta \kappa \eta)$  must be excavated underground, of elongated shape, and must be constructed of stone. But the dead were not always laid in a tomb of stone without a coffin (σορός, λάρναξ). When the latter was used, it was made of cypress or other wood.

The different stages of the funeral were usually accompanied by weeping and lamentation on the part of the relatives and friends, and of other perons who visited the dead when exposed to view teld attended him to the sepulchre. These manifesthe ons of grief must originally have been excessive, civil not different from those we have met with in civil not dinerent from those we have met with in tombsr. They were prohibited by legislators like Mycenad Charondas, who desired to restrain what been pri to many Greek writers to be clamorous believing wie forms of grief. Plato describes as indications the weeping for the dead, and would be a support of the dead, and would be a support of the dead. In the island prohibit lamentations (θρηνεῖν) outside discovered mgg. xii. 960). It is true that Æschy-and others of 20 f.) and Euripides (Hec. 642 f.) (Iphig. Aul. 1437 f.) of the culting off of the hair

describe displays of grief such as striking the breast, tearing and lacerating the face and garments, and pulling out the hair; but probably these two authors wished to reproduce primitive customs which were no longer permitted in their day. In spite of legislative prohibitions, however, there was no cessation at funerals of more or less exaggerated manifestations of grief; the bier was certainly accompanied by funeral-singers (θρηνφδοί). Plato himself speaks of them (Legg. vii. 800) in the masculine only. This duty, however, was carried out also by women called Kaριναι, θρηνφδοί, μουσικαί, probably, as is supposed, from their Carian origin, whence came the employment of the term for those women who sang over the dead, just as a kind of flute was called Phrygian as having been invented

by the Phrygians, e.g. αὐλὸς θρηνητικός (Poll. iv. 75). While in pre-historic times the places of sepulture were either the houses or the streets of the city or village, or even the agora, in the classical period the Greeks had fixed places outside the city, cemeteries in the common and broad signification centeries in the common and broad signification of the term; or else they made use of the roads outside of the city, as may still be seen in Italy, e.g. at l'ompeii. Moreover, distinguishing signs or inscriptions were placed upon the sepulchres. The sepulchres themselves had different names, as  $\theta \hat{\eta} \kappa a \iota$ ,  $\tau \dot{\alpha} \dot{\phi} \rho \iota$ ,  $\mu \dot{\nu} \dot{\eta} \mu a \tau a$ , and they might have different forms, among which was that of the tumulus ( $\nu \dot{\omega} \mu a$ , barrow). There were placed upon them ( $\chi \hat{\omega} \mu \alpha$ , barrow). There were placed upon them steles ( $\sigma \hat{\tau} \hat{\eta} \lambda a \iota$ ), a kind of posts, or actual columns ( $\kappa toves$ ), or little temples ( $\nu a t \delta \iota \alpha$ ,  $\hat{\eta} \rho \hat{\omega} a$ ), or else horizontal slabs of stone ( $\tau \rho a \pi e \xi \alpha \iota$ ), with inscriptions

(γραφαί).

In the sepulchres in Greece, from the most ancient and primitive onwards, have been found objects and vessels frequently of great value, such as those of Mycene, of Vaphio, and of Crete. These were deposited in the tomb with the dead, and were objects which had belonged to him. Thus there have been found objects for the toilet, weapons, little figures of earth or of bronze, and, especially, bronze or earthen vessels. The sepulchres themselves contain the bones of domestic animals, among which are those of the horse. In the ideas and beliefs of the Greeks there was the conviction that the dead person must have for his journey to the subterranean world the same objects of use and of ornament which he had possessed when living, and also utensils and vessels which were proper for eating and drinking from, and containing food and drink. This usage did not cease in classic Greece, as has been proved by the vessels and other objects which have been found in the sepulchres of this epoch.

The burial was followed by the funeral meal  $(\pi e p l \delta e \iota \pi \nu \sigma)$ , already met with in the Homeric period, though not by the games, which had been abolished; and also by the purification  $(\kappa a \tau a - \lambda o t e \sigma \theta a \iota)$ . But solicitude for the deceased did not end here: on the third day after the burial, sacrifices (called  $\tau \rho l \tau a$ ) were offered upon the tomb, especially on the stele or other object placed on it; these sacrifices were repeated on the ninth day (ένατα); and in the meanwhile the mourning began. This, in the majority of cases, lasted thirty days; the shortest period was twelve (Plut. Lyc. 27). As to external signs, mourning was shown by abstin-ence from everything which might cause joy and pleasure, and also by putting on a black garment, pleasure, and also by putting on a clack garment, or clothing which was only in part black. According to Plutarch (Quest. Rom. xiv.), it was a custom with the Greeks that during the mourning the women should shave off their hair, and the men should let theirs grow, if the regular usage was for the men to shave off the hair, and the women to the their state of the hair, and the women for the men to shave off the hair, and the women

and the putting on of a black peplum for mourning. The Argive custom of wearing a white garment for mourning instead of a black one (Plut. op. cit.

xxvi.) seems to have been an exception.

In Athens there was also an anniversary of the death called by Herodotus (iv. 26) γενέσια, a funeral feast, during which sacrifices were offered to the earth (τŷ γŷ)—a commemoration called by others νεκύσια or ωραΐα. It is to be supposed that such a commemoration was chiefly found in the case of men well known and highly thought of, notwith-standing that no distinction of persons or classes is made by Greek writers. But a general feeling of respect for tombs, and especially for ancestors, may be inferred from what one reads in Æschylus (Pers. 401 ff.) concerning the tombs of forefathers (θήκας τε προγόνων). Just as in the commemoration on the third and ninth days after burial, so at the annual commemorations, there were sacrifices, offerings and libations (ἐνάγισμα) to the dead, who was supposed to be already in the subterranean world; whence such libations took also the name of xoal, and of χθόνια λουτρά.

The unhappy criminal alone was denied sepulture and a funeral. In Athens the bodies of criminals were thrown behind the tower Melita and along by where thrown beamt the town Merica and atong by the northern walls of the city (Plut. Them. xxii.; Plato, Repub. iv. 439). The suicide's right hand was cut off; but he was granted burial. Plato would have the suicide buried in silence and without any sign of sepulture (*Legg*, ix. 873). Finally, to those whose bodies could not be obtained, cenotaphs or empty monuments were erected. Euripides (*Hel.* 1241) says that it was a law of the Greeks that he who died by drowning in the sea should be 'buried in a tissue of empty robes' (κενοΐσι θάπτειν ἐν πέπλων ὑφάσμασιν).

(κενοῖοι θάπτειν ἐν πέπλων ὑφάσμασιν).

DEATH AND DISPOSAL OF THE DEAD (Hindu).—Life and death stand in perpetual contrast. To give expression to this fact is the aim of Hindu ritual in all its processes, down to the minutest details. In the case of offerings to the gods the participants circumambulate the fire with their right side turned towards it, and in a direction from left to right; in offerings to the manes the left side is turned, and the direction is from right to left—the opposite of the sun's course (see CIRCUMAMBULATION); in the former case the right knee is bowed in the latter the left; in the one the sacrificial cord is put on from left to right (under the right arm), in the other from right to left (under the left arm); ropes are twisted from right to left; even numbers are assigned to the gods, odd ones to the manes; to the former belongs everything that is young, healthy, and strong, to

the latter what is old, weak, or deformed. thing that is bright-coloured—the forenoon, the ascending half of the month or the year—is assigned to the gods; whereas the manes have their portion in all that is dark—the afternoon, the descending half of the month or the year. Even in the course of a human life the 50th year marks a boundary, those who have not reached it belonging to the gods, those who have passed it to the manes.

Dread of the evil influence of the dead, their impurity, their return, and their interference with the living is another characteristic of the ritual. off this influence; stones are laid down between the village and the place of cremation; on the way home from the latter, care is taken to obliterate footprints in order to prevent the dead from finding the way, or perhaps to save the foot-print, which is a possible subject of magic, from being exposed to the influence of hostile spirits; at the funeral ceremonies plants are selected whose names—such as apāmārga, avakā, yava—have a protective sense.

The living are bound to prepare the way for the dead in the other world, to provide them with food for their great journey into Yama's realm, and to supply them with means for crossing the rivers. These ends are served by the utkrānti or vaitaraņā cow, which in some cases has been presented to the Brāhmans before his death by the deceased himself or his son. The same was originally, no doubt, the purpose also of the anustaranī cow, which is led along in the funeral train, and whose members are finally laid upon those of the dead, its kidneys being deposited in his hands as food for Yama's dogs. The streams which have to be crossed are probably indicated by the piece of reed which is introduced into the wall of the tomb, and which is meant to serve as a boat (cf. Cerberus, Bridge). The realm of the dead is variously located in the

west or the south-occasionally in the east, no doubt in conformity with the conception of Rigv. x. 15. 7, which speaks of the fathers as aruninam upasthe, 'in the bosom of the dawn.' The dead are sought for in earth and air and heaven, in sun and moon and stars—in the last-named very rarely. In fact, we encounter a number of frequently contradictory views, which originated at different times and among different races, and which, after

undergoing artificial amalgamation, now emerge in the Vedic ritual and its hymns (Hillebrandt, Ved. Myth., Breslau, 1891-1902, iii. 414 ff.).

The usual method of disposing of the dead is cremation. But the well-known distinction drawn in Rigy. x. 15. 14 between agridagilas and anagridagilas (property less than 1997). nidagdhas (cremated and un-cremated manes) shows manganas (cremated and un-cremated manes) shows that other forms were known and practised. It is not at all impossible that Rigv. x. 18. 10 ff. originally referred to the rite of burial (Winternitz, Gesch. d. ind. Litt., i. [Leipzig, 1905] 85). But our present ritual is not acquainted with burial except as applied to young children and ascetics, in whose gase from a motive half-rules only to half-super. as applied to young children and ascences, in whose case, from a notive half-philosophic, half-superstitions, and after a fashion known even at the present day, the skull was split with a coco-nit (Caland, Altind. Bestatt. § 50, p. 95). The only other trace which appears to point with any certainty to burial is found in the smasāmachiti, while the relating of the remains in the urn. tainty to burial is found in the smassame, while follows the placing of the remains in the urn. Brāhmans were reluctant to abandon old cust was they modified them when necessary, and is the them on to other existing usages. Just in the them on to other existing issages. Just towards pravargya ceremony—once an independence exposing the non-obligatory smasanachiti may en done at originally an independent custom. In see day after of this chiti Caland (l.c. 181 f.) has righted in order, 'survival' of original burial; and the surrance that that there theurn is not interred, but cast away, also appears to point to the independence of the smaśanachiti, for which urn-burial is not a necessity.

The data as to burial are found in the Vedic hymns, and especially in the Sūtras—the Grhya and Pitrmedha and kindred texts—and in the records of modern usages. It is not without interest that many of the regulations of the Sūtras find parallels at the present day among Indian tribes. As we find the injunction that those returning from the place of cremation are to deposit stones or other objects between the dead man and his village, so 'the Mangars of Nepal obstruct the road leading from the grave with a barricade of thorns, through which the soul, conceived of as a miniature man, very tender and fragile, is unable to force its way' (Census of India, 1901, i. 355). On the other hand, our Sütras do not contain an account of all the customs that existed or may have existed, and do not coincide with the ritual known to the Rigveda. An interesting illustration of this is supplied by Dr. Bloch (Annual Report of the Archael. Survey, Bengal circle, for the year ending April 1905, Calcutta, 1905 [ZDMG lx. 227 ff.]), who opened some burial-mounds at Lauriya, and found in the midst of them remains of a wooden post (sthūnā), which recalls the post mentioned in Rigv. x. 18. 13, and of whose meaning the Sutra ritual gives us no idea.

It would be quite out of place here to treat even superficially of the huge mass of prescriptions to be found in published and unpublished texts, or of the variations presented by the usages of different schools and families. Caland divides the whole ceremonial into 114 acts, not to speak of the variations found in each of these. It is equally impossible to discuss the numerous verses which accompany the particular acts, and whose real relation to these is not always clear; or, more especially, the circumstantial casuistry with which the highly ingenious spirit of Brahmanism has sought, in a manner that is far from uninteresting, to provide for all possibilities. Like the ceremonies connected with birth, those attending on death are a sam-skāra. 'It is well known,' says the Baudhāyana Pitrmedha, iii. 1. 4, 'that through the samskāra after birth one conquers earth; through the samskara after death, heaven.' Ritualists are therefore eager to have this samskara performed with care and with regard to all circumstances. It may happen, for instance, that the Hindu dies in a foreign land and must be brought home, or that he dies there and remains forgotten. In the latter case cremation is performed in effigy upon a human figure composed of palāša stems. Should it chance, however, that after all the man returns alive, the ritual provides even for this, and ordains that he must be born anew-i.e. undergo all the rites of jātakarman, in which he sits speechless and with clenched fists, like an embryo in the womb (Caland, § 44). When a prostitute dies, she must not be cremated, according to some teachers, with a continuous fire but with the of the forest wild and ordinary fire, but with that of the forest, wild and unchecked. Other regulations apply to the death of a widow or a woman in childbirth. If a man longs for death, he presents an offering, the various acts in which symbolize this longing (cf. Kāt. Sr. S. axii. 6. 1). If one dies in the act of presenting an ordinary offering, certain rules are to be followed. But it is impossible to go into all this; only when the Srauta Sutras have been translated, will the historian of religion and the ethnographer obtain full insight into this circle of ideas. Here we must content ourselves with a brief account of the most important features of the ritual.1

1 For fuller details, see the present writer's sketch in GIAP iil. 2; and Caland (op. cit. infra), whose work is thorough, and yet does not exhaust the enormous quantity of material.

I. Death.-When the Hindu feels the approach of death, he must summon his relatives, hold friendly converse with them, and, if the dying-hour is very near, have himself placed on a cleansed spot on sandy soil. It promotes his future weal to make presents before his death to Brāhmans; among these gifts a special value attaches to the watarani-cow as his conductor over the stream of the under world. His dying-couch is prepared in proximity to the three fires, or, if he keeps up only one, near to it, viz. the domestic fire, and here he is laid down with his head turned towards the south. In his ear are repeated passages from the Veda of his school, or, if he is a Brahmavid, from an Aranyaka. When death has taken place, they bring the corpse to a covered place, and then (or, with many, at a later stage) cut his hair and nails, which, according to Gautama (ii. 24), should be deposited in a hole in the ground. Many follow the practice (prohibited by others) of opening the body, removing the excrements, and replacing the entrails after they have been washed in water and filled with butter—a procedure intended, in the opinion of the present writer, simply to facilitate cremation, which would be hampered by the heavy fæces. Then the corpse, with its head turned towards the south, is laid upon a bier covered with a black skin; on the dead man's head is placed a wreath of nard; he is clothed down to the feet to a pupil, or to the wife of the deceased, to be worn for life or till it becomes too old for use. Others have a piece of the death-robe cut off, and is the practice of some, who bind together the thumbs (or the toes) of the deceased—a custom which, as Caland (i.e. 176) and Steinmetz (ap. Caland) remark, is found also among other than

Indian peoples (see above, p. 433a).

If the deceased has in his lifetime presented animal-offerings, three he-goats are provided; if he has offered sāmnāya (sweet and sour milk libations) at new and full moon, a milk-offering (āmikṣā) is to be presented [evidently slight differences of cult going back to primeval times]. If goats are not used, many take 'black rice-grains,' of which from one to three rice-paps are made. A remarkable figure is that of an old, un-horned, vicious cow (anustarant). When the cow is brought, the servants of the deceased have each to throw three handfuls of dust over their shoulders. At the head of the procession (according to the teaching of many) walks a man with a firebrand which he has kindled at the domestic fire; he is followed by the sacrificial fires of the deceased and the apparatus for the cremation ceremony, including the above-mentioned anustananicow; next in order is the dead man on his couch, which is placed on a mat or on the before-mentioned bier, carried by servants, old people, sons, or relatives near and remote, according as the custom may be. In many circles it is the practice-still followed in certain instances in India—to employ for the transport of the corpse a waggon drawn by black oxen, and to place upon it also the fires and sacrificial utensils of the deceased. Behind the corpse come the of the deceased. Benind the corpse come the relatives, the older ones first, men and women, the latter with loose dishevelled hair and their shoulders besprinkled with dust. [In points of detail we meet with many variations.] When the corpse is lifted, the invocation, 'May Pūṣan bring thee from here!' is addressed to Pūṣan, who in the corpse is the corpse of the corpse of the corporation of the corps of t the whole ceremonial appears as ψυχοπομπός—a rôle already assigned him in the Rigveda. When a third or a fourth of the way has been covered, one of the goats is killed, or one of the paps of rice (or, if there be only one, a third of it) is poured upon a clod of earth thrown to the south. Thereupon the

company, with the younger ones in front, thrice circumambulate the corpse and the clod from right to left, with their hair loose on the left side and bound up on the right, at the same time striking their right thigh with the hand and fanning the corpse with the extremity of their garments. Then comes a thrice-repeated circuman bulation from left to right with the bein lesses at the right. left to right, with the hair loose on the right side and bound up on the left, with a striking of the left thigh, but, according to the view of certain scholars, without another fanning of the corpse. The same procedure is repeated at the second third of the journey and at its termination. The rice-vessel is finally dashed on the ground, and its fragments so shattered that water will not remain upon them. [The variations encountered here in the practice of the different schools are numerous. Some walk along strewing small pieces of iron or roasted grains of rice upon the ground, while they recite or sing Yama-hymns. The Mādhyandinas deposit a rice-clod at the place of death, one near the door as they leave the house, one for the bhittas half-way between the dwelling and the place of cremation, and one for the wind as soon as the place of cremation is reached, while one is deposited in the hand of the deceased.]

2. Cremation.—Special regulations, particularly as to its orientation, are offered for the choice of the place of cremation, which in some respects resembles the place of offering for the gods, while in others it is quite different. The duly selected spot is purified, and a formula is employed to scare away demons or ghosts. The kind of wood used, the size and orientation of the pyre, and everything of a like kind are regulated by rigid prescription, scarcely anything being left to caprice. The corpse is now (or later) laid on the pyre, the threads which bind the thumbs are loosed, the cords which hold the bier together are severed, and the bier itself is flung into the water or laid on the pyre, upon which the fires of the deceased also find a place. When all is done according to rule, the anustarani cow is brought forward, and so held by the relatives of the deceased that the youngest of them touches her hind-quarters, while the others are so arranged that an older person always touches a younger. The cow may either be slaughtered or —manifestly in connexion with a later custom—let The latter course must be followed in the case of one who has presented no animal-offerings. The animal is in that case led round the fires, the pyre, and the corpse, and with certain formulæ set free. To the north of the pyre the widow of the deceased crouches down, but (with formulæ which originally belonged to an entirely different ritual) is called on to rise and return to the world of life. There, too, is placed the bow of the deceased, which is afterwards cast upon the pyre. Upon the openings of the face are laid small pieces of gold, or at least melted butter is allowed to trickle down upon The sacrificial utensils of the dead, which he has had in his possession since the kindling of the fires, are distributed over his limbs, those of them that have a cavity being filled with butter—plainly for the purpose of feeding the fire; the two millstones (according to one version) are appropriated by the son, and so is everything made of copper, brass, or clay. In like manner the parts of the cow are distributed over the members of the deceased: the caul, for instance, being laid on his head and face, the kidneys (for Yama's dogs) being placed in his hands, along with a lump of curds (for Mitra-Varuna) if he has presented sāmnāyyaofferings. Before or during the process of cremation [here, as almost everywhere, different opinions pre-vail in the schools] the pyre is asperged after a fashion that may still be observed: the person performing this office walks round the pyre carrying on his left shoulder a pitcher, in the back of which there has been made, by an axe or a stone, a hole through which the water runs out. After a triple circumambulation he casts the pitcher behind him.

Now begins the *cremation*, which is regarded as an offering into the fire, conducting the corpse to heaven as a sacrificial gift. In the *Dakşina*-fire are offered libations for Agni, Kāma, Loka, etc., and finally a libation on the breast of the deceased to Agni, 'who is now to be born of him as he once was of Agni.' If the man was an Anāhitāgni, the firebrand is taken from the domestic fire; if he was an Ahitagni, the cremation is performed by the flames of the three or five fires kept up by him. Note is taken of which fire reaches him first, and it is augured therefrom whether the deceased has gone into the world of the gods or of the manes, or into some other world. To the north-east of the ahavantya a knee-deep trench is dug, in which a certain water-plant is placed—clearly an ancient superstition—in order to cool the heat of the fire. The traditional explanation of the custom is that 'the dead man rises from the trench and ascends along with the smoke to heaven.' Behind the pyre a goat is fastened, but in such a manner that it is possible for it to break away, and, if it does so, nothing is done to prevent it. The cremation so, nothing is done to prevent it. The Grammon is accompanied by a number of verses or songs selected according to the school to which the deceased belonged. While the pyre continues to blaze, the relatives move off without looking round. The officiant gives them seven pebbles, which on their way home they scatter with the left hand turned downwards. [According to the prescription of another school, three trenches are dug behind the pyre; they are then filled with water from an uneven number of pitchers, and gravel is thrown in. The relatives enter the trenches, touch the water, and then creep through branches set in the ground behind, and bound together by a rope made of darbha-straw. The last to creep through tears the branches apart. Gautama directs a thorny branch, Vaikhānasa a grass snare, to be held in front of them, under which they must creep.] The company, as they leave the place of cremation, must restrain themselves from any exhibition of mourning, and go forward with heads bent down, enterand virtuous tales. Many tears, it is said, burn the dead (of. Raghuvanisa, viii. 86). Yudhisthira is rebuked by Vyāsa for bewailing the death of his nephew. Story-tellers (paurānisas, etc.) are therefore engaged in order to drive away by their skill the sorrows of the relatives (Lüders, ZDMG lviii. 708 8). 706 ff.).

3. Udakakarman.-The offering of water to the deceased which follows is carried out in a variety of ways. According to one view, all the relatives down to the seventh or tenth generation—must enter the water. They wear only a single gar-ment, and the sacrificial cord hangs over the right shoulder; many also direct that the hair must be dishevelled and dust thrown upon the body. They turn their face towards the south, plunge under the water, call upon the dead by name, and offer him a handful of water. Then they emerge, bow the left knee, and wring their dripping garment.

the left knee, and wring their dripping garment.

An interesting usage prevails at the present day. Immediately after the bath a quantity of boiled rice and peas is set out for the crows (Caland, p. 78). This recalls the primitive notion that the dead appear as birds, and the comparison of the Marrats with birds, for the Marrats are an offshoot from the cult of the dead. Scarcely anything connected with the history of cults can be seen more interesting or more strongly reminiscent of the earlier times than an enormous Pipal tree—not the one sacred to the Buddhist community on the western side of the stupa—growing to the north of the Buddhist sanctuary at Bodh-Gaya, beneath which offerings to the manes are continuously presented, while blackbirds fly to and fro amongst its branches.

After the bath the relatives seat themselves

upon a clean grassy spot, where they are regaled with stories or Yama-songs. They do not return to the village till the first star shows itself, or the sun is partly set, or the herds come home. At the door of the house they chew leaves of the pichumanda (Azadirachta indica), rinse their mouth, touch water, fire, cow-dung, etc., or inhale the smoke of a certain species of wood, tread upon

a stone, and then enter.

4. Asaucha (uncleanness).—The occurrence of death renders those associated with it uncleana condition which lasts from 1 to 10 days, and is variously regulated according to circumstances and the usages of particular schools. 'After ten days' the mourning ceremonies for Indumati are ended (Rughwamsu, viii. 73). The prescriptions to be attended to during the āśaucha are partly negative—in so far as they forbid certain things, such as the cutting of the hair and beard, study of the Vedes Gabus offerings, and partly resitive. of the Vedas, *Grhya*-offerings; and partly positive —e.g. the enjoining of certain offerings. The first night a rice-ball is offered to the dead, before and after which water for washing is poured out for him, and he is called on by name. Milk and water are set out for him in the open air. Many of out professer and drights for him are line as well as set out perfumes and drinks for him, as well as a lamp to facilitate his progress through the terrible darkness that enshrouds the road to the city of Yama. Others cause a trench to be dug, into which perfumes and flowers are cast, while a pot suspended by a noose is hung over it. Even today the notion is to be met with that a thread serves the spirit of the deceased as a ladder to reach

5. Samchayana.—The collecting of the bones after cremation is usually carried out on an uneven day; according to some, during the dark half of the month, and under certain constellations. For the bones of a man a plain urn is employed; for those of a woman, a 'female' one, i.e. one adorned with breasts. The bones are picked up one by one, with the thumb and ring-finger, and are laid without noise in the urn. Among the Taittiriyas this duty is performed by women, regarding the selection of whom the pre-scriptions vary. According to the rules of Baudhāyana they must attach a fruit of the brhatīplant to their left hand with a dark-blue and a red thread, mount upon a stone, wipe their hands once with an apāmārga-plant, and with closed eyes collect the bones with the left hand. The urn, which is closed with a lid, is placed in a trench prepared in the same manner as the place of cremation, and having no flow to it except rain-water; or it may be laid under the root of a tree. Others place grass and a yellow cloth in a trench, and then throw in the bones. From the latest period we have an account of how one 'puts [the remains] into a little new barrel, and throws them into the water, if there be any at hand, or, if not, into some desert and lonely place.' The Kapola-Banias tie up the bones in a piece 'of silken cloth, and the bundle so made is suspended to the bough of a tree in the burning-ground' (JASB iii. 8, p. 489; Caland, 105384). Many schools enjoin a second cremation, in which the bones that have survived the first process are pulverized, mixed with butter, and then offered in the fire.

6. Säntikarman.—This is another important department of the death-ritual. [In many ceremonies it comes at the point we have now reached, in many not till after the smasanakarana. The reason for this appears to be that the samchayana and the smasanakurana were originally parallel

ceremony is to be held on the day of new moon. The same authority directs that a fire, with ashes and fireplace, is to be carried southwards and set down at a cross-road or elsewhere; then the par-ticipants are to circumambulate it thrice, striking the left thigh with the left hand. [Others kindle an ordinary fire at a spot between the village and the smasana ground.] Then they return without looking round, touch water, and furnish themselves with a number of new articles—jugs, jars, fire-sticks of samī-wood, etc. The fire is kindled afresh, and they sit till nightfall around it, enter-taining one another with auspicious stories. When the stillness of night reigns, an uninterrupted stream of water is poured around the house from the south to the north side of the door, and then the participants take their places on an ox-skin that is spread for them. The formulæ uttered during this and other parts of the ceremony have regard to life and the averting of death. A stone regard to life and the averting of death. A stone is laid down to the north of the fire, 'to keep off death.' The young women anoint their eyes with fresh butter. Many texts speak also of the leading around of an ox, of which the company take hold and walk behind it: the one who closes the procession has to obliterate the footmarks. A strange continuous approximation of the contract of the con notion entertained by certain Indian tribes is cited by Caland (l.c.) from the Bombay Gazetteer (xiii. 1, passim), to the effect that, at an assembly held on the 12th day, the dead man takes possession of one of the company and intimates what his friends are to do for him, or takes leave of his relatives.

The fundamental aim of the santikarman is to take effective measures to ward off evil and to return to ordinary life. Hence even the fire that served the deceased is removed—not, however, by the door—and extinguished outside. Its ashes are placed on a mat or in an old basket, and carried to the south or the south-west, where they are set down on a saliferous, and therefore unfruitful, piece of ground (Caland, 114). The new fire is kindled by the eldest son, after (or, sometimes, before) the removal of the old. The Rigveda is acquainted with a similar ceremonial, but the details of the ritual are considerably different

(Hillebrandt, Ved. Myth. ii. 108 ff.).

Many of the ceremonies prescribed by the ritual literature for the santiaran are connected by some authorities with the smasanz e.g. the digging of seven trenches to represent the seven rivers is met with sometimes in the one ceremony, sometimes in the other; but for the general interest of the subject it is a matter of no great importance to what part of the death-ritual we assign particular actions.

7. Pitrmedha or šmašāna.—The questions for whom and at what time the smašāna is to be performed have given rise to ritual discussion, and have been variously answered by the different schools. The season of the year and the reigning constellations are also of significance; on the whole, a preference seems to have been given to the day of the new moon. On the preceding day, certain plants are rooted up at the spot destined for the smasana, to the north of which earth is dug up, and from this are made the 600-2400 bricks which serve for the structure, besides the number (not precisely defined) employed for packing. The urn with the ashes is brought and laid between three palāśa-stakes driven into the ground inside a hut which must be between the village and the smasāna spot. If the bones are not to be found in the trench mentioned above, dust is taken from this spot, or the dead man is called upon from the bank of a river, and then any small animal (this being taken to represent him) that happens to spring upon an outspread cloth is treated as if usages, which were only afterwards brought into connexion, and the santikarman continued in several schools to hold the place which belonged to it at first.] According to Asvalayana, the sound to support an outspical country to the wrong the bones. Upon the three stakes is placed a perforated vessel containing sour milk and whey, which trickles through the numerous holes upon to it at first.] According to Asvalayana, the

of the lute the company circumambulate the spot after the fashion already described (striking the left thigh with the hand, etc.), and fan the urn with the extremities of their garments. [Many ritual authorities speak also of song and dance and female dancers: some do not mention the hut; others have additions to, or modifications of, the above. The variations are great, indeed: e.g. some place an empty kettle in the hut, and beat it with an old shoe.]

The ceremonies take place during the first, middle, and last parts of the night. The company repairs quite early to the smasana spot, regarding whose extent there are widely deviating prescriptions. It must be out of sight of the village, in a hidden situation, yet visited by the rays of the midday sun. The spot must be staked off and surrounded with a rope, and—as in the case of the agnichayana, with whose ritual the śmaśāna has many points of contact-its surface must be covered with small stones. Furrows must be opened with a plough drawn by six or more oxen, and various seeds cast into them. In the middle of the ground a hole is made, into which gravel, saliferous earth, etc., are cast. Milk from a cow whose calf died is poured into the half of a bowl and stirred up with groats into a kind of drink; and this, or some-thing else, is set out as food for the dead. [Towards the south (according to some) two crooked trenches are to be opened, and filled with milk and water. It may be mentioned, as one of the numerous and frequently characteristic details, that in the smastina a piece of reed is immured, apparently to serve the purpose of a boat to the deceased (cf. above, p. 475).] The bones are laid down upon a bed of darbha-grass, arranged in the figure of a man, covered with an old cloth, and asperged. The urn is destroyed. Over the remains is creeted the many posts of the destroyed of the property of the destroyed. the monument, which conforms to a definitely prescribed plan, and in which the present writer sees the precursor of the stupa of later days. When the structure has reached a certain height, food for the dead is walled in. After its completion, the *śmaśāna* is covered with earth, and water is poured over it from pitchers which it is the custom to destroy, or it is bestrewn with avakā-plants and kuśa-grass. Much is done also to separate the world of the living from that of the dead: the boundary betwirt them is marked by lumps of earth, stones, and branches; and the same purpose is served by the uttering of certain formulæ.

The soul of the deceased does not pass at once into the world of the Pitaras; it remains separate from them for a time as a preta, or spirit, and has special offerings presented to it. But, after the lapse of a certain period, or when some for-tunate circumstance occurs, the dead man reaches the circle of the manes through the instrumentality of the sapindikarana. The grandfather now drops out, since, as a rule, only three rice balls are presented; but, as one of the manes, he receives his place in the ancestor-cult. This cult has struck its roots deep in Indian life. To feed the ancestors, to propitiate or keep them away, and to summon their aid, are the purposes served by the *srāddhas* described in ritual- and lawbooks. The *śrāddhas* are offered either on special pooks. The sraadhas are offered either on special occasions, when fortunate occurrences take place, or regularly at certain periods of time. To the first category belong the birth of a son, the nāmakarana, and other festivals, when the manes are spoken of as 'cheerful,' and are honoured in the same way as the gods: to the second belong the daily worship of the manes, that on the day of the new moon, the monthly worship the sreat of the new moon, the monthly worship, the great offering to the manes at the four months' sacrifices, at the soma-sacrifices, and the astakā cele-

bration with the anvastakya, which coincide with the close of the year see, for details, the present writer's sketch in GIAP iii. 2).

the close of the year (see, for details, the present writer's sketch in GIAP iii. 2).

DEATH AND DISPOSAL OF THE DEAD (Indian, non-Aryan).—I. Conception of death: not due to natural causes.—The conception of death among the non-Aryan tribes of India does not materially differ from that entertained by other savage and semi-savage races. Death is not regarded as the result of natural causes, but is supposed to be due to the interference of devils, demons, or other evil spirits. This is particularly the case with diseases like dementia, the delirium of fever, and the like, which seem to indicate action by some indwelling spirit. This belief is naturally extended to accidents caused by wild animals, and deaths due to epidemic diseases, each of which is attributed to the working of a special disease-spirit. Hence many of these tribes use special means to identify the spirit, and the methods usually partake of the nature of Shamanism. The scal, again, is regarded as a little man or animal occupying the individual, which causes him to move. It leaves the body through the skullsutures or other pure orifices of the body, in the case of persons who have lived virtiges lives; in the case of the wicked, by one or other of the impure exits. The soul may at times live apart from the body—a theory which explains to those who hold it the nature of dreams and the danger of waking a sleeper. There may be more souls than one, and these may have separate abodes-a belief accounting for the performance among some tribes of funeral rites at the place of death, at the grave, or at some other spot, where offerings are made to appease the spirit, and explaining much of the vagueness which characterizes their funeral ceremonies. The soul, again, is believed to be mortal; and with their lack of interest in their national history, and their imperfect recollection of past events, these people, after a time, regard their deceased ancestors as no longer objects of reverence or fear, and the attention of the survivors is concentrated on the more recently dead. The soul, when it leaves the body, is figured as a

naked, feeble mannikin, exposed to all kinds of injury until, by the pious care of its friends, a new body is provided for it. This often takes the form of a temporary refuge—a hut, a stone, a tree, or a piece of sacred grass. Or the soul may abide in an animal or insect; and this temporary refuge, or, among tribes who accept the theory of metempsychosis, this form of re-birth, may be identified by laying out ashes or flour at the scene of death. These, when carefully examined, often show the footmarks of the creature by which the soul has been occupied. Among the jungle tribes the soul is commonly supposed to abide in a tree—a belief which may in some instances have been suggested by the habit of tree-burial (see § 4(h)). In W. India a common refuge of the soul is the  $j\bar{v}vhh\bar{u}du$ , or 'life-stone,' which is selected at the time of the funeral rites, and to which offerings and libations are made. This naturally leads to a further development, when a rude image of the deceased is made, placed among the household gods, and honoured with gifts of food and drink. In some cases, as among the Kachins of Upper Burma, an attempt is made to enclose the soul within a barrier of bamboos, from which it is solemnly released at the termination of the funeral rites (Gazetteer Upper Burma, I. i. 409). Sometimes, again, during this intermediate period, the soul is believed to haunt the scene of death, and at a later period it abides in the grave or at the cremation-ground. When beliefs such as these are current among the people, it is obviously of supreme importance that the funeral rites should be duly performed. No infective tabu is more dangerous than that which proceeds from a corpse unpurified by the customary rites; and perhaps no people in the world devote more anxious care than the Hindus to placating the friendly, and repressing or scaring away the malignant, spirits of the dead.

2. Spirits friendly and malignant.—The line between these two classes of spirits is clearly drawn, and it is based on the close family- and clan-organization of the non-Aryan tribes. The clan-organization of the non-Aryan tribes. The souls of the family dead, unless they are irritated by neglect, are generally benevolent; the souls of strangers are, as a rule, malevolent and hostile. In the case of the former no means of placation are neglected. Some tribes, after the soul has left the body, endeavour to recall it, and invite it to abide with them as a house-guardian; others make a miniature bridge to enable it, as it returns, to cross a stream, and thus evade the water-spirit (cf. art. BRIDGE, ii. 2, c); others, again, make a pretence of capturing the soul and bringing it back to its home. The provision of fire and light for the soul, either in the house itself or at the grave, is more general. Sometimes rites are performed or it is solemnly invited to leave the grave and ascend to the other world, where it is welcomed by the friends who have gone before—a conception of the realm of the sainted dead which may have been independently arrived at by the non-Aryan tribes, though the details may be due to Hindu influence. To secure the peaceful departure of the soul, it is essential that the due egress should be provided for it by removing the dying person into the open air or into an upper chamber—a precaution which possesses the additional advantage of relieving the house from the death-tabu. With the same object, the skull is often broken at the time of cremation. When death occurs, the soul is placated by the walling of its relatives; or, as among the Kandhs, it is exhorted to keep quiet, to employ its time in working in the other world, and not to transform itself into a tiger and plague its friends (Risley, TC i. 408). More remarkable is the procedure of the Nagas of Assam,

who curse the evil spirit which has removed their friend, and threaten to attack it with their spears (JAIxxvi. 195, xxvii. 34; Dalton, 40). This custom apparently does not prevail among the Manipur branch of the tribe (T. C. Hodson, The Naga Tribes

of Manipur, 1911, p. 146 ff.).

After death, the wants of the dead are provided for by gifts of food and drink (see art. FOOD FOR THE DEAD). Among some tribes the feeling provails that the goods of the dead man should be appropriated to his use, and not taken by his friends, lest the envious spirit may return and claim them (Dalton, 21, 205; cf. Crawley, Mystic Rose, Lond. 1902, p. 98). In some cases a viaticum, in the shape of a coin or some article of value, is placed with the corpse to support it on its way to the other world, as among the Pahāria (Hosten, 'Paharia Burial-Customs,' Anthropos, iv. 670, 672). But people in this grade of culture, while strictly governed by a regard for precedents, contrive to evade the duty by placing worthless representa-tions of the dead man's effects in the grave, or by merely waving them over his pyre (Rivers, The Todas, 362 f.). The arms and implements which are often buried with the corpse, or placed upon the grave, are obviously intended for the protection or use of the dead; and these are sometimes intentionally broken, either in the belief that, if left uninjured, they are useless to the dead, or to render them unavailable, and thus prevent the rifling of the tomb. Special clothing is also some-times provided for the soul, and, as the garments of the dead man are supposed to be infected by the death-tabu, they are generally presented to some menial priest, whose sanctity guards him from danger in using them. Ornaments are sometimes placed in the grave: a set of diadems, for instance, like those of Mycene, having been found in a S. Indian interment at Tinnevelly, where they were probably deposited as amulets to protect the soul from evil spirits (Thurston, Notes, 149 f.). Some deposit with the dead a prayer written by the tribal priest; others, like the Gäros of Assam, slay a dog at the grave to guide the soul to Chikmang, the tribal paradise; or, as among the Gonds, clay images of horses, on which the soul may ride to heaven, are placed on the tomb (A. Playfair, The Garos, 1909, p. 109; Oppert, 84 f.). Closely connected with this is the custom of slaying human victims at the funeral, in order that they may accompany and serve the soul. Some of the wilder Assam and Burma tribes, down to quite recent times, killed slaves with this object (Gazziwer Upper Burma, I. i. 553; F. Mason, Burmah, 1860, p. 92 f.): Blood being the favourite form of refreshment for the dead, it is provided by animal The victim is often slain at the grave, sacrifices. and its blood is poured upon it. The Andamanese mother places a shell full of her milk on the grave of her child, and the Dosādh of the United Provinces pours blood into a pit, so that it may reach the soul (JAI xii. 142; Crooke, TC ii. 354). With the same intention water is poured on the grave, or dropped into the mouth of the dead or dying man. Many articles of food placed with the dead serve the additional purpose of scaring evil spirits. serve the additional purpose of scaling of a spirits. Rites such as these, performed at the grave, naturally develop into a periodical feast held in the house or in some holy place; food, again, is offered to a rude image representing the dead. The final stage is reached when it comes to be believed that, by leeding the tribal priest or a Brühman, the food passes on for the use of the soul.

3. Rites performed to repel evil spirits.—The rites performed in the case of the malignant dead assume another form. Such spirits are the souls of those who have been removed from this world by an untimely or tragical death-those of the

murdered, the unburied, the unmarried, childless women, robbers, men of evil life, and strangers. These are included under the general title of  $bh\bar{u}t$ (Skr. bhāta, 'formed,' 'produced')—a term which does not necessarily connote malignancy, but is now generally accepted in this sense. They all cherish feelings of envy and malignancy towards the living, and it is necessary to placate or, more the living, and it is necessary to placate or, more generally, to repress and coerce them. The souls of the unmarried dead are often propitiated by a mock posthumous marriage, in which a boy or girl represents the dead youth or maiden. For the unburied dead a mock funeral is performed over such relies of the dead as may have been recovered, such relies of the dead as may have been recovered, or over an image representing the deceased. The soul of a dead bandit, as among some of the robber tribes of N. India, is sometimes defined and worshipped. The most common example of the discontented spirit is the *churel* of N. India, or, as she is called in the S., the *alwantin*, the spirit of a childless weares on of one who has died within a childless woman, or of one who has died within the period of sexual impurity. Like demons in other countries, she has her feet turned backwards, and is much dreaded. She is repelled by scattering grain on the road from her grave. When she rises, gram on the road from her grave. When she rises, she halts to collect this, until the morning call of the cock forces her to return—a practice extended even to the benignant dead by the Pahārias of British Sikkim, who drive a nail through each finger and toe of a prospective *churel*, to prevent her from harassing the living (Hosten, 673, 679). The ghost of a mutilated person is also an object of from the part of the Euler was of the E of fear; but, except among the Chakmas of the E. frontier (Lewin, *Hill Tracts*, 74), there seems to be no Indian example of the custom of mutilating the corpses of enemies to prevent them from 'walking' (though Hosten, 679, records, without having been able to obtain any explanation for it, the custom of the Yākhās of British Sikkim, who, 'when a man has died, split open his hands from the middle knuckles to the wrist'). Spirits of this description of the malignant dead are repelled in various ways. Some tribes have an annual ghost-hunt, by which the evil spirits are scared from the house and village. Guns are fired, gongs and drums are beaten, and rockets are exploded. Dances and other revels, in which the rules of morality are disregarded—indecency being a mode of scaring evil spirits—are performed. Sometimes the rite takes the form of a mock combat-one band of performers representing the evil, and another the friendly, spirits; and it is always arranged that the latter shall be victorious (Lewin, Wild Races, 185). Some tribes measure the corpse, or watch it until it is buried, lest it may be occupied by an evil spirit.

The devices intended to prevent the return of malignant spirits are manifold. In some cases a cairn is raised over the grave (§ 4 (d)), or, as an additional precaution, the excavation is filled up with stones or thorns; or, as among many of the wilder tribes, the body is buried face downwards a practice adopted by the Thugs. In Upper India the ghosts of menial tribes, such as sweepers, are so much dreaded that riots have followed an attempt to bury their dead in the usual way with the face turned to the sky. Sometimes the grave is enclosed by a fence too high for the ghost to 'take it,' particularly without a 'run.' Such an enclosure has the additional advantage of marking encourse has the additional advantage of marking the place as tabu, and was the origin of the stone circles, erected round eairns, which subsequently developed into the artistic railings of Buddhist stūpas. Another common method is to deceive the spirit by carrying out the corpse feet foremost or by a special door so that it may be mable to or by a special door, so that it may be unable to find its way back, by removing the house-ladder, or by forcing the bearers to carry their burden at is that of exposure of the remains to beasts and

a trot and to change places on the road. Special recautions are taken not to name the dead, at least for some time after death, lest the soul may consider it an invitation to return.

4. Methods of disposal of the dead.—(a) Cunnibalism.—Of that most archaic method of disposal of the dead, the funeral feast, 'when the meat is nothing less than the corpse of the departed kinsman' (Hartland, LP ii. 278), India has so far supplied no clear examples. There are, however, Methods of disposal of the dead .- (a) Cannicases of eating the aged with a view to reproducing the virtues or powers of the departed, as among the Lushais of Assam, and the Chingpaws and Was of Upper Burma (Lewin, Hill Tracts, 107; Gazetteer Upper Burma, I. i. 436, 496). But this custom is confined to the most isolated and savage tribes, and the similar tradition recorded by Dalton (220 f.) of the Birhors of Chota Nagpur is probably quite baseless—possibly an echo of a story told of tribes much further east.

(b) Dolmens and other stone monuments.-The earliest form of corpse-disposal of which physical evidence exists is that in dolmens, kistvaens, and other forms of stone monuments, of which India furnishes numerous examples. Though sporadic remains of such structures have been found in remains of such structures have been found in many parts of N. India, the assertion of Fergusson (Rude Stone Monuments, 475 f.) may be accepted as generally correct, that they are peculiar to the country south of the Vindhyan Hills, and are numerous in the country drained by the Godāvarī and its affluents, and in particular in the valley of the Kistna and its tributaries, on both sides of the Ghāts, through Coimbatore down to Cape Comorin, and especially in the neighbourhood of Conjeeveram. The most complete account of these stone monuments is that of Breeks, who describes them under three heads—cairns, or rather mounds enclosed by a stone circle; barrows; and kistvaens. In the cairns have been discovered earthen vaens. In the cairns have been discovered earthen jars containing fragments of burnt bones, and some beautiful bronze vessels, probably imported from Babylonia or some other foreign country. Questions connected with the origin, purpose, and date of this series of monuments have given rise to much controversy. The fact that stone circles, of a form analogous to that of the ancient monuments, are used by the modern Todas has led to the ments, are used by the modern Todas has led to the inference that the members of this tribe are the successors of, or closely allied to, the old circle-builders. The character of the remains discovered does not, as a rule, suggest a date earlier than the Iron Age, which, if the analogy of Europe be accepted (though there are no materials for such accepted the property of the content of the capture of the capture than the content of the capture than the content of the capture than the capture th a comparison), need not imply a date earlier than 850-600 n.c. But V. A. Smith (*IGI*, new ed., 1908, ii. 98) supposes that the Iron Age in N. India may go back to 1500 or even 2000 B.C. The difficulty of fixing an approximate date for these amenity or fixing an approximate date for these structures largely depends upon the fact that modern tribes, like the Kols and their kinsfolk in Chotā Nāgpur, as well as the Nāgas and Khāsis of Assam, still erect stone monuments of a type closely resembling the pre-historic examples. The modern funeral monuments of the Khāsis have been fully described by Gurdon (The Khāsis, 144ff.), who divides them into three classes—those intended. who divides them into three classes—those intended as seats for the souls of the dead while their bones are being conveyed to the tribal ossuary; memorial stones erected in honour of deceased ancestors; and stones which mark tanks used for purifying the mourners from the death tabu. Many monu-ments in Madras and among the tribes of the E. frontier take the form of ossuaries, into which the

the transfer of the dead the most crude other modes of disposal of the dead the most crude

birds of prey. This custom still prevails among the Tibetans and certain tribes of the N. frontier, where it probably originated from the difficulty of providing wood for cremation, or excavating graves during the severe winter of these regions. At a later period it was re-introduced from Persia by the Parsis. Among the non-Aryan tribes of the Peninsula this method is occasionally employed for those dying in a state of tabu, as is the case with the Pahārias of Bengal, the Nāgas of Assam, and some menial tribes in the northern plains (Dalton, 274; JAI xi. 203; Rice, Essays, 60; Crooke, TC ii. 92, i. 7, iii. 144).

(d) Cairn-burial.—The idea of protecting the corpse from violation, and the desire to prevent the clust from violation, and the desire to prevent

the ghost from 'walking,' account for cairn-inter-ment, which was used by the early tribes of S. ment, which was used by the early tribes of S. India, and is found at the present time among the Bhils of Bombay (BG xii. 87), the Kachins of Upper Burma (Gazetteer Upper Burma, I. i. 393, 409), and some of the Assam tribes (Dalton, 9; Risley, TC ii. 112). From such cairns the stūpas of the Buddhists have been developed.

(e) Cave-burial.—Cave-burial, common in other regions of E. and S. Asia, does not seem to have prevailed widely in India. But it must be remembered that many caves have been occupied continuously even to the present day, and thus the evidence may have become obliterated, and numbers of them may still remain unexplored. In Malabar, however, sepulchral chambers excavated in the laterite and containing clay vessels and iron implements have been discovered; and in the same class are the pāṇḍā-kulī, the name of which is based on the absurd belief that they were the abodes of the Pāṇḍava heroes of the Mahābhārata (JAI xxv. 371 f.; Thurston, Notes, 148). See also the account of cave-burials in 'anterior India,' a region not capable of identification, by Nicolo Conti (*India in the xvth Cent.*, ed. R. H. Major, Hakluyt Soc., 1857).

(f) House-burial.—Cave-burial naturally leads

to house-burial, and the examples of this practice are abundant. More than one reason probably led to the adoption of the custom-the desire to retain the corpse in the house in the hope of its revival; the dread lest the relics might be used for purposes of black magic; or the hope that the soul of the ancestor thus buried might be re-incarnated in the person of some female member of the family. This last belief seems to be most general, and the custom, sometimes with this explanation, has been recorded among the Andamanese (JAI xii. 141, 144; Temple, Census Report, 1901, p. 65), the Nāgas of Assam (JAI xxvi. 200), the Was and allied Burman tribes (Scott, Burma, 408), and some Madras and Panjāb tribes (Thurston, Notes, 155;

PNQ i. 123).

(g) Disposal in water.—The custom of consigning the dead to water is more common. Among orthodox Hindus, the bones and ashes after cremation are deposited in a river or tank at some sacred place. Among the lower tribes, in most parts of the country, the corpse is often flung into the nearest river, sometimes after a perfunctory attempt at cremation by singeing the face and beard. It has been suggested that this method of disposal is in some cases based upon the desire to free the bones rapidly from the products of decomposition, and thus to please the privile but decomposition, and thus to placate the spirit; but more usually the intention is simply to get rid as quickly as possible of the corpse and the tabu which emanates from it. Hence it is frequently adopted in the case of those dying in a state of special tabu, as, for instance, those perishing from epidemic disease; and the bodies of sannyāsis and other holy men are frequently consigned to running water. Sometimes, again, the rite is in the nature

of sympathetic magic, as when in Bengal those dying of leprosy, on the principle of water to water, are flung into the Ganges (Asiat. Res. iv. 69;

Buchanan, E. India, i. 114).

(h) Tree-burial.—The practice of tree-burial in India seems to depend partly on the desire to placate the spirit by saving the remains from the placate the spirit by saving the remains from the attacks of wild animals, and partly on the fact that the tree is the haunt of spirits. It is found among the Andamanese, Nāgas, and Māriyā Gonds (JAI xii. 144 f., xi. 205, xxvi. 199; Dalton, 43; Census Report Assam, 1891, i. 246; Hislop, App. xiii.). Among the Khāsis of Assam the corpse is placed in a hollow tree, and the next development is the use of a tree-trunk as a coffin, as among the Nāgasand Karennis of Burma (Dalton, 56: Gazetteer Nāgasand Karennis of Burma (Dalton, 56; Gazetteer Upper Burma, I. i. 528; JAI xxvi. 199).
(i) Platform-burial.—This rite further develops

into the custom of platform-burial, which prevails among the Andamanese and some tribes on the E. frontier (JAI xii. 144; Census Report Andamans, 1901, 65; Lewin, Hill Tracts, 109). Among the E. tribes the custom of smoking the corpse is

frequently combined with this.

(j) Jar-burial.—Jar-burial, in the sense that the corpse is deposited in an earthenware vessel, does not appear to prevail at present among the non-Aryan tribes; but instances of corpses placed in large mortuary jars have been discovered in pre-historic S. Indian interments (JAI xxv. 374); and some of these terra-cotta coffins closely resemble those found in Babylonia. At present, among most tribes which practise cremation, the ashes and bones are deposited in an earthen jar before burial

or consignment to water.

(k) Contracted burials.—Besides the ordinary mode of burial in a recumbent posture, there are other methods which deserve special mention. First comes what is known as contracted burial, when the corpse is interred with the knees closely pressed against the breast. The tribal distribution of this practice does not throw much light upon its origin or significance. It is found among some of the more savage tribes, such as the Andamanese and the Pen tribe in Car Nicobar (JAI xii. 141, 144; PNQ iv. 66); and among the Lushais and Kukis of the E. frontier (Lewin, Hill Tracts, 109, Wild Races, 246). Among such people it has been suggested that it represents an attempt to prevent the ghost from 'walking'; and in some cases, among various races, the thumbs and toes of the dead are bound, apparently with this intention. Another theory is that it symbolizes the prenatal position of the child in its mother's womb. In some instances it may be due to the practical difficulty of digging a grave of the shape and size in which the body may rest in a recumbent posture; in others it may represent the position of a savage sleeping beside a camp fire. It has been adopted by some of the religious orders, like the sannyāsīs of N. India and the Shenvī Brāhmans and Lingāyats of the south. Here it probably represents the posture of the guru engaged in meditation, or lecturing to his pupils, because some of these sects place the bodies of their gurus in this posture after death, and worship them (BG XV. i. 149).

(I) Shelf or niche-burial.—Shelf-or niche-burial,

in which the corpse is deposited in a chamber or cavity excavated in the side of the perpendicular entrance to the grave, seems to be based on the intention of preventing the incumbent earth from resting upon the corpse and thus incommoding the spirit—a feeling which prevails among some wild tribes, like the Mīrīs of Assam (Dalton, 34). It is found among some of the E. and S. tribes, like the Kaupūīs of Manipur and the Paniyans of Malabar (JAI xvi. 355f.; Thurston, Notes, 144); it has been adopted by some religious or semi-religious orders,

like the Jugis of Bengal, and the Rāvals or Lingāyats (Risley, TC i. 359; Crooke, TC iii. 19; BG XVIII. i. 361); and it is the orthodox method among Muhammadans, who place the corpse in a niche (lahd) high enough to allow the spirit to rise when the dread angels, Munkar and Nakīr, come to interrogate it regarding its belief in the Prophet and his religion.
(m) Concealed burial.—Concealed burial and

(m) Conceased burnat.—Conceased burnat and the obliteration of all marks of the grave appear generally to be due to a desire to get rid of the spirit. It is found among the wilder tribes in Madras and Burna (Oppert, 199; Scott, Burna, 408).

5. Disinterment of the remains.—The practice of disinterment of the remains after decomposition has accordanced probably rests upon the heliof that the

has ceased probably rests upon the belief that the soul is immanent in the bones. The Andamanese soul is immanent in the bones. The Andamanese and the Nicobarese disinter their dead, wash the bones, and, after wrapping them in cloth or leaves, re-bury them, or fling them into the jungle, or sink them in the sea (JAI xxxii. 209, 219 f., xii. 143, iv. 465, xi. 295 f.). Among the Khāsis of Assam those who die from infectious disease are buried, the remains being dug up and cremated when danger from infection is over (Gurdon, 137). This custom leads, among some tribes, to the provision custom leads, among some tribes, to the provision of ossuaries in which the dry bones are stored. Such structures are found in E. and S. India (JAI v. 40, vii. 21 ff.). The same belief in the continued, though mysterious, oneness of the body with its severed parts leads to the formation of tribal cemeteries, to which, often from long distances, as among the Chinbons of Upper Burma and some tribes in the central hills, the bones of tribesmen are removed (Gazetteer Unper Burma, I. 467. men are removed (Gazetteer Upper Burma, I. i. 467; Dalton, 34, 262).

6. Immediate and deferred burial.—In most cases climatic conditions necessitate the immediate disposal of the remains by cremation or burial. The custom of deferred burial, in which the remains are retained in the house to enable friends from a distance to pay their last tribute of respect to the dead, is less common, and is found chiefly among the E. tribes like the Khāsis, Nāgas, or Lushais (Gurdon, 138; JAI xxvi. 195; Lewin,

Hill Tracts, 109).

7. Embalming the dead.—Customs of this kind naturally develop into the practice of embalming the dead, which is not common in India. In the form of preservation of the remains in honey or by smoking them over a slow fire, it is found only among some of the E. and Burmese tribes (Hooker, Himalayan Journals, ed. London, 1891, 486 f.; Shway Yoe [Scott], The Burman, ii. 330 f.).

8. Inhumation and cremation.—The methods of

disposal of the dead which have been considered hitherto are all more or less abnormal. The modes now generally adopted are either simple burial in a recumbent position or cremation. We may, perhaps, in consideration of the Indian evidence, assume that the most primitive form was exposure of the corpse, followed by inhumation, and then by cremation. It has often been asserted that cremation was specially an Aryan practice; but the evidence from S. India monuments indicates that possibly it was only in the case of persons of rank that cremation prevailed (cf. art. ARYAN RELIGION in vol. ii. p. 16). At the same time, the facts at our disposal do not enable us definitely to decide why cremation displaced inhumation. Among the Aryans, as Ridgeway argues (Early Age of Greece, Cambridge, 1901, i. ch. vii.), the idea that fire was the only medium by which sacrifice could reach the gods may have led

(ib. i. 539 f.), in a forest country, where the hut was consumed with the corpse to avoid tabu, there seems no reason why it may not have been independently discovered by the non-Aryan tribes. At present it is only the most primitive non-Aryan tribes and some ascetic orders who still maintain the practice of earth-burial. On the other hand, many tribes in a low state of culture who now cremate their dead may have adopted the practice under Hindu influence. No literary evidence exists by which the historical development of these customs can be traced. The transition, however, between the two forms of disposal is in many instances clearly indicated. For example, among some tribes the ordinary dead are buried, while those under tabu are cremated; or the rich are cremated, while the poor are buried; or the question which mode is to be adopted depends upon the season of the year in which the death occurs. Among some tribes we find more than one method in use. One clan of the Nagas combines platform-burial with cremation, placing the dead in open coffins raised several feet above ground, whence the remains are subsequently removed and burned close by (JAI xi. 213). The Kāmīs of Bengal burn, bury, or fling the corpse into water, as may be convenient at the time (Risley, i. 395). The Habūras of the United Provinces either cremate or expose their dead in the jungle, as best suits their nomadic habits (Crooke, TC ii. 476). The widest variety of practice appears among the Nagas, who bury, expose on a platform or in a tree, and sometimes cremate the corpse after placing it on a platform (JAI xi. 203, 213; Hodson, 146 ff.). After cremation the bones and ashes are usually deposited in a river or tank, the vessel while in process of removal to the sacred place being hung in a tree so that the spirit, when so disposed, may revisit the bones.

9. The death-tabu.—As among all races in the

y. The death-table.—As among an races in the same grade of culture, the infective table arising from the corpse is specially dreaded. All who come in contact with the dead are considered to be infected. The corpse-bearers, for instance, as among the tribes of the central hill tract, have their shoulders rubbed with oil, milk, and cow-dung by the women of the mourning family, while they are sprinkled with cow's urine from twigs of the sacred Nim tree (Melia azadirachta). The dread of the death-tabu appears throughout the rites of mourning. Thus, among some tribes a special dress is provided for the chief mourners, the intention possibly being in some cases to disguise the mourner from the ghost. With the same object the Andamanese smear their heads with clay (Temple, Census Report, 1901, p. 65). As the tabu infects the house, no cooking can be done there, and the mourners either fast or receive supplies of food from relatives or friends. Persons, again, when exposed to the death-tabu, are not allowed to leave the house or village, lest they may infect the neighbourhood. This form of tabu is specially observed by the E. tribes, like the Nāgas of Assam and the hill races of Arakan (JAI xi. 71, xxvi. 191, ii. 240; Hodson, 173f.). Tabu is also marked by the rule that mourners sleep on the ground, portly hereuse if heds are used during ground: partly because, if beds are used during this period, they too become infected; partly because spirits cannot touch Mother Earth. The continence enforced upon mourners is probably, as in the case of the sacred dairyman of the Todas (Rivers, 100 f.), a precantion against the dissipation of physical energy, all of which is needed during this critical period. By an extension of the principles of tabu, if the death-rites to the introduction of the process of cremation after the belief in an abode in the sky where the soul joined the pitri, or sainted dead, had become finally established; and, if it arose, as he argues cause the powers of the other world seem to have 1 1 1 11

rejected him as unworthy. The period of tabu varies among the different tribes, and seems usually to depend on the time during which, before the completion of the funeral rites, the spirit is supposed to haunt the neighbourhood of the place of

death or the grave.

10. Purification from the death-tabu.-Purification from tabu is effected in various ways. One method is that adopted by the Andamanese and Gonds, who quit the house of death or burn it, along with some or all of the effects of the dead man  $(JAI \times ii. 142; Hislop, 19)$ . But generally there is a special rite of purification. This usually consists in ablution, by which the clinging spirit or tabu is washed from the body of the mourner. Sometimes special substances, usually the products of the sacred cow, are used for this purpose. With the same object many touch fire on their return from the funeral, or pass their feet, which naturally are supposed to be specially liable to infection, through the smoke of burning oil. In other cases the tabu is removed by transferring it, and, by a later conception, the sins of the dead man, to a scape-animal. In its clearest form the rite appears among the Badagas of Madras (Gover, Folk-Songs of S. India, London, 1872, p. 71; Thurston, Notes, 195 f.). Traces are also found of the remarkable custom of 'sin-eating,' by which the sins of the dead are transferred to a Brāhman who eats food in the house of death, or even, as used to be the habit at Tanjore, eats the bones of the dead Raja ground up and mixed with rice (Dubois,

Manners and Customs, 1906, p. 366).

Lastly, the custom of shaving the mourner may be mentioned. The idea seems to be to get rid of the death-infection clinging to the hair, which, possibly with the same intention, is often let loose in mourning, as is the case with other persons under tabu, like the ascetic classes (Mudras Museum Bulletin, iii. 251 f.). The hair is sometimes dedicated to the dead, as in the Deccan and along the lower Himālaya (BG XVIII. i. 364, 149; NINQiii. 117), the intention being to strengthen the feeble spirit of the deceased by dedicating that portion of the human organism which, by its growth, furnishes the strongest proof of vitality (Frazer, GB, pt. i. [1911], 'The Magic Art and the Evolution of Kings,' i. 31, 102). More usually the hair is shaven after the mourning period begins, or at its close. The shaving is usually confined to the immediate relatives or kinsmen; but in some cases the whole population shave their heads and beards on the death of a Rāja, e.g. in Kashmīr and other parts of the Himālaya (NINQ iv. 18, 98;

Drew, Jummoo, 54).

Drew, Jummoo, 54).

DEATH AND DISPOSAL OF THE DEAD (Jain).—The Jains agree, on the whole, with the Brāhmans in their notions on death. The soul of every living being-the highest gods includedmust be re-born as long as it possesses karma, i.e. merit or demerit; but, when the karma has been annihilated, then the soul, on death, will enter on its innate state of purity, and will be released for ever from the cycle of births. But on some points

the Jains have developed peculiar notions.

1. Re-incarnation and liberation of the soul. According to the Jains, karma, the effect produced on the soul by its deeds during life, consists of extremely subtle matter, which pours or infiltrates into the soul when worldly actions make, as it were, an opening into it (asrava). This karma-matter, as we may call it, fills the soul as sand fills a bag, and acts on it like a weight. The soul by itself has an upward gravity (ūrdhvagurutva), and is kept down, during its worldly state, by the karma-matter, which, like all matter, has a downward gravity (adhogurutva). Therefore, if cleansed of all karma, the soul, on leaving the body, will rise in a straight line to the top of the universe, where the liberated souls reside for ever (see above, p. 160<sup>b</sup>, 'Jain cosmography')—just as a pumpkin coated with clay sinks to the bottom of a tank, but rises to the surface of the water when the clay has fallen off. But, if the soul is burdened with karma, it will, on leaving the body, move in any direction—upwards, sideways, or downwards. It does not travel in a straight line, but in a broken line, with one, two, or three angles or turns, and thus gets, in two, three, or four movements, to the place where it is to be re-incarnated. There it attracts gross matter, in order to build up a new body according to its karma.1

2. Voluntary death or euthanasia.—It is a wellknown fact that religious suicide is occasionally committed by the Hindus: under a vow to some deity they starve themselves to death, eat poison, drown themselves, enter fire, throw themselves down a precipice, etc. The Jains condemn such practices as an 'unwise death' (būlamarana), and recommend, instead, a 'wise death' (paṇḍilamarana), as provided in their sacred books.

Two cases must be distinguished: religious suicide may be resorted to in case of an emergency, or it forms the end of a regular religious career; both cases apply to laymen as well as to monks.

(1) If a Jain contracts a mortal disease, or is otherwise in danger of certain death, he may have recourse to self-starvation. This practice is frequently mentioned in Jain narratives, and prevails, no doubt, even at the present day. If a monk is unable to follow the rules of his order, or cannot any longer sustain the prescribed austerities, he should rather commit suicide than break the rules. A particular case seems to be the following. When a monk falls sick, and foresees that he will not be able to go through the 'ultimate self-mortification' to be noticed hereafter, he may keep a long fast. If he gets well in the meantime, he is to return to his former life. But, if he should not recover, but die, it is all for the best. This conditional selfstarvation is called itvara.2

(2) A pious layman may go through a regular course of religious life, the phases of which are the eleven 'standards' (pratimā); the first is to be observed for one month, the second for two months. Umāsvāti's Tattvarthādhigama Sūtra, i. 26-36 (tr. ZDMG
 [1906] 304 ft.)
 SBE xxii. 72, note 3.

and so on. In the last standard, which he must observe for eleven months, he becomes practically a monk. At the end of this period he abstains from all food and devotes himself to 'self-mortification 2 by the last emaceration, patiently awaiting his death, which will occur within a month.

In the case of a monk, the 'self-mortification'

lasts twelve years, instead of twelve months. If a monk believes himself purified to such a degree that he may enter upon this last mortification of the flesh, then he should apply to his guru, or spiritual master, who will test him in various ways before he gives him his permission. Then, for a period of twelve years, the monk has to exert himself by every means to overcome all passions, worldly feelings, desires, etc., and to annihilate his kurmu by ansterities—trying, however, to ward off a premature death. At the end of this period he should abstain from all food till his soul parts from the body. There are three different methods by which this end is brought about; they are called bhaktapratyākhyānamarana, ingitamarana, and pādapopagamana of which the last two are distinguished by the restriction of the movement of the person, and the motion of his limbs.

The rules for religious suicide form the subject of three canonical books—Chausarana, Aurapach-

chakkhāṇa, and Bhattaparinna.

LITERATURE.—This has been sufficiently indicated in the rticle.

H. JACOBI.

DEATH AND DISPOSAL OF THE DEAD (Japanese).—I. GENERAL.4—The oldest traditions respecting burial speak of a moya ('hut'), in which the body of the deceased was kept, often for a very long time (e.g. that of Jimmu Tennö is said to have been kept for 19 months in the moya); of religious dances and music; of an eulogy or elegy (shinubi-kotoba) pronounced by the head of the family; and of a funeral feast or wake. They also tell of the practice of the self-immolation of wives, retainers, and servants at the grave of a husband or master. The advent of Buddhism in the 6th cent. A.D. brought in certain limitations and modifications. Cremation was introduced in A.D. 703; from that date to 1644 all the Emperors were cremated. Funeral regulations concerning, e.g., periods of mourning, etc., have existed since the 10th cent.; the self-immolation of retainers began to lose favour in the 14th cent., and was prohibited by Iyeyasu, though it still continued sporadically for some time. During the whole of the Tokugawa period only members of the Imperial House were buried with Shinto rites, and even the present forms of Shinto funerals date from the same period.

We will suppose the patient to have been given up by his medical attendant. Relatives and friends stand around his bed, watching his last struggles. Some of them moisten his lips with drops of water conveyed on a feather (matsugo no mizu, 'water of the last moment'), others gently rub his eyelids and lips with their hands, so that mouth and eyes may keep shut the more readily after death has taken place. In the province of Iyo, in Shikoku (a district in which there are many quaint survivals), efforts are sometimes made to retain the dying soul, especially when there still remains some communication to be made by or to the man at the point of death. Three men climb

to the roof of the house, sit astride on the roof-ridge. and cry aloud: 'Come back, So and So, come back once more.' Nobody inside the house is supposed to have heard the cry, but the dying man will revive for a little, and his spirit will linger for an hour or two before taking its final departure.

After death, the corpse, which is washed by all Buddhist sects, but not universally by the Shinto (some sects apparently being contented with rubbing with a wet cloth), is laid out, with its face covered with a piece of white cotton or silk, and placed on a mat in some suitable place, very often in front of the toko-no-ma ('alcove'), in the best sitting-room. The corpse lies with its head to the north (as did that of Buddha), either on its back (Buddhist) or facing the west. At its head is placed a mirror, and a sword for protection (the latter especially in the case of a samurai). Round the corpse is a screen. Outside the screen is an eight-legged table (Shinto) with offerings of washed rice, fresh water, salt, fish, and a tamashiro, etc. In Buddhist houses there is no necessity for the table to have exactly eight legs, but the offerings are so placed that the deceased may be what to be considered to the table to contain the problem to the deceased may be able to see them. On the Buddhist table stands an ihai, or tablet, inscribed with the postlumous name of the deceased, offerings of vegetable foods (kumotsu), and, in a vase, a single branch of shikimi (Chinese anise). The single branch or stem is so specially associated with funerals that on other occasions a Japanese housewife will not use a single branch for room-decoration.

Both in Shinto and in Buddhism a kind of fiction is kept up, during the days intervening between death and burial, that the spirit is still present with the body. Meals are brought at stated intervals, the corpse is sometimes rolled from side to side, under pretence of giving it ease in lying, and conversation is kept up with it as though it

were still alive.

The corpse is dressed, in Shinto, in (1) a tafusagi, a kind of apron tied round the waist; (2) a hadage or shirt, reaching down to the knees; (3 and 4) a shitagi and an uwagi, a lower and an upper gar-ment, corresponding to the kami-shimo (lit. 'upper and lower') of ancient Japanese dress; (5) an obi, or belt; and (6) shitugutsu, or shoes. A corpse is never dressed in ceremonial clothes or uniform. These are placed in the coffin later. In Buddhist houses the garments are very much the same, only that a distinction is made between winter and summer garments, which may be either of white cotton or of silk (a further development of the fiction of the continued presence of the spirit in the body). But the garments are put on inside out, with the seams showing, and they are worn hidarima, folded to the left, instead of to the right, as in life. At different parts of the garments are stitched the formulæ Namu Amida Butsu ('Glory to Amida the Buddha'), or Namu myō hō rengekyō ('Glory to the Mystic Scripture of the Lotus of the True Law'), which are said to be

Lotus of the True Law'), which are said to be

1 The tandshiro is a wooden tablet, just like the Buddhist
that, except that it contains the actual name of the deceased,
and not the kaimyō ('posthumous name'). When the sick
person is about to draw his last breath, the head of the family,
or the person whose duty it will be to perform the funeral ceremonies (moshu), washes his hands, changes his clothes, places
the tablet on a low table by the bedside, and then, taking it up
again, carries it to the sickbed, and there respectfully writes on
it the sick man's name. Then, addressing the dying man, he
announces to him that the tanashiro has been prepared as a
place of residence for his spirit: 'With all respect I address
thee. Suffer thy excellent spirit to remain in this tablet, and
accept the worship which will henceforth be perpetually offered
before it by thy posterity in future ages.' Then, gently clapping
his hands, he bows once and retires. The tamashiro is then
put in a wooden box, or covered with a cloth, and placed, facing
the south, on a low table in another room, where offerings are
made before it. The Buddhist ihat (which is made in duplicate)
cannot be prepared until after the priests have been called in to
select a posthumous name for the deceased.

4 The present writer is under great obligation to Dr. Ohrt, of the German Embassy in Tokyo, for permission to consult the MS of two lectures delivered before the Deutsche Gesellschaft für Natur- und Velkerkunde Ostasiens in Tokyo, during the winter of 1999-10.

potent protectors of the soul. In addition to the other garments, the Buddhists dress their corpses in straw sandals (warnji) and socks (tabi), the sandals being put on behind before. The corpse is also provided with a dzudabukuro, or bag, containing the rokumonsen, or six pieces of money required for the ferry across the Sandzunogawa, or Japanese Styx. Originally these were six pieces of actual money; at a later period six pieces of paper, cut and stamped in imitation of actual coins, were used; the present rokumonsen is simply a piece of paper with the representations of six coins stamped on it. The number of coins is not always the same -6, 12, 18, 49, according to circumstances; and the dzudabukuro, which is really an ascetic pilgrim's bag, contains all manner of things necessary for the long journey now commencing—the first lock of hair cut from the head of the deceased in informer, bits of his head and infancy, bits of his beard, nail-parings, teeth, a rosary, 'letters of orders' (kechi-myaku), a tobaccopouch, a comb, pins, needles, threads, a single change of garments, and a towel; but there must not be more than one of each of these things. When a husband dies, a wife cuts off her hair and puts it into the bag; when a father dies, the children cut their nails and put the parings into

In some houses, when a death occurs, a noticekichū ('period of mourning')—is posted at the entrance as a notification to visitors. the busiest thoroughfares of Tokyo the present writer recently observed an expansion of this idea. In addition to the kichū notification, there was a little white table standing in the street, with a white cloth over it, a bowl, and a flowervase containing a single branch of shikimi.

One of the first things to be done after a death is the notification to the authorities. This is made, first of all, to the headman or mayor of the village or urban district, while in the case of the Shinto it is also made to the priest of the ujigami shrine (i.e. the shrine of the tutelary god of the village or family). Should that shrine be at an inconvenient distance from the deceased's residence, some other temple near by is selected. The Shinto clergy do not, however, have much to do with the arrangements for the funeral, although, as a matter of course, they have a voice in the selection of the day for the funeral obsequies.

In Buddhist funerals the priests play a larger part, and in former days their rôle was more important even than it is now. This may be seen in the fact that in some very ancient temples there may still be found a yukamba ('bath-room'), in which the ceremony of washing the dead (yukan) was carried on under their directions. (The washing ceremony takes place after midnight; a new wash-tub, pail, dipper, and towel are used, and, after the washing is over, all these utensils, together with any hair, nails, etc., taken from the body, are buried in some secluded spot.) The intervention of the priesthood is also necessary for the ceremonial shaving of the corpse, since shaving is the sign of ordination, and it is the theory of all Buddhist sects that the Buddhist Iayman passes at his death into the Order of Monks. When the shaving ceremony is over, the priests prepare a kechi-myaku, (lit. 'letters of orders,' i.e. 'certificate of ordination'), which, as we saw above, is placed in the dzudabukuro for use during the soul's pilgrimage in the realway of the dead in the realms of the dead.

The priests are also consulted about the selection of a day suitable for the funeral, and about the posthumous name to be given to the deceased. Government regulations and sanitary requirements interfere somewhat (not much) with the absolute freedom of choice of a propitious day, and attempts are made to get the funeral fixed for some time

within 24 hours after death. But these regulations are more frequently honoured in the breach than in the observance, and an interval of many days sometimes occurs. (The difficulty is occasionally got over by postponing the formal announcement of the death until all the necessary arrangements for the funeral have been made.) In addition to the ordinary cycle of the seven days of the week, there is another cycle of six days (generally to be found in the almanaes), according to which the propitious and unpropitious days are selected. The names of these six days are sensho, tomobiki, sempu, butsumetsu, daian, and shakkō;¹ a tomobiki day is never selected for a funeral. The posthumous name is always one with a religious meaning, and it is also so formed as to mark the sect to which the deceased belonged. Thus yo always appears in the posthumous name of a Jodo believer, and nichi and zen in those of Nichiren and Zen believers respectively, but it is not always the case with the latter. Appended to the posthumous name is a designation of the deceased's status: koji ('landlord') and daishi ('landlady') for a gentleman and lady of high rank; shinji ('laynan') and shinnyo ('laywoman') for ordinary men and women; doji ('lad') for a boy; donyo ('lass') for a girl. The posthumous name is inscribed on the ihai, which is executed in duplicate, one being retained in the house, while the other goes to the funeral and is deposited in the temple. At the end of 100 days after death, lacquered ihai take the place of the plain wooden ones first used. In the same way, in Shinto rites, the tamashiro is at first placed in a 'temporary soul-receptacle' (karimitamaya); at the end of 50 days it is placed in a 'permanent soul-receptacle' (mitamaya). In some Buddhist families there is a large family ihai, on which the names of all the deceased members are inscribed, 100 days after death. It should be noticed that some Buddhist sects, e.g. the Shinshu, speak of two kinds of posthumous names: the kaimyō, given by the priests; and the hōmyō, given to the soul in Paradise by Amida himself—a kind of 'new name which no man knoweth saving he that receiveth it.

Notice is now sent, by post-card or otherwise, to friends and relatives, announcing the decease. is customary to pay visits of condolence, and to send presents to the house of the deceased. The nature and manner of presenting these gifts are fixed by custom, but it is very common at the present day to offer money in lieu of other gifts a kindly tribute which is always very acceptable in view of the heavy expenses which a Japanese funeral entails.2

1 The cycle of six days (see the talismanic tables in books on magic, e.g. Barrett's Magus, 1801) depends on the six elements common to Kabbala, Gnosticism, and Shingonism, which are symbolized by the term Abarakaka, to which reference is made in this article. It is one of the many links connecting the Mahāyāna with the Judæo-Gnostic thought of the New Testament times.

Malayana with the Judwo-Gnostic thought of the New Testament times.

The days are (1.) Senshō, 'first half good.' A senshō day is good for pressing and urgent business during the forenoon, but not after midday. By urgent business, lawsuits, petitions, etc., are meant. (ii.) Tomobiks, 'drawing friendship.' These days are good in the forenoon or evening, but not in the afternoon. There is no contest about anything. The day brings its own luck, and no amount of human striving will alter it. (iii.) Sempu, 'first half bad.' No urgent business should be undertaken on such a day. The afternoon is, however, lucky, (iv.) Butsumetsu, 'destruction of Buddha.' A sort of unlucky Friday. Nothing done on such a day will prosper. (v.) Datan, 'great peace.' Very lucky for anything, especially removals or journeys; of the old seaman's superstition about starting on a journey on Sunday. (vi.) Sekbo, 'red mouth.' With the exception of the noontide hour, the whole of this day is unlucky. In the cheap Japanese calendars (koyomi) each day is marked according to this sixfold cycle.

2 E. Schiller, 'Japan. Geschenksitten,' in vol. viii. of the Mitteil. der deutschen Gesellsch. für Natur- und Völkerkunde. Ostassiens; cf. also A. H. Lay, 'Funeral Customs of the Japanese,' in TASJ, vol. xix. pt. iii. The subject is a very large one, and beyond the limits of this article.

In due course the body is placed in the coffin. Coffins (hitsugi or kwan, the former distinctively Shintoist) are of two kinds—nekwan ('sleeping coffin') and zakwan ('sitting coffin'). In the the former, in a recumbent one. At the bottom of the coffin is placed a piece of white cotton cloth, 4 hand-breadths wide, and 8 shaku (Jap. feet) in length; over this, a white futon and fusuma ('quilt' and 'coverlet'), and a pillow. Then the corpse is put in, together with any objects, c.g. an inkstand or photographs, prized by the deceased during life; and the whole is filled up with buckwheat husks to keep the body from moving. No metal object may be put into the coffin. The interval between the encoffinment and the funeral is the most important period of the watching by the dead. It was a period of festivity in the old Shinto, but is now generally passed in silence: in the Buddhist tsūya ('wake') the silence is broken by the voices of the priests who are summoned on the last night to read Sūtras by the side of the deceased and for his benefit. This is known as makuragyō, 2 or 'pillow-Scripture,' and is accompanied by much burning of incense. Entertainments are provided for the guests. The lawfulness of the officiating priests partaking in these festivities is frequently discussed in Buddhist magazines. Very often the priest is provided with his meal apart from the laity, who do not begin until the clergy have finished; and an attempt is sometimes made to save appearances by drinking the saké out of tea-cups.

There are several strange old customs with regard to the choice of a location for the grave. Thus, in some of the remote mountain-villages in Tosa, while the corpse is still lying outstretched on the rush-mat, one of the near relatives kicks the pillow from under its head and carries it off to the cemetery. When he has selected the proper place for the grave, he puts down the pillow there, and, taking out four small coins, throws them east, north, west, and south. 'With these coins,' he says, 'I buy seven square feet of ground from the god of the earth.' Another old custom, still surviving in remote districts, is for a person not connected with the deceased by blood, and therefore free from death pollution, to sweep the ground selected for the grave, to spread a rush-mat on it, and on a table placed on the mat to erect a himorogi ('temporary tabernacle') for the earth-god. This is done by setting up sakaki branches with little

is done by setting up sakaki branches with little paper pendants (musa), etc., and by making ofierings of rice, fish, vegetables, seaweed, and fruit. Then he offers the following prayer:

'I address the great god who is the lord of this locality. A new grave is here to be made for N. (name, office, rank). With an offering of wine, boiled rice, and musa, I pray thee to grant that he may lie in this grave for ever, free from affliction and in peace. I speak with all respect and humility.'

Then he clasps his hands and bows twice.

When the preparations for the funeral are all complete, the coffin is carried into a front chamber, and incense, lights, and a single flower are again

and incense, lights, and a single flower are again offered before it. A set of zen is also provided. In this case, the zen consists of a bowl of unhulled boiled rice (kurogome no meski), soup, raw miso ('bean-paste'), unrefined salt, and a pair of chopsticks, one of which is made of wood and the other of bamboo. Everything is now in readiness for the funeral ceremony. From this point sectarian differ-ences become more marked, and it will be well to treat of Japanese funerals in detail according to the various sects.

the various sects.

1 In certain Buddhist sects a pilgrim's staff and a doll are also put into the coffin (Ohrt).

2 The Sütra varies with the sect. In the Zen sect it is Yuikyō (Eka-Sütra); in the Shingon, Rishukyō (Buddhi-Sütra). These Sütras, which do not exist in Sanskrit tor Pāli, are said to have been preached by Sükyamuni shortly before his entry into Niryāṇa. They are classified under the Nehangyō or Niryāṇa Sūtras

II. SHINTO.—A purely Shinto funeral is divided into five distinct portions: (a) mitamautsushi, or introduction of the spirit into the tamashiro; (b) shukkwan, or taking the coffin out of the house; (c) soso, or funeral procession; (d) maiso, or committal to earth; and (e) the subsequent purifica-The actual ceremonies are conducted by the moshu ('chief mourner'), who is generally the heir, eldest son, or other near relative. Relatives in the ascending line are generally excluded. Recently, when H.I.H. Prince Arisugawa lost his son, the moshu was Prince Ito. The moshu is dressed in a dress of some dark colour, over which is worn a white hitatare ('surplice') and an aboshi ('mitre'). In the middle classes, however, the ordinary haori ('upper garment') and hahama ('nether garment') are frequently worn.

(a) The mitamautsushi takes place apparently as soon as the tamashiro is provided. The moshu (sometimes a kannushi, 'priest') sits down before the tamashiro, bows twice, claps his hands, and announces that the spirit (tama) of the deceased has taken up its abode in the tamashiro. This is

has taken up its abode in the tamashiro. This is known as the zokuji, and the following norito ('prayer' [Shinto]) is used (tr. by Ohrt):

'Alas' my (tather), thou hast been taken away from us. I, N. N., and the rest of us that remain behind, will still continue to do thee faithful service in our hearts. Thy life has come to its close upon earth. Hear us in thy place of rest, as we celebrate thy obsequies. Deign, exalted spirit, to take up thy abode in thus tamashiro, and remain at rest for ever in this thy house. I address thee with the deepest reverence.'

This norito is frequently repeated, as well as the invitation to the soul to participate in the feast.

invitation to the soul to participate in the feast. The tamashiro is then placed on the kamidana, or

god-shelf,' used in Shinto houses.

(b) Shukkwan.—Before the bier is taken out of the house, offerings of boiled rice, saké, etc., are again made. Then the celebrant seats himself before the bier, bows, claps his hands, and, presenting a tamagushi, addresses the spirit with the following norito:

following nortio:

'This day, as the sun sets, we shall reverently celebrate thy obsequies. We pray thee to behold us in peace and without anxiety, as we start on our journey and pursue our way (to the cemetery). I speak with deep reverence and humility.'

Then he bows twice, claps his hands, and retires. All relatives present do the same. After this, four men, dressed in white, carry the coffin into the court-yard, where a fire is burning (on the theory of a midnight funeral), and the procession is formed in the following order: (1) coolies (or outriders); (2) coolies carrying torches or lanterns (still on the theory of the midnight funeral); (3) servant with a broom (relic of the old custom mentioned above); (4) white banner, 15 in. in width by 8 or 9 ft. in length, carried on a pole, and inscribed with the name and title of the deceased; (5) bearers with consecrated branches of the sakaki tree; (6) chest with offerings; (7) bearers with torches and lanterns; (8) the coffin (if a zakwan, it is carried in a kago ['litter']; if a nekwan, on a bier of white wood; it is carried on the shoulders of bearers in white surplices); (9) bohyo, a post, inscribed with the name, to be set up as a temporary mark for the grave; and (10) the chief and other mourners, on foot, as a general rule. Trestles (koshidai), a table for offerings, hangings, and a wooden pail and dipper also form part of the paraphernalia, but are now more generally found at the place of interment.

(c) The soso no shiki is generally celebrated within a curtained enclosure, though in Tokyo and other large places there are mortuary chapels to serve the purpose. The enclosure, or chapel, is invariably arranged in accordance with the annexed plan, the ritual observed in the chapel differing very slightly from that in the enclosure.

As the funeral procession arrives, the musicians take their seats and begin to play. During this 1.6.e. a conscrated branch adorned with numerous pendants and streamers of paper.

time the bier is placed in its proper place, the flower-standards are arranged, and a high stand is erected, from which a pendant will later be suspended. When every one is seated, the celebrant, with his assistant, advances before the bier and bows. During this ceremony the music has ceased, but it begins again as soon as the priests return to their places.

The assistant now takes his place before the bier, but a little to the right of it. Acolytes bring a banner for the stand, and offerings to be placed on the table—saké, boiled rice, fresh fish, vegetables, seawed, cakes, fruit, etc. Again the music ceases, while the chief celebrant advances once more, and, with his mace on his left hip, commences the repetition of certain prayers, which contain a recital of the dead man's birth, lineage, school-life, and career, official or otherwise, and conclude with words much to this effect:

'Our honoured N. has passed away to our great regret; to our sorrow he has given up the ghost. The prayer of our inmost

lid. Then the grave is filled up, and on the new-made mound is planted the bohyō, a few lanterns, and banners. An open shed resting on four pillars is sometimes built over it, and generally it is surrounded with a magaki ('bamboo fence'), and a shime ('cordon') of rice-straw string.

The Shinto ritual does not contemplate crema-

The Shinto ritual does not contemplate cremation, but it is sometimes adopted. In that case the maisō-no-kotoba and the ritual that follows are used at the time of the interment of the ashes.

(e) The purificatory rites are of two kinds—of the house and of the mourners. The house is purified, immediately after the corpse has been taken out, by a Shinto priest, who comes in and waves a tumagushi in every direction, though sometimes the purification is accomplished by the priest's rinsing his mouth with water and throwing salt over his head.

The mourners are purified on their return from the funeral. (The return journey is always by a different road from that taken when going to

heart was that he might live to very great age, but it is the way of the fleeting world that he should come to this. Our prayer is that he will regard with tranquil eyes the obsequies we are now performing, and lie down to rest in his grave, leaving his spirit behind him to guard the house. Reverently and with humility I make this prayer.'

This prayer is known as the maisō-no-kotoba ('words of committed'). Everywholds the live is the way of the committed of the second committed of

This prayer is known as the maisō-no-kotoba ('words of committal'). Everybody stands while it is being offered. When the music begins again, the chief mourner, habited in black with a white surplice, and wearing a black eboshi ('mitre') and straw sandals, comes forward and offers a branch of sakaki as a tamagushi. All the relatives and friends follow this example, the attendant priests having a large number in readiness for the needs of the visitors. Funeral orations are delivered, sometimes before and sometimes after the offering of the tamagushi.

(d) Maisō.—The coffin is now carried to the grave, and lowered into it, with few or no ceremonies. A few handfuls of earth are thrown upon it, and a boshi, 'plate,' inscribed with the name, age, rank, etc., of the deceased, is put on the coffin-

the funeral.) There are apparently three methods of purifying persons, viz. (1 and 2) the methods observed in purifying a house, and (3) a slightly more elaborate one. Offerings are placed before the tamashiro, and in front of them a branch of sakaki. The priest (or the moshu) recites the following norito:

'I thus address the spirit of (my father) who has now become a god. I prayed day and night that thou mightest live to be a hundred years old, and now I can but weep and lament that thou hast left this beautiful world, and gone to the dark land beyond. I beseech thee, listen in peace to us thy relatives assembled here, as we celebrate the worship of the dead with all manner of food.'

Then the offerings are removed.

The first lifty days after death are observed according to the Shinto rituals with daily offerings before the tamashiro. Special emphasis is laid on the 10th, 20th, 30th, etc. On the liftleth day, the tamashiro is removed from its temporary shrine to the mitamaya or kabyō ('spirit-house'), and henceforth the worship of the spirit is performed along with that of the other ancestors. On this occasion,

the saishi-no-kotoba are used-prayers asking the spirit of the deceased to take up his abode in the kabyo, and beseeching the whole body of the ancestors to receive him into their company. Similar cestors to receive him into their company. Similar prayers are offered on the 100th day after death. On that day the temporary post should be removed from the grave, and a stone monument set up. The first anniversary is observed; after that, the anniversaries of the 3rd, 5th, 10th, 20th, 30th, 40th, 50th, and 100th years. After that, there is a commemoration every 100 years. The reader will understand that it is only in very exalted families that such minutiæ can be attended to, but the Shinto funeral is in any case almost entirely confined to the highest classes. fined to the highest classes.

III. BUDDHIST.—Something has already been said about customs observed in Buddhist houses in the care of the dead. The general procession is somewhat as follows (it is more striking to the eye by reason of the greater splendour of vestments, etc.): (1) bearers with natural flowers (seikwa); (2) bearers with artificial flowers (tsukuri-bana); (3) four (sometimes two) paper dragons on poles (jatō), these being evidently connected with the friendly Nāgas of Indian Buddhism; (4) banner (meiki), with the personal name of the deceased; (5) the officiant priest (dōshi), with his assistant (mukaisō); (6) white paper lanterns; (7) one ihai (the other is left at home); (8) incense (kōro); (9) the coffin on a bier borne on men's shoulders sayd the coffin on a bier, borne on men's shoulders, and with a few friends of the deceased walking beside it; and (10) the mourners (generally in jinrikisha). A bird-cage full of birds to be released at the grave-side, and a sotoba or stupa, actually a post, notched near the top, and inscribed with Sanskrit characters, often form portions of the procession.<sup>1</sup>
1. Ceremonies of the Zen.<sup>2</sup>—(1) The service in

1. Ceremones of the Zen.—(1) The service in the house.—In this sect, the officiating priest is generally called the indōshi, because a large part of his duty is supposed to be to guide (indō suru) the soul of the deceased on its voyage through the realms of the dead. The indōshi begins by laying his hossu ('chowry,' a brush made of long white hair) on the lid of the coffin, as a sign of authority. Then he takes up the recor that he sheen used to Then he takes up the razor that has been used to shave the deceased. This is followed by the words:

Teijo shuhatsu Tōgwan shujō Yōri bonnō Xugyō jakumetsu: 'The hair and beard have been shaved. I pray that all creatures may forsake evil passions for ever, and reach the goal of annihilation.'

This verse is sung three times, sometimes by the officiant alone, sometimes by the officiant and chorus. Next follows, sung or said in the same manner:

Ruten sangaichū Onnai funōdan Kion nyūmui Shinjitsu hōon sho: 'Whilst transmigrating through the Three Worlds, ties of kindness and affection cannot be cut off. He who has cut off this tie, and entered the realm of the unconditioned, is truly a grateful man.

Now follows an exhortation to the deceased to confess his sins:

'Young man of good birth' [it will be remembered that the deceased is supposed to have received the tonsure], 'if thou wish to stand fast in the Refuges and to observe the commandments, thou shouldest first confess all thy sins. [There are two formule of penitence; there is also the form of confession which has come from the former Buddhas and been handed down by successive patriarchs.] All thy sins will be pardoned. Recite these words after me.'

Then the priest recites the confession, with the sound of clappers (kaishaku) once at the end of

1 The Sanskrit characters are Kha la ka va a, representing 1 The Sanskrit characters are Kha la ka va a, representing the five skandhas (forms of mundane consciousness), and, as an alternative, the five elements which compose the universe. In Shingon, we have the pair of formula A-ba-va-ka-kta and Kha-la-ka-va-a: in Irenzus, the Gnostic terms Abrazus and Caulacau (Irenzus says that Caulacau = 'mundus' [cf. vol. ii. p. 428, note]). See the present writer's The Fath of Half Japan, London, 1911.

Twe take the Zen first, not as being the oldest of the now existing sects, but as representing most specially the purely Indian side of Japanese Buddhism.

The each line, and twice at the end of the stanza. spirit of the deceased is supposed to join him in his recitation:

'All the evil karma, which I have accumulated in the past, has had its origin in desire, hatred, or ignorance, in a series of previous existences which has had no beginning. It is due to the body, the tongue, and the mind. All this I confess.'

The priest continues:

'Thou hast confessed the veil deeds of body, tongue, and mind, and hast obtained the perfect purification. Now, therefore, thou must stand fast in the Three Refuges, in Buddha, the Law, and the Order. The Three Treasures have a threefold virtue, the threefold absolute virtue, the threefold virtue as it was in Buddha's time, the threefold virtue as it is in a time when there is no Buddha (ittai sambō, genzen sambō, jūji sambō). When thou hast taken refuge in them, thy virtues shall be completed.'

Recitation of the ninefold Creed follows:

Namukie Butsu, 'Glory to Buddha in whom I take refuge.' Namukie Hō, 'Glory to the Law in which I take refuge.' Namukie Sō, ' , Order Namukie Sō, ' ,, Order ,, Kie-butsu-mudō-son, 'I take refuge in Buddha, the super-

eminent.'

Riv-hō-ri-yin-son, 'I take refuge in the Law, the undefiled.'

Kie-sō-vivagō-son, ', ", the Order, the harmoni

Nie-buk-kyō, 'I have finished taking refuge in Buddha.'
Kie-hō-kyō, ', the Law.'
Kie-sō-kyō, ', ', the Order the Law.'

[After each sentence the clapper sounds once; at the end it is sounded twice.]

The officiant goes on:

'After this wise have I now conferred on thee the Retuges. Henceforth, the Tathāgata [the Buddha], the Truest, the Perfectly-Enlightened is thy Teacher. Put no faith in the Tempter, nor in any heretical teachers, but have respect to the great Benevolence, Deliverance, and Compassion that have been vouchsafed thee. Now will I recite for thee the ten grave commandments. They are these:

1. fusesshō, "thou shalt not destroy life."

2. fushbūtā " steal."

1. fusesskō, 2. fuckūtō, 3. fujainā, commit fornication or adul-

4. fumögo, " 5. fukoshu, " 6. fusekkwa, " 7. fujisankita," lie. sell intoxicating liquors."

backbite."
praise self at the expense of others." 8. fukenhözai, " be grudging of the gifts of the Law."

9. fushin-i, "10. fuhōsambō," be angry."
speak evil of the Three
Treasures."

Treasures."
These ten grave commandments have been formulated by previous Buddhas and handed down by successive Patriarchs. I have now entrusted them to thee. Keep them well in all thy existences until thou attain to the Buddhahood. [This formula may be repeated at the discretion of the celebrant.] Sentient beings that fulfil the Commandments of Buddha are placed in the same rank with Him. He that is in the same rank as the Perfectly Enlightened One is truly a Son of Buddha.'

[Wooden clappers twice, handbell thrice.]

The priests present now chant a stanza known as the daihishu. When it is finished, a priest (not the one who led the service before) takes up his word:

'After this wise has been sung the *dathishu*. The merits arising therefrom are to be transferred to N. [here insert the *kaimyo*], newly returned to the elements. We pray that when we place his body in the coffin the Sambhoga land may receive him.'

Then all together:

'All the Buddhas in the Ten Directions and in the Three Worlds, all the Honourable Bodhisativas and Mahāsativas, and Mahāprajūāpāramitā, the land of the Sambhoga Kāya.'

Mahāprajūāpāramitā, the land of the Sambhoga Kāya.

The same priest continues:

'It we meditate deeply on these things, lo! birth and death succeed each other as heat follows cold. They come like the lightning flashing over the deep sky, their going is like the cessation of waves on the great sea. The newly deceased N. has this day suddenly come to the end of his life, by reason of the exhaustion of all seeds of existence. He understands that all composite objects must be dissolved, and is convinced that the extinction (of the seeds of existence) is bilss. The holy congregation here assembled will respectfully recite the names of the saints. May the blessings resulting from that recitation serve to adorn the road leading to Nirvāya.

Vairochana, the Buddha of the Holy Dharmakāya. Rachana, the Buddha of the Perfect Sambhogakāya. Sākyamuni, the Buddha, whose Nirmāyakāya Incarnations are hundreds upon hundreds of millions.

Honourable Maitreya Buddha, for whose coming we wait. All Buddhas in the Ten Quarters and the Three Worlds. Mahāyāna-Saddharmiapundarikā Sūtra (personified).

Mahāyāna-Saddharmiapundarikā Sūtra (personified).

Mahāyāna Samantabhadra Bodhisattva. Mahākāruṇika Avalokīteśvara Bodhisattva. Honourable Bodhisattvas and Mahāsattvas. Mahāprajñāpāramīta.

[Here follows the shariraimon, or stanza for worshipping the relics of Buddha.]

One priest alone:

One priest alone:

'After this wise the Names of the Holy Ones have been recited, and the Sütra has been chanted. The merits arising therefrom will be transferred to the newly-deceased N. to adorn the Sambhoga land, with the prayer that the soul may travel beyond the consecrated border (of personified existence), that its karna may be exhausted, that a superior lotus flower may open for it, and that the Buddha may give it a prediction for life. Once more the Holy Assemblage is invited to chant.' All present:

'All the Buddhas in the Ten Quarters and the Three Worlds, all the Bodhisativas, Mahāsativas, and Mahāprajūāpāramita.'

Then the indōshi:

'We are now about to lift the sacred coffin, and to celebrate imposing obsequies. The assembly is implored to recite the great names of saints, and to assist the soul of the deceased along the road to Nirvapa.'

This ends the makuragyō, or service in the house. The procession is now formed outside, and, when the coffin has been put on the bier, a start is made

for the temple or graveyard.

(2) The services in the temple.—Whilst the procession, professedly modelled on the funeral of Suddhodana (the father of the Buddha), is making its way to the temple, certain preparations have been made for its reception. The temple-bell has been made for its reception. The temple-bell has been set tolling, and goes on until the cortège reaches the front gates. In the court-yard four small torii ('gates') of wood have been erected facing E., S., W., and N. On each is suspended a tablet with an inscription: (1) Hosshimmon, the gate of religious awakening; (2) Shagyōmon, the gate of religious practices; (3) Bodaimon, the gate of Bodhi; and (4) Nehammon, the gate of Nirvāna. They are symbolical of the various ways that lead to Efernal Life and the coffin is carried three to Eternal Life, and the coffin is carried three times round to them all to show that, in the opinion of the Zen, all four are necessary. The ceremony may be held either in the main hall of the temple or in an open court-yard.

the temple or in an open court-yard.

While the procession is making its round of the four torii, some of the priests slip into the temple or hall, and begin the recital of certain dhāranī ('secret formulæ'). These are supposed to be very efficacious, even by the Zen sect, which originated in a protest against the magic formulæ that were so rife in the China of the 6th cent. A.D. Gradually the assembly take their seats; when all are seated and the music and chanting have come to an end and the music and chanting have come to an end, the indōshi recites the indō, or 'guiding words, for the benefit of the soul of the deceased. Then Then

for the benefit of the soul of the deceased. Then another priest says:

'This day the newly-deceased N., having exhausted all the causes of life (Skr. yratyaya), has entered Nirvāna, and is now to be buried according to the Law. His phenomenal body, the body that endures for a hundred years, will be buried; the real Self will be sent to tread the lone path that leads to Nirvāna. The holy assembly (of monks) is therefore prayed to assist the soul that is being enlightened, and to recite.'

Here all the priests present take up their cue and regite:

'Vairochana, the Buddha of the Holy Dharmakāya,' etc., as above.

above.

The priest resumes:

'After this wise have the holy Names been praised, and the soul that is being enlightened has been helped. Let us pray that the mirror of Wisdom may shed its brightness on him, that the wind of Truth may watt on him its splendours. In the garden of Bodhi ('infinite knowledge') may the flowers of Enlightenment and Wisdom bloom, and on the sea of reality may the waves roll free from every stain. We offer three oups of tea, we offer incense to accompany him along the solitary, clouded path, and we worship the assemblage of the saints.'
Here the congregation recites the Ryōgonshu; then the priest alone: then the priest alone:

'After this wise have the names of the Holy Ones been chanted and the Sutra been recited. The merits accruing from this act of worship are to be transferred (\$\delta b\$) to the newly-deceased N, at the time of his interment, to adorn the Sambhoga land.'

Chorus of attendant priests:

'All the Buddhas in the Ten Quarters,' etc., as above.

Small bells, drums, and cymbals are beaten in chorus three times, and the coffin is taken away

for cremation or [and] interment.

No special ceremonies are observed in cremation. When the body (or the ashes, as the case may be) comes to the place of interment, it is lowered into its grave by the nearest kinsman. All the banners are placed on the coffin-lid, and the relatives each

take a handful or spadeful of earth, which they throw into the grave. The grave is then filled up.

2. Ceremonies of the Shingon.—We now come to a sect whose ceremonies it is most difficult to describe, for the reason that a great deal is done by dumb show, the so-called mudrā, 'signs of the hand,' being matters of prime importance in these ceremonics. Great stress also is laid on the recital of mystic formulæ in debased Sanskrit, which it is not always easy to understand. Some of these formulæ are secret, and may not be revealed to the general public. [For all these the student is referred to vol. viii. of the Annales du Musée Guimet.] The Shingon sect is in many ways the most interesting of all the Buddhist sects in Japan; for not only has it been the great inspirer of Japanese art, but it has certain most striking resemblances both to Alexandrian Gnosticism and to the Jewish Kabbala. These will be duly pointed

out as they occur.

(1) Ceremonies in the house. 1—A temporary place of worship having been arranged, when the service is about to commence, the officiant, also called indöshi, goes before the coffin with the long-handled incense-burner in his hand, and makes a bow. Then he takes his seat on the raiban ('exalted seat of worship'), rubs his hands with dzukō ('liquid incense'), and spends some moments in meditation, the subjects of which are supposed to be the three secrets' (i.e. the secret dhāraṇī, the secret manual acts, and the secret teachings which have been committed to him); the 'way of purifying the three deeds, i.e. of body, mouth, and heart; the 'three sections,' i.e. the world of Buddhas, the world of the Lotus, and the Diamond World; and the 'putting on of spiritual armour.' All these meditations are exhibited by the corresponding formulæ and manual acts. This section is closed formulæ and manual acts. This section is closed by a meditation on the scented water, which is called the kajikōsui,² scented water signifying the acceptance by the believer of the great mercy of the Tathāgata projected over the hearts of his creatures' (so explained in Sokuskinjōbutsugi). This produces an effectual union of the worship-projected that the feet the Paddie. per's heart with that of the Buddha.

per's heart with that of the buddha.

The celebrant now proceeds to the invocation of the Buddhas. Commencing with a manual act ('diamond-joining-hands'), which signifies the raising of the thoughts towards bodhi, accompanied by a dhāranī of the same import, he proceeds by a series of gestures and formulæ, which it is not necessary to give here to invoke the Thi

panied by a series of gestures and formulæ, which it is not necessary to give here, to invoke the Universe<sup>3</sup> and the Atoms.<sup>4</sup> From the invocation of <sup>1</sup>The Shingon house-ceremonies are performed before a small temporary altar, on which stand the images of the thirteen Buddhas and Bodhisattvas, supposed to take charge of the soul of the dead for several years after death. These thirteen Buddhas, who are clearly not particularly connected with primitive Buddhism, appear to correspond with the Æons of the thirteen realms of the dead, through which, e.g., in the book Pistis Sophia, the Gnostics supposed the souls of the dead to pass in Hades. The thirteen Buddhas are not peculiar to the Shingon, though this sect lays more stress on them than does any of the others. See note on the subject in the present writer's Shinran and his Work (Tokyo, 1910), Appendix iii, and also The Fatth of Half Jayan.

<sup>2</sup>The Kajikāsui is also used in the abhişeka, or baptismal rites (Jap. kramio), of both Shingon and Tendai. It corresponds to the opobalsamum mentioned by Irenæus as used in the baptisms of the Marcosian heretics.

<sup>3</sup>The dhāraṇi is Om-sammaya satoban, a debased Sauskrit which we have not been able to understand. The manual act is called a meditation on Samantabhadra.

<sup>4</sup>Here the dhāraṇi refers to the five exterior elements; it is Om Abiraumken, 'earth, water, fire, wind, void.' This name

the Universe impersonal he passes to that of the Universe personal, to the Five Buddhas, to Amitābha, the giver of immortality, and to Amitābha with his attendants Avalokitesvara and Mahāsthamaprapta, that they will come to the funeral ceremony and invite the deceased to enter the bliss of Paradise. After each of these invocations, the kōmyōshingon,3 or invocation of the Five Dhyānibuddhas, is chanted three times. Then, coming lower in the scale of dignity, we have the invocation of Kṣitigarbha, the sixfold protecting angel of the dead (Roku Jizō), and that of Fudō-nŋyō-ō (Achāravidyārāja) and the other greatvidyārājas—Mahātejas, Vajrayakṣa, Kundali, and Tribhava-vijaya. The mantra of Kṣitigarbha is Kakakabā in the mantra of Kṣitigarbha is Kakakabā in the mantra of Kṣitigarbha is Kakabābā in the mantra of Kṣitigarbha is Kababābā in the mantra of Kṣitigarbha in the mantra of Kṛitigarbha in the mantra of Kṣitigarbha in the mantra of Kṛitigarbha in the mantra of Kṛitigarbha in the mantra of Kṣitigarbha in the mantra vijaya. The mantra of Ksitigarbha is Kakakuvisamayei abiraunken sowaka; that of Fudō-myō-ō, which is chanted three times, is Nōmaku sāmanda bāsarada sendam mākara shātei sowataya untaratā kamman. (The meaning of these Sanskrit formulæ is now wholly lost.)

We now get three mudrās, representing the 'preaching' of Vairochana of the three  $k\bar{u}yas$ —the Dharmakāya (Namu A), the Sambhogakāya (Namu Vam), and the Nirmāṇakāya (Namu Un). The three syllables A-vam-un (possibly Skr. om =a+u+m) represent the 'Trinity' of Vairochana. Then the stūpa is figuratively opened and shut—an evident allusion to the Saddharmapundarīka Sūtra; next, a  $mudr\bar{a}$  (or manual gesture) figuring the abhiseka of Fudō-myō-ō (see above), with Namubam repeated thrice; next, three representing respectively the Dharmakāya, Sambhogakāya, and Nirmāṇakāya (possibly of Fudō-myō-ō), with mantras respectively—Anbanrankan ken, Abiraunken, and Arahashanō. But Fudō, like Kṣitigarbha, is sixfold in his operations in the six spheres of sentient existence, and we consequently have a suitable gesture, imparted to Kōbō Daishi by his Chinese tutor Keikwa, for which the mantra is Abiraunken, together with a secret formula which may not be written down, but which may be attained by means of a proper 'meditation on the Fire.'

Thus, the whole celestial hierarchy of the Shingon having been invoked, it remains only to procure for the deceased, on whose behalf all these celestials have been summoned, a suitable understanding of what it all means. This is effected by means of four more sets of manual acts and mantras, signifying respectively the attainment of the perfect knowledge of rūpadharma ('objects having form'), of chittadharma ('objects conceivable, but without form'), of rūpadharma and chittadharma together, which are not two, but one; and, finally, a meditation on the dharmadhātu ('universe'), for which the dhāraņī is Om Maitreya Svāhā. [The Shingon are firm believers in Maitreya, more so than any other of the Buddhist sects. It is their conviction that the body of Köbö Dalshi, which never decays, is awaiting the advent of Maitreya in his tomb at Kōya San, and Shingonists often send the bones of their dead, after cremation, to Kōya San, so as to be near to Kobo at the resurrection, which will take place when Maitreya makes his appearance.

The officiant now prostrates himself three times

The officiant now prostrates himself three times appears often as Ambamramkakau and as A-ba-ra-ka-kia. It is almost certainly the Gnostic Abracas—a conclusion in which we are strengthened by the fact that the Gnostic Caulacau also seems to appear in the mudra. See above, p. 489%, n. 1.

In this place the five Dhyānibuddhas are Amogha, Vairochana, Mahāmudra, Manipadma, and Jālapravarta—a very unusual enumeration. The more usual one is given below. We believe these to represent the five Dhyānibuddhas of the Vajradhātu ('Diamond World,' i.e. world of ideas), the others the corresponding set of the Garbhadhātu ('Womb World,' i.e. world of birth, death, concrete existence).

2 The Shingon form of Amitābha is Amritābha.
2 In Shiraran and his Work the present writer has shown that the word kömyō seems always to have Manichæan associations and connexions. It is quite possible that this mantra may have them too.

may have them too.

before the assembled deities, offers incense, strikes

before the assembled deities, offers incense, strikes the bell three times, and recites a sort of creed:

'With deep respect for all the Buddhas here assembled, I take my refuge in Buddha. May all creatures follow my example! I take my refuge in Dharma. May all creatures follow my example! I take my refuge in the Sangha. May all creatures follow my example! The excellent physical body of the Tathägata is without a parallel. The form of the Tathägata is inexhaustible, and all the dharmas (Jap. isaathāe-iall-matter') are permanent. With deepest reverence I address the great Vairochana, the Tathägata, the Master of Shingon Buddhism, and all the venerable ones and saints of the two assemblies (i.e. the Vajradhātu and Garbhadhātu); and especially Amitābha, the master and teacher of the Land of Bliss, the Merciful Matreya, for whose coming we wait; the holy Henjō Kongō (i.e. Kōbō Daishi), who sits cross-legged in deep meditation; all the great Achāryas, the transmitters of religious light in the three countries (India, China, Japan), and also in all the lands illuminated by the eye of Buddha, and pitied by the Three Gems.

If we meditate deeply thereon, the moonlight of "Opportunity-which-is-born-when-the-desire-thereof-ariseth" (Kukuci ki okoreba sunavachi shōzu) shines in the sky of the tranquil spiritual Nature. The colour of the flower of "The-Cause-that-being-exhausted-presently-disappeareth" blooms in the Garden of unbounded Adornment.

Appearance is as non-appearance.

being-exhaused-presently-disappeareth blooms in the of unbounded Adornment.

Appearance is as non-appearance.

Disappearance is as non-disappearance.

Both appearance and disappearance are unattainable.

Both appearance and disappearance. Both appearance and disappearance are unattainable. They cannot be named.

They cannot be named.

The deceased N., his causes of life having been exhausted, has gone to another world. He has left his body in Jambudvipa.¹ and has entered the intermediate state (Skr. antara-bhava, Jap. chā-u). Therefore now, in accordance with the testament of the Sakyan king, who was endowed with the testament of the Sakyan king, who was endowed with the testament in the Sakyan king adorned the Sacred Altar upon which the Tathägata will descend in answer to our prayers, we will pray for the favourable acceptance of his soul by the Venerable Ones, and for its deliverance. We will kindle the Pure fire, which passes through all the six elements (rokudai mu-e), and so cremate the body which from the beginning has had no true phenomenal appearance (honrai fukhō). We pray that all the Buddhas may certify for him, that all the Sants may pray for him, and that they may receive him to a lotusstand of superior dignity. May the living and lawful king of reason and wisdom (Vairochana [7] Amitābha [7]) endow him with the highest Buddhahood! . . And may all sentient beings in the Dharmadhātu be equally benefited! . . . I speak this with all respect.' all respect.

This ends that portion of the service which is known as hyōhaku, 'the expression of belief.' Next follows the singing or chanting of the Jimbun shingyō, i.e. the Mahāprajñāpāramitāhrdaya Sūtra, for the purpose of giving pleasure to the assembled spirits,

purpose of giving pleasure to the assembled spirits, in order that they may make their appearance upon the altar. After this a priest says:

'In the yard where funeral services are being conducted (for a deceased person), it is generally the case that his sins all perish, and that his merits rise heavenwards. This is the time of his ascension to the land of Bliss, and we may consequently expect that Yama the lawful king, and the five infernal officers of the other realms of existence, will make their appearance. We pray, therefore, to the thirteen great Buddhas, to the infernal officers, and to all their retainers and followers, that they may aid this man to lay saide his karma, and attain Supreme Enlightenment.'

\*Chorus.\* Hail, Mahāprajājājāramitā Sūtra!\* (one bell).

'That the departed soil may ascend to the secretly adorned sphere of flowers (missuyonkezo), we invoice'—

Oh. 'The Name of the great Buddha Vairochana' (one bell).

'That he may bascend to the world whose inhabitants hunger not, neither thirst (anys) 5000, we invoice'—

Oh. 'The Name of Amitabha (one bell):

'That he may be re-born in the inner palace of Tugitaloka, we invoice'—

Oh. 'The Name of the Buddha Maitreya (one bell):

"The Name of the Buddha Maitreya (one bell);

The Name of all the Saints in its inner and outer palaces' (one bell).

'That the Buddha-field may be accessible at all times to all who

'That the Buddna-neid may be accessible at all times to all who desire it, we invoke'—

Ch. 'The Three Holy Treasures' (one bell).

That all sentient Beings in the Dharmadhātu may be benefited equally (with him whose obsequies we celebrate), we invoke'—

Ch. 'The Name of Avalokitesvers (one bell);

The Name of Vajrapāri 'One bell).

[Here the officiant lays down his censer and takes up his nyo-i,

or mace.] Namo ('homage'). 'Kimyō chōrat Mujōshugwan. Shōrei indō Öjōgokuraku,

1 It is a common fiction amongst Japanese Buddhists that Jambudvipa, which is, of course, Hindustan, comprises China and Japan as well. It is in Japanese pronounced Nan-embudat. In Nichiren Sect books it is Ichi-embudai, which comes nearer to the sound of Jambudvipa.

Hall! Buddhas and Bodhisativas, whom I worship with bowed head and potent invocations! May this holy soul be led to, and be re-born in, the land of Bliss!

It is by the adornment and honouring of the Altar of the Teaching of Supernatural Power that Supreme Buddhahood may be obtained as in a moment. It is by the proclamation of the teaching that the material body is identical with Buddha, I that the Buddhas will themselves develop enlightenment in the doctrine that phenomenon is itself reality.'

Next follows an  $ek\bar{\nu}$  ('prayer of transference'). The officiant lays down his nyo-i, and resumes his censer. (One bell.)

The officiant lays down his nyo-i, and resumes his censer. (One bell.)

'I respectfully pay homage to the Three Eternal Treasures, and extol the teachings of Buddha, the Tathāgata who has realized Nirvāṇa and passed beyond birth and death. If any man will listen to Him with all his heart, that man's soul shall be filled with unbounded joy. All composite things are impermanent; they are possessed of the necessity of growth and decay. They spring into existence; again they perish; their extinction is bliss.'

Then the Rishukyō (Buddhi Sūtra) is read, and the ceremonies in the house are closed. On the

the ceremonies in the house are closed. On the road from the house to the temple, the priests meditate upon Fudō, and chant his mantra (see

above).

(2) Ceremonies in the temple.—Near the entrance to every Shingon graveyard or temple will be found the six images of Kṣitigarbha (Roku-Jizō), the friend and protector of the dead. These must first be worshipped, as also the corresponding set of six Avalokitesvaras (Roku-Kwannon). Then of six Avalokitesvaras (Roku-Kwannon). Then the officiant, entering, walks three times round the sacred fireplace which is found in every Shingon temple, with manual gestures and formulæ representing the five elementary colours, the putting on of spiritual armour, the breaking of hell, the raising of the mind to the contemplation of bodhi, and the meditation on Samantabhadra (Fugen), the special patron of truth. The last of these dhāraṇī is Om-sammaya satoban, which we have mentioned above (p. 490b).

mentioned above (p. 490°).

All this leads up to what appears to be the central portion of this temple-service, the ceremony of abhiseka (Jap. kwanjō, 'besprinkling'), a kind of baptism mystically performed, and transferred by a subsequent ekō to the credit of the deceased. The abhiseka is threefold, and is followed by an indō, 'guiding words,' very much the same as that used in the Zen ceremonies. But the Shingon indō which is traditionally attrithe Shingon indő, which is traditionally attributed to Köbö Daishi, is not in writing, neither are the dhāranā used in this, the most sacred part of the service. They are all handed down orally from teacher to disciple, and it is not every Shingon priest that knows them. Next follows a passage from the Dainichikyō (Mahāvairochanābhisamboddhi Sūtra), also with a secret accompanying mentage.

rabbinsambouth Sturra, and with a secret accompanying mantra:

'Without leaving this physical body, man may attain to the supernatural power of finityotsu (Skr. radhipada, 'means of attaining magic power'), and, walking freely about in great space, may comprehend the secret of the body.'

Then come: abircumiten (five times); the mantra

and gesture of the eye of Buddha (not committed to writing); a list of the succession of teachers, with the kainyō of the deceased inserted at the end; separate mantras and gestures for all the six elements composing the 'enlarged Abraxas's—earth, water, fire, wind, emptiness, consciousness; the

<sup>1</sup> It is an essential feature in Shingon teaching that all material objects—stones, trees, the human body, etc.—partake of the Ruddha nature.

of the Ruddha nature. In this conjecture that Abarakakia or Abraumken connects Jap. Shingon with Alexandrian Chosticism, we may also be justified in supposing that the abbieska thus administered in the Shingon inneral rites throws much light on the 'baptizing for the dead' mentioned by St. Paul (I Co 1529).

The fivefold scale of elements is represented by A-baraaktia. When a sixth element, alaya ('consciousness'), is added, the word becomes Abarakakia um. The addition of this sixth element is sometimes, though without good authority, attributed to a priest named Ryugyō Hōshi, about A.D. 1140. We believe this to rest on a misunterpretation of the Hōjōki, 'History of the Hōjō Regents.' See Romaji for 20th Nov. 1969.

fujumon, 'address,' describing the deeds, character, etc., of the deceased; the repetition of several mantras and hymns; another formula of ekō, transferring all the merit thus accumulated to the credit of the deceased; the dedication (figuratively) of the staff that is to accompany the deceased on his journey through the valley of the shadow of death; a number of prayers never committed to writing; and a similar manual gesture on the 'most secret Nature.' This brings the

service to a close.

3. Ceremonies of the Tendai.-The Tendai has always been a sect with strongly developed Erastian tendencies. In the days of its initiation in China, it was the ally of the Sui and Tang Governments in their efforts to control the heterogeneous mass of teaching calling itself Buddhist, which was flooding China in the 6th cent. A.D. Introduced into Japan about A.D. 800, it served the same ends. And, when Iyeyasu had brought peace to Japan in the 16th cent., the Tendai played a considerable part in the spiritual policing of the country which was carried on during the whole of the Tokugawa period. The Tendai rites which we are about to describe were those observed at the obsequies of Viscount Takamatsu (August 1904).

(1) Ceremonies in the house: the otogi, or 'wake.'
—The ceremonies begin with the adoration of the
Three Precious Things. The celebrant (indōshi)

thus begins:

'I take my refuge in Buddha. May all sentient beings comprehend the great Path, and raise their thoughts towards the Supreme Object!

I take my refuge in the Law. May all sentient beings (follow my example, and), plunging deep into the Treasure House of the Scriptures, acquire knowledge as vast as the sea!

I take my refuge in the Order. May all sentient beings (following my example) attain to positions of rule in the great assembly!'

Then follows what is called the instructive stanza, as taught by the previous Buddhas, the predecessors of Sākyamuni:

'It is our prayer that all sentient beings may refrain from the commission of sin, that they may do good, and purify their own minds. This is the teaching of all the Buddhas. We worship the assemblage of the Saints.'

The Stanza of Evening:

'Hearken to the Stanza of Impermanency under the similitude of evening. When this little day is over, our lives will end and we shall disappear. We are here like fish in a shallow (basin of) water. O ye Bhiksus, is there anything in the world that is pleasurable? Exert yourselves with diligence, and lose no stime in saving yourselves from the fire. Meditate on the impermanency of material objects which are empty as the void, be diligent, he not slothful.

The Stanza of Impermanency:

'All composite things are impermanent, for they are liable to growth and decay. They spring up into existence, and perish. Their extinction is bliss. The Lord Buddha has realized Nirvāṇa and banished for ever birth and death. He that wills to listen to this teaching with his whole heart shall gain immeasurable happiness.'

The Six 'Fors':

The Six 'Fors':

'For all believers' in the Ten Quarters, let us meditate on the Tathāgata Sākyamuni. (One bell.)

For His Majesty our Emperor, let us meditate on Yakushi Rurikō Nyorai. (One bell.)

For the four "benefactions" in the Three Worlds, let us meditate on Amitābha Nyorai. (One bell.)

For our Great Teacher, Dengyō Daishi, and all the Venerable

1 The Tendai is one of those sects which protess to base their tenets on the whole vast Canon of the Mahayana.

2 The Jap. word is danna (Skr. danam, 'generosity'). Giving is the first duty of a layman. The word has come to mean 'householder,' 'layman,' and is commonly used by servants, etc., in addressing their master.

3 See abovo, for the connexion of Tendai with the State. Yakushi (Bhaishajyaguru) is the master of medicines, who went about healing sickness and had twelve disciples. He was a very favourite god during the Nara period.

4 The shi-on represent the gratitude we owe for the benefactions we receive from (1) our parents, (2) our rulers and the State, (3) sentient creatures in general, and (4) the Three Precious Things of religion.

5 Dengyō Daishi, founder of the Japanese Tendai, A.D. 767–822.

Ones, let us meditate on the Saddharmapundarīka Sūtra. (One

For all the gods, 1 let us meditate on the Mahaprajñaparamita For all the gous, 1st us mentate on the Managhamapage States. (One bell.)

For all Sentient Beings in the Dharmadhatu, let us meditate on the Bodhisattva Manjusri.' (One bell.)

The Four Reverential Invitations: 2

'There is delight in the scattering of flowers (bis).
We reverentially invite all the Tathāgatas in the Ten Quarters to alight on this sacred altar. There is delight, etc.
We reverentially invite Sākyamuni the Tathāgata to alight on the sacred altar. There is, etc.
We reverentially invite Amitābha the Tathāgata, etc. There

We reverentially invite Avalokitesvara, Mahāsthāmaprāpta (Kwannon and Seishi) and all other Bodhısattvas, etc. There is delight in the scattering of flowers.'

Namu Amida Butsu, Amida butsu, Amida butsu.

The reading of the Sukhavativyūha (Amida V.-2)

Kyō). Namu Amida Butsu, Amida butsu, Amida butsu.

Prayer of Transference (ekō):

Prayer of Transference (ekō):

'All the benefits arising from the invocations we have just made, we transfer to the Lord Amitabha in the Land of Bliss. May we be graciously accepted in the great sea of His Yow, may our karma he destroyed, and may we realize samidhi ('supernatural tranquillity')! May the Devas and deities of the sky and the earth experience an increase of their dignities, and may the gods (Shinto) assembled in this place take pleasure in what we do! May the Great Teachers who have passed away accomplish Perfect Enlightenment, and may all souls, noble and mean, attain to Buddhaship! May Jikaku, our great Teacher, experience ever-increasing happiness, and may our benefactors during the last seven generations be re-born in the Land of Bliss! May the venerable soul that has now passed away be re-born in the Land of Bliss and attain to Buddhashood, seated on a lotus-seat of high degree! May the Court of our Wise Emperor be preserved from harm, and may the reign of His Majesty be long drawn out. May the country be peaceful, and may religion prosper! May the laymen in the Ten Quarters be free from evil and sorrow, and may the fraternity of monks who invoke the names of the Buddhas accomplish perfection! When they come to the end of their lives, may they not miss the ascent to the Land of Bliss, and may they meet Amitābha and his attendant hosts face to face! May their desire to both ("supreme knowledge") never fail them, and may they be the leaders of all sentient beings in the Three Worlds and in Dharmadhātu! And may they all, partaking, as they do, of the same spiritual nature, alike attain to bodha!"

The post-ckō hymn:

'May we, living in this world, be as though we lived in the heavens, like the lotus untarnished by the water! Prostrate on the ground, we worship the Pre-eminent One, with hearts purer than the lotus.'

Adoration of the Three Precious Things

The Instructive Stanzas preached by the Seven Previous Buddhas.

The Confession of Sins:

'May the three obstacles (passion, karma, and the secondary results of karma, Jap. hōshū) be removed absolutely and universally for the benefit of the four benefactors (note 4 above), and for beings in all spheres of existence and throughout the dharmadhātu. For their sakes, we repent of all our sins, from the bottom of our hearts, in the presence of all the Buddhas in the Ten Quarters.'

Gonenmon, or meditation on the Five Gates of praising Amida, by which men enter into the Pure Land. These are all taken from Vasubandhu's treatise on the Pure Land  $(J\bar{o}doron)$ . They are: (1) Raihaimon ('the Gate of Worship'); (2) Santammon ('the Gate of Praise'); (3) Sagwannon ('the Gate of Prayer'); (4) Kwansatsumon ('the Gate of Observance'); and (5) Ekōmon ('the Gate of Transference'). The following is an abbreviated form of the Gonenmon, as recited at a Tendai

With my head touching the ground I adore Amitābha the Sage, the noblest of two-footed beings, whom gods and men

1 i.e. the Shinto deities of Japan, adopted into the Buddhist

14.e. the Shinto detites of Japan, adopted into the Buddinst pantheon.

2 Similar forms will be found in the sects of Jōdo and Shinshu, which, originating in the Tendai, developed the doctrine of Amida. In the Nichiren, which rejects Amida, they are not found. The Zen derived neither doctrines nor ritual from Tendai, nor did the Shingon.

3 It was from this that Genshin (a.b. 942-1017), the first Japanese Patriarch of the Shinshu, derived his teaching about the twofold Paradise, Kwedō, in which the sins of the 'mean' souls are purged, and Hōdō, in which he sins of the 'mean' souls are purged, and Hōdō, in which noble and mean alike attain to Perfection. This is brought out in Shinran's poem Shishinga.

Shishings.
4 Jikaku, the second Patriarch of the Tendai (A.D. 794-864).

delight to honour, who dwells in the choice Paradise of ease and bluss, surrounded by an innumerable host of the Sons of Buddha. The pure golden body of the Buddha is like the king of Mountains, and his footsteps, when he walketh in tranquility, are like those of the still-treading elephant. His eyes are as pure as the lotus. I, therefore, with my head touching the ground, adore the venerable Amitābha. His face, good, round, and pure, is as that of the moon at her full. His majestic brilliancy is as that of thousands of suns and moons. His voice is as nighty as that of the celestial drum [thunder] and as soft as the voice of the Karlobinga bird. Therefore I, placing my head on the ground, adore the venerable Amitabha...

Thus I worship the Buddha and praise his merits. May the Thus I worship the Buddha and praise his merils. May one dharmadhātu be adorned (with many virtues)! May sentient beings, arriving at the term of their lives, go to the Western Land, and, meeting with Amitabha, may they accomplish Buddhahood! May sentient beings go and be re-born in the Paradise of Bliss! May they go and meet with Amitabha, the Venerable One!

Next follow the burning of incense and the presentation of oblations (cakes, tea, hot water sweetened with sugar, boiled rice). The chief mourner, the family, and relatives offer incense. Then are read passages from the Saddharmapundarika Sütra, illustrating the various 'gates' of the Gonemon, and thus the otogi ceremony (which is supposed to take place or the deep in (which is supposed to take place on the day of death) is brought to a close.

(2) Ceremonies in the house: the first part of the actual funeral.—This is conducted by the fukudoshi ('second celebrant'), with a choir of six assistants, the first celebrant (döshi) awaiting the cortège at the temple.

The Four Invitations (as in the otogi).

Stanza of Repentance:

'All the evil  $karma_i$ ' etc. (see above, 'Ceremonies of the Zen,' p. 489b).

The three Refuges:

'Hail be to, and I take refuge in, Buddha.
Dharma.
Saigha.

I take refuge in Śākyamuni, chief of two-footed beings. Dharma, chief of Instless things. Sangha, noblest of congregations. I have finished taking refuge in Euddha.

Dharma

The General Vows (sōgwan):

'Sentient beings are numberless. May I make them all traverse the sea of sanisaira ('metempsychosis'')!

Evil passions are endless. May I help sentient beings to destroy them!

destroy them:

The gates of the Law (Scriptures) are infinite. May I cause sentient beings to understand them!

Supreme Buddhahood is ineffable. May I make sentient

beings attain to it!

Hyōhaku (see under 'Shingon,' above, p. 491b) Chanting of a Sūtra; either the Sukhāvativyūha or the Saddharmapundarīka. Post- $ek\bar{o}$  hymn (as in the otogi above).

Burning of incense and offering of oblations (as above).

Chief mourner, family, and relatives burn incense.

The Invocation of the Buddhas in the Ten Quarters.

Hait to the Buddhas in the Ten Quarters,

"Bangha",

Hail to Sakyamuni Buddhas.

Hail to Sakyamuni Buddhas.

Hail to Sakyamuni, whose body is divided into the Ten Directions.

Hait to Baddharmapundarika Sütra.

"Maninish the Bodhisativa (Monju),

"Samantabhadra the Bodhisativa (Fugen).

This ends the ceremonies in the house.

(3) The ceremonies in the temple.—On arrival at the temple, the bell is tolled, and the choir of clergy take their seats, followed by the celebrant

1 The Tendai very generally identify Säkyamuni with Amitäbha. Hence the application of the same epithet to both. In the Shinshi, which derives much of its terminology from Tendai, this identification is known as ni-son-tick ( the identity of the two Blessed Ones").

and his assistant. The choir recite, in debased Sanskrit, the fourfold hymn of Wisdom:

'Om basarasataba shigyaraka. basaraaratanamadotaran. basaradarumagyaganai. basarakarumakaro baya.'1

The celebrant now goes up to the High Altar, and there makes a mudrā ('manual gesture') known as kömyögu.2

An introit is sung, the 'Hymn of taking the seat.

 $Ind\bar{o}$ , 'guiding words,' spoken by the celebrant. The praise of the  $shakuj\bar{o}$ , 'pilgrim's staff':

'I take a staff in my hand (does so). May all sentient beings follow my example!

The whole choir say with the celebrant:

The whole choir say with the celebrant:

'I give a feast of charity, and, showing the true Way, make offerings to the Three Precious Things (bis). With a pure mind I make offerings to the Three Precious Things (bis). Striving to raise a pure mind, I make offerings to the three gems (shakes the shakujō twice); may all sentient beings follow my example! May I become the Teacher of Devas and men; may I fill the Heavens with my vows; may I cause suffering beings to traverse the sea of sansara, and, guarded by spiritual beings, to make offerings to the Three Precious Things! May they meet with Buddhas and obtain the Buddhahood! (Shakes the shakujō wice.) May all sentient beings learn the sacerdotal Truth's (shoutat); may they treat their fellow-beings with respect and sympathy; may they learn worldly truth and treat their fellow-beings with respect and sympathy; may they respectfully make offerings to the Three Precious Things—to Buddha, to Dharma, to Sangha—to each individually, to all three conjointly (ittus sambō). [The shakujō is shaken twice.] May all sentient beings practise Silapāramitā (the perfection of character).

Dānapāramitā (the perfection of generosity), . . . Kṣāntipāramitā (the perfection of fortitude), . . Dhyānapāramitā (the perfection of meditation), . . . Prajāāpāramitā (the perfection of shakujō is shaken twice.] Buddhas in the past have taken up the pilgrim's staff and have been enlightened. Buddhas in the future will take up the staff and have been enlightened. Buddhas in the future will take up the staff and have been enlightened. I therefore take up the staff and make offerings to the Three Precious Things (bis).

The celebrant comes down from the High Altar and burns incense.

Offerings of tea and hot water with sugar.

Lifting the coffin off the bier and closing it. The assistant (fukudōshi) reads the Funeral

Chanting of a Sutra.

Chief mourner, family, and relatives burn incense.

General congregation follow their example.

When all who wish have burned incense, the celebrant and choir leave the temple.

So end the funeral ceremonies of the Tendai. 4. Ceremonies of the Jödo.—The Jödo sect, founded by Hönen Shönin in A.D. 1174, is an

1 This in Sanskrit would be somewhat as follows:
On vajra sattva sangraha!
vajraratnamanuttaram!

vajraranamantutaram i vajradarma gaganah ! vajratarmakaro bhava ! ' 'Hail | Store of Diamond-Essence ! Diamond-Jewel that hath

Vajrakarmakaro bhava! 
'Hail! Store of Diamond-Isemel bhava! 
'hail! Store of Diamond-Isemel that hath none higher! Heaven of the Diamond-Isemel that hath none higher! Heaven of the Diamond-Isem! Be thou working the Diamond-Karma! 
2 Kömyögu is very possibly a Manichæan word. It was used in the designation of the Manichæan temples (cf. Lloyd, Shimran and his Work, Appendix i. and ii.).

3 There is a distinction made in Tendai (also in Shinshu) between the 'noble' and the 'mean,' just as Manichæans were divided into 'hearers' and 'perfect.' For the learers only a very simple creed was required (Jap. zokutaimon [cf. Lloyd, op. cit. p. 109]). A more elaborate form of faith and life was required from the perfect (shintaimon), which included assent to theological truths.

4 The Jödo secis maintain that the One Vehicle is the one by Faith in Amida, also that the Tendai, if true to their own doctrinal standards, are committed to this position. It is perhaps worth our while to note as an interesting point that Amida, is, to Tendai, Jödo, and Shinshu, pre-eminently the Buddha, that the character for Buddha was introduced into China A.D. 64, that it signifies 'the man with the arrows and bow' (Emp. Ming.til's Vision; et. Rev 62), that in the legend it is connected with a 'white horse,' and that, divided into its constituent elements (man, arrows, bow), it represents the first three letters of the name of Jesus,

offshoot of the Tendai, or rather an attempt to call back the Tendai to that sole Faith in Amitabha which the Jodo sects maintain to be the essential feature of primitive Mahāyānism.
(1) The service in the house (Gongyōshiki).—

Opening verse of the regular service:

'May our minds be purified as the incense-burner! May our minds be bright and clear as the fire of Wisdom!

Burning the incense of morality and tranquillity, thought by thought, make offerings to the Buddhas in the Ten Quarters, in the Three Worlds.'

Samborai, or worship of the Three Precious

With all our hearts we pay supreme honours to the Supreme Buddhas in the Ten Quarters. . . . With all our hearts we pay supreme honours to the Supreme Dharmas in the Ten Quarters. . . . With all our hearts we pay supreme honours to the Supreme Streets in the Ten Supreme

Tambutsu no ge, or hymn of praise for all the Buddhas:

'The handsome physical bodies of the Tathägatas are unparalleled in the Universe. They are incomparable beyond conception. Therefore, behold, I worship them. The physical bodies of the Tathägatas are inexhaustible and everlasting, and their Wisdom is as their bodies. Dharmas are infinite. Therefore I date refuge in them.' fore I take refuge in them.

Ryakusange, or abridged form of confession": 'All the evil karmas,' etc., as in the Zen and Tendai. Sankikai, or the threefold Taking of Refuge: 'I take refuge in Buddha . . . Dharma . . . Saigha

The ceremony of tonsure. While the head of the corpse is being shaved, the name of Amitābha is being repeated ten times. This is known as Jūnen. The number of repetitions shows that Jūnen. the shaving occupies only a short time. It is merely symbolical. In the Shinshu sect there is a ceremony called Kamisori, 'head-shaving,' roughly corresponding to Christian confirmation, which implies a formal acceptance of and admission into the sect. It is administered by the head of the sect only, and consists in passing a golden razor lightly over the hair of the candidates as they kneel before him. The ceremonial shaving of the dead is very often nothing more than this.

Kaikyōge, or hymn introductory to the reading of the Scriptures:

'The Law, which is pre-eminent, profound, and sought out, an rarely be met with, scarcely once in a thousand kalpas ["ages of the world"]. But we have seen and heard, and do accept it May we understand the true meaning of the Tathagata's teaching!

Reading of a Sutra—generally a chapter from the Amitāyurdhyāna Sūtra, or the Aparimitāyus Sūtra. Sometimes also the Amitābhatathāgata-

muladhāranī is read:

'In accordance with the Original Vow of the Buddha we pray that we may hear His Name, and be re-born in the Land of Bliss. On being re-born in that land, may we all obtain the safe position from which there is no falling back! The 84,000 doors, each different from the others, were opened as means of escape from ignorance, karma, and the results of karma. A sharp sword verily is the name of Amitabha Buddha. He that shall invoke it but once and meditate thereon,—his sins shall be destroyed for ever.'

Hotsuguanmon, or the raising of vows:

'Humbly we pray that our minds, at the hour of death, may be undistracted, unconfused, and in possession of all their faculties. With mind and body free from pain and filled with joy, in the state of contemplation, and in the presence of the Holy Ones (Amitābha and his 25 Bodhisattvas), by the merits of the Buddha's Vow, may we have a favourable re-birth in the Land of Amitābha. Land of Amitabha.

On being re-born in that land, may we obtain the Sixfold Supernatural Power (roku-jin-dzu), which shall enable us to assume visible forms at will and to manifest ourselves in the Worlds of the Ton Quarters for the Salvation of mankind. The Sky and the Law are infinite in extent; our vows are co-

i.e. the doctrines of Buddhism.

<sup>1</sup> Not in the Biblical sense of 'sought out of them that have pleasure therein.' The allusion is to the Vow of Amitabha, which was framed after a careful survey and examination of all the Buddha-fields.

extensive with them. With these vows we take refuge in Amitābha Buddha with our whole hearts.

Amitabha Buddha with our whole hearts.

Könnyö kenjö

Jippö sekesi
Nembutsu shujö

Sesshujushu,
Shining upon all the worlds in the Ten Quarters with the bright rays issuing from his halo, the Buddha accepts the beings who call upon him. He will never abandon them,'

Invocation of Amida's name.

Ekō, 'transference':

LEG, 'Transference':

(1) Special: 'May the soul of the newly-deceased N. (kaimyō) migrate to the pure fields, and may his karma give up dust-like trouble! May he see Buddha, hear the Law, and rapidly reach the pre-eminent way!'

(2) General: 'May the merits resulting from this service be transferred to all sentient beings alive! May they all lift up their hearts to Enlightenment, and all be re-born in the land of eage and courter!'

ease and comfort!

Shinseigwan, or Four Holy Vows (see Tendai rites).

Sanrai, or Worship of the Three Precious Things: Namu Amida butsu is repeated nine times, three times for each.

This concludes the service in the house. The procession is now formed and starts for the

temple.
(2) The service in the temple is almost a replica of that in the house. It begins with gongyōshiki, of that in the nouse. It begins with gongyosher, sambörai, shibujō, ryakusange, and tambutsu no ge (see above). Then follow the beating of cymbals (nyohachi), the indō, or 'guiding words,' karkyōge, the reading of Scriptures, kōmyō henjō, etc., the invocation of Buddha's name, and another ekō:

'May the merits arising from this chanting of the Sütra and the invocation of Buddha's name be transferred to the newly-deceased N. May his soul migrate,' etc. (The rest as in the ekū above.)

Then follow invocations of Amida's name, the Four Holy Vows (as in Tendai), and the adoration of the honzon, or image of Amitābha. This brings

the service to a close.
5. Ceremonies of the Shinshu.—The Shinshu sect, founded by Shinran Shōnin in A.D. 1224, carries still further than the Jodo the doctrine of salvation by Faith only. The account of the cere-monies described in this section is taken from the Fūzokugwahō for Feb. 1894, and gives a summary view of the obsequies of Kōshō, the 21st Abbot of the Eastern Hongwanji, who died at Kyoto on 15th Jan. 1894.

(1) The worship of the corpse.—This ceremony is not peculiar to the Shinshu sect, but is observed in the case of all monks and priests [the Shinshu clergy are not monks; they marry and live with their families]; but naturally, in the case of the head of a great organization, such as the Hong-wanji, the ceremonies connected with this worship

were more carefully carried out than usual.

Three days after death, the corpse was dressed in silk crêpe robes of a grey colour, with a small kesa ('stole') over the shoulders, and was placed in a sitting posture on a kyokuroku ('camp-chair') in one of the rooms of the Abbot's official residence. The face was covered with a white cloth, so that only the eyes were visible. Screens were set up behind the chair and on either side of it, and in front there was a slight curtain of split bamboo, which could easily be drawn up and down. Six laymen, in kamishimo (upper and nether ceremonial garments) of a grey colour, were constantly in attendance, to draw up the curtain whenever a group of worshippers presented themselves. Many thousands of Shinshu believers thus offered their last respects to the deceased prelate, the worship

consisting of a silent prostration before the corpse.

On the following day the corpse was put into a coffin and removed to another apartment, where similar worship was offered before it. In this case, however, a scroll-picture of Amitabha was suspended on the wall behind the coffin, to represent the idea that the deceased had now passed

definitely under Amitabha's protection. Immense crowds of worshippers from every part of Japan

came to worship.

(2) The farewell to the corpse.—This took place on the following day. Three short ceremonies were observed, the first in the apartment where the coffin had been lying in state since the previous day. It was then removed to the daishido, or hall set apart for the worship of Shinran Shonin, the founder of the sect, and from there to the Amidado, or Hall of Amida. In each of these places a service was held, consisting very largely of repetitions of the Namu Amida butsu¹ and the burning of incense. Not unnaturally the third service was esteemed the most dignified. Not only blood relations, but proxies representing the princes of the blood, and the heads of other subdivisions of the Shinshu, came forward to burn incense, and, immediately after this last ceremony was over, the procession was formed and the funeral cortège started for Uchino, where the main obsequies were to take place.

(3) The procession need not delay us. It was on (3) The procession need not delay us. It was on the same general lines as the procession mentioned at the beginning of this section (above, p. 489°). Only, as befitting a personage who, in addition to being the hereditary head of one of the largest of the Buddhist sects in Japan, was a peer of the realm, and a collateral descendant of the great Prijurer families. Fujiwara family, it was, of course, a very imposing procession, more than a mile in length.

(4) The service at Uchino.—Uchino was in

former days the cremation-place connected with the Eastern Hongwanji temple. But the growth of the city has rendered it unsuitable for the purpose. In the case, however, of the funeral of an Abbot, there are historical reasons why a part of the service should still be held there. open space had therefore been curtained off, large enough to seat the great number of invited guests, and it was here that that part of the service took place which in ordinary cases would be held in the temple. (The farewell to the corpse, thrice repeated, corresponded to the service in the house at ordinary funerals. It followed, then, almost exactly the same order as is observed in Jödo funerals.) A temporary crematorium had been erected for the symbolic cremation to be held here. The chief mourners were the new Abbot and his wife (the urakata). The actual cremation took place later at Kwazan, where the regular crematorium is situated.

The service, which was of the regular type,2 followed the usual order: The Four Invitations.

The Shöshinge.3

Nembutsu wasan,4 or hymn in praise of Buddha, followed by invocations of Amida's name.

Iollowed by invocations of Amida's name.

Ekō, as in Jōdo sect, with the following addition:

'Guannishi Kudoku,
Byūdose issai,
Dōhotsu bodaishin,
Ojō anrakukoku,
We pray that the merit of this service may be given equally
to all sentient beings, that they may lift up their minds to the
attainment of enlightenment, and ascend for re-birth in the
Land of Ease and Comfort.'

land of Ease and Comfort.'

1 It is to be noted that the common interpretation given to these words is 'Believe in (trust) me; for I will save you.' This meaning, which has been read into, not out of, the Sanskrit words, is interesting.

2 In the memorial service held by the Shinshu in Tokyo in honour of King Edward vII., the form approximated much more closely to the Tendai ritual. The explanation of this will be found in the Tendai origin of the Shinshu, and also in the fact that it was not a funeral service proper.

3 This is a poem by Shinran Shönin giving an account of the transmission of the Amida doctrines. For text and tr. see Lloyd, Shinran and his Work, p. 85.

4 Wasan are hymns of praise composed in Japanese. The Shinshu sect, which, to its credit, has always used the vernacular whenever possible, is particularly rich in these hymns, some of which are of very great interest.

Symbolical cremation. The Abbot entered the temporary crematorium and lighted some straw, and, as the smoke issued from the building, it was accepted as an actual cremation. This was, of course, a special feature of this particular funeral.

*Shōshinge* again.

Burning of incense by mourners, etc.

The coffin was now removed for the actual cremation.

(5) The cremation. 1—This was carried out semiprivately at Kwazan, only the new abbot, near relatives, old body-servants, and the superintendent of the crematorium being admitted into the curtained-off space around the furnace. The pyre was made of pine logs skilfully arranged on a hearthstone, and was attended to by four mastercarpenters in white robes, overlooked by two priests in black. The Abbot, as chief mourner, having already, as we have seen, symbolically lighted the fire, it was apparently not necessary for him to do it actually on this occasion; though in ordinary funerals this is a duty which always falls upon the chief mourner. It must be a 'pure' fire (no sulphur or brimstone to be used in the kindling), and, when once kindled, is kept alive not only with additional fuel, but also by constant libations of natune abura ('rape-seed oil'). It is desirable that the coffin, as in this case, should be so thick that the body inside may be completely consumed before the sides of the coffin fall in; but this is, of course, merely a counsel of perfection not applicable in all cases.

When the cremation was over, the remains were reverently collected, with a short service (not used in ordinary cases), put into a small box, covered with a white silk cloth, and carried back to the late Abbot's residence, where they were privately disposed of in a suitable manner. A certain amount of secrecy was observed on this occasion. There existed for many centuries a bitter feud between the parent sect of the Tendai and her more prosperous but rebellious daughter, the Shinshu. When Rennyo Shōnin, the greatest of all the successors of Shinran, died in A.D. 1499, the jealous Tendai monks made an assault on the procession that was carrying home the sacred relics, and tried to seize and dishonour them. Since that time it has been customary, at the cremation of a Hongwanji Abbot, to bring the ashes home in secret, by some circuitous route, and under guard.

In collecting the bones, etc., after a cremation, it is customary to pick them up with chop-sticks, one of wood, and one of bamboo. Hence, in ordinary life it is deemed most unlucky to use chop-sticks of different materials, e.g. one of wood and one of bone. Shingon believers send the bones to Köyasan; amongst the Shinshuists in Echigo and Shinshu they are often preserved in the house. In most cases, however, they are interred. Great efficacy is sometimes attributed to these relics

6. Ceremonies of the Nichiren sect.—The Nichiren sect, founded in A.D. 1253, differs from all other sects of Buddhism in that it concentrates the whole of its attention on the Saddharmapundarīka Sūtra, which it almost personifies. This darka Subra, which it almost personnes. In Sütra consists of two parts, known as Shakumon (chs. i.-xiv.) and Hommon (chs. xv.-end); and the peculiar position of the Nichiren School is that for it the latter is the most important portion of the Sütra, while all other Japanese sects lay special stress on the former. Nichiren himself claimed to be the first of the Four Great Bodhisattvas mentioned in the latter part of that Sütra as rising out of the earth at the head of a large company

of believers. The services are very long; but they admit of condensed statement, because they consist almost entirely of readings from the Saddharmapundarika Sütra.

(1) The house ceremonics.—(a) Makuragyō, en-

trusted to a minor priest (shokeso).

Kwanjomon, or words of Invitation:

Kwanjōmon, or words of Invitation:

'We humbly invite Juryō,¹ the honzon (principal idol) of the True Teaching,² to be present.

Glory to the Saddharmapundarīka Sūtra, in which are contained the Three Mysteries of the True Teaching.³
Glory to Sākyamuni-Buddha, who is the great benefactor of sentient beings, who accomplished enlightenment before innumerable ages, and who alone is the Master of the Teachings.³
Glory to the Buddha Tahō,³ who certified to the teachings of the Saddharmapundarīka Sūtra.
Glory to the Buddhas mentioned in the Hommon ('Real Teaching'—see above), as also to those spoken of in the Shakumon ('Temporary Teaching'), in this and in other worlds. Glory to the Great Bodhisattvas in the thousand worlds, who were taught by the Buddhas of the Hommon, and who issued forth in troops out of the earth, when the Kenhūtōhon was being preached. preached.

preached.
Glory to the Three Everlasting Precious Things mentioned in the Saddh. Sūtra, in which the Temporal Buddhas are secreted (swallowed up) and the True Buddha revealed.
Glory to Nichiren, the Great One, the founder of the sect, our mighty leader, who has been entrusted by Sākyamuni with the Secrets of the True Doctrine.
Glory to the successive Patriarchs (of Nichirenism).
May all the Devas and good gods, the protectors of the True Faith, descend upon the altar and watch our worship.

Reading of Hōbenhon, sect. 2 of Saddh. Sūtra.

Lunnāhon, sect. 16

Much repetition of the Daimoku, or the true standard of faith and worship (Namumyöhörengekyö, 'Glory to the Lotus-Scripture of the Wonderful

Law ').  $Ek\bar{o}$ , 'prayer of transference.' The gist of the prayer is that, by the virtue of the Sūtra, sentient beings may attain to Buddha-ship in their bodies.

Bestowal of a Kaimyō. This service may be performed before or after death, or may be entirely omitted. It is of great importance to the student, as giving the doctrinal position of the Nichiren

(b) The wake (otogi). This is also entrusted to a minor priest. The whole of the Saddharmapundarīka is chanted once, or sect. 16 thirty-six times. Sermons are delivered at intervals-for the edification both of the living and of the dead.

The tonsure. A leaf of *shikimi* is cut with a razor over the head of the deceased.

(c) The home funeral service, by one or more minor priests. Five banners are prepared and set up, inscribed as follows:

(1) 'Glory to Prabhūtaratna, to the Saddh. Sūtra, to Sūkyamuni, to Nichiren, the Great Superior Teacher of the Latter Days.'
(2) 'Glory to Jögyöbosatsu,' i.e. to the Nichiren, first of the Four Great Bodhisattvas.
(3) 'Glory to Muhengyöbosatsu,' second of the Four Great Bodhisattvas.

64) 'Glory to Jögyöbosatsu,' third of the Four Great Bodhi-sativas.
(5) 'Glory to Anryūgyöbosatsu,' fourth of the Four Great Bodhisativas.

Four smaller banners are also prepared and set up, and inscribed as follows:

1 Juryō is a portion of the Saddh. Sūtra personified (sect. 26), and treated as the embodiment of the Deity.

2 Nichirenists maintain that there are three stages of Buddhist Teaching—the Smaller Vehicle, the Larger, and the True

(fitting).

3 The Three Mysteries are: (1) The revelation of the true object of human worship made in the Sütra, (2) the establishment of the true standard of faith and worship, (3) the true

ment of the true standard of faith and worship, (3) the true teachings of morality.

4 Observe that the Säkyamuni of Nichirenism is only incidentally the historical Gautama.

5 Tahō (Skr. Prabhūtaratna) is a Buddha, previous to Säkyamuni, who, in the Saddh., is seen descending upon the latter as he teaches, in a stūpn; who is dead, then revives, and, after commending the teachings which Säkyamuni is giving in the Sütra, becomes in some mysterious way identified with him. This account appears in Kenhōtōhen ('opening of the stūpa'), the 12th section of the Saddh. Sūtra (Chinese). It is to bo noticed that Tahō's Paradise is represented as in the East.

6 Nichiren is supposed to have had the power of teaching committed to him by virtue of his being a re-incarnation of the first of the Four Great Bodhisattwas.

<sup>1</sup> The Japanese word for 'cremation' is dabi. It comes from the Pali jhape (causal of jhaya, 'to burn'), and is one of the few instances of the survival of a Pali word in Japanese.

(1) Kaibutchiken, i.e. 'May the deceased attain to the opening of a supernatural insight like that of Buddha l' (2) Jibutchiken . . . 'May he show forth a . . . etc. . . . !' (3) Gobutchiken . . . 'May he understand, more and more

(4) Nyūbutchiken . . . 'May he enter into . . . etc. . . . !'
Whilst the banners are being set up, the priests read-

Höbenhon, sect. 2 of the Saddh. Sütra.

Juryöhon, sect. 16 ,, (or only its gāthās).

 $Ek\bar{o}$ , as before.

(2) Ceremonies at the temple.  $Kwani\bar{o}mon$  (see above).

Juryohon (prose sections only). Beating of drums and cymbals.

After this a minor priest says in a distinct

'Nyokyakukenyaku

Kaidaijömon,
Lo! the Gate of the Great Castle has been opened, and the
old has been taken away' (from the Kenhötöhon, sect. 12). Offerings.

Indo, pronounced by the leader (doshi).

Chanting the gatha portions of sect. 16 of the Saddh. Sūtra.

Incense.

The Daimoku, oft repeated.

 $Ek ec{o}$  .

The ceremonies come to a close. There seem to be no ceremonies specially connected with cremation or interment.

See, further, art. FESTIVALS (Japanese).

LITERATURE.—The greater part of this article is based on information collected for the writer by his friend Mr. S. Tachibana, a Buddhist priest of the Zen sect. The other authorities have been cited in the text.

A. LLOYD.

DEATH AND DISPOSAL OF THE DEAD (Jewish).—I. Conception of death.—Although there is uniformity, in a sense, in the physical phenomena of death, its character and circumstances and the impression which it makes vary in different times and places. In ancient Israel, death, like life, was more a matter of the family than it is now; it was not so much an occasion when an external professional element, represented by priests, lawyers, doctors, nurses, and hospitals, broke in upon or set aside the family. Again, violent deaths were more common; and the last illness of a dying man was not prolonged, as it is now, by the resources of medical science. In all probability the death-rate was much higher than it is with us, so that death was more common and familiar.

The impression made by death depends partly on belief as to its cause and as to the future of the individual after death. The modern mind is occupied with the physical cause of death, the particular disease, and the failure of remedial treat-ment. The Israelite and the Jaw thought of death as an act of God; more especially a death in early years, or in the prime of life, or under exceptionally distressing circumstances, was often regarded as a

judgment upon sin.

Death was not the annihilation of the individual—at any rate, according to the ordinary Hebrew view. A feeble ghost of the dead man maintained a dim, shadowy existence in Sheol, the under world or Hades. But probably in early times other beliefs supplemented or replaced this view. There are traces of ancestor-worship and necromancy in ancient Israel, and these imply that the spirits of the dead could manifest themselves to the living, and could exercise some influence upon their fortunes. Samuel, for instance, appeared at the call of the witch of Endor and foretold the death of Saul (1 S 28). Although there is little positive evidence, it is probable that the popular 1 Oft. W. H. Bennett, Religion of the Post-exilic Prophets, Edinburgh, 1907, p. 361 ff.
VOL. IV.—32

belief in ghosts prevailed in earlier as in later times. In Lk 243717 the Apostles take the risen Lord for a ghost.

In a sense the Israelite looked forward to reunion after death, so far as this may be implied in such phrases as 'buried with his fathers' (2 K 12<sup>21</sup>), 'slept with his fathers' (1 K 2<sup>10</sup>); but there is nothing to suggest that he looked forward to any satisfying fellowship with his deceased brethren in a future life. Thus, for all practical purposes, death was a final parting.

As regards what happened to the individual when he breathed his last, death was thought of as the departure of the nephesh (wp), or vital prin-

ciple; <sup>1</sup> though, curiously enough, nephesh is sometimes used in the sense of 'corpse' (Lv 19<sup>22</sup> 21<sup>1</sup> 22<sup>4</sup> [all H], Nu 5<sup>2</sup> 6<sup>11</sup> 9<sup>10</sup> [all P], Hag 2<sup>13</sup>).

Probably various primitive views prevailed in ancient Israel as to death and the individual after death, and these views were connected with general Semitic mythology; but the editors of the OT eliminated accounts of such crude superstitions, in the interests of orthodoxy and edification, so that only a few traces remain. A familiar myth is the death and resurrection of a god. Traces of this are found in the women weeping for Tammuz (Ezk 8<sup>14</sup>). According to Gressmann, the account of the death and resurrection of the Servant of Jahweh in Is 53 is based on some such myth; of this

possibly other traces are found in the references to אָבֶל יְחִידּ אָבֶל יְחִידְּ אָבְּלְ יְחִידְּ 'mourning for an only son.3 The later books of the OT contain hints of a resurrection, which develop in the later literature, especially in the Wisdom of Solomon and the Apocalypses, into an express doctrine, so that for later Judaism and for Christianity—following Judaism—death became the portal to a future life. When Judaism evolved a hierarchy of angels, with proper names and special functions, there appeared among the rest, Sammael, the Angel of Death. See DEMONS AND SPIRITS (Heb.) and

(Jewish).

Later Judaism inherited or developed many curious fancies as to the hour of death; as, for instance, that the dying soul has a vision of the Shekinah just before its departure. Ben Kaphra, a Rabbi of the early Christian centuries, is quoted as saying:

'For three days the spirit hovers about the tomb, if perchance it may return to the body. But, when it sees the fashion of the countenance changed, it retires and abandons the body' (cf. Expos. Gr. Test. [1897] on Jn 11<sup>44</sup>).

2. Disposal of the dead .- The regular and legitimate mode of dealing with a corpse in ancient Israel was burial, and this has always remained the general custom of the Jews. Embalming was not an Israelite practice; when we read that Jacob and Joseph were embalmed (Gn 50<sup>2-26</sup>), we must clearly understand that they were treated as Egyptians, amongst whom embalming was the regular custom. In later times we are told that the body of Aristobulus was embalmed in honey (Jos. Ant. XIV. vii. 4). Embalming in the strict sense must be distinguished from the Jewish custom referred to in 2 Ch 16<sup>14</sup> and in NT (Jn 19<sup>80</sup> etc.) of anointing the dead body and placing it in or wrapping it up in spices. Cremation, amongst the Israelites, was exceptional. According to 1 S 31<sup>12</sup>, the men of Jabesh-Gilead burned the bodies of Saul and his sons, probably to prevent their falling into the hands of the Philistines. The fact that 1 Ch 10<sup>12</sup> omits the burning, and that Josephus (VI. xiv. 8) states that the bodies were buried, is probably evidence of the repug-

1 W. H. Bennett, op. cit. 228 ff. 2 Der Ursprung der isr. füd. Eschatologie, Göttingen, 1905, p. 328 ff. 3 Am 310, Jer 620, Zec 1210; cf. Cheyne, The Two Roligions of Israel, London, 1911, p. 211.

nance of the Jews, at any rate in later times, to nance of the Jews, at any rate in later times, to the cremation of the dead. The EV of Am 6<sup>10</sup> speaks of 'he that burneth' a corpse; but the reference to burning the corpse is due to corruption or misunderstanding of the text. In some cases, however, criminals were burnt alive (Gn 38<sup>24</sup>, Lv 20<sup>14</sup> 21<sup>9</sup>), or their corpses were burnt (Jos 7<sup>16,26</sup>). The picture in Is 66<sup>24</sup> of the corpses of sinners consumed by fire may have been suggested by the actual treatment of dead criminals. According to Kimchi there were perpetual fires in the Valley of Hinnom for consuming dead bodies of criminals and animals. In Am 2 the burning of the bones of the king of Edom is an outrage which calls down inexorable doom on Moab.

Exposure without burial was a disgrace and a misfortune. Criminals or their representatives might be so treated (2 S 21<sup>91</sup>.), but, according to might be so treated (2 S 21°1.), but, according to Dt 21°21., even their corpses were to be buried. Such a misfortune might befall sinners as the judgment of God (1 K 14¹1.) Jer 7°33, Ezk 29°5, Ps 79°3). To bury relatives, and even strangers, was a supreme duty; it is specially insisted on in To 1. 2, and is illustrated by the story of Rizpah (2 S 21°10.). Job complains that God allows the wicked man to have an honourable burial (Job 21°32.). The desecration of a grave was a kind of posthumous punishment (2 K 23¹6, Jer 3¹1.). There is not much evidence in the OT of graves dug in the earth in the modern fashion, though

dug in the earth in the modern fashion, though doubtless such were often used. The labours of the various Palestine Exploration Societies show that rock-hewn tombs were exceedingly common; they usually occur in groups. A space for a single corpse is hewn in the face of a rock and closed with a stone slab; this space was called a kik, resultance, Dict. of the Targumin, 1886-1903, s.v.), by the Jews in later times. These are found grouped in one or more chambers in natural or artificial caves. One of the most interesting examples of such a burying-place is the cave of Machuelah, where Sarah Alvaham, Issue of Machpelah, where Sarah, Abraham, Isaac, Rebekah, Leah, and Jacob are said to have been buried (Gn 23<sup>19</sup> 25<sup>9</sup> 49<sup>31</sup> 50<sup>13</sup>). Masonry tombs with groups of kükim are also found; and sometimes monuments were erected over tombs; for instance, Simon the Maccabee built an elaborate mausoleum at Modin for his father and brother (1 Mac 1327-29), no trace of which has yet been discovered.

no trace of which has yet been discovered. In ancient times each family, like that of the patriarchs, had its own burying-place. Such burying-places would naturally be on the family estate. We read of Manasseh being buried in the garden of his own house, and Amon in the garden of Uzza (2 K 21<sup>18, 25</sup>). But usually the kings of Judah were buried in a royal burying-place in the city of David: e.g. Josah (2 K 12<sup>21</sup>), apparently near the Temple (Ezk 43<sup>7-9</sup>), the Temple being in ancient times an adjunct of the royal palace. Obviously dwellers in towns, who had not extensive gardens, would be required, as in later times. towns, who had not extensive gardens, would be required, as in later times, to bury their dead outside the walls. Poorer people would have no family burying-place, and we read of a public cemetery, 'the graves of the bent hat am' (2 K 23°, Jer 263°). Apparently a measure of disgrace attached to burial there, 'in a pauper's grave,' so to speak.

The family desired to be together in death as in life, and men were anxious to 'sleep with their fathers,' i.e. to be buried in the family tomb. It fathers, 7.2. to be buried in the family tome. It is part of the punishment of Pashhur that he is to be buried in Chaldaea (Jer 20th); and the Chronicler, in contradiction to the Book of Kings, states that certain wicked kings of Judah—Jehoram and Joash—were not buried in the sepulchres of the kings (OCh. 9120 2425). In most Bibliog times the kings (2 Ch 2120 2425). In post-Biblical times the Jews have had their own cemeteries. They still

1 Of. Sir C. Warren, in HDB ii. 385.

retain their anxiety to be buried with their own people. Jews who are lax in many religious matters will keep the Day of Atonement in order

that they may be buried in a Jewish cemetery.

A certain sanctity attached to the graves of ancient saints and heroes, and probably, as amongst the Muhammadans, such tombs became shrines; e.g. the tomb of Joseph at Shechem (Jos 2432), and e.g. the tomb of Joseph at Snechem (Jos 24"), and the tomb of the patriarchs at Machpelah. Necronancy and similar superstitions were often connected with graves (Is 65").

On the other hand, the grave is unclean (Lk 1144).

On the other hand, the grave is unclean (bk 11"). In later times, at least, cemeterics were supposed to be special haunts of evil spirits; and the spirits of the dead lingered there, at any rate till the corpse had been assimilated to the soil. This belief, that the spirits of the dead inhabit the tombs, is found in most primitive religions, and was probably prevalent amongst the Israelites in

early times.

3. Mourning and other observances.-Numerous passages illustrate the distress caused to the Jews passages illustrate the distress caused to the Jews by bereavement: the mouning of Jacob over the supposed death of Joseph (Gn 37<sup>35</sup>); of David over Absalom (2 S 18<sup>33</sup>); Rachel refusing to be comforted (Jer 31<sup>16</sup>). The behaviour of David, who fasted and wept when his child was dying, but arose and ate when it was dead, was a puzzle to his courtiers; his explanation, that lamentation was useless, hardly seems adequate (2 S 12<sup>156</sup>). The feelings sentiments and ideas called forth

The feelings, sentiments, and ideas called forth by death gave rise to various burial and mourning customs. Decease was and is followed by the necessary arrangements for the seemly 'laying out' of the corpse. The eyes and mouth are closed (Gn 464, Jn 1144), and the body is washed (Ac 927). It has been supposed that the dead were, sometimes at any rate, buried in their usual dress, with their arms and ornaments; Samuel appears to the witch of Endor in his mantle (1 S 2S<sup>14</sup>), and the dead go down to Sheol with their weapons and their 'pomp' (jww). The practice certainly prevailed in later times. Thus Herod buried ornaments with the body of Aristobulus (Jos. Ant. XV. iii. 4); treasures were said to have been buried with David (XVI. vii. 1). Herod was buried everyod with pavid treasures were said to have been buried with David (XVI. vii. 1); Herod was buried covered with purple, with his diadem, crown, and sceptre (XVII. viii. 3; BJI. XXXIII. 9). We are told that in later times such practices led to great extravagance, so that Rabbi Gamaliel II. ordained that corpses should be buried in a simple white dress. We read of Ananias, that they 'wrapped him round,' apparently in the clothes he was wearing, and carried him out, and buried him (Ac 56) buried him (Ac 56).

Later on, the use of a shroud or special graveclothes or wrappings for the dead became universal; but it is not clear when this custom was first introduced amongst the Jews. In Jn 1144 Lazarus' hands and teet were bound with linen bandages The body of our Lord was wrapped in strips of linen (δθονίοιs). We have already referred to the use of spices.

Coffins were not used by the Jews in ancient times, except in the case of Joseph (Gn  $50^{28}$ ), whose remains were placed in an ' $\bar{a}_{L}m$ , or chest; but this, like his embalming, was an Egyptian custom. The Jews laid their dead on a bier (OT mitted, 1957, 'couch' [2 S 331]; NT oopes [Lik 714]), as is the custom amongst Eastern Jews now. They use this bier to carry the corpse to the grave, and do not bury it.

The exigencies of the climate of Palestine called for burial soon after death, on the same day, or within 24 hours. As often, a natural necessity hardened into a sacred custom, which was long maintained amongst Jews in Western countries, where the same necessity did not exist; but after a while it fell into disuse, and a longer interval is allowed in the West.

The carrying of the corpse to the burying-place was the work of friends of the deceased, and was the occasion of public lamentation, which, at any rate in the early centuries of our era, was partly performed by hired mourners and musicians. There does not seem to have been any formal burial service of a religious character in Biblical times, but then and later funeral orations were sometimes delivered. According to *JE* (s.v. 'Funeral Rites,' v. 529), the mourners recited Ps 91 on their way to the cemetery; in the cemetery, other formulæ, con-cluding with the *Kaddish*, or doxology; and on their return, passages from Lamentations. Women attended funerals in ancient times, and still do so amongst the foreign Ashkenazim, but not amongst

amongst the foreign Ashkenazim, but not amongst the Sephardim or the English Ashkenazim.

The funeral of Herod the Great is thus described by Josephus (Ant. XVII. viii. 3; cf. BJ I. xxxiii. 9):

'The body was carried upon a golden bier, embroidered with very precious stones of great variety, and it was covered over with purple, as was the body itself: he had a diadem upon his head, and above it a crown of gold; he had also a sceptre in his right hand. About the bier were his sons and his numerous relations; next to these were the soldiery, distinguished according to their several countries and denominations; and they were put into the following order: first of all went his guards, then the band of Thracians, after them the Germans, next the band of Galatians, every one in their habiliments of war; and behind these marched the whole army, in the same manner as they used to go out to war, and as they used to be put in array by their muster-masters and centurions; these were followed by five hundred of his domestics, carrying spices.'

We may also quote the following description of modern Samaritan rites, which probably preserves

modern Samaritan rites, which probably preserves many of the customs of Palestinian Jews in early times:

'Upon death the corpse is carefully and ceremoniously washed; it is not forbidden to the Samaritans, as has been frequently stated, to handle their dead, except in the case of the high-priest. Candles are burnt at the head and foot of the corpse before burial. Coffins are used—an exception in modern Palestinian custom. The mourning ceremonies last until the tollowing Sabbath, the community going each day to the tomb, where they read and pray. On the Sabbath the community again visit the tomb, where they partake of a meal, while further appropriate services are held in the synagogue.' The divertion of mourning her always varied

The duration of mourning has always varied, according to the rank of the deceased and his relation to the mourner. Seven days was a very common period. The men of Jabesh-Gilead fasted seven days for Saul and Jonathan (1 S 31<sup>13</sup>); Joseph mourned seven days for Jacob (Gn 50<sup>10</sup>); Judith was mourned seven days (Jth 16<sup>24</sup>); Sir 22<sup>12</sup> mentions seven days as the period of mourning. In later Judaism the period of strict mourning, the Shib'a, lasts seven days; mourning of a less severe character lasts till the end of thirty days, and in the case of children to the end of the year.

As to mourning-dress, the rending of garments and the wearing of sackcloth are mentioned in Gn 37<sup>34</sup> etc. We also read of garments of widowhood (Gn 38<sup>14</sup>, Jth 10<sup>3</sup>), which apparently were worn by the widow throughout her life, and consisted of, or included, sackcloth. Modern Jews usually wear black as mourning, except in Russia, Poland, and Galicia, where white is worn. Mourners rend their garments at the time of death, and wear the outer garment cut and unbound during the thirty days of mourning.5

The presence of numerous guests at a funeral necessitated a special meal, 'funeral baked meats, which, in spite of the character of the occasion, was apt to become a feast. This meal is perhaps spoken of in the OT as *lehem 'chim*, 'bread of mourners' (Hos 94), and was provided for the mourners by their friends at the close of the fast 1 Stapfer, Palestine in the Time of Christ, Eng. tr., Lond. 1887,

which occupied the day of the funeral (2 S 335, Jer 167)—a custom which seems to have prevailed ever since.1

Other acts of mourning were fasting (1 S 31<sup>13</sup>), beating the breast (Is 32<sup>12</sup>, cf. Lk 18<sup>12</sup>), sitting in ashes (Jon 3<sup>6</sup>), sprinkling ashes on the head (Est 4<sup>1</sup>). Ezk 24<sup>17</sup> implies that mourners were wont to cover the lip and to go barefoot and bareheaded. According to Jer 16<sup>6</sup>, mourners mutilated themselves, and plucked out or shaved off the hair;

but such practices are forbidden in Lv 19<sup>28</sup>, Dt 14<sup>1</sup>.

Traces remain in the OT of the worship of the dead, of sacrifices offered to or for them, and of furnishing them with food. Probably the later funeral feast was partly a survival of such practitles. The worship of the dead was closely connected with necromancy, which was prevalent in Israel (a.g. Is 8<sup>19</sup>). The graves of ancient worthies seem often to have been shrines, as in Islām. Thus seem other to have been shrines, as in Islam. Thus there was a massebā, or sacred pillar, at the grave of Rachel (Gn 35<sup>20</sup>), and the important sanctuary at Shechem may have been connected with the grave of Joseph (Jos 24<sup>26, 22</sup>). The interpretation of Dt 26<sup>14</sup> is a little doubtful. The EV renders '[I have not given food] for the dead,' but the reference probably is to offering food to the dead or providing food for them. or providing food for them. The practice was condemned by official Judaism, but persisted nevertheless. Tobit 4<sup>17</sup> bids the Jew place food on the tomb of the righteous; and Sir 30<sup>18</sup> also refers to the custom. In some quarters necromancy and its allied enginess survived among the Love in later. its allied customs survived among the Jews in later periods.

In Rabbinical times and among the stricter modern Jews, during the Shiba, or seven days of strict mourning, the relatives abstain from work and remain at home, sitting on the floor or on a low bench, reading the Book of Job, and receiving visits of condolence. Bereaved children should abstain for a year from music and recreation.

A special feature of Jewish mourning is the repetition of the Kaddish by a bereaved son. According to the Jewish Prayer-book, this is to be repeated by sons for eleven months after the death of a parent, and also on the Jahrzeit, or anniversary of the death. It is a special form of Kaddish which runs thus:

'May His great Name be magnified and hallowed in the world which He created according to His will! May He establish His kingdom speedily and in the near future in your lifetime and in your days and in the lifetime of all Israel! Say ye Amen. May His great Name be blessed for ever; may it be blessed for ever and ever!

for ever and ever!

May the Name of the Holy One (Blessed be He) be blessed and praised and glorified and exalted and set on high and honoured and uplitted and sung above all blessings and hymns and praises and consolations that are repeated in the world!

May the Name of the Lord be blessed from now even for evermore! May there be great peace from heaven and life upon us and upon all Israel, and say ye Amen. My help is from the Lord that made heaven and earth. May He that maketh peace in His high places make peace for us and for all Israel! And say ye Amen.

This is a publicly neglected in the supergroup but

This is publicly recited in the synagogue, but according to Oesterley and Box 4 it is in no sense in itself a prayer for the dead, but the public recitation of it in this fashion by a son is regarded as a proof of the piety of the dead, as represented by a pious survivor.' This no doubt is the view of enlightened Jews; but others believe that the repetition of the *Kaddish* by the son shortens the purgatorial period which the father must spend in Gelenna or exalts him to a higher sphere in Paradise.<sup>5</sup> The repetition terminates on the anniversary of the death, because it would be unfilial to suppose that a father's sins would require more than a

year's purgatory. In the Ashkenazic synagogues prayers are said four times a year by the bereaved for the souls of the deceased.

Priests were forbidden to mourn except in the case of the nearest relationships (Lv 211-5, Ezk

4. Significance of death and of funeral customs.
—Some scholars 2 see in many of the funeral rites, notably cutting of the hair, self-mutilation, etc., which were forbidden by the more advanced Judaism, traces of an animistic stage of the religion of Israel, of the worship of ancestors, and of the allied ideas of the continued life of the dead, of the possibility of communion with them, of the necessity of providing for their needs and protecting them from evil spirits; or, on the other hand, of the need of protecting the living from injury by the spirits of the dead. No doubt the Semitic peoples passed through a stage of religious development when such ideas were current; and these ideas persisted and do persist when they have been outgrown by the purer forms of religion; but they do not belong to Jahwism or to Judaism so far as either was or is dominated by revelation. Nevertheless, the great importance attached to burial in less, the great importance attached to burial in the last centuries of the pre-Christian era sug-gests that the condition of the spirit of the deceased was supposed to be influenced by the treatment of the corpse. Later on, in some districts the habit prevailed of visiting cemeteries in order to obtain the help or intercession of the dead.

Another quasi-animistic explanation of mourning rites which involve disfigurement, unattractive dress, covering the head, etc., is that they were intended to prevent the spirit of the dead man from recognizing the mourner, and so to protect the letter from the lette the latter from any injury the spirit might wish to inflict upon him. Similarly, the mourners' shrieks were intended to drive the spirit away; and satisfactory burial was necessary in order that the dead might find their way to Sheol and stay The suggestion that many mourning rites were due to the anxiety of the mourner to humble himself before God a hardly seems probable. The most obvious explanation is that mourning arose out of a natural desire to express the emotions caused by bereavement. Such distress gives rise to wailing, frantic gestures, neglect of the dress and person, an aversion to the pleasures of life. Acts which were originally spontaneous would soon harden into a fixed etiquette or ritual. Many customs might easily be thus explained; and it is possible that this may be the true explanation, even in cases where a mourning custom does not seem to us a natural expression of grief. A man distraught by sorrow may seek relief in any unexpected, strange, unusual act; such an act may appeal to the imagination of spectators by its very strangeness, and be imitated till it becomes a

The contagious uncleanness of a corpse (Nu 52, Lv 21" might be suggested in many ways: by the fear of the spirit of the dead man mentioned above, by the natural shrinking from an object so changed from the living friend or kinsman, and even by sanitary reasons. The uncleanness of the corpse would naturally be extended to the tomb. In the same way an unburied corpse defiled the land and brought down a curse upon it (Dt 2123). It would be a mistake to try to explain all the mourning customs, even of one people, by the consistent application of a single principle. Bereavement affects men in many ways, so that natural affection, practical considerations, superstition, 1 Oesterley and Box, loc. cit.

3 E.g. F. Schwally, Das Leben nach dem Tode, Giessen, 1892.

3 PRE \*\* xx. 88 t.

and religion all contribute to give rise to the ritual connected with death. Moreover, a rite changes its significance and value from time to time, so that the meaning attached to it in later times may be quite different from that which it had originally, and the popular explanation of it may throw no light on its origin.

According to Gn 3, death was a consequence of the sin of Adam and Eve (cf. Ro 512); it would be natural to draw the conclusion arrived at in the latter passage, that henceforth each man died because of his own sin (a view perhaps implied by Nu 278). But the narrative in Genesis stands apart from the general course of OT thought, which regards death as the natural end of life. The righteous man, according to a widely prevalent view, enjoys a long and happy life, and is gathered to his fathers in a good old age. Some passages of the Wisdom Literature, even apart from any belief in a real future life, regard life as a burden and death as a boon (Job 716. 16, Ec 1<sup>2</sup> 4<sup>2.3</sup>).

In some passages of OT, death is personified (e.g. Job 28<sup>22</sup>, Is 28<sup>15</sup>, Hab 2<sup>5</sup>). In others the term is extended to mean spiritual death; it doubtless includes physical death, but only as a part of a wider judgment which also involves separation from God and exclusion from the Kingdom. In such passages, as Schultz said, 'death includes everything which is a result of sin.' This usage of the term is extended and developed in the later literature. Thus Philo: 'The death of the soul is the decay of wirther the taking was of critical.'

rirtue, the taking up of evil.' 8

In later Judaism, death is regarded as atoning for the sin of the deceased. According to a popular superstition, the dead man suffers pain while his body is decaying in the grave, and this pain has an atoning value. But, apart from such ideas, we find the doctrine taught by Rabbinical and other authorities. Thus the Sephardic ritual for a dying man includes the following:

'Let my death be an atonement for all my sins, iniquities, and transgressions, wherein I have sinned, offended, and transgressed against Thee, from the day of my first existence; and let my portion be in the Garden of Eden.' Again we read: 'The Day of Atonement and death make atonement when accompanied with sincere repentance.' <sup>5</sup>

or Atonement and death make atonement when accompanied with sincer repentance.

63). In the traditions, men are forbidden by the Prophet to wish for death, though to a believer it will be desirable. Whoso's last words are the Kalima (profession of faith, 'There is no god but God') will enter into paradise; and it is directed that this shall be recited in the presence of the dying, and the Sūra Yā Sīn (Qur. xxxvi.) should be said over the A fantastic tradition, given on the authority of Abū-Huraira, relates what Muhammad is supon Add-Tathana, relates what indiminial is sup-posed to have said about the passing of the soul. In the case of a believer, angels of mercy clad in white come and invite the soul to the rest which is with God, and the soul comes out with a delicious smell of musk, which the angels sniff with satisfaction; the soul is handed on from angel to angel, till it reaches the souls of the faithful, who rejoice and question it about those left behind on earth. But angels of wrath come to the dying infidel, and his soul departs with a bad smell, which disgusts them, and they bring it to the souls of the infidels. This idea is elaborated in other traditions, in which the soul of the righteous is said to issue forth like water from a skin, and the angel of death seizes it; but the angels in white snatch it from him and wrap it in a shroud with an odour of musk, and convey it on and on to the seventh heaven, where the believer's name is registered, after which it is returned to its body on the earth, to undergo the questioning of the grave. But the dying infidel is visited by black-faced angels, and the soul is drawn out like a hot spit out of wet wool which sticks to it, and is wrapped in sackcloth, smelling fetidly; and its name is written in hell (sijjīn); and it is violently thrown down upon the earth, to be examined by the angels of the grave, as will be

Meanwhile the body is treated with a ceremonial which varies little in different parts of the Muslim world, and is nearly the same for men and women. Precedents for most of the ritual are traced to traditions of the Prophet; but two customs-the wailing of women and the recital of praises of the dead-are observed in direct defiance of his commands. The dying man is turned to face the qibla, or direction of Mecca, and, as soon as his eyes are closed in death, the surrounding men ejaculate pious formulæ and the women raise cries of lamentation (walwala), the family calling upon the dead in such terms as 'O my master!' 'O my resource!' 'O my camel!' 'O my misfortune!' The clothes of the deceased are instantly changed, his jaw bound, and his legs tied; and he is covered with a sheet. Women friends, and sometimes professional 'keeners' (naddāba), with tambourines, join the mourners and cry, 'Alas for him!' If he was one of the 'ulamā of Cairo or some man of mark, his death would be announced from the minarets in the call known as the Abrār (from Qur. lxxvi. 5-9). The lamentations go on all night, if the death occurred in the evening, and a recitation of the Qur'an by hired fique takes place; but, if the death occurred in the morning, the burial follows on the same day, as, in addition to the rapid decomposition in a hot climate, there is often a superstitious dread of keeping a corpse all night in the house. The washing of the dead is done by a professional washer (mughassil or ghassāl), male or female according to the case, who brings a bench and bier, and does the work, often in a courtyard, with much reverence and decency, and with care in the disposal of the water, which people fear to touch; while the figis continue chanting in the next room. After a very elaborate washing, the nostrils and other orifices are stuffed with cotton, and the corpse is sprinkled with camphor, rosewater, and lote leaves (nabq), the feet tied together and hands laid on breast, and the grave clothes (kafan) put

on according to precise rules. Those vary from two or three pieces of cotton (or five for a woman), or a mere sack, in the case of the poor, to a series of layers of muslin, cotton, silk, and a Kashmīr shawl, among the rich; and the fashions vary in different lands. Women usually have a long shift (yalak) added, and in India a coif (damnī). White and green are the favourite colours for the kafan, or any colour but blue, but white alone is allowed in India. A shawl is thrown over the body when placed on the bier (janāza or sundāq). There is no coffin, and, of course, no priest.

The funeral or procession varies in different countries. In India, women do not attend as a rule, but they do in Bukhārā. In Egypt the cortège is often preceded by half a dozen poor men (yamanīya), blind by preference, walking in pairs and chanting the Kalīma. After them come the male friends and relations and relations and relations and relations. the male friends and relations, and perhaps some darwishes, especially if the deceased belonged to a darwish order. A few schoolboys follow, carrying a Qur'an on a desk, and chanting lively verses on the Day of Judgment and similar topics. Then comes the bier (which for women and children has a post [shāhid] at the head, covered with a shawl, and often adorned with gold ornaments, or, in the case of a boy, surmounted by a turban), carried head foremost at a brisk pace by friends, who relieve each other in turn. It is an act of merit for any passer-by to lend a hand or to follow the bier: and when a bier was passing, and saying a prayer.
The women walk behind the bier, with dishevelled hair, keening and shricking, and the hired mourners swell the chorus and sound the praises of the dead, contrary to the Prophet's will. Blue headbands and handkerchiefs distinguish the women relations, who slap their faces and some-times smear them with mud. There are some variations in the procession when the deceased is a woman. Rich people add camels to the procession, and hire figis to chant chapters of the Qur'an on the march, or members of religious orders carrythe march, or members of rengious orders carrying flags; and also sacrifice (al-kafūra) a buffalo at the tomb for the benefit of the poor; whilst ladies riding the high ass often follow their female relations. If it be a saint (walī) who is being buried, the women raise joy-cries (zaghārīt) instead of wilvūl, or keening; and, if these cries cease, the bier stops too; for saints are believed to be wilful and able to stop their bearers, and even to direct them to where they prefer to be buried. It is said to be useless to try to rush a saint's bier in a direction he does not like, but the somewhat bizarre device of turning the bier round rapidly several times has been found successful in confusing the corpse's sense of orientation (Lane, Mod. Eg. p. 518).

The ceremony at the mosque consists in laying the bier on the floor, right side towards Mecca, when a service of prayer is recited by an imām and his attendant muballigh, in the presence of the congregation of mourners and all who choose to attend, ranged in a prescribed order, ending with an appeal to the audience: 'Give your testimony concerning him,' and their reply: 'He was of the righteous.' The fiqīs may then recite the Fātiha, etc., and the funeral goes on to the graveyard.

There a tomb has been prepared, of ample size, with an arched roof, so that the corpse may sit up at ease to answer the interrogatory of the examining angels, Munkar and Nakir, who will enter the tomb to question him as to his orthodoxy. If the replies are satisfactory, the grave will be enlarged to him, and a man with a beautiful countenance will appear to tell him: 'I am thy good deeds'; otherwise, a hideous face comes to represent

his evil deeds, and painful experiences ensue. The fear of 'the torment of the grave' is very real

among Muslims.

The construction of tombs varies in different Places, and no one pattern can be indicated. In Egypt, the entrance is at the foot, the side furthest from Mecca, and the tomb is often made to hold several bodies; but, if they are of opposite sexes, a partition is set up. Over the tomb is an oblong stone slab or brick monument (tarkīya), with an upright stone (shāhid) at head and foot. The inscription is on that at the head, which is often carved with a turban. A small chapel covered with a cupola is frequently built over the tombs of saints and other distinguished people, while the tomb-mosques of sultans and amīrs are often beautiful examples of Saracenic

The body is lifted out of the bier and laid in the tomb, on its right side, with the face towards Mecca, propped in that position by bricks. Its bandages are untied, its Kashmīr shawl rent, lest pandages are united, its Masimir snawl rent, lest it should tempt grave-robbers, a little earth is sprinkled, ch. exii. of the Qur'ān, or xx. 57, is recited (but this was forbidden by the Waḥḥabīs and others), and the entrance is closed. There is no service at the grave; but, before leaving (unless the funeral be of a Māliki), a fiqī, in the character of mulaqqin, or tutor of the dead, sits before the temph and tells the defunct the five correct approximately t tomb and tells the defunct the five correct answers to be given to the examining angels that night (the 'Night of Desolation,' Lallat al-waqsha) when they come and ask him his catechism: he must reply that his God is Alläh, his prophet Muhammad, his religion Isläm, his Bible the Qur'an, and his qibla the Ka'ba. The grave is left in solitude and the mourners depart, saying a Fātiḥu for the defunct and another for all the dead in the cemetery. Some fiqīs take a repast in the room where the decased died and recite ch. Lvii. of the Quran, or deceased died and recite ch. Ixvii. of the Qur'an, or perform the more elaborate ritual called the Sabha, 'Rosary,' in which a rosary of a thousand heads is used to count the thousands of repetitions of the Kalima and the hundreds of other formulæ repeated. This performance ends with one of the fiqis asking the others: 'Have ye transferred [the merit of] what ye have recited to the deceased?' and their answer: 'We have transferred it.'
Wailing is resumed by the women on the

Wailing is resumed by the women on the Thursdays of the first three weeks after the burial, and the men receive friends of the deceased in the and the field receive friends of the deceased in the louse and hire figis to perform a hatna of the Qur'an; and on the Fridays following these three Thursdays the women visit the tomb and go through various rites, including the placing of a broken palm branch on the tomb and giving food to the pear and the same is done on the Thursday to the poor; and the same is done on the Thursday and Friday completing or following the forty days and rheay completing or following the forty days after the funeral. Men do not display mourning in their dress, but women dye their veils and other gear dark blue, and sometimes smear the walls of their rooms, and even stain their hands and arms with the same indigo dye. They also disarrange their hair, and the furniture and carpets are upget in mourning for the head of the hears. set in mourning for the head of the house.

LATERATURE.—The most minute account of all the ceremonies and processes used in regard to the disposal of the corpse is to be read in G. A. Herklots and Ja'far Sharif's Qunon-e-Islam, London, 1832, ch. xxxxiii.; the ceremonies after the funeral are described in ch. xxxix.: but a good deal of this account consists of details peculiar to the Muslims of Hindustan. The corresponding ceremonies observed in Egypt are described in Lane's Modern Byptians's London, 1860, ch. xxviii., where also is a notice of a curious dance performed on the cecasion of a death by the peasants of Upper Egypt. The Egyptian customs are similar to those observed in Syria and Turkey, though local differences of usage are to be noticed, a fairly detailed account of which for Turkey may be read in The People of Turkey, ed. S. Lane-Poole, London, 1878, ii. 136-143. See also Itaghes' DI, London, 1885, s.v. 'Burial' and 'Death,' where Herklots is conveniently abridged. The traditions of Muham-LITERATURE.—The most minute account of all the ceremonies

mad on the subject are accessible to English readers in Mishkat al-Masābih, tr. Matthews, Calcutta, 1809, vol. i. pp. 355-403.
STANLEY LANE-POOLE.

DEATH AND DISPOSAL OF THE DEAD (Parsi).—r. Before death.—When death approaches, one or two priests are summoned to make the dying person confess his sins. The Patet, or confession of sins, is recited for his benefit, and it is a meritorious act if he is able to join the priest in repeating the confession. According to the Sād Dār (xlv.), the man who 'accomplishes repentance' does not go to hell, 'accomplishes repentance' does not go to hell, but, having received his punishment at the end of the Chinvat bridge, is led to his place in heaven. In a case of urgency the short Ashem-Vohū (Ys. xxvii. 14) formula may suffice, and the Hātōkht Nask fragment (Yt. xxi. 14f.) attributes a special value to the recital of Ashem-Vohū in the last moments of life. The Sād Dār adds (Ixxx. 11) that it brings one who has deserved hell to the Hamīstakān (the 'ever stationary' region between heaven and hell); one who has deserved the Hamistakā to heaven; and one who has deserved heaven to the highest paradise. The tanu-peretha, after whose death the upaman, 'waiting,' mourning,' of the relatives must be prolonged beyond ing,' of the relatives must be prolonged beyond the usual period (Vend. xii.), is explained by tradition as one who has died without Patet and without Ashem-Vohū. Sometimes a few drops of the consecrated haoma juice mingled with water are poured, if possible, into the mouth of the dying person, haoma being believed to produce immortality. Formerly this custom was more common; and it was also usual to drop into the mouth of the dying person a few grains of pomegranate, belonging to the holy ceremonies of the Parsi sacrifice. Parsi sacrifice.

z. Death.—According to Vend. v. 10, the ancient Zarathushtrians and special chambers or buildings (kata) for the dead-one for men, one for women, and one for children-in every house or in every and one for children—in every house or in every village, and the common mortuary still exists amongst the Zarathushtrians of Persia and in the Mofussil towns of Gujarāt. In Bombay and other parts of India a special place in the house is prepared beforehand and washed clean in order to receive the dead body. The body is bathed all over and covered with a clean, but worn-out, white suit of cotton clothes, which must be destroyed and never used again after having served for this and never used again after having served for this purpose (cf. Vend. v. 61, viii. 23-25). A relative girds the sacred cord round the body, reciting the girds the sacred cord round the body, reciting the Ahura Mazila Khudāi, a short prayer in Pazand. The corpse is placed on the ground on a clean white sheet. Two relatives sit by his side keeping themselves in contact with him—a custom probably derived, like the paivanil (see below) held by the watchers and the bearers of the corpse, from the idea of forming a bridge or a way for the soul. An Ashem-Volui is recited close to the dead man's ear.

the dead man's ear.

3. Impurity of the corpse.—The corpse is now supposed to be assailed by the corpse-demon, the Druj Nasu. According to Vend. vii. 1-5, the druj of the corpse rushes on the body from the north, in the shape of a fly, immediately after death in a case of natural death. But in a case of violent death (by dogs, or by the wolf, by the sorcerer, by an enemy, or by the hand of man, by falling from a mountain, by strangling oneself, or by treachery) the demon comes only in the gāh (one of the five divisions of the day) that follows after death. Only special despised officials, set apart for that purpose, are allowed actually to touch the body, and they must scrupulously observe certain fixed rules. If any one else happens to touch it, the contagion spreads to him, pens to touch it, the contagion spreads to him, and he must undergo the great purification, bar-

ashnūm, for nine days (being washed with the urine of the cow, etc. [Vend. ix.]). The glance of a dog (see below) or other animal is considered to be particularly effective for driving away the

corpse-demon.

In theory the old tabu ideas concerning the dead have been modified in a characteristic manner by the Avestan dualism. Thus, since the death of a Mazdayasnian implies a victory of the Evil Power, his body is unclean, but the corpse of an unbe-liever is clean, because his death favours the cause of Ahura Mazda, and a wicked man defiles only during his life, not after his death (Vend. v. 36-38).

4. Isolation of the corpse.—The place of the two relatives waiting beside the body is next taken by the nasu-kashas of the Avesta, now called khāndhya ('shoulder-men') by the Parsis of India. Two of those funeral-servants prepare themselves by washing and by putting on clean suits of clothes and the sacred cord, and by reciting the Srösh-bāj (on which see Darmesteter, Le Zend-Avesta, ii. 688-688) up to the word ashahē.

They then enter the room where the dead body is placed, keeping between them a piece of cloth or cotton tape—the pairand. They cover the body with cloth except the face—which, however, in some parts of Gujarāt is also covered—with a padan (the patitidana of the Avesta, a piece of white cotton stuff which the Parsi priest holds before his nose and mouth in order not to defile the sacred fire and the other pure things). Then the sacred fire and the other pure things). the two khāndhyas lift the corpse on to slabs of stone placed in a corner of the room, its arms being folded across the chest. The face must not be turned towards the north, whence the demons proceed. In some districts of Gujarāt the old

Avestan rule (Vend. viii. 8) is still observed of laying the body on a thin layer of sand in a cavity dug in the ground five inches deep, while in Yezd the corpse, after being lifted from the bier in the common mortuary, is placed 'on a raised platform of mud paved with stone, about nine feet long and four feet wide '(Jackson, Persia, p. 391). The place

in which the body reposes is ritually separated from connexion with the living by three deep circles, kasha, drawn with a metallic bar or nail by one of the two khāndhyas, who afterwards leave the house, still making paivand, and finish

their Srösh-bāj

5. The sag-did.—If possible, 'a four-eyed' (cathrucashma) dog, i.e. a dog with two eye-like spots above the eyes, is now brought near the corpse in order to frighten the druj by his look, i.e. the sag-did ('dog-gaze') is arranged. According to Vend. viii. 16, a white dog with yellow ears has also a particular power against the demons, but any dog may suffice. The sag-did is repeated at the begin-ning of every  $g\bar{a}h$ , until the body is carried from the house. The prescription of Vend. viii. 14-18 seems not to be observed nowadays, namely, that a yellow four-eyed dog or a white dog with yellow ears must be led three times if he walks willingly, six or nine times if he is unwilling, along the road where a corpse of a man or of a dog is carried, in order to scare away the corpse-demon. In Yezd the ordinary street-dog is used, and 'morsels of bread are strewn around the corpse, or, according to the older usage, laid on the bosom of the dead, and the dog eats these (Jackson, op. cit. p. 389). Immediately before entering the dakhma ('tower of silence'), the dead body is once more exposed to the sug-did. The demon-expelling glance is attributed by Vend. vii. 3. 29 f., viii. 36, not only to the dog, but to 'the flesh-eating birds' as well as to 'the flesh-eating dogs.'

Those passages evidently refer to the moment when the animals, to which the body is exposed, rush on it to devour

it; but the eminent Parsi scholar J. J. Modi, to whom we principally owe our knowledge of the actual funeral ceremonies of the Parsis, interprets Vend, vii. 3 in the following way: 'It is enjoined that in case a dog is not procurable, the 'Sagded' of flesh-devouring birds like the crows and vultures should be allowed, that is to say, it will do if a flesh-cating bird happens to pass and sees the corpse from above or if the flesh-cating birds fly in that direction' (JASB ii. 414).

6. Demon-frightening fire.—We return to the mortuary room, where, after the first saq-did, the demon-killing fire (Vend. viii. 80) is brought and fed with fragrant sandal-wood and frankincense, and where, until the body is removed, a priest recites the Avesta, keeping himself, as well as

every other person, at least three paces from the dead body (*Vend.* viii. 7).

7. Time of removal.—The removal of the body must take place in the daytime, in order to expose it to the sun (Vend. v. 13). In ancient times the corpse might lie in the special mortuaries as long as one month or even until the next spring (Vend. v. 12). Now, in India, the body is removed the next morning, if death takes place early in the night; if a person dies late at night or early in the morning, the body is removed in the evening. In case of death by accident the body may wait

8. Removal. — Two 'corpse - bearers' (nasū-sūlūrs), clothed in white, with 'hand-cover' (dastānā) on their hands, and making pairand, enter the house about one hour before their departure to the dakhma, carrying an iron hier  $(g\bar{a}h\bar{a}n)$ . They must be at least two in number (Vend. iii. 14), for a single man is not allowed to carry even the body of a child. Wood being more liable to infection, the bier must be of iron. It is placed beside the body. The corpse-bearers read the Srōsh-bāj up to the word ashahē (the remaining portion of that prayer is recited only when their operations relating to the corpse are inished), and add in a low voice: 'According to the dictates of Ahura Mazda, the dictates of the Amshaspands, the dictates of the holy Space, the dictates of the dictates of the holy Sraosh, the dictates of Aderbād-Mahrespand, the dictates of the Dastur of this time. Then they sit silent, while two priests, having performed the kosti (cf. Darmesteter, op. cit. 685 f.) and repeated the special prayers of the gāh, enter the chamber, making paivand, put on their face-veils, 'take the Srōsh-bāj' (i.e. repeat it as far as ashahē), and commence the Ahunavaiti Gāthā (Ys. xxviii.-xxxiv.), keeping themselves near to the door or at least at a distance of three paces from the corpse. At the words of Yasna xxxi. 4: 'Seek thou for me, O Vohu Manah, the mighty Kingdom, through whose increase we may over-come the Druj, they stop; the corpse-bearers lift the dead body on the bier, when the priests turn to the dead and finish the Gāthā, after which a new sag-dīd is performed. The moment is now new sag-ara is performed. The moment is now come for relatives and friends, who have gathered in the house (or, in Yezd, in the common mortuary, the zād-ō-marg, 'birth and death,' or pursish-khānah, 'inquiry house'), to have a last look at the deceased. They how before the body, i.e. make the sejdo, before its face is covered up.

o. Fineral procession.—Having carried the body outside that house (according to Vend. viii. 10, the corpse sh ti-il be removed through a breach specially made in the wall of the house, and in this connexion it is worthy of note that the Persian zad-ō-marg has two doors, the corpse being brought in by the one and carried out by the other), the nasā-sālārs entrust the bier to two or more khāndyas (who are also sometimes called nasa-salars) to bear it to the 'tower of silence.' Two priests walk in the front of the procession, at a distance of thirty paces after the bier, accompanied by relatives and friends, two abreast, clothed in white and making paivand. In Persia, however, the order

There the procession is led by a man is different. bearing a vase containing fire (and formerly also by a musician playing a doleful air), followed by the relatives and friends, the corpse, the priests, and additional members of the family of the deceased. Here, too, if the dakhma is far distant, the body may be conveyed on a cow or donkey (cf. the Pahlavi commentary on Vend. iii. 14), and the mourners may ride, though the priests are required to walk.

io. In the tower.—At the gate of the tower the bier is set down, the face is uncovered to let the accompanying procession pay their last respects to the dead from a distance of at least three paces, and once more the sag- $d\bar{\imath}d$  is performed. Now the two real nasā-sālārs, who had arranged the body on the bier in the house, and who alone are allowed to enter the tower (not wearing their usual clothes [Vend. viii. 10], but the so-called 'clothes of dakhma'), open its gate, which is closed with an iron lock, lift the bier, carry it into the tower, place the body, with the head toward the south (the auspicious quarter), on one of the beds of stone (kesh) arranged in concentric circles, rising like an amphitheatre, which are intended for re-ceiving the bodies. These circles are separated by canals (pavis, a word which seems also to be used They reof the sections divided by the canals). move the clothes from the corpse, leaving it naked (Vend. vi. 51), and cast them into the central well, forming the middle of the tower, and surrounded by the amphitheatre-like circles of stone beds. The naked corpse may be left 'on the earth, on clay, bricks, and stone and mortar.' The vultures, Nature's scavengers, are already waiting, and in one or two hours they devour all that is corruptible of the body. Twice a year the nasāsālārs throw the skeletons into the well, where sun, rain, and air soon reduce the whole to dust. The Dinkart to Vend. v. 14 considers the falling of the rain on the corpses in the dakhmas and on the impure liquids as a great advantage. Formerly

the impure inquids as a great advantage. Formerly the bones were preserved in an ossuary.

'Whither shall we carry the bones of the dead, Ahura Mazda? Where shall we place them?' Ahura Mazda answered: 'You may make a structure (uz-dānem) for them beyond the reach of the dog, of the fox, of the wolf, inaccessible to the rain from above. If the Mazdayasnians are rich, they may construct it of stones, of plaster, or of earth. If they are not rich, they may place the dead on the ground in the light of heaven and looking towards the sun'(Yend. 49-51).

If, in Persia, a Zarathushtrian community is too small to support a delbang the hody (is carried)

small to support a dakhma, the body 'is carried to some remote place in the hills or mountains, is then piled around with stones and covered with a slab, but not interred' (Jackson, op. cit. p. 394). The Dādistān (xviii.), in the 9th cent. A.D.,

recommended collecting the bones and putting them in an astodan, elevated above the ground and covered with a roof to preserve them from rain and from animals. These receptacles to pro-tect the bones from the sun were made of two excavated stones, one forming the coffin, the other the cover. They might also be real monuments. perhaps corresponding to the caves of the Achæmenians at Naksh-i Rustam (Modi, 'An old Persian Coffin, JASB, 1888; cf. Darmesteter, op\_cit. p. 93, note 34). At the present day the here's of the dead are no longer preserved. dead are no longer preserved.

dead are no longer preserved.

Vend. vi. 45, in directing the dead to be carried. to the most elevated spots, where fiesh-eating dogs and fiesh-bating birds may most surely perceive it, gave sanction to a Dimittive method of disposing of the dead, still practised, e.g., by the Käftrs, who expose their dead in wooden coffins on the tops of the mountains (Lassen, Ind. Alterthumskunde, i.3, Leipzig, 1867, p. 520), by some wild tribes of India (Crooke, JAI xxvift, [1899] 245 t.), and by the Masai, where a person dying without children is abandoned, some hundred yards outside the kraal, to the hyænas, whose speedy devouring of the corpse is considered a favourable sign (Merker, Die Masai, Berlin, 1904, p. 198). The Hawnians threw their dead to the sharks, etc. (Segerstedt, Le Monde oriental, Upsala, 1910, iv. 2, p. 64). According to Strabo (p. 517; cf. Kleuker, Anhang zum Zend-Avesta,

Riga, 1783, II. iii. 71 f.), the Bactrians threw their sick and aged people to dogs, trained to devour them; the Caspians considered it more auspicious if birds devoured their dead exposed in the descrt than if they were eaten by dogs or wild animals (cf. Marquart, Philologus, Supplem. x. [1907] i. 141).

II. Dakhmas.—Special constructions or towers (dakhmas), for exposing the corpses, are well known to the Avesta. They constitute the most awful and impure spots on the earth, and it is one of the greatest merits to demolish them when they have served their purpose, and thus restore the ground to cultivation (*Vend.* iii. 13, vii. 49-58). The construction of the actual 'towers of silence' used by the Parsis of India is accompanied by a series of religious ceremonies, the consecration lasting three days (Menant, Les Parsis, Paris, 1898, pp. 206-235, with plans and illustrations).

12. Dispersion of procession.—At every dakhma a kind of chapel (sagri) is built, to which the funeral procession retires while the nasā-sālārs do their work with the dead inside the tower. When the  $nas\bar{a}$ - $s\bar{a}l\bar{a}rs$  are ready, the assistants, gathered in the  $s\bar{a}gr\bar{\imath}$  or seated at some distance from the dakhma, get up and finish the Srosh-baj, which they had commenced before starting in the funeral procession. In concluding the paivand they recite this prayer: 'We repent of all our sins. Our respects to the souls of the departed! We remember here the fravashis of the pious (departed).' They then take urine of the cow, wash the naked parts of their bodies, make the kosti, and repeat the Patet, mentioning the name of the departed at the end of the prayer, after which they return home and take a bath.

13. Ceremonies at home.—At home, immediately after the removal of the body, urine of the cow (nirang) is sprinkled over the slabs of stone on which the corpse was placed, and upon the road by which it was carried out of the house. All clothes, utensils, and other articles of furniture must be cleansed, principally by the same means— $g\bar{o}m\bar{e}z$  (urine of the cow) and water—or rejected altogether, if they have come into any contact with the dead body. After the removal of the body, all the members of the family are

required to take a bath.

În an ancient Iranian province, Harōiva (Harāt), the custom recorded from later times (Chardin, Voyages en Perse, Amst. 1735, iii. 109), of abandoning the house to the dead, seems to have prevailed according to the vish-harezana of Vend. i. 9 (cf. N. Söderblom, RHR xxxix. [1899] 256 ff.). The Great Bundahīshn gives the following explanation of this custom: 'We keep the prescriptions (of received the foundation of the second the first the foundation of the first the moving the fire, the barashnum, the cups, the haoma, and the mortar) during nine days (in the winter) or a month (in summer) (cf. Vend. v. 39 fl.). 'They abandon the house and go away during nine days or a month' (Darmesteter, op. cit. p. 9, note 20). It may be that upaman, 'waiting' (Vend. v.) originally meant a temporary abandoning of the house. At present, in Bombay, all the members of the family have to take a bath after the removal of the body, and fragrant fire is burnt on the spot where the corpse was laid. During nine days in winter and one month in summer a lamp is kept burning on the same spot, and no one is allowed to go near it during that period. After its expiry the whole room is washed. The members of the family and also near friends abstain from meat during three days after the death

We do not deal here with the festivals and gifts intended for the priest and for the poor after the death of a wealthy Parsi, or with the recital of several offices for his soul (see Immon-tantay (Parsi)). The funeral expenses of an eminent Parsi gentleman who died in 1763 amounted to more than 733 rupees, which would mean more than double this sum at present (Bomanji Byramji Patell, JASB iii. 144 ft.).

\(\mathbb{4}\). Recent opposition.—In some circles of Parsi society the question of introducing a more hygienic

and less savage manner of disposing of the dead has of late been very eagerly agitated. Both burning and burying being prohibited because of the purity of fire and earth, it has been proposed to consume the corpse by electricity, and the exe-getical question has been discussed whether such a method can be considered as burning or not. No change has been officially permitted as yet in the disposal of the dead, which shows the tenacity

disposal of the dead, which shows the tenacity of custom, and maintains continuity with an immemorial antiquity.

15. Ancient Persian rites.—In ancient Persia, before the spread of Zoroastrianism, the means of disposal of the dead were quite different from those observed by the adherents of the great Iranian religious leader. Attention has already been called, in § 10, to the Bactrian custom of leaving the sick and the aged to be devoured by doors, a practice recorded at only by Strebe (as dogs—a practice recorded not only by Strabo (p. 517), but by Cicero (*Tusc. Disp.* i. 45) and by Eusebius (*Præp. evang.* I. iv. 7). Both Herodotus (i. 140) and Strabo (p. 735) expressly state that, while the Magi exposed their dead to dogs or birds (as the Avesta enjoins), the Persians interred the dead body after coating it with wax (κατα-κηρώσαντες δή ῶν τὸν νέκυν Πέρσαι γῆ κρύπτουσι). It was, therefore, rank blasphemy (οὐχ ὅσια) when Cambyses ordered the corpse of Amasis to be cremated (Herodotus, iii. I6); and it is very doubtful whether any credence can be given to Xenophon's account (Cyropæd. VIII. vii. 25) of the request of the dying Cyrus—'Put my body, my children, when I die, neither in gold nor in silver nor in anything else, but commit it to the earth as soon as may be (τῆ γῆ ὡς τάχιστα ἀπόδοτε). For what is more blessed than this, to be mingled with the earth (γῆ μιχθῆναι)?'—since this last phrase would seem to exclude any coating of the body birds (as the Avesta enjoins), the Persians interred would seem to exclude any coating of the body with wax. Equal suspicion seems to attach to Xenophon's story (ib. vii. 3) of the death of Abradates, for whom a grave was prepared, and whose dead head was held on her lap by his wife, whose corpse, after her suicide, and his were both covered over by her nurse before burial. Ctesias, however, who is much more reliable than his ancient contemporaries would allow, may be right when he states (Pers. 59) that Parysatis buried the head and right hand of Cyrus the Younger, for here the

wax coating may perhaps have been employed.

Unfortunately, our sole information on this subject must thus far be gleaned from the meagre statements of the classics. If we may judge from the tombs of the Achemenians, their bodies were not exposed as Zoroastrianism dictated; but it is by no means impossible that they were coated with wax, or even, as Jackson also suggests (Persia Past and Present, p. 285), 'perhaps embalmed after the manner of the Egyptians.' According to Arrian (Anab. VI. xxix. 4—11), the body (σῶμα) of Cyrus was laid in a coffin of gold (πύελον χρυσῆν; cf. Jackson, loc. cit. and p. 304 f., for further references).

All this was, of course, changed when Persia definitely became Zoroastrian. In his account of the obsequies of Mermeroes († A.D. 554), Agathias (Hist. II. xix. 22) recognizes only the usage of the Avesta (with the addition of the exposure of the sick while still living), and he expressly says that the Persians could not place the dead in a coffin  $(\theta \eta \kappa \eta)$  or urn  $(\lambda \delta \rho \nu a \kappa \iota)$ , or bury in the earth  $(\tau \hat{\eta} \ \gamma \hat{\eta}$ καταχωννύναι); and the 5th cent. Sasanian monarch

Kobad demanded, though without success, the Christian Iberian ruler Gurgenes should adopt the Persian custom of exposing the dead to birds and dogs, instead of burying them (Procopius, de Bell. Pers. i. 12).

LITERATURE.—In addition to the works mentioned in the previous section, reference may also be made to Kleuker, Anhang zum Zend-Avesta, n. iii. 91, 571, 144, Riga, 1783; Brisson, de Regio Persarum principatu, ed. Lederlein, p. 619 ff., Strassburg, 1710; Rapp, ZDMG xx. [1860] 53-56.

DEATH AND DISPOSAL OF THE DEAD

(Roman).—As in other lands and in other times, so also among the ancient Romans the customs attendant upon death and burial varied so considerably according to wealth, rank, occupation, nationality, religion, place, and period that no single succession of circumstances may be taken as typical, and great caution must be exercised in dealing with the scattered and fragmentary evidence on the subject, in order to avoid confusing the particular with the universal, or attributing to one period the customs peculiar to another.

The greater part of our evidence having to do

with the upper classes during the late Republic and early Empire, it will be best to re-construct, as a nucleus around which to build up an account of burial customs in general, a typical instance of the death and burial of a Roman grandee of the

1st cent. of the Empire.

As the man breathes his last, the assembled relatives loudly and repeatedly call out his name in the conclamatio—a more or less formalized expression of grief which is probably reminiscent of primitive attempts to wake the dead back to life; and perhaps the nearest of kin kisses him, as if to catch and preserve in the family line the last breath. After the formal announcement 'conclamatum est,' the eyes are closed, and the usual bathing and anointing, perhaps embalming, take place, performed by one of the household, or by the professional libitinarius or pollinetor. The body is composed, arrayed in the toga—the full dress of antiquity—ornamented with all the insignia won during the dead man's career, and placed in state on the lecture functories in the attrium, or main on the lectus funebris in the atrium, or main chamber of the house, with the feet towards the There are also flowers, coronæ of street-door. honour, and burning censers supported on cande-labra. Near by are attendants, among them being sometimes included paid mourners who chant the funeral wail. [These details may be seen in the Lateran Museum on the tomb relief of the Haterii, a family of considerable importance during the latter part of the 1st century.] Possibly a coin is placed in the mouth as passage-money across the Styx-a custom always in vogue to some extent. A wax impression of the face is then taken, afterwards to occupy its niche in the ala, a state room off the atrium, along with the masks (imagines) of the ancestral line, and to be supplied with the appropriate inscription, or titulus, recording the name, years, offices, and deeds of the dead. Out-side, the fact of death is made known, and the proper safeguard taken against chance religious or social impropriety, by the hanging of a cypress- or pine-branch at the entrance of the house.

In due time, which in ordinary cases is as soon as arrangements can be made, and in funerals of state from three to seven days, the last ceremonies take place. Criers go through the streets announcetake place. Criers go through the streets announcing its coming occurrence in the ancient formula: 'Ollus Quiris leto datus. Exsequias, quibus est commodum, ire iam tempus est. Ollus ex aedibus effertur' ('This citizen has been given over to death. His obsequies those who find it convenient may now attend. He is being carried forth from his dwelling'). Under the supervision of the designator and his attendant lictors, the stately

funeral-train takes form and moves: musicians, and perhaps paid singers; dancers and pantominists, who jest freely, sometimes impersonating in humorous wise even the deceased; a succession of cars, at times amounting to hundreds (six hundred at the funeral of Marcellus), on which sit actors dressed to impersonate the long line of the dead man's ancestors, wearing their death-masks, now taken from the niches in the alæ, and accompanied by lictors, as in life—symbolically conducting the most recent of the family line to take his place with his forefathers in the lower world; a display of the dead man's memorials-trophies, horses, dogs, insignia, painted representations of his exploits-after the manner of a triumph; more listors, with down-pointed fusces, reminiscent of olden-time burial by night; and then, high on a funeral car, the dead himself, with face exposed to the sky, or enclosed in a casket and represented by a realistic figure clad in his clothes and death-mask; the immediate mourners-sons with veiled heads, daughters bareheaded with flowing hair; and finally the general public, not without demonstration. On both sides, as the procession passes, is the Roman populace, pressing to the line, and climbing up 'To towers and windows, yea, to chimney tops,'

to witness what must have been one of the greatest

spectacles of all time.

Arrived at the Forum, the great centre of civic life, the dead is carried to the Rostra, on which, surrounded by his ghostly ancestry, he lies while his nearest relative delivers over him the *laudatio*, a formal and often extravagant glorification of the deceased and his forefathers which is preserved among the family archives, and whose uncritical use will do so much to falsify or distort Roman history. The procession then forms again, resumes its way, and passes through the city-gate to the destined place of cremation or inhumation at one of the great mansolea, such as that of Augustus, at the north end of the Campus Martius, or in one of the long lines of lots which border the high road. Here the dead, with ornaments, weapons, and other possessions dear in life, together with many memorials brought by friends and relatives, is placed upon an elaborate pyre, to which, with averted face, the nearest relative or friend, or some civic dignitary, applies the torch. As the flames rise to the summit of the pyre, perhaps they liber-ate from his lightly fastened eage an eagle, which soars aloft—the symbol of the spirit of the dead setting out for its home among the immortals. The embers are quenched with water or wine, the final farewell (another conclamatio) is uttered, and all return to the city except the immediate relatives, who collect the ashes of the departed in a napkin, bury the os resectum (see below) to preserve the form of earth-burial, perform a purificatory sacrifice, and partake of the funeral-meal in the family tomb-chapel.

There follow nine days of mourning, on one of which the now dry ashes are enclosed in an urn of marble or metal, and carried by a member of the family, barefooted and ungirdled, to their final resting-place in the tomb-chamber. At the end of this period, the sacrum novendiale, a feast to the dead, is celebrated at the tomb, and a funeralbanquet is held at the home. Mourning continues ten months for husbands, wives, parents, adult sons and daughters, eight months for other adult relatives, and in the case of children for as many months as they have years. Memorial festivals, which partake of the nature of a communion, are celebrated on Feb. 13-21, the Parentalia, or pagan All-Souls' Day; again on the birth or burial anni-versary; and again at the end of March and May, the Violaria and Rosaria, when violets and roses are profusely distributed, lamps lighted in the tombchambers, funeral-banquets held, and offerings made

to the gods and to the manes, or spirits of the dead. Such a funeral, though not unfamiliar to the Roman people, was the exception rather than the rule. The imposing nature of the whole—the splendour of its appointments, the dignity of the participants, the impressiveness of the stately train, with its hundreds of impersonated prætorians and consulars, traversing the principal thorough-fares between thronging spectators—may best be compared with the funerals of Italian royalty in modern times, though the latter probably fall far short of the magnificence of the ancient ceremony.

The funerals of middle and lower class people, and of most of the upper class, were less ostentatious, and unaccompanied by the *landatio*, the display of death-masks, and the paraphernalia of wealth. Children, citizens of the lowest class, and slaves were carried to their last rest without public

procession, and with few formalities.

Unlike modern burial-places, the Roman cemeteries were not public communal enclosures set apart by themselves, but were situated along the great highways that led from the city-gates, and took the form of a very long and narrow series of private holdings, whose front, occupied by imposing monuments, bordered immediately on the road. All streets leading from Rome had their tombs, and the location of sepulchres along them in the country also, on landed estates, was frequent. Most prominent among the highway cemeteries at Rome were the Via Flaminia and the Via Salaria on the north, the Tiburtina and the Prænestina on the east, the Latina and the Appia on the south, and the Aurelia on the west. Most magnificent of all was the Appian Way, Regina Viarum, which still displays almost unbroken lines of tomb-ruins from its issue at the old Servian Porta Capena to the Alban Mount, fourteen miles away. Among its two hundred or more larger monuments, displaying great variety of architecture and ornamentation, are to be seen most of the types of the Roman tomb: the mausoleum, round, and probably once with conical summit, copied and named after the tomb of Mausolus, the king of Icaria, who died the tonio of Mansons, the king of learn, who died about 351 B.C.; the tumulus, a conical mound heaped over the body or ashes of the dead, also reminiscent of Asia; the tomb above ground; the tomb excavated in the tufa bed of the Campagna; the combination of both, with tomb below and chamber above; the columbarium, for the reception of the cremated dead of burial-associations; the chambers in series called 'catacombs' (q.v.). Burial lots were marked by boundary stones inscribed lots were marked by boundary stones, inscribed with measurements: e.g. 'in fronto p. xvi. in agro p. xxii.' ('frontage, 16 ft., depth, 22 ft.'). Threats and curses were frequently added to safeguard the area and monuments against violation or profanation. The more pretentious areas were great family burial-places, where were laid to rest all the members of a gens, or branch of a gens, including its freedmen and slaves, and sometimes even clients and friends. Such a burial-place might include a generous plot of ground, with an area before the tomb, a garden behind, an ustrina, or crematory, ediculæ, or shrines with statues of the dead, banquet-room for anniversary use, pavilion, well, and custodian's quarters. The epitaphs, incised upon slabs let into the front of the monument or on tombetones of the ground status. ment, or on tombstones at the graves of indi-viduals, or near the remains inside the vault, are characterized by great variety of content and expression. Name, parentage, public offices, and an accurate statement of the length of life are found in most of them, without dates of death and hirth. A type may be seen in that of Minucia, the daughter of Fundanus, whose death is the subject of Pliny's Ep. v. 16:

'D. M. Minuciae Marcellae Fundani F. Vix. A. XII., M. XI., D. VII.' ('To the Departed Spirtt [Dis Manibus] of Minucia Marcella, the Daughter of Fundanus, who lived 12 years, 11 months, and 7 days') (CIL vi. 16631).

A portrait-bust sometimes accompanied the epitaph, and it was not infrequent for the inscription to be in the form of an address to the passer-by from the mouth of the departed, as the quaint archaistic one of Marcus Cæcilius, which lies by the Appian Way (CIL i. 1006):
'Hoc est factum monumentum Maarco Caicilio.

Hooges, gratum est quom apud meas restifiste seedes.

Bene rein geras et valeas; dormias sine qura.'
('This monument is erected to Marcus Cæcilius. Stranger, it gives me pleasure that you have stopped at my resting-place. Good fortune attend you, and fare you well; may you sleep without ear.') without care.")

Such appeals as this upon stones, the use of portrait-sculpture, and the custom of roadside burial illustrate the Roman yearning for continued participation in the affairs of the living, and an instinctive conviction as to future existence.

Among the lower classes, especially freedmen and the labouring part of the population, a most popular form of tomb was the columbarium, so named because of its resemblance to a dove-cot. Long narrow vaults were either built above ground or excavated in the tufa, and in their walls were formed numerous compact rows of niches, each of a size barely large enough to receive an urn containing the ashes of one person, whose identity was made known by a titulus upon a slab below the urn, or on the urn itself, sometimes accompanied by a small portrait-bust. One of these columbaria on the Via Appia, from which three hundred tituli have been preserved, was for the use of the freedmen of Augustus and Livia. Such tombs were sometimes given as benevolences, and sometimes erected by speculators, but it was more usual for them to be constructed, or at least managed, by collegia funeraticia, co-operative funeral assoof contexts of the context of the co the space by lot to the shareholders, who might in turn sell their holdings.

The lot of the ordinary slave and the very poorest class of citizens was less fortunate. Outside the line of the Servian Wall, where it crossed the plateau of the Esquiline, there existed, down to the time of Horace (when it was covered with earth and transformed into the Gardens of Mæcenas), a great burial-ground which might be called 'the potter's field of Rome. Here, as shown by excavations made from 1872 onwards, was an area of irregular dimensions extending a mile or more along the wall, from near the present railway-station on the north-east to the Lateran on the south-east, which had served as a necropolis from time irregular and was the basic property of the state of the served as a necropolis from the se time immemorial, and was the burial-ground to which Horace made reference in Sat. I. viii.

8-16:

'Huc prius angustis electa cadavora cellis Conservus vili portanda locabat in arca; Hoc miserae piebi stabat commune sepulchrum, Pantolabo scurrae Nomentanoque nepoti. Mille pedes in fronte, trecentos cippus in agrum Hic dabat, heredes monumentum ne sequeretur. Nunc licet Esquiliis habitare salubribus, atque

Nunc licet Esquilis habitare salubribus, atque Aggere in aprico spatiari, quo modo tristes Albis informem spectabant ossibus agrum' ('Hither, of yore, their fellow-slave contracted to carry in their cheap coffins the dead sent forth from their narrow dwellings; here lay the common sepulchre of the wretched plebs, for Pantolabus the knave, and Nomentanus the ne'er-do-weel. A thousand feet front, three hundred feet deep were the limits; the monument not to follow the heirs. To-day you may dwell on a healthful Esquiline, and take walks on the sunny agger, where but now your sad gaze rested upon a field ugly with whitening bones).

The reference in the above lines to the cheap coffins, the slave hireling, the contrast between the gloomy bone-strewn Esquiline of former days and

the healthful gardens of the present, and the sardonic allusion to the cippus as the one monument of a whole city of wretched poor constitute an eloquent comment on the mortuary destiny of the lowest class, though to interpret literally the poet's mention of whitening bones seems unnecessary. Excavation has revealed pit-graves 13 to 16 ft. square and of great depth, in which the bodies of the criminal and otherwise unfortunate were deposited one above the other, unburned, and with little ceremony.

Cremation and inhumation existed side by side throughout the pagan period. The earliest ceme-teries—the lowest stratum of that on the Esquiline, and the necropolis recently (1902) excavated on the Sacred Way near the Forum—contain both cinerary urns and sarcophagi, the latter being sometimes made of hollowed tree-trunks. The later strata on the Esquiline also contain both. The Cornelian gens held to earth-burial until Sulla chose cremation as a measure of safety. tomb-chambers of the Scipios, a branch of the Cornelian gens, on the Appian Way inside the Wall of Aurelian, were filled with sarcophagi containing unburned dead; and in many large tombs the heads of families were laid away in sarcophagi, while the cremated remains of their freedmen and the humbler members of the household were deposited about them in the same chamber. humation, as the cheaper and more natural method, seems to have been the earlier, basic, and popular custom; even in Augustan times, when cremation was as nearly universal as it ever became, it was the custom to perform at least a symbolical burial of the body by the interment of a small part of it.

the os resectum, usually a joint of the little finger. The foregoing account of death and burial has to do principally with the 1st cent. A.D. and with the city of Rome. Naturally, there were variations in detail before and after this period: e.g. burial by night was the practice of earlier times, and was prescribed again by Julian, on the ground of incon-venience to urban business caused by diurnal rites; the cemeteries of the earliest times were less distant from the heart of the city, by reason of the lesser circumference of the primitive walls, each successive fortification carrying the line of tombs farther out because of the law forbidding burial within the city limit; there was less of both display and poverty before the rise of the Empire; sumptiary laws governing funerals were known from the first centuries of the city; the employ-ment of chambers and galleries excavated in the bed of the Campagna, long known on a small scale, grew much more general and extensive after the rise of Christian Rome, developing into the great communial burying-places called 'catacombs'; cremation died out because of its expensiveness and the influence of belief in the resurrection. As to other cities, practice there was essentially the same as at Rome; and in small towns in the country a great deal of conservatism no doubt obtained, manifest in the retention of customs long after they had gone out in the capital.

All periods of the history of Roman burial, how-ever, are unified by the belief in the continued existence of the dead, and in his ghostly participa-tion in the life of the family and community, and by the consequent scrupulous care about proper burial, and the maintenance of right relations with the spirits of dead ancestors. The quick and the dead of ancient Rome were in a more than usually

intimate communion. LITERATURE.—The appropriate chapters in S. B. Platner, Topography and Monument Ancient Rome, Boston, 1911; J. H. Middleton, Remains Ancient Rome, London, 1892; J. Marquardt, Das Priba and Romer, Leipzig, 1896; Daremberg-Saglio, Diet of the graph of the propriate first graph of

DEATH AND DISPOSAL OF THE DEAD (Slavic).—The subject of death and the disposal of the dead, so far as the Slavic peoples are con-cerned, was discussed with considerable fullness in the art. ARYAN RELIGION, vol. ii. p. 11b ff. 1t cannot be doubted that the primitive conditions in this particular phase of human life, though to some extent overlaid with a dressing of Christian thought and practice, have been maintained most faithfully among the peoples in question, and it was therefore quite natural that the writer of that article should begin with Slavic ideas and customs, so that, by comparing these with the correspond-ing phenomena among the linguistically allied races, viz. the Indian, Iranian, Greek, Roman, Celtic, Teutonic, and Lithuanian, he might carry his investigation back to the so-called Aryan period. There is consequently no need to cover the same ground again, but it may not be out of place to record here such facts as have emerged, or have come to the writer's knowledge, since the appearance of the article referred to. arrange these fresh data under five heads. We shall

I. Burial and burning of the corpse (cf. ARYAN RELIGION, vol. ii. p. 16 f.).—In the early historical period, as was shown in the passage cited, both of these methods were in operation—probably simul-taneously—among the Slavs, and, as recent archeological investigation shows, they prevailed also in the pre-historic age. With reference to burial, there has recently come to light a most remarkable correspondence between Middle Germany and Southern Russia in regard to the practice of con-structing the tomb in the form of a hut.

At Leubingen, a station on the railway from Erfurt (Thuringia) to Sangerhausen, and not far from Sömmerda, there is a now celebrated sepulchral mound, which has been excavated by Prof. Klopfleisch, a long misunderstood pioneer in the study of primitive history. Near Helmsdorf, again, a village at no great distance from Leubingen, in the so-called Mannsfeld Seekreis, another mound, similar in many respects to that at Leubingen, was recently opened (cf. P. Höfer, in Jahresschr. f. d. Vorgesch. d. sächs.-thirring. Länder, v. [Halle, 1906]; and H. Grössler, ib. vi. [1907]). In each case the remains (which in the mound at Leubingen lay upon a flooring of wood, and in that near Helmsdorf in a bed-shaped chest of hewn timber) had been arched over by an actual wooden hut of excellent workmanship, with a steep roofing, the planks of which in the Leubingen example were thatched with reeds. The remains found at Leubingen were those of an elderly man, across whose breast had been laid the body of a girl some ten years old, while the Helmsdorf mound, to all appearance, contained but a single body, in a doubled-up position. The objects found beside the dead in both cases—bronze axes, dagger-rods and daggers, small chisels, a diorite hammer, and also numerous ornaments in gold, such as armlets, pins, spiral rings and bracelets—point to the Bronze Age (c. 1500 B.C.?), and also show that the dead had been persons of rank. In a dense layer of ashes under the clest in the Helmsdorf mound were found the skeletons of two men, who had doubtless been given to the dead as his servants. But the most interesting feature of either barrow is unquestionably the wooden hut, designed unmistakably to provide a house for the dead.

Now, although students of pre-historic times are as yet unaware of the fact, similar, and, indeed, almost identical erections are found in great profusion in the Russian kurgans, i.e. the sepulchral mounds which lend a picturesque variety to the monotony of the Stoppes in the districts to the north of the Black Sea. These erections are met with, moreover, not only in the kurgans con-

structed by the Scythian tribes who once dominated that region, but also in those dating from the require investigation. It will be to the purpose, therefore, to give a relatively full description of a single specimen of the South-Russian burial-huts -that, namely, discovered in 1903 by V. A. Gorodzov in a kurgan situated in the Government Gorodzov in a kurgan situated in the Government of Ekaterinoslav, and dating, according to its discoverer, from the close of the second millennium B.C. (cf. Results of the Archeological Excavations in the District of Bachmut in the Government of Ekaterinoslav in 1903 ([Russ.], Moscow, 1907, p. 152 ff.). In the heart of the kurgan was a spacious square cavity, on the floor of which rested a framework box of thick oak boards — some kind of coffin. Between the walls of the cavity and the box, on the east side, lay a red-coloured jar and a cow's head, while each of the four corners of the cavity contained a cow's foot. Inside the box was the doubled-up skeleton of a woman, lying on its left side, with the head turned towards the northeast, and the wrists under the face. At the neck of the skeleton were found small fragments of bronze beads or other ornaments of the kind. In front of the face stood an earthen vessel; and before the breast were a number of rattles, which had been cut from the backbone of an animal. The skeleton lay on chalky earth, but the skull had a pillow of rushes. The most striking feature of this burial vault, however, is the hut erected over the chest. This hut was supported by two posts fixed in roundish holes at the head and feet poss fixed in roundish notes at the head and reet of the skeleton, but outside the box in which it lay. The post supported a beam, which had branches leaning against it on either side, so forming the sloping framework of the roof; the branches, again, were covered with reeds. Upon the roof-beam stood a number of pots upside down, and also a badly-weathered quern of sandstone. Above these was a layer of ashes, containing a cow's head, four cow's legs, a large pot with a dimpled ornamentation at its neck and a perforated bottom, incinerated bones, and a whetstone.

As bearing upon the primitive history of Russia, and even of Europe, however, these discoveries are surpassed in importance by the places for the cremation of corpses—perhaps the oldest in Europe
—which have been discovered in the valleys of the Dniester and the Dnieper, to the east of the Carpathians, and at no remote distance from the localities above referred to. These places for cremation date, for the most part, from a late Neolithic civilization, which yields little of importance, but in their pottery they furnish a new factor in the cultural development of Europe, extending, as it does, towards the west, across Southern Russia and Bessarabia, and to the north of the Balkan Peninsula. Among its characteristic products are magnificently painted vessels, with plastic decorations of bulls' heads and the like, and numerous idols, mainly representing women and cattle.

women and cattle.

The last-mentioned discoveries are due in the main to the researches of Chvojko, of Kiev (Papers of the XIth Archael. Congress at Kiev [Russ.], i.; also Antiquités de la region du Dniepre [Collection B. Khanenko, première livraison, Kiev, 1899], and [for Bessarabia] v. Stern ('The "pre-Mycensean' Civilization in Southern Russia,' in Papers of the XIIth Archaol. Congress in Ekaterinoslav [Russ.], i.), and they have been critically examined by E. Meyer, Gesch. d. Altertums, i. (Stuttgart, 1909) 741 ff. But we are not yet in a position to identify with certainty the peoples from whom emanated the civilizations thus traced at Tripolje, to the south of Kiev, and at Petreny, in Bessarabia.

2. The funeral procession (cf. art. ARYAN)

RELIGION, vol. ii. p. 20).—In the passage cited we were able to indicate that the practice of bearing the dead to the grave on sledges, even in summer, once prevailed in certain parts of Russia. In an exhaustive work shortly referred to in that passage (viz. 'Sledge, Boat, and Horse as Accessories of Burial Ritual' [Russ.], vol. xvi. of the Moscow Drewnosti), Anucin has conclusively proved that in ancient Russia the dead were often, even in summer, conveyed to the grave on sledges, which, however, might be either driven or carried. The former method is illustrated by a picture in the Sylvester MS ('Conveyance of the Remains of St. Glebu by Sledge to the new Church'); the latter by a picture in the Sylvester MS of SS. Boris and Glebu ('Conveyance of the Corpse of Prince St. Boris by Sledge'). But, as the use of the sledge in funeral obsequies is also found, according to Anucin, among many Finnish tribes, and as to this day the funeral-sledge often supersedes the waggon-even in the finest season of the year-in the north-east of Europe, it is safe to conjecture that the Russians had adopted the practice from the East European peoples with whom they mingled as they spread towards the north-east. Traces of funeral-sledges are likewise found in Egypt, while Lycian grave-stones sometimes exhibit houses resting upon sledge-runners (cf. R. Meringer [Indogerm. Forschungen, xix. [1905]

3. The gifts to the dead (cf. art. ARYAN RELIGION, vol. ii. p. 20 ff.).—Just as we read in the Riad (xxiii. 171f.) that the four-horse team of Patroclus was burned upon his funeral-pyre, in Herodotus (iv. 71 f.) that large numbers of horses were buried with the Scythian kings, and in Tacitus (Germ. 27) 'quorundam [the Germans] igni et equus adicitur'; so from the Russian bylins, or histories, we learn that men were interred with their horses, and sometimes even upon horseback. The burial of Bogatyri Potok Mikhail Ivanovič, for example, is thus described:

'Then they began to dig a grave there; They hollowed out a grave deep and large: A deep one, some twenty fathoms wide. And then was Potok Mikhail Ivanović, With his steed and harness of war, Lowered into the deep grave.
And they covered it with a roofing of oak,
And strewed it with yellow sand.

(Anučin, loc. cit.).

The funeral feast (cf. art. ARYAN RELIGION, vol. ii. p. 20<sup>b</sup>): attentions paid to the dead after vol. ii. p. 20<sup>b</sup>): attentions paid to the dead after the funeral rites (Ancestor-worship) (ib. 23 ff.).—
The various facts—and especially those referring to the White Russians—set forth in the paragraphs cited have meanwhile been largely supplemented from various quarters of the Slavic world. This fresh information is supplied by Matthias Murko in an art. entitled 'Das Grab als Tisch,' in Wörter und Sachen: Kulturhist. Ztschr. f. Sprach-u. Sachforschung, ed. R. Meringer, etc., ii. I, Heidelberg, 1910, p. 79 ff. The first three chapters of this most instructive essay deal respectively with the most instructive essay deal respectively with the following subjects: (1) funeral repasts of the Slavs at the burial-place after the interment; (2) sepulchral meals of the Slavs at the graves of individuals; and (3) sepulchral meals on the all-souls'-days and at the ancestral feasts of the Slavs, and meals for the dead among aliens in Russia. That Murko is in this field of inquiry essentially at one with the present writer appears, e.g., from his remarks on

present writer appears, e.g., from his temaked on p. 110:

For experts in this study, it will not be necessary that I should emphasize the fact that so many customs and festivals still in vogue recall those of the Greeks and the Romans, and even surpass the latter in remoteness of origin, so that we must look for their parallels among primitive peoples. I shall merely state that the original purport of the practice of eating and drinking at the grave can still be clearly recognized: the deceased still takes part in the meal; the mourners leave a place vacant for him at the grave-table; they expressly invite

him; they eat with delight of his favourite dishes; they give him wine and honey to drink; they pour wine and water upon the head of his grave; and beside or upon the grave they set food for the dead,' etc.

5. In the article referred to, however, Murko carries his investigation considerably further, as in subsequent chapters he sketches the process by which the relies of ancient ancestor worship have in the Eastern Church become intermingled with the primitive worship of the dead among the Slavs ('worship of heroes and its transference to the Christian martyrs'). The details of the process are given in the following chapters: (4) the early Christian Agapæ and the meals connected therewith; (5) the survival in the Slav languages of Gr. τράπεζα and other foreign words connected with the cult of the dead (cf. art. ARYAN RELIGION, the cult of the dead (cf. art. ARYAN RELIGION, vol. ii. p. 27°, regarding Russ. kanunt = Gr. κανών); (6) Romano-Greek influence upon the spring festivals for the dead among the Slavs (O. Slav. rusalija, Serv. (d)ruziċalo, Russ. radunica; cf. vol. ii. p. 25° and 25°); Murko's derivation of Russ. radunica, from Gr. ροδωνία ὁ τῶν ρόδων εμών of Suidas, is original and convincing, so that its meaning is the same as that of Rosalia, thespring festival for the dead); (7) Lat. silicernium, silicernius (cf. vol. ii. p. 28°; Murko thinks that this word denotes the feast held upon the silices, i.e. the rubble of the grave). i.e. the rubble of the grave).

LITERATURE.—This is sufficiently indicated in the art. and in Aryan Religion.

O. SCHRADER.

DEATH AND DISPOSAL OF THE DEAD (Tibetan).-In Tibet, death is regarded as the work of the death-demon, who has accordingly to be exorcized from the house and locality. The ceremonies at death and the methods of disposal of the body are almost entirely of a pre-Buddhistic or Bon character, although now conducted for the most part by orthodox Buddhist priests.

The Tibetans believe that the soul lives after the death of the body, but the future life desired by the people is not the Buddhistic one of a higher earthly re-birth or the arhat-ship of Nirvāna or Buddhahood. They desire the new life to be in an everlasting paradise, which is now identified with the Western Paradise of Buddha Amitābha of the later Indian Buddhists. The object of the death-ritual, therefore, is, firstly, to secure the due passage of the soul of the deceased to this paradise, and, secondly, to safeguard the earthly survivors against harm from the death-demon, as well as from the spirit of the deceased in the event of its failing to reach paradise and so becoming a malignant ghost.

Formerly, so late as the 8th cent. A.D., human sacrifices were made on the death of kings and nobles. Five or six chosen friends from amongst their officers were styled 'comrades,' and killed themselves on the death of their master, so as to accompany him to paradise, and their bodies were buried alongside of his. The crests of the hills were crowned by such sepulchral mounds, as in China and amongst the Turkic tribes. Beside the body were buried the clothes and valuables of the deceased, his bow, sword, and other weapons, and his favourite horse; and a tumulus of earth was thrown up over all. Animal-sacrifice seems also to have been practised, as is evidenced by the dough effigies of animals which are offered as part of the sacrificial rite by the hands of Buddhist monks, who now perform the popular death-rites, and by their religion are prohibited from taking life (L. A. Waddell, Buddhism of Tibet, p. 518 f.).

1. Extraction of the soul.—On the physical death

of a person, Tibetans believe that the spirit does not depart forthwith, but continues to linger within the corpse for a varying period, which may extend to four days, after the cessation of the heart and

reath. In order to secure the release of the spirit n that direction in which it has the greatest chance of reaching paradise, the services of an expert priest

are necessary.

After a death occurs, no layman is allowed to bouch the body. A white cloth is thrown over the face of the corpse, and a priest is sent for to extract the soul in the orthodox manner. This priest is one of the higher monks, and bears the title of 'The Mover or Shifter' ('p'o-bo). On his arrival in the death-chamber, all relatives and others are excluded, and the priest, closing the doors and windows, sits near the head of the corpse and chants the directions for the soul to find its way to the Western Paradise. After exhorting the soul to juit the body and give up its attachment to earthly property, the priest seizes with his forefinger and thumb a few hairs on the crown of the corpse, and, jerking these forcibly, is supposed thereby to make way for the soul of the deceased through the pores of the roots of these hairs, as though actual perfora-tion of the skull had been effected. If, in the process, blood cozes from the nostrils, it is an auspicious sign. The soul is then directed to avoid the dangers which beset the road to paradise, and is bidden God-speed. This ceremony lasts about an hour. When, through accident or otherwise, the body is not forthcoming and the fourth day is expiring, this rite is performed in absentia by the priest conjuring it up in spirit whilst seated in deep meditation.

2. Handling the corpse.—All persons are tabued from touching a corpse (ro) except those who belong from touching a corpse (ro) except those who belong to the father's family or those indicated by the astrologer-priest, who casts a horoscope for the purpose. This document also prescribes the most auspicious date for the funeral and the mode and place of disposal of the body, as well as the worship to be performed for the soul of the deceased and for the welfare of the surviving relatives.

The persons who may ordinarily handle a corpse

The persons who may ordinarily handle a corpse must be children by the same father as deceased (p'as-spun), though in Lhasa and large towns with many strangers the professional scavengers may do this work. In rural communities, when a man has no paternal relatives of his own, he procures admission into the family of a friend for such funeral purposes as official mourner by giving a dinner to announce the fact. The persons so authorized then approach the body with ropes, and, doubling it up into a crouching attitude, tie it in this posture, with the face between the knees and the hands under the legs. If rigor mortis be present, bones may be broken during the process. The attitude of the body resembles that found in some of the early sepultures, and is probably a survival of the pre-historic period. It ensures portability of the

corpse.
When tied up in the proper attitude, the body is covered with some of the clothes of the deceased, put inside a sack made of hide, tent-cloth, or blanket, and removed from the room to the chapel of the house (where there is one) as a mortuary, and placed in a corner there. A sheet or curtain is stretched in front of the sack as a screen, and all laymen retire. Where the body has to be kept a long time for climatic or other reasons, it may be

slung up to the rafters.

3. Pre-funeral rites.—Priests remain in relays day and night chanting services near the corpse until it is removed. The head priest sits near the until it is removed. The head priest sits near the screen, with his back to the corpse; the other priests face him, and all read extracts from the Buddhist scriptures, often from different books at the same time; and they keep alight lamps (from 5 to 108, according to the means of the deceased). The relatives sit in another room, and offer food and drink to the deceased. His bowl is kept filled

with tea or beer, and he is offered a share of whatever food is going; and such drink and food as are offered are afterwards thrown away, as it is believed that their essence has been abstracted by the soul of the departed. Feeding the manes is also found in the Indian Buddhist practice of avalambana, based upon the Brähmanical rite of śrāddha.

Before the funeral the guests, after libations, partake in solemn silence of cake and wine within the house in which the corpse is lying; but, after the latter is removed, no one will eat or drink in

that house for a month.
4. Funeral procession.—This occurs on the auspicious day and hour fixed for it by the astrologer. The relatives and guests bow to the corpse, which is then lifted by the official mourners, put on the chief mourner's back, and carried to the door, where it is placed in a square box or coffin (ro-rg'am) provided by the monastery which is conducting the funeral, and the box is carried thence by the official mourners to the cemetery or cremation ground. If the chief mourner is a woman, she does not accompany the funeral, but, after walking thrice round the coffin and prostrating herself thrice, is conducted back to the house.

In front of the procession go the priests, chanting Sanskrit spells or mantras extracted from the later Indian Buddhist scriptures, and blowing horns, or beating drums, or ringing handbells; then follow the relatives and friends, and last of all comes the coffin. This is led by the chief priest by means of a long scarf, one end of which is attached to the coffin; the other end he holds in his left hand, whilst with his right he beats a skull drum as he walks. This scarf probably represents the 'soul's banner' (hurin-fun), which is carried before the coffin by the Chinese.

The spot or cemetery to which the body is carried is usually a solitary rock on a wild hilltop, and is believed to be haunted by evil spirits. In Lhasa the ordinary cemetery (dur-k'rod) is within the city. The corpse must not be set down anywhere en route, otherwise the final ceremony would have

to be performed at that place.
5. Disposal of the body.—The particular mode in which the body is to be disposed of is prescribed by the astrologer-lama. Of the various modes, one only, namely cremation, presents Buddhistic features. The methods may be said to be five in number:

1. Consumption of flesh by animals and burial of bones.—This, the so-called 'terrestrial method,' is the commonest and obviously the most ancient. It was a custom of the ancient Scythians known to Herodotus; and its practice by the Parsis at the present day may also be derived from such a source or from the Turkic tribes. There seems no reason to ascribe it, as has been conjectured, to the influence of those Jātaka tales which relate that Sākyamuni in former births offered his body to feed famished tigers and other animals. Such a practice of disposal of the dead is not recorded in Indian Buddhism, and its present-day practice in Siam and Korea, as well as in Tibet, is obviously a survival of the ancient Scythic and Mongolian custom.

At the cemetery the body is placed face downwards on the rock or slah of stone, divested of its clothes, and tied to a stake. The priest, chanting mantras, scores it with a large knife, and the corpse-cutters slice off the flesh and throw it to the vultures and other animals of prey which frequent these cemeteries. In Lhasa dogs and even pigs assist in devouring the corpses. As, however, vultures are esteemed more auspicious, the attendants for a small sum engage to keep off the other less desirable beasts of prey. The rapidity with which the body is devoured is considered of good omen, and the skull of such a corpse is prized as an auspicious libation-bowl.

The bones of the stripped and dismembered body are then buried, and, if the person be wealthy, a

mound or tower is erected over them.

2. Total consumption of flesh and boncs by animals.—This, the so-called 'celestial method,' is much less common, though not infrequent with the richer classes. The bones, stripped of their flesh as above, are not buried, but pounded and mixed with meal, and given to dogs and vultures to consume.

3. Throwing into rivers or at waste places.—This, the most ignoble method, is the fate of the poorest, as burying entails considerable expense. The body is dragged by a rope like a dead beast. In this way are also disposed the bodies of criminals, those killed by accident, lepers, and sometimes barren women. The skulls of enemies slain in battle are

deemed auspicious for drinking-goblets.

4. Cremation.—This mode of disposal of a quasi-Buddhistic kind is reserved in Tibet for the bodies of the higher lamas, though, in those districts where wood fuel is more available, it is also used

for the laity.

The body is placed on the pyre, seated erect in a devotional attitude, cross-legged like Buddha's image. The soles of the feet are turned upwards, the right hand with palm upwards resting on the flexed thigh, and the left hand is raised in front of the shoulder in the 'blessing' attitude. In the case of the laity, the face seems usually to be placed downwards. When the wood is lighted, melted butter is poured over the body, and, when the first limb or bone drops from the body after a few hours, the funeral ends, though some of the relatives remain till the cremation is over. The ashes and unconsumed relies are removed by the priests to the house of the deceased, and there pounded and mixed with clay to form in a mould miniature votive chaitya medallions called ts a-ts a, the dharma sarīra relies of Indian Buddhists. These are placed in the niches of the funercal towers known as chortens, or, if the deceased be rich, a special tower may be erected over them (see

art. CHORTEN).

5. Preserving the entire body by embalming.—
This mode seems to be restricted to the sovereign Grand Lamas of Lhasa and Tashilhunpo. The body is embalmed by salting, and, clad in the robes of the deceased and surrounded by his personal implements of worship, is placed, in the attitude of a seated Buddha, within a gilded copper sarcophagus in one of the rooms of the palace; it is then worshipped as a divinity. Before it, on an altar, food and water are offered, and lights are kept burning. Eventually it is enclosed in a great gilded *chorten*, surmounted by a gilt dome, and becomes one of the recognized objects of worship to

pilgrims.
With the disposal of the body, the relatives and

guests disperse, after a feast given in the open air.
6. Post-funeral obsequies.—The funeral does not end the ceremonies. The soul of the deceased is end the ceremonies. The soul of the deceased is not effectively disposed of until forty-nine days after the death, and the death-demon is also to be expelled from the locality. This latter exorcism is an indigenous Bon rite, and must be performed within two days after the funeral. It is termed the 'Turning away of the face of the Devouring Devil (Za-'dre).' The demon is represented as of human form, riding upon a tiger; and, in laying the evil spirits, figures of animals moulded in dough are used in the sacrifice. For the final disposal of the soul of the deceased, further priestly services are required weekly until forty-nine days services are required weekly until forty-nine days after death. During this period (i.e.  $7 \times 7$  days)

the soul is believed to remain in a purgatory or intermediate stage (bar-do) between death and regeneration, and is assisted onwards by the prayers of the priests. For this a lay effigy of the deceased is made in the house, on the day on which the corpse was removed, by dressing up a bench or box with the clothes of the deceased, and for a face a paper mask is inserted bearing a print of a dead Tibetan. On the forty-ninth day this service is completed, the paper mask burned, and the clothes given away. The priests receive as presents some valuable articles from the property of the deceased, and a feast concludes the ceremony.

Mourning is practised chiefly for young people; the old are less lamented. The full term of mourning is about a year, but three or four months is more usual. During this time no coloured clothes are worn, nor is the face washed or the hair combed ; men may shave their heads, and women leave off their jewellery and rosaries. For Grand Lamas the general mourning of the people lasts from a

week to a month.

All the places where bodies are buried or otherwise disposed of are esteemed sacred.

L. A. WADDELL,

## DEATH OF THE GODS.—See DEICIDE.

DEBAUCHERY (French debaucher [de, 'from,' and old Fr. bauche, 'a course,' 'a row'], 'to lead from the straight course'; hence 'seduction from duty,' 'excessive intemperance,' 'habitual lewdness').—Although individuals who habitually indulge in reckless dissipation are justly regarded as defective in ordinary self-control, and although it might be shown on incontestable evidence that no might be shown on incontestable evidence that no inconsiderable proportion of such persons are insane or mentally defective, it would still be preferable to approach this subject from the standpoint of normal psychology in order to trace the nature of the impulse which impels men in the direction of excessive intemperance and lewdness. To do this successfully we must take into consideration the habits and proclivities of primitive men. Uncivilized peoples manifest an intense love of excitement, particularly in connexion with their social and religious gatherings. All the writings of travellers referring to the domestic and social life of savages are unanimous as to the fact that every event out of the daily routine which causes people to assemble together is likely to become an occasion for intoxication. Birth alone is perhaps less associated with this form of enjoyment; marriages and deaths are certainly a very common excuse for it, and it is remarkable that we still retain survivals of these customs even in Western A culmination in intense excitement without the aid of intoxicants is frequent in their social gatherings. Featherman (Social Hist. of Races

social gatherings. Featherman (Social Hist. of Races of Mankind, 1881–91, iii. 341) gives many examples, from which the following may be selected:

'They arranged themselves in groups, and at a given signal each group began to sing at first in a low tone of voice, which became louder and terminated in dreadful yells and hideous howls. The jumping was so violent and their efforts were so furious that some of them fell senseless to the ground. Three or four players or sorcerers stood in the centre, shook their tamarak, and blew tobacco smoke from a cane pipe upon the dancers.'

Mrs. French-Sheldon (JAI xxi. [1891] 367), speaking of the natives of East Africa, says:

'At some of their festivals this dancing is carried to such an extent that I have seen a young fellow's muscles quiver from head to foot, and his jaws tremble without any apparent shillty on his part to control them, until, foaming at the mouth and with his eyes rolling, he falls in a paroxysm upon the ground.

to be carried off by his companions. This method of seeking artificial physical excitement bears a singular resemblance to the dances of other nations outside of Africa.'

Not only are the reunions of savage peoples characterized by intoxication and induced physical and mental excitement, but their religious cere-monies owe attraction largely to the induced mental fervour of the ministrants and audience. Partridge (AJPs, Apr. 1900, p. 363) goes so far as to hold that intoxication is one of the most important parts of the religious and social life of primi-

'The use of alcoholic beverages arose in connexion with the religious social life in the effort to heighten the religious self-conscionsness. Its use for these purposes among primitive people is widespread and almost universal.'

Among some tribes in the Philippine Islands the shaman (usually a woman) works herself up into frenzies of nervous excitement by means of contortions and copious draughts of fermented liquor. Feasting and revelling follow, until ofttimes at her ceremonies all present become intoxicated, and fall into an unconscious state (cf. Tylor, Prim. Cult. 3 ii. 134 ff.). Similar practices are universally prevalent at the present day among the Persian dervishes, who produce in themselves states of exaltation and hallucination by means of opium and hashish. A naturation by means of optim and hashish. A similar condition is induced by the Peruvian priests by means of a drug known as 'tonca' (ib. 416 ft). The reunions of savage and barbarous peoples are characterized not only by intoxication, but also, frequently, by sexual orgies of a revolting character. Bancroft (Native Races, i. 551) says (quoting Native Races) Kendall):

Once a year the Keres have a great feast, prepared for three successive days, which time is spent in eating, drinking, and dancing. To this cave, after dark, repair grown persons of every age and sex, who pass the night in indulgences of the most gross and sensual description.

2.83

Writing of the Mosquitos, the same author

of sour frozen butter, and a large piece of yellow soap, while an adult of the same tribe devoured forty pounds of meat in a day. Wrangle says each of the Yakuts ate in a day six times as many fish as he could. The Comanches, according to Schoolcraft, eat voraciously after long abstinence, and without any apparent inconvenience (quoted from Spencer's Sociology, i. 45). That debauches are restricted solely through the want of opportunities for prolonging and repeating them is only too apparent from the histories of those savage or barbarous tribes which have been brought into close and constant contact with the more unscrupulous representatives of civilization. So long as alcohol and pleasurable excitement were obtainable, no price was grudged for them until, as a consequence of reckless self-abandonment, the wretched hedonists stood stripped of their possessions, and incapable of resuming their previous methods of life. The unfitness of savages, in the majority of instances, for regular or sustained employment of any kind is one of their most marked characteristics. It might be objected that such a generalization is too sweeping, and, moreover, that war and the chase are the only careers open to primitive man. It may be admitted that many members of the so-called inferior races have shown exceptional

aptitude for commerce, agriculture, and industry of various kinds; but the history of the emancipated Negroes and of the native Indians in the Reserve Territories of the United States is conclusive proof of the inadaptability of these races, as a whole, for the rôle of civilization in which sustained and regular labour is the active and most important element. In these races labour is titful and dis-tasteful, and alternates with long spells of inactivity and unproductiveness.

From the foregoing statements it is evident that among the members of uncivilized communities certain anti-social defects which are hostile to the progress of civilization are extremely prevalent. These defects may be summed up as: (1) a craving for intense mental states, which is most easily gratified by induced excitement, by alcohol or other drugs, by sexual excitement, or by the appetite for food; (2) an inability or, at any rate, a strong disinclination for sustained mental or physical exertion. The representative anti-social elements in a modern civilized community may be regarded as the legitimate survivals of uncivilized ancestors. They all manifest the same strong craving for intenser mental states, which can be craving for intenser mental states, which can be fully gratified only by the grosser forms of dissipation, while they also exhibit the natural disinclination for sustained and productive labour. The prostitute, the gambler, the drunkard, the criminal, and the loafer have this in common, that they desire the grosser forms of excitement, that they are prodigal of their means, and unproductive in their methods of supplying their wants.

The view which regards the pronounced antisocial members of a community as the survivals

social members of a community as the survivals of a period when the race as a whole was comparatively primitive in its social development is the only scientific one, and displaces to a large extent the older views of deliberate sinning and moral responsibility; for a little consideration will enable us to see that a person who is constitutionally a-moral cannot be also at the same time immoral. Such a statement must not be taken to imply a disbelief in individual moral responsibility, for it must be recognized that persistent immoral conduct may depend upon opportunity and the absence, for any reason, of public opinion. It follows that a person who is able to control his conduct under the influence of any ordinary deterrent must be more or less, responsible for his conduct in the absence of these deterrents. In the development of society, as of the individual, there are two factors—environment and evolution. The environment is never constant but is always changing, while the development of a society depends upon the development of its units, subject to the influence of the environment. Physically as well as mentally, the individual must be in harmony with his surroundings or he cannot exist. In every established race of living beings the majority of the individuals present an average mean of certain qualities the possession of which entitles them to be regarded as normal representatives of their race; but there is in every such race a large minority of individuals who vary to a greater or less extent from this mean of any given quality. Some of them possess the quality in excess of the mean, others in defect. The majority of the members of a civilized community subordinate their desires for the grosser pleasures to the duty of sustained effort and the dictates of morality. Through a long process of natural selection this standard has been attained; but, just as a race of men present marked divergencies in stature or mental ability, so do they manifest throughout their composing units the greatest differences in respect to social qualities, varying from the highest manifestations of altruism to an absence of the

sense of responsibility and a reckless craving for gross self-indulgence. 'A community,' says Giddings (Princ. of Sociol., 1898, p. 414), 'that delights in many harmonious pleasures has, on the whole, more chances in life than one which is satisfied with a few intense pleasures.' It is scarcely necessary to insist upon the instability of a community the majority of whose members are constitutionally indolent or immoral. We see, therefore, that the debauchee and the loafer are variations from the mean type of their society; we also see the sense in which they may be described as representatives or survivals of more primitive social states. In relation to their social doomed to elimination. The rapidity of this process of elimination is apt to be obscured by the fact that each new generation produces its fresh quota of individuals who are socially abnormal; but it must be borne in mind that the rapidly changing environment advances the moral standard of each generation, and that therefore a relatively higher and more stringent natural selection is gradually being brought to act upon those unfortunate units whose mental or physical organiza-tion is out of harmony with its requirements. With the advance in the standard of morals of a community there emerges gradually an expression of the ethical attitude of the public towards disease and infirmity, of which sufficient proof is to be seen in the improved condition of the insane, in the founding of 'homes' for epileptics and inebriates, and in the increased interest in the study of criminology. All these movements exhibit the tendency of modern societies to regard the actions of its anti-social members as irresponsible. It therefore seems highly probable that at no distant date civilization will enable us to dispense with retaliative punishment as a deterrent in certain moral delinquencies, and that the State will take upon itself the regulation of the lives of those who are

upon itself the regulation of the lives of those who are incapable of living up to the standard of decency and order required by the existing social environment.

JOHN MACPHERSON.

DECALOGUE.—Introductory.—There is probably no human document which has exercised a greater influence upon religious and moral life than the Decalogue. On account of its brevity, its comprehensiveness, its forcefulness, and its limitations, it has stood out from other teaching, and has been embedded in Christian liturgies and catechisms, so that it is difficult for any one brought up with any degree of Christian culture to escape knowledge of its contents. The exalted idea of its superior value goes back certainly to the Book of Deuteronomy; for we are told re-peatedly there that the Ten Words were written upon two tables of stone by God Himself, and even with His finger 1 (4<sup>13</sup> 5<sup>22</sup> 9<sup>10</sup> 10<sup>1-4</sup>; cf. Ex 31<sup>18</sup> 32<sup>16</sup> 34<sup>1-28</sup>). However freely the statements may be interpreted, however figuratively the author may have written, it was certainly his intention to show that he placed this code above all other legal codes, these words above all other revealed words. In other cases it sufficed to say that Jahweh spoke to Moses, and Moses' memory was depended upon to convey accurately to the people all the vast amount of revelations given in the course of many days. But the Ten Words were so precious that no risk of forgetfulness could be run, and they were at once engraven on the solid stone. And <sup>1</sup> Compare our Lord's easting out devils by the 'finger [i.e. the power] of God' (Lk 11<sup>20</sup>).

there is more to show their high station. Moses brought the stones down from the mountain, and saw Israel's apostasy, he dashed the stones to the ground and broke them. The precious record could not be lost, however; nor could Moses, who may be presumed to have known them by heart, be trusted to reproduce them. He was directed to prepare two new tablets of stone, and take them up to the mountain again, that the original text might be restored by the same finger which engraved the first copy. Finally, that there might be no further chance of breakage, Moses by command made an ark of acacia wood for their safe keeping (Dt 9. 10). It is now advisable to see what this document is, and to test the statements

accounting for its origin.

1. The two forms of the Decalogue.—The Decalogue has come down to us in two versions which differ to a considerable extent, one (in common use) being in Ex 20<sup>2-17</sup>, the other (unfortunately almost ignored) in Dt 5<sup>6-21</sup>. Some of the variations in the Decalogue may be due to accidents in the transmission of the text, but the most of them are certainly deliberate. Moreover, the process of development did not stop with our present Heb. text, as the LXX shows still further modifications, few if any of which can be fairly attributed to the translators.

In the case of the Fourth Commandment, the important differences are indicated in the following parallel renderings, italics showing variations:

ing parallel renderings, it Remember the subbath day to sanctify it. Six days shalt thou labour, and do all thy work; but to be seventh day is a sabbath to Jahweh thy God. Thou shalt not do? any work: thou and thy son and thy daughter, thy man-servant and thy maid-servant, and thy cattle, 4 and thy guest who is within thy gates 6. For in six days Jahweh made the heavens and the earth, the see 0 and all that is in them, and he rested on the seventh day. Therefore Jahweh blessed the sabbath 8 day and sanctified it. day and sanctified it.

Ot 512.15.

Guard the subbath day to sanctify it, as Jahweh thy God commanded thee. Six days shalt thou labour and do all commanded thee. Six days shalt thou labour and do all thy work; but the seventh day is a sabbath to Jahweh thy God. Thou shalt not do any work: thou and thy son and thy daughter, and thy man-servant and thy ox and thy ass and all thy cattle, and thy guest who is within thy gates; 'n order that thy man-servant and thy maid-servant may rest as well as thou. And thou shalt remember that thou wast a servant in the land of Egypt and that Jahweh thy God brought thee out from there by a strong hand and by an outstretched arm. Therefore Jahweh thy God commanded thee? to make the sabbath day.

<sup>1</sup> There are many other instances of duplicates in Holy Scripture: Ps 18 has been incorporated in the history of David (2,322), on the supposition that it is an account of an episode in his life; but a more striking parallel for our purpose, because of the importance of the material, is the Lord's Prayer (Mt 6-13, Lk 11<sup>24</sup>).

of the importance of the material, is the Lord's Prayer (Mt 69-13, Lk 112-4).

2 LXX has τη δὲ ἡμέρα; so in Dt 514=112, a necessary correction, followed by Lat. and Eng. versions. This reading is found in the Papyrus Nash (see Peters, τρ. ct. infτα).

4 LXX reads: 'thy ox and thy ass and all thy cattle,' in agreement with Dt 514. The translator would scarcely have inserted this phrase for the sake of harmony when he leaves so much else divergent; therefore the early Heb. texts must have differed from each other in the same code.

5 LXX reads: 'the guest who dwells with thee'; so in Dt 514. In spite of its more primitive appearance (cf. below), this reading can hardly be original, for the Heb. phrase would not have been changed after the Greek version was made. The LXX expression is more comprehensive, and may be a free rendering, though all else is intensely literal.

8 LXX B lacks 'the sea'; perhaps it is a later addition.

7 LXX B adds here: 'for in six days the Lord made the heaven and the earth and the sea and all that is in them.' The words are a manifest harmonizing gloss, as is shown by the impossible connexion with the following clause, 'in order that thy man-servant and thy maid-servant may rest as well as thou.'

8 LXX has \$686μην, 'seventh'—a better reading, for it was Jahweh's blessing of the seventh day which made it the sabbath.

sabbath.

9 LXX reads: 'that thou shouldst guard the sabbath day and

The peculiar phrases in the Deuteronomic edition are characteristic of the author; they are unmistakable, for there is no other OT writer whose style is so readily detected (see Driver's Deut., in loc.). It will be noted that we have here a commandment, and the reasons for its observance. The two versions have no important divergence in the commandment, but separate absolutely on the reasons. Beyond question Deut, is the older. The sanction on humane grounds is original with him, for it accords with his spirit through and through. There came a time when grounds of humanity were not strong enough. Another editor, perhaps the one who constructed the Creation story in Gn 1-24 for this purpose, put it on a basis which is to him distinctly higher—that man should follow the example of God. That story of the Creation is much later than Deut., and this addition to Ex. is perhaps the latest touch to the Decalogue. It is unfortunate that this version, with its sanction on a ground which nobody believes now, is the one in general Christian use.

In the Fifth Commandment, Dt 516 has two clauses which do not appear in Ex 2012. The former version runs: 'Honour thy father and thy mother, as Jahweh thy God commanded thee, that thy days may be long, and that it may be well with thee, upon the land which Jahweh thy God is giving thee.' These are common Deuteronomic is giving thee. These are common Deuteronomic phrases, and are plainly editorial additions. The first obviously overlooks the fact that Jahweh Himself is supposed to give the words from His own mouth. The second is found in the best Greek texts of Exodus, but preceding the clause about long days. The words may have got into some of the Heb. editions, but not into those which have come down to us. In earlier times, length of days would be a sufficient reward, but later the craying for good days would reward, but later the craving for good days would naturally

find expression.

In the Ninth Commandment, Dt 520 differs from In the Ninth Commandment, Dt 5<sup>20</sup> differs from Ex 20<sup>16</sup> by a single word: instead of pp, 'false,' we find kip, the word used in the Third Commandment for 'vain' (cf. below). The Greek text renders freely: 'Thou shalt not falsely testify against thy neighbour false testimony,' and the renderings of Deut, and Ex. agree verbatim et literatim, showing a careful comparison, which ignores the difference in our present Heb. text. The proper rendering of the Hebrew is: 'Thou shalt not answer against thy neighbour a false witness.' By a slight change of the text (MTM for TM) we get 'testimony,' as LXX. But the Heb. seems to mean that a man shall not bring a false witness to testify against his neighbour as Jacob side. to testify against his neighbour, as Jezebel cid against Naboth. This view makes the mandate more ethically refined, laying the stress of the wrong on the procurer of false testimony rather than on the witness.

In the Tenth Commandment we have a consider-

able variation:

Ex 20.7.

Thou shalt not covet the house' of thy neighbour; thou shalt not covet the ways of thy neighbour, and the servant nor his man-servant nor his ox nor his ass,4 nor anything which is thy neighbour's.

Dt 521. Thou shalt not covet the wife of thy neighbour. Thou shalt not desire 2 the house of snatt not desire the house of thy neighbour, nor his field, nor his man-servant nor his maid-servant, his ox nor his ass, nor anything which is thy neighbour's.

. The use of 'desire' instead of repeating 'covet' sanctify it.' This could scarcely be a rendering of the present text. In the text above, instead of 'make' we might render

'institute.'

1 The LXX order is 'wife,' 'house,' as in Deuteronomy.

2 LXX uses the same verb in both clauses, as in Exodus.

3 LXX adds: 'nor his field,' as in Deuteronomy.

4 LXX adds in both versions: 'nor any cattle of his,' to agree with v.10. Codex L has 'nor any vessel of his,' reading 'b' as אָלָי. The two texts of LXX in that verse, as in the preceding, agree verbatim et literatim.

is presumably for rhetorical elegance. The transposition of 'wife' and 'house' is not so easily explained. It may be due to the greater importance of the wife in the time of Deut., taking the wife out of the property class (so EBi i. 1049, s.v. 'Decalogue'); it may be a copyist's error; it may be an effort to secure a more logical sequence, the wife not belonging so strictly to the category of property as the other objects enumerated; or it may be due to the influence of such facts as David's marriage with Bathsheba. The interpolation of 'field' seems surely to reflect the impression made upon the people by the story of Naboth's vineyard, and of other instances which gave occasion to Is 58 'Woe unto them that join house to house, that lay field to field, till there be no room, and ye be made to dwell alone in the midst of the land. Cf. Mic 2<sup>3</sup>. There are a few other variations, but they practically consist of the addition of conjunctions in Deut. to connect the clauses for greater rhetorical effect.

al effect.

A few of the more important readings of the Greek text may be noted beyond those already cited. In Ex. 20¹ A reads; 'And the Lord spake to Moses all these words, saying.' Here we have an explanation of the singular which is used throughout the Decalogue. The words are in the first instance commands to Moses. This introduction is scarcely consistent with the statement of Deut., that they were first inscribed upon stone tablets by the finger of God. Deut. reconciles the two ideas by saying that Jahweh first spoke the words unto all the assembly with a great voice, and then wrote them upon the stone (522). In v.², instead of 'house of slaves', LXX has 'house of bondage' (so in Deut.)—a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt. In v.³, LXX renders '1½' '2, 'except me' (πλην ἐμοῦ) in Ex.; but in Dic 57 B has 'before my face' (πρη προσπαριου, Lat. in conspectu meo). The Eng. versions have 'before me' in the text, but RVm 'beside me.' The latter is a doubtful rendering, like the Prayer-Book form 'but me.' The words literally are 'upon my face,' and would most naturally mean 'in preference to me.' If that is the true sense, then this command represents a more primitive religious conception than the absolute monotheism of the prophetic age. Weiss holds that the words forbid the worship of all other gods (Das Buch Exadus, Graz, 1911).

In v.4 (3) 'any likeness which is in the heavens' (an exactly literal tr.) gives no sense. LXX has παντὸ διοιαμα (so in Deut.), and this is followed by Eng. versions. Kitel (Bib. Heb., 1905) suggests '23 ⊓ NDD, on the basis of LXX (cf. Dt 425). The reason for this prohibition is given at length in Dt 416-19.

for this prohibition is given at length in Dt 416-19.

In v. של-שׁלְשִׁים, LXX B has בני דווים, implying a reading Ty instead of by. The Heb. is right. The absence of the conj. (though Deut. has it erroneously) shows that we have a case of apposition, i.e. 'upon the sons, upon the third and fourth generations.'

apposition, ε.e. 'upon the sons, upon the third and fourth generations.'

In v. <sup>12</sup> LXX has 'upon the good land' (ἐπὶ τῆς γῆς τῆς ἀγαθῆς). The addition of 'good' sounds like Deut, and yet the reading is found only in Exodus.

In v. <sup>12-15</sup> LXX A transposes here and in Deut, having the order: adultery, stealing, killing. The change may be accidental, or due to an idea that the Seventh Commandment is more closely related to the Fifth. The relation is not very obvious, and the LXX was not wont to take such liberties. There is much variation in the order of these three commandments. In MT, Jos., Syr., the order is murder, adultery, stealing; in Codex Alex, and Ambros, murder, stealing, adultery, stealing, in Codex Vat., adultery, stealing, murder. Peters holds that the original order was adultery, murder, stealing, which he says, 'commends itself on internal grounds' (op. ett. p. 33). If conjecture could govern, the present writer would prefer the order—murder, stealing, adultery—atter some Gr. texts, on the ground that we have then a true sequence in the development of the moral standard. Murder was recognized as wrong long before adultery.

2. Real meaning of some of the commandments

2. Real meaning of some of the commandments. —We turn now to the interpretation of some of the more difficult passages.

In the Second Commandment the meaning of the word 'thousands' is not altogether clear. In Dt 79 word 'thousands' is not altogether clear. In Dt 7º we have apparently a commentary on this commandment: 'the faithful God, keeping the covenant and mercy to those who love him and keep his commands, to a thousand generations.' This interpretation was followed in the Targums, and has been generally accepted. Weiss, the latest writer on Exodus, takes this view. The contrast with 'third' and 'fourth' seems to support it. But the antithesis between the two clauses is not so clear antithesis between the two clauses is not so clear

as appears at first sight. In the first part we have 'visiting the sins of the fathers'; in the second, 'showing the mercy of God.' In the one case God brings the consequences of paternal sins upon the sons, in the other He displays His own mercy to thousands. It appears, therefore, that 'thousands' is contrasted with 'sons,' not with 'third and fourth generation.' Further, אַלְפִים never means 'a thousand generations'; it has two distinct meanings: a 'thousand' as a numeral, and a body of a thousand 'thousand' as a numeral, and a body of a thousand people, such as a regiment. In the latter connexion the word is used to indicate a subdivision of a tribe, and means a clan (cf. Jg  $6^{16}$ ,  $18 10^{19}$ ). The word here must either be a numeral, 'thousand,' or it must = 'clans.' The extension of mercy is therefore outward not downward. The sin goes down to the sons, the mercy goes outward to the whole family or clan.

'There's a wideness in God's mercy Like the wideness of the sea.'

The meaning is illustrated in Abraham's plea for Sodom and Gomorrah (Gn 18<sup>22ff.</sup>); if there had been ten righteous men in the city, the whole population

might have been saved.

The Third Commandment is the vaguest of all: 'Thou shalt not take the name of Jahweh thy God in vain.' The moment we reflect upon the words, the vagueness appears. The usual interpretation is that it is an injunction against profanity. Weiss (in loc.) says that 'not only false swearing, but every sinful use of the name of Jahweh, in impreevery sinut use of the name of Jahwah, in impre-cation, blasphemy, charm, divination, and every frivolous use is included.' And yet it is a little difficult to discover that sense in the original. We should expect the Ten Words to deal with vital matters. There is no evidence that profanity was specially common among the Hebrews, or that they specially common among the hebrews, or that they regarded it as a serious offence. From the concluding clause, 'Jahweh will not hold innocent' the one who commits this wrong, it is clear that we are dealing with a serious evil; in fact, with the unpardonable sin of the OT. Indeed, we might well render 'Jahweh will not forgive,' etc. It is at well render 'Jahweh will not forgive,' etc. It is at least a step in clearing up the matter to note that my means 'speak.' First there was the full expression, 'he lifted up his voice and spake,' then he 'lifted his voice,' finally 'he lifted,' but with the meaning 'spoke.' my' means 'in vain,' i.e. without result (cf. Jer 23°). We therefore have: 'Thou shalt not speak the name of Jahweh thy God without result,' i.e. without doing what was vowed in His name. Thus we can grasp the force of what is otherwise a pure redundancy. 'for of what is otherwise a pure redundancy, 'for Jahweh will not deem innocent him who speaks his name without result.' Now, if there was a principle cherished by the Hebrews above any other, it was the obligation to carry out a vow made in the name of Jahweh. We may note the case of Jephthali, who felt bound by his vow to sacrifice his daughter (Jg 11). Other cases will occur to the reader; and we find the principle strongly urged in Ec 5<sup>1-6</sup>. It may be remarked that, so far as internal indications go, this command may be early. At all events the obligation was recognized in the primitive ages. It was the misuse of the command as above interpreted that our Lord sought to correct (cf. Mt 5<sup>335</sup>, 23<sup>165</sup>). The Jews held that only a yow in Jahweh's name was binding; Jesus teaches that a man's personal word should be as strong an obligation as any oath.

3. Original form of the Decalogue.—It is apparent from a comparison of the texts that the Decalogue has not come down to us in its original

1 Morgenstern holds that nis ili in Bab, is a technical name for an oath, and that speaking the name of the gods was a sin for an oath, and that speaking the hame of the gods was a sin for any but priests. He regards DF RPJ as an equivalent term, and the Third Commandment as having that meaning ('The Doctrine of Sin in the Bab. Religion,' MVG, iii. [1905] 35 f.). There is no evidence in the OT to support this view.

form.1 Many attempts have been made to determine what that original form was. For the most part it is a matter of pure conjecture. But it has been noted that there is a persistent tradition that there were 'Ten Words,' and that they were inscribed on two tables of stone. It has been assumed that there would be practically an even division—five on each table.' The Decalogue divides into two parts, but Command-ments 1-4 deal with man's relation to God, and 5-10 with his relations to men—not therefore an even division. In the Heb. text of Exodus, Comm. 1-5 contain 146 words, 6-10 contain 26 words. Taking the division by subject, I-4 have 13I words, 6-10 have 41 words. Comm. 1-3 contain 76 words, 4-10 contain 96 words. This is the nearest approach to an even spatial division. Hence it is assumed that the commandments must originally have been all short, as 6-9 still are. Com. 2 then would have been simply: 'Thou shalt not make thee a graven image'; Com. 4: 'Remember the sabbath day to sanctify it'; and Com. 10: 'Thou shalt not covet.' This would make commands of sufficiently even length. The growth is easily explained. The images were hard to get rid of, as all religious and to prevent evasions, amplification was necessary and dire consequences of disobedience must be added. Down to the time of Nehemiah the rule for cessation of labour on the sabbath day was disregarded (cf. Neh 13<sup>15f.</sup>). Reasons were appended to the law to secure a stricter conformity.

While all this is very probable, the reason urged on the ground of an even division on the two tables is not convincing; for we have many ancient inscriptions on stone and clay, and there is no evidence of an attempt to conform the contents to the size of the material used for the inscription. The size of the characters and of the tablet is determined by the amount to be written. The commandments must have taken shape originally according to their substance, and could hardly have been framed with reference to two tables of stone. The only reason for using two stones was that there was not room enough on one, just as a correspondent takes up a second sheet when one does not suffice for his letter.

4. How far Mosaic.—A still more baffling problem is found in the origin of the Decalogue. In both codes it is attributed to Moses, i.e. Moses is the mouthpiece of Jahweh. In Dt 9. 10 there is an unusual wealth of detail about the matter, describing the first writing, the breaking of the stones, the second writing, and the care for the preservation of the final record. The Covenant and the Decalogue are certainly identified in the story, but that is, of course, due to the author of Deut., who lived long after Moses' day. His identification may be correct, but is not necessarily

We are obliged to face the question as to the We are obliged to face the question as to the value of this evidence. Now, we know that in the OT all Hebrew law is attributed to Moses, as practically all Hebrew psalmody was ascribed to David, and all wisdom to Solomon. There is, therefore, a presumption against this testimony; for it would be extraordinary if the whole body of a nation's laws were enacted by a single individual,

1 The Rabbis were puzzled by the variants, but, as sual, were equal to the occasion, holding that both versions alike were of Divine origin, and were spoken miraculously at the same time. Saadya alleges that the Exodus version was on the first set of tables that were broken, and the Deut text on the second (cited in JE iv. 494, s.v. 'Decalogue').

2 The Rabbis indulged in their usual fanciful guesses about this distribution. Some held that all ten were on each stone; officers that all ten were on each stone; while Simai goes further and alloges that all ten were engraved four times on each stone (JE, loc. cit.). The idea was that the more times the words were inscribed the more important they were.

and that before there was any nation at all. evidence, therefore, that Moses produced the Decalogue is no greater than that he produced the law governing the fringe on the priest's cloak. The persistent tradition proves, in the opinion of the present writer, that Moses was a truly great lawgiver; but, by ascribing all laws to him, it puts upon us the necessity of determining as best we can be somewhere with any restricted law. his connexion with any particular law. We are compelled, therefore, to consider whether the Decalogue could have come from so early a date as that of Moses.

Some of the prohibitions are of such a general character that they might belong to any period; such is the case with Comm. 3, 5-9. Others seem to have a closer relation to the development of religion, and a place for them ought to be found accordingly. Com. 1 is monotheistic, though accordingly. Com. 1 is monotheistic, though perhaps not so sharply so as has generally been assumed; for the meaning may certainly be that no other god is to be set above Jahweh, and this possibility must have full weight (see above). So far as we know, the victory of monotheism was won by the prophets, one of the great battles being fought by Elijah. But it is certainly true that there were monotheists from the earliest days, such as Deborah, Gideon, and even the freebooter Jephthah. This law may have been as early as

Moses for anything we know to the contrary.

The law against images does not belong to the same category. Image-worship was certainly practised down to the Exile, and as late as Hezekiah's time (2 K 184), without rebuke. The war against it appears to have had as its main-spring the effort to centralize the worship at the tample in Jerusalam 1.45 a monage of determine. temple in Jerusalem.1 As a means of destroying the cult at the local shrines, where images a bounded, they were forbidden, for there appear to have been no sacred images in Solomon's temple. It is true that disobedience to a law does not prove its non-existence. The teaching of Jesus about the perils of wealth has not made a very profound impression on the world even yet. But there was no strong motive for images, and it is difficult to think that David would have defied so fundamental a law (1 S 1918), or that Isaiah would have countenanced images (1919). This command, therefore, appears not to have been formulated long before the time

of Deuteronomy.
In its present form, Com. 4 cannot be Mosaic. The nomad is never a very hard worker, and a day of rest is not of urgent necessity for him. Moreover, such work as he does is necessary on every day of the week. Further, in the time of Moses there were no guests (gčrim, 'protected strangers') within the gates. Sufficient emphasis does not within the gates. Sufficient emphasis does not appear to have been laid upon the term 'gates,' disclosing as it does urban life, and therefore belonging at the earliest to the period after the conquest. It is true that so acute a scholar as Weiss holds that "w" may mean the gate of the camp as well as of the city, and he thinks, therefore, that this term does not presuppose the settlement in Palestine. But the only instance of this meaning that occurs to the present writer is Ex meaning that occurs to the present writer is Ex 32s, where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates. Moreover, the expression within thy gates is a characteristic Deuteronomic expression, occurring some twenty times in Deut., and not found elsewhere in the Pent. save in Ex 2020. The solicitude for the stranger or guest is also Deuteronomic.

The silence about the sabbath day in the records

I Wellhausen holds that the early Hebrews would object to a pp, 'image' (the word used in the Decaloguo), but not to a TARD, 'pillar' (Reste Arab. Hetd. pp. 101, 141). It is difficult to see sufficient ground for this distinction. 

of the early days is truly remarkable from any point of view. In Jos 61, 14, 15 we read of the army's marching around Jericho on seven successive days, one of which must have been the sabbath. That looks very like 'any kind of work,' and was certainly unnecessary. There are, however, two references to the sabbath which throw welcome light on the situation. In 2 K 423 the Shunammite asks his wife why she is going to the prophet Elisha, and gives as the reason for his question 'it is not new moon and it is not sabbath.' It would be easy to draw too large a conclusion from this statement, but one thing is certain, viz. that there is no objection to a journey from Shunem to Carmel (30-40 kilometres, 20-30 miles; see Kittel, Bücher der Könige, 1900, in loc.) on the sabbath day; further, it is a reasonable inference that the sabbath was a day for religious rites, but that cessation of labour was not a part of its observance. Something like half a century later Amos makes the people say: 'When will the new moon be over that we may sell grain, and the sabbath that we may open up corn (85). It is clear that we have an advance from Elisha's time, in that trade is not permitted on the sabbath—precisely the conditions which Nehemiah enforced (Neh 13<sup>15st</sup>.). The new moon is not mentioned in the Decalogue, but it is here, as in Elisha's time, on the same plane as the sabbath. There is hardly evidence, therefore, to support the existence of the Fourth Commandment. The passage may seem to imply that the sabbath and already care to the fourth commandment. had already come to be a mere form (Marti, Dodekapropheton, 1903, in loc.). But it is more likely that the prevention of trade was a new feature, not approved by the merchants; hence their impatience at the loss of trading days. It appears that under the prophetic influence a movement was making for a stricter regulation of both these festivals. The effort finally centred on the sabbath, and by Josiah's time all labour as well as trade was forbidden. The older idea always persisted, for Nehemiah did not attempt to check sabbath labour in the fields, but restrained trade even by threats of violence. Even to-day Sunday trading is objected to much more than Sunday labour.

Finally, Com. 10 cannot be Mosaic in its present

form. In the Exodus version the first object whose coveting is forbidden is the house; in Deut, this is followed by the field. Nomads have neither houses nor fields. It is true that my is often interpreted as meaning 'household' in Exodus. This use is very common, especially in the Hexateuch.¹ But it would be strange to say, 'Thou shalt not covet thy neighbour's family,' and then to continue, 'Thou shalt not covet thy neighbour's wife, and servants and cattle.' It is plain that in the time of Dent. mr was interpreted as meaning 'dwelling,' for it is not difficult to see why 'field' was added. As we have noted above, there was much taking of others' land even by violence. The oppressors might easily reconcile their aggressions and the law by saving they had not taken The oppressors might easily reconcile their aggressions and the law by saying they had not taken the house but only the field. The law is, therefore, amended to carry out its original intent. Doubtless the sweeping final clause, 'nor anything which is thy neighbour's,' was added to meet easuistical juggling. If the command was Mosaic, therefore, it could only have been in the form quoted by St. Paul, 'Thou shalt not covet' (Ro '7'). But here we meet a new difficulty. It (Ro 77). But here we meet a new difficulty. It is often urged that this law shows an ethical refinement too great for the period of Moses. Quite true. But it is not so sure that the re-finement was too great for Moscs, the man God. The Decalogue does not profess to he production showing the moral sentiment of the age, but is the work of the most enlightener the

1 See the Hebrew lexicons.

of the time. Among a rude people it is always possible for one to rise head and shoulders above the rest, not only in stature, like Saul, but in

moral insight, as Moses certainly did.

In a word, if we strip the Decalogue of the known later accretions, and the probable additions to meet new conditions, the Commandments may all be Mosaic except possibly the First, and almost certainly the Second. This is confessedly very far from affirming that they did come from the hand of the great lawgiver. Indeed, it is not unlikely that the Decalogue itself may be a growth covering a period of some centuries before the last addition was made. Various men may have tried their hand at putting the great principles of the Law into a terse and comprehensive form. All that we can say positively is that the Decalogue was complete some time before 621 B.C. (the date of Deut.), and that it has not survived in a standard and authoritative form. If it was originally issued on stone tablets, such a version is lost beyond present power of recovery.

There has never been agreement even as to the proper division of the material we have. In Deut, the command against coveting falls into parts, and Com. I may be regarded either as a part of the introduction, or less probably as part of the First Commandment, which here deals with images. This arrangement is followed by the Roman Catholic and Lutheran Churches to this day, while most Protestant bodies and the Greek Church adhere to the division in Exodus.<sup>1</sup>

5. Theology and ethics of the Decalogue.—In its theology the first striking feature of the Decalogue is its monotheism. It is true that there is some doubt as to the meaning of the First Commandment, but, whatever its original meaning, it was ultimately interpreted as an uncompromising prohibition of the worship of any deity other than Jahweh. That is a necessary step in the development of any religion. Even some that are formally monotheistic are not really so. A prophet may be exalted to the place of a subordinate deity, as in Muhammadanism; or a saint may be made to stand so close to God that the distinction is unreal to the ordinary worshipper. In the lower forms of religion there is a tendency to divide the supposed Divine functions, and assume a deity to preside over each. In the Decalogue, even in its most primitive form, there is but one God, and all Divine offices are performed by Him. In the Deuteronomic form there is nothing which goes beyond nationalism. Jahweh is the only God in Israel. He brought them out of Egypt, and He ordained laws for them. In the later form, the thought of Jahweh as the God of the whole world is brought out in reference to creation.

is brought out in reference to creation.

The prohibition of image-worship puts the religion on a high plane. Though it was supposed that Jahweh could engrave stones, His image could not be made in stone. Jahweh was truly a spiritual being, too sublime to be represented in an image, and too great to be portrayed in the likeness of animal life. In the present form of Com. 2, idolatry is deemed the worst form of sin. It is this that arouses the jealousy of Jahweh, and calls down enduring punishment upon the offenders, and wide-spreading mercy to the innocent. Hating Jahweh is synonymous with idolatry, and loving Jahweh is synonymous with idolatry, and loving Him is equivalent to spiritual devotion. This conception could hardly have come from the pre-

prophetic period.

The ethical tone of the Decalogue is very high especially if we assign it to the early period of national life. We note first the demand for truthfulness. Really this appears in both Comm. 3 and 9. No one was to swear to his neighbour and then disappoint him no matter what the to lisappoint him, no matter what the consequences and ight be—a command correctly interpreted in Ps There There are really three uses, the Jews taking the preface as For the details, see art. 'Decalogue,' in HDB i. 580.

154; and no one was permitted to bolster up a bad case against his neighbour by the introduction of false witnesses. Killing and stealing are fairly common vices among undeveloped races, and are far too prevalent even among the most advanced peoples. But the clear terse laws on the two tables, without any qualifications whatever, doubtless saved many a life in Israel, and helped to maintain personal property inviolate. The forbidding of coveting reaches the evangelical note (cf. Mt 528). It is hardly necessary to assume that coveting is as great a vice as stealing, or that a lustful desire is as degrading as a lustful act. that coveting is as great a vice as stealing, or unat a lustful desire is as degrading as a lustful act. But even in the early ages it must have been apparent that coveting leads to vicious action. Abimelech coveted the throne, and the murder of his seventy brothers resulted (Jg 9). Ahab coveted the land of Naboth, and the murder of Naboth and the confiscation of his land was the consequence (J N 21). David's passions were aroused by the (1 K 21). David's passions were aroused by the sight of a beautiful woman, and there followed the criminal death of Uriah and the unholy marriage with his widow (2 S 11).

The ethical standards of the world are still far too low, but it is certain that they would be even lower but for the great influence of the Ten Commandments. It is very desirable that they be stripped of later accretions, and in a simpler and more original form continue to be read to the people in the churches and taught to the children

in the Sunday schools.

In the Sunciay Schools.

Literature.—The student will naturally consult the various commentaries on Evodus and Deut., the Bible dictionaries and encyclopædias, and works on Hebrew religion. The following may also be consulted: G. L. Robinson, The Decalogue and Criticism, Chicago, 1899; R. Kraetzschmar, Die Bundesvorstellung im AI, Marburg, 1896; Meisner, Der Dekalog Halle, 1893; B. Beantsch, Das Bundesbuch, Halle, 1892; N. Peters, Die ütteste Abschrift der zehn Geböte, Freiburg i. B. 1905; F. W. Farrar, The Voice from Sinui, London 1892; J. Oswald Dykes, The Law of the Ten Words, do., 1834; E. Kautzsch, art. 'Religion of Israel,' in HDB, vol. v. p. 612.

L. W. BATTEN.

DECISION.—The term 'decision' may be used

DECISION.—The term 'decision' may be used (1) concretely, of the judgment which is affirmed at the conclusion of a period of deliberation (q.v.); or (2) abstractly, of the ability to 'come to a decision,' i.e. to bring deliberation to a conclusion.

Decisions are as various in kind as the subjects about which we deliberate. Thus the judge issues his decision—that a charge is proved or not proved; a connoisseur decides that he prefers one wine to another. Decisions which consist in the resolve that a certain kind of action is to be performed by oneself seem to form a class apart. It is in connexion with these that the strife between necessitarians and libertarians has been waged. This, however, is a controversy affecting the determination of content of the judgment which is a decision, i.e. the quality of the conduct decided on. Though extreme necessitarians declare that every decision is mechanically determined, no one denies the reality of decision as a psychological crisis. This crisis consists in a concentration of the attention on the idea of one of the possible courses of action before us, with a consequent inhibition of the ideas of the other possibilities. Recent advocates of the doctrine of free will (g.v.) base their argument upon the feeling of effort which accompanies a typical class of decisions. See, further, DESIRE, WILL.

LITERATURE.—W. James, Text-book of Psychology, London, 1892, pp. 415-460; W. M. Wundt, Human and Animal Psychology, Eng. tr., 1901, p. 233. G. R. T. ROSS.

This is finely brought out in the Prayer-Book version: 'He that sweareth unto his neighbour, and disappointeth him not, though it were to his own hindrance.' This is a conflate reading. The Heb. has: 'He that sweareth to his own hint'; the Greek: 'He that sweareth to his neighbour.' The liturgical version contains both readings. See Perowne (Psalms\*, London, 1898) on the passage.

DECOLLATI.—The full expression is le anime dei corpi decollati, 'the souls of executed criminals.' These souls are the object of a popular cult in Sicily. It is spread throughout the island; but its most famous shrine is the Church of the Decollati, most famous shrine is the Church of the Decollati, near the river Oreto at Palermo. It seems to have arisen out of the sympathy naturally felt in an oppressed community for sufferers at the hands of a ruling caste. For many centuries Sicily was subject to rulers who were either foreigners, or at any rate divided by a sharp and impassable line from the mass of the people. The latter were ignorant, and more or less passively hostile to the governing class. They regarded all who were put to death under the forms of law as heroes; nor did they distinguish between moral and merely legal they distinguish between moral and merely legal crimes,-between acts directed against the rulers and acts directed against society at large,—if, indeed, these two categories were always distinguishable. The priests were for the most part drawn from the 'folk,' and probably shared to a great extent their ignorance, their superstitions, and their feeling towards the government. The executions were public. The condemned man (called l'afflitto, 'the afflicted'), having been reconciled to the Church and having received its consolations, was regarded as a martyr; and his death-scene was a species of triumph. He passed, it was true, into purgatory; but his prayers on behalf of others, even from purgatory, were deemed to have great intercessional value by virtue of his

Formerly at Palermo several of the churches witnessed the cult of the Decollati. During recent centuries, however, it became the custom to bury in the graveyard adjoining the little church beside the Oreto such bodies of criminals as were not given to their friends, or reserved to adorn the gallows in chains. Accordingly, the cult has concentrated there. Its particular shrine is a side-chapel filled with votive offerings of wax, testifying to the various benefits for which the intercession of the Decollati is sought. The souls of the Decollati are believed to congregate under a large stone just inside the door of the chapel. Pilgrimages are frequent; and the pilgrim, having performed his devotions at the attar of St. John the Baptist, adjourns to the chapel and prays to the Decollati, listening for an answer to the prayer. The slightest sound is taken for a favourable reply. Invocations, however, may be addressed to them elsewhere by suppliants who cannot undertake the

pilgrimage.

The objects for which intercession is sought are primarily protection from violence or accident, and the cure of sufferers from either. For the Decollati, however much they may in their lifetime have been guilty of violence, now having suffered and been reconciled to the Church, hate violence and punish it, or at least protect and heal its victims. By an extension of the idea, they are invoked against diseases, especially hemoptysis, of which bleeding is the manifestation. Two long cases of rude water-colour drawings on the churchyard walls record with ghastly detail many examples of vows made and benefits received, where violence, accident, or disease of the kinds indicated was concerned. But, in fact, the good offices of the Decollati are not limited to these. They are implemed for aid by the power element the water the proper of the property of th plored for aid by the poorer classes throughout Sicily on all sorts of occasions, and for all sorts of sicily on all sorts of occasions, and for all sorts of purposes. They have their prayer-formulæ, which are extensively used; and many stories of miracles performed by them in person are current. The ordinary vehicles of the country are light carts, painted with scenes from the history and traditions of the island. Many of these carts are adorned with paintings of the Decollati.

LITERATURE.—The cult has been described and illustrated with many details by Giuseppe Pitrè, the venerable recorder of the insular traditions and customs. See particularly his Biblioteca della tradizioni popolari siciliane, i. (Palermo, 1871) 7, ii. (1871) 38, xvi. (1889) 4ff., La Vita in Palermo, ii. (Palermo, 1905) ch. xviii., Mostra etnografica siciliana (Palermo, 1892), 51, 80. See also a paper by the present writer, with plates from photographs, in FL xxi. (London, 1910) 168.

DEDICATION.—See Consecration.

DEGENERATION.—r. Application of the term.—'Mental degeneracy' is a term which is applied to a group of characteristics inferred from the speech, behaviour, or productive activity of individuals, and generally held to be symptomatic of defect in the central nervous system. The nervous defect in question may be either congenital or acquired through accident or disease; in either case, it may be organic or functional.' Savill (Neurasthenia, 17) defines a 'functional.' Savill (Neurasthenia, 17) defines a functional nervous disease negatively, as one in which 'no anatomical changes can be found after death, either with the naked eye or with the microscope, which can account for the symptoms during life.' It may really be due to some structural change, which available means cannot determine, to the presence of toxic materials in the blood (of endogenous or exogenous origin), to deficient quantity or quality of blood, or to exhaustion of the nerve tissues from excessive use, etc.

The term also implies that the individual falls markedly below the mental level attained by the average or normal member of the race, sex, age, and period of civilization; but, since the number of degrees of defect is potentially infinite, and the defect may be either general or special (in the former case touching all the mental capacities, in the latter such special functions as sensation, the latter such special functions as sensation, memory, emotion, etc.), the actual usage of the term is extremely indefinite. Thus it is employed to denote (1) actual insanity, including amentia, imbecility, dementia, mania, and melancholia; (2) persistent criminality; (3) mental instability, excitability, excessive irritability, or mere eccentricity; and (4) the neuroses of hysteria, psychasthenia, and others: to the last two groups belong those whom Dr. Balfour has named the 'denizens of the borderland' (Edin. Med. Journ. 1901). It would seem that strictly the word should apply only to those who have some congenital defect in only to those who have some congenital defect in mental capacity, excluding those in whom the defect has been due either to accidental injury, or to lesions of the brain arising from toxic influences, subsequent to the birth of the individual (for example, alcoholic insanity, or insanity sequent upon typhus fever). It is impossible, however, to draw a hard and fast line between the congenital and the acquired, as many cases of insanity would not have according to the congenital and the acquired had not the individual hard. not have occurred had not the individual been already predisposed to the disease by physiological or mental weakness. On the other hand, the term is also frequently applied to an acquired defect, especially when it is of the progressive type.

In popular usage the word 'degenerate' means

one whose tastes are lower than those of the society in which he has been educated, a.g. a clergyman's son who associates with racing touts or publichouse loafers; or one whose intelligence and tastes. house loarers; or one whose intelligence and tasters show a marked deterioration from his own stiller standard, as in alcoholism, etc. It is applied esthetically to those whose interests, who ther as readers or as authors, as artists or as critics, lie in disease, physical or moral; to realists of maturalists in the narrow sense of these words; and also to pessimists. The assumption is that the healthy mind will avoid these things as topics of thought or imagination, except with the object of removing them or lessening their evil effects; that only the diseased mind will seek to dwell upon disease, or

take a pleasure in its contemplation.

To the biologist, the degenerate appears as a reversion to an older type of the race, as one who has been born with a physical nature in which some primitive human or even pre-human stage of cerebral development is reproduced. He is a primitive being set in a civilized environment, unable to adapt himself to it, and hence coming into conflict with its conditions.

The only common feature underlying these diverse applications of the term is a marked 'deviation from type' either in quantity (energy, rate, etc.), or in quality, of thought and action.

2. Physical and mental conditions of degeneracy.

The causes of such mental deviation may be

2. Physical and mental conditions of degeneracy.—The causes of such mental deviations may be grouped in three classes: (1) an originally defective physical and mental capacity, or defective development; (2) physical accident or injury, disease, privation, etc., by which the central nervous system is weakened locally or generally; and (3) social conditions, such as family life, educational disadvantages, poverty, occupation, etc. (Ferri, Criminal Sociology, Eng. tr., London, 1895, ch. 2). Thus, alcoholism may occur in a given individual because he is by nature unstable, excitable, pleasure-loving; because his brain has been weakened by an exhausting disease; through mere imitation of heavy-drinking companions; from lack of employment, unbearable home life, or other social conditions; or from any combination of such factors—the result in each case being a gradual deterioration of the nervous system, by which the original tendency is strengthened, until the control of the

will is destroyed.

The relation between mental and physical defect is by no means so clear or so simple as is commonly assumed. It is argued that, with the exception of those relatively few cases in which the disorder can be traced to some definite accident, such as a fall or blow upon the head, or to some virulent fever which has been caught by infection, it invariably arises from a congenitally defective disposition of the nervous system; this defect or weakness predisposes to insanity, so that any physical or mental shock which might leave a healthy individual uninjured overthrows the balance of such subjects and renders them insane. They suffer from what Maudsley (Body and Mind, 43) has called 'the worst of all tyrannies, the tyranny of a bad organization.' The result of this organization may be that the normal development cannot be completed, that the subject remains at a lower level, mentally and physically, than his more fortunate brethren; hence either definite idiocy, insanity, or some of the minor forms of defect already referred to. In cases of idiocy there is almost invariably some malformation of the brain, whether in its size, in its shape, or in the complexity of the convolutions (the brains of many idiots remaining as smooth as those of the higher apes); the result is an arrested development, and a disproportionate growth of the different parts of the system, which, under the principle of 'recapitulation,' suggest a reversion to, or a stopping short at, some stage in the animal ancestry of the human individual. Popular superstition has always recognized a close relationship between mental defect and congenital physical deformity; Shakespeare's 'stigmatic' contains both the modern name and the modern idea (the 'stigmata' of the insane, of the criminal, of the hysterical temperament). From Hippocrates on wards many have insisted that in a great number of persons the predisposition to insanity is inherited,

and hence that slighter causes are sufficient to produce its onset than in other persons; moreover, that this predisposition may be inherited from parents not necessarily insane, but only nervously diseased; the contrary is also true—mere nervous disease in the child corresponding to and connected with insanity in the parents or near ancestors. In 'degenerate' families there is a tendency for this degeneracy to be progressively worse from generation to generation, until ultimately sterility appears, leading to the extinction of the degenerate race (Talbot, ch. 1). Moreau-de-Tours renewed the old thesis that genius is twin brother to madness, both being in many cases derived from the same parentage, and argued that degenerate types often represent throw-backs or reversions to more primitive types of evolution. The principal application given to this doctrine has been in the theory of criminality, of which Lombroso was the chief exponent, viz. that the criminal is born, not made, that (passion and accident apart) crimes spring from natures in which both the physical and the mental characteristics are those of primitive man, or, it may be, of the ape. The physical stigmata of the 'congenital criminal'—deformity of skull, sloping forehead, prominent cheekbones and projecting jaw, large ears, small deep-set and 'shifty' eyes, irregular dentition, cleft palate, stammering, etc.—are not now so seriously taken, and, according to Lugaro (p. 17), the anthropological theory, whether applied to insanity or to crime, is 'a thing of the past.' It is true that both the criminal and the idiot or imbecile are more liable to diseases, such as phthisis, etc., than the normal individual, and have many other physical deficiencies; while statistics have been frequently compiled to show the apparent transmission from parent to child of the 'criminal temperament,' and its hereditary relationship with imbecility and insanity. From such data, however, even if we exclude the immeasurable influence of environment, physical and social, it

Against the physical theory of degeneracy (as an all-sufficient account), there may be pointed out the frequency with which mental causes produce, or at least initiate, a change of intellectual or moral character, e.g. emotional shock, disappointment, loss of occupation or of means, death of husband, wife, or child, social degradation, religious emotion, school strain, privation, prolonged worry, etc. It is by no means necessary that a hereditary or congenital physical predisposition should exist in all cases; thus, a shock coming closely upon or during an illness or exhaustion, or a period of insomnia, may give all the conditions necessary for the outbreak of insanity. The influence of the mind upon the production of insanity was fully recognized by Pinel in 1801, and by others after him. The evolution theory gave, however, a stronger hold to the organic theory of mental disease, and its connexion with heredity, so that this view is now practically universal. It is clear that such disease is always a product of two factors—a predisposition on the one hand, physical or mental; and, on the other, a shock or a stress leading to the actual appearance of the insanity or mental defect. Thus the physiologically critical periods of life are those at which outbreaks of insanity are most frequent—first and second dentition, puberty, adolescence, the elimacteric, etc. Of course, if we assume from the first that mind is never an agent of bodily changes, but always their mere concomitant or their effect, then mental degeneracy cannot but be the sign or symptom of physical degeneracy, which is the

reality underlying all the phenomena. On the other hand, it may with equal plausibility be argued that the real factor is the montal disposition, the fundamental mode of feeling and of reacting upon impressions, which has a characteristic form and degree in every individual, but is variously modified by the temporary disposition which arises in connexion with bodily states—fatigue, exhaustion, illness, etc. A shock or stress will disturb the mind more or less, according to its fundamental and temporary disposition at the period when the strain comes. Without prejudice to any theory of the relation of body to mind, it may be admitted that actions are the outcome of the dominant feeling or emotion, which in its turn is mainly a product of perceptions and reproductions or memories; hence in human conduct the mental life predominates over the physiological: and this is especially the case after the child has become able to appreciate moral ideas. It is not denied that the physical nature has an immense influence in the causation of insanity.<sup>1</sup> But it is claimed (1) that this physical nature may be largely modified by education and by suggestion; (2) that it may itself be of a mental origin either in the ancestors or in the individual; (3) that the outbreak of insanity is almost invariably caused by mental factors, including, for example, emotional shock or mental contagion (as in imitative insanity); and (4) that the insanity may be every the suggestion (4) that the insanity may be cured by suggestion and other mental measures, in addition to physical hygiene (Dubois, in *Archives de psychologie*, x. [1910] 1: 'Psychological Conception of the Origin

of Psychopathies').

3. Symptoms of mental degeneracy.—The manifold forms in which mental degeneracy expresses itself may be illustrated from the two most important 'functional' diseases—hysteria and psych-

asthenia.

(i.) Hysteria has been defined as a 'morbid mental condition in which ideas control the body and produce morbid changes in its functions' (Dana, Journ. of Abnormal Psychol., Feb. 1907). Its most prominent features are anæsthesia, amnesia, loss of control over the attention, paralysis of certain muscles. (1) The anæsthesia may be the loss of sensibility in the whole of a special sense (e.g. blindness) without any injury either to the sense-organ or to the conducting nerve-fibres; or it may be partial (monocular blindness; narrowing of the field of vision in both eyes; colour-blindness), or systematic (loss of power to perceive certain persons or classes of objects, while the sensibility is otherwise intact). A historical illustration is the 'devil's marks' on the skin, by the insensibility of which a woman's guilt in trials for witchcraft was often determined. The insensibility differs from that which is due to nervenjury, in that it is not permanent, but varies; it is, for example, sometimes removed during sleep, or under the influence of chloroform, or in the hypnotic trance, while emotional excitement of any kind is said to intensify it. Also the insensibility does not correspond to the distribution of a particular nerve or group of nerves; many of the reflexes are preserved in connexion with the senseorgan, while the insensible limb is not liable to accident or to injury, as is the case with insensibility arising from a severed nerve. It has been

I Cf. Lugaro, p. 22: 'The functional insufficiency of a shrunken gland in the neck causes the syndrome of cretinism. Slight but chrono lesions of the kidneys can determine conditions of stupidity, temporary loss of speech, and violent attacks of confusion and agitation. A febrile malady occurring in miancy, though transient, altracting little notice, and passing away almost unobserved, can ruin the brain beyond repair. The effects of this may either manifest themselves as moral and intellectual defects of every degree, or as epileptic convulsions which may appear after many years, and by their repetition progressively destroy the mind.'

proved also that, while the subject is unaware of the existence of such anæsthesias, and therefore does not, of course, notice the impressions which are made on the insensitive organs, these are nevertheless recorded, and may be later brought to consciousness, e.g. when the patient is hypnotized; these and many similar facts show that the seat of the anæsthesia is not in the sense-organ but in the central organ, the cerebrum. Physiologically the impression is made on the nervous system, but it is, under the special conditions, unable to effect consciousness, as in other conditions it would (Janet, L'Etat mental des hystériques, p. 20 ff.).

(2) A further group of symptoms is found in the

amnesias, which also almost always accompany hysteria. The memory may be defective in one or more of many different ways; it may simply show weakness, the subject being unable to remember events of recent occurrence, or material which has been learned, with the same vividness, accuracy, and completeness as a normal individual; or the defect may be specialized so that particular qualities or classes of experiences can no longer be recalled at all; for example, visual memories, or auditory memories, or the memory of actions; and within any one of these groups there may be specialization; in the visual group the patient may be unable to recall the colours of objects, while remembering their forms and their light and shade; in the auditory group, he may remember spoken words, but not melodies or tones, etc. Or the lapse of memory may be systematized, and this also in two ways: (a) with reference to the time-series; a period of life may be wholly forgotten—sometimes a recent period, sometimes a more distant one, while events before and after this period are remembered with distinctness; (b) with reference to systems of knowledge, as, for example, when the power of reading lapses, or the memory for a particular language, or a particular science, etc.; still more completely systematized are the cases in which a particular object or person, formerly familiar, is no longer remembered.

(3) The will and power of attention may be affected. There may be excessive concentration on one impression or idea, or there may be incapacity to concentrate the attention upon any impression or idea; in the former case we have an approximation to the state of melancholia, in the latter case to the state of mania or the insane flight of ideas. Whether the span of attention is nar-row or wide, a subject may be distracted from a task by the slightest stimuli, and hence be unable to learn new material or to complete any task attempted by him; on the other hand, even though the attention be unconcentrated, it may still be excessively persistent, just as in ordinary experience a weak-willed individual may on occasions reveal the utmost obstinacy of character. cation and development are mainly a function of the power to direct the attention, at will, to objects uninteresting in themselves, or for the moment uninteresting to the individual: this power the hysteric patient possesses to a minimum degree. His attention is easily eaught by sensory impressions which fall within his field of morbid interest, by ideas which enter the mind through purely casual associations (associations of contiguity, of similarity of sound, or the like), but is not caught or held by ideas of deeper logical value. As the attention decides which of the many ideas that are clamouring on the margin of consciousness shall enter its focus and become determinative of the course of our actions and of the course of our thoughts, so in hysteria the level of thought and action falls. Words suggest thoughts through their sound (punning, rhyming words) rather than through their meaning; actions are decided by

sensations or simple associative images rather than by systematized tendencies built upon experience; originality and spontaneity are replaced by banality

or by automatism.
(4) On the motor side, there is frequently paralysis, or paresis, inability or weakness in the use of the limbs on one side of the hody, or of a particular limb or organ, or a particular muser; and (5) usually also disturbances, of 'nervous' origin, in the circulatory and other functions of the body -asthma, vertigo, palpitation, fainting, congestion, etc. Sometimes a power is exercised over these functions, which to the normal individual appears impossible: e.g. control of the heart, or of the digestive processes, ability to hasten or retard them at will. Both the muscular and the organic defects or abnormalities are, like the anæsthesias, of purely central origin; i.e. they spring directly from some temporary and local change in the cerebral system—a change which, however, has probably a mental origin.

The different phenomena in a particular case may usually be traced to a single system of ideas, which has obtained an undue control over the personality for example, the memory, conscious or suppressed, of some emotionally exciting event or experience. Cure is sometimes effected by suggestion, which strengthens the power of the personality over the ideas, sometimes by a shock or accident calling up the dormant energies of the individual: thus in one case (Donaldson, Growth of Brain, London, 1895, p. 304, from Taylor, Journ. of Nerv. and Ment. Dis., 1888) a lady recovered from a hysteric paralysis on the sudden death of her husband; in another, a cure resulted from the elopement of a daughter. For the most part, however, almost any stimulus is enough to re-excite the dominant idea. and to determine thought and action according to it. Thus a man who had been lost in the Australian Bush, and in the agony of thirst had frequently plunged into imaginary pools of water, used, long after his rescue, under the slightest dose of alcohol, to go automatically through the actions of diving recording of of diving, regardless of the surroundings or of the position in which he was. There is, for the most part, some such absorption by, or fixation of the mind upon, the compelling thought, with entire failure to correlate it with the immediately given sensations and impressions, or to criticize it by them. Epidemics of hysteria or insanity are common among peoples or races at a low level of development, or who suffer from insufficient nutri-tion (J. M. Clarke, 'On Hysteria,' Brain, xv. [1892]

526).

A well-known case is that of Haute-Savoie, 1857, in which a young girl saw a companion taken out of a stream half-drowned; the girl fell down in unconsciousness, and a few days later a friend who was with her became similarly affected. Other hysterical phenomena followed. Within four years there were 120 persons in the same neighbourhood affected in the same way, and this in spite of the fact that public exorcisms were held by the priest. The epidemic was stopped 'by the Government sending a force of gens d'armes to the district, removing the parish priest, isolating the patients, and sending the worst cases to distant hospitals' (Clarke, loc. cit.). Here it is the force of suggestion acting on an unstable nervous organism, and securing an influence over the internal organs of the body such as is not possessed, or is possessed only to a very slight degree, by the normal individual. See also art. Hystralia.

(ii.) A different complex of symptoms is presented.

y the normal markaual. See also are Alexanda.

(ii.) A different complex of symptoms is presented by what is now called psychasthenia, or 'obsessional insanity' (Janet), although at some points it is closely related to hysteria. Whereas in the latter the morbid ideas are specific or particular, in observable insanity that are general or governing the morbid ideas are specific or particular, in ou-sessional insanity they are general or governing ideas, entering into relation with every possible action or thought of the subject, for example, the idea that one is a criminal, or has committed some unpardonable sin. The idea is involuntarily, continuously, and painfully present to the mind, if not in the centre, at least on the verge, of con-

sciousness, so that to escape from it is impossible. The general ideas most commonly present are those of  $(\alpha)$  crime, including homicide, suicide, dipsomania, sacrilege, etc., and there are two forms—the obsession of committing the crime, and the obsession of remorse for a crime already committed, the actual crime being in such cases enormously exaggerated in the mind (what was really a mere they have the being transreally a mere an entral deed) is the hasical or mental formed into an actual deed) is the hasical or mental defect, again in two forms—obsession of the year obsession of becoming. Thus, a lady who is an entrangent of the property of the p tressed at her actual stoutness may refuse food, or take insufficient rest in consequence, while a lady at present of moderate dimensions may adopt the same tactics from fear of becoming unduly stout. Other instances are the fear of approaching old age, of approaching madness, of approaching death.

The common qualities, as regards the content of the obsessional ideas, are: (1) they regard acts or states of the subject himself, not primarily of any external object; (2) the acts or states are socially disreputable, wicked, or ridiculous, or in general undesirable; (3) (and in this is the fundamental difference from hysteria) they are endogenous, selfsuggested, whereas in hysteria the morbid idea is usually exogenous, or suggested from without. Accordingly, we find that at the early stages there is full consciousness of the absurdity or folly of the obsession; and also that, except in rare cases, the morbid action is not completely realized. Thus, a kleptomaniac used to take a servant with him when he went shopping, to watch and afterwards return the stolen articles; in another case, a youth, after taking poison, telephoned to his mother to inform her of the fact, with the (expected) result of a doctor's arrival. Again, the hallucinations have not the same definiteness or 'body' as those of hysteria; they lack details, and hence the slightest effort of the attention destroys them, as is the case in dreams; they are seldom completely externalized, or definitely located; they are really symbolic or type-ideas, standing for a system of thought rather than for a definite object.

On the volitional side, there are almost invariably automatisms, that is, actions which occur independently of and even in opposition to the will of the subject. These Janet classifies into three groups, in each of which the disturbance is either systematic or diffuse. (1) Mental agitations, including the systematic forms—manias of interrogation, of doubt, of precision, of explanation; and the diffuse form—the mania of rumination or The essential character of all is a movereverie. The essential character of all is a movement of the mind which is incapable of arresting itself upon any one fact or thought, but is compelled to pass beyond it, to add something to it. period to pass beyond it, to add something to it, and then something more, and something more, without end—'ideas either revolving in a circle, or branching out endlessly, but in any case never reaching an end, a definite conclusion' (Les Obsessions, i. 150). Familiar cases are those in which a patient deliberates for hours about carrying out come simple and proceed to the control of the contr ing out some simple, and, normally, habitual action: e.g. that of putting on a sock, choosing a action: e.g. that of putting on a sock, choosing a necktie, stepping over an object in the roadway. (2) On the motor side, what are called 'tics,' that is, automatic actions, twitchings, movements of the lips, etc., these being in nearly all cases symbols or traces of complete actions as suggested by the ideas—'psychic short-cuts.' (3) On the emotional side there are systematic dreads, or 'phobias,' or a generalized anguish or terror. Among the 'phobias' are the fear of crossing an onen space (augrephobia) are the fear of crossing an open space (agoraphobia), fear of remaining in a shut or closed place (alaustrophobia), fear of infectious disease (nosophobia), fear of insanity, of snakes, of vermin, etc. The diffuse form has sometimes been called panophobia,

a generalized expectation or dread of some untoward

tion of these phenomena is found first in a weaken-

4. Explanation of the symptoms.—The explana-

ing of the mind, by which the control over the finer mechanism, alike of association and of voluntary movement, is relaxed and ultimately destroyed. The contrast with the normal individual is the as that which occurs, within an between bodily health are activity, co-ordinative the former of movement, ability to relatter state the weakening or failure of these nowers. Obsessional insatisfications of these nowers. powers. Obsessional insanity is an exaggeration of this relatively healthy state, having its centre of this relatively healthy state, having its centre or point of support in some actual psychical experience of the subject. In hysteria, the general symptoms may most simply be referred to a disaggregation of the personality: some group or groups of memories, or of habits, or of other acquired activities, separate off from the controlling consciousness with which the normal individual identifies his self or ego. Thus, in the automatic identifies his self or ego. Thus, in the automatic writing and other expressive movements of hysteric or neurasthenic patients (Binet, Janet, etc.), the subject is entirely unaware of the actions done, although they would normally imply consciousness both to initiate and to carry out. So, the hypnotical reliable to the subject is a subject in the subject is a subject in the subject in the subject is a subject in the sub ized subject may carry out many actions which apparently involve deliberate consciousness, and, on apparently involve definerate consciousness, and, on awakening, show complete ignorance of them; and there are familiar cases in which a patient leads, for a shorter or longer period of time, a different life from that of his normal condition, during which he is unconscious, or at least has no memory, of his he is unconscious, or at least has no memory, or ms previous state, while afterwards, on recovery, he has forgotten the temporary abnormal state (Ansel Bourne, etc.). Morton Prince gives a remarkable instance of such a case of double or multiple personality in his Dissociation of a Personality. Normally all our experiences, or at least those which are important to use are emphasized unified. which are important to us, are synthesized, unified in the single dominant consciousness or personality; abnormally, some bundles of experience, more or less large, are detached from this unifying consciousness, and form secondary personalities, which may make use of the general fund of memories, habits, etc., organized in our experience, and represented in the intimate structure and fabric of the brain. It is not necessary here to discuss how far these self-realizing ideas deserve the name of 'separate consciousnesses' or 'separate personalities.' There are all degrees of disaggregation—between the simple hearing and answoring of a question by an absorbed reader, without subsequent awareness on his part of the action, and the extreme form found in Ansel Bourne, Janet's 'Léonie,' or Prince's 'Miss Beauchamp.' There is a close parallelism between such cases and insanity—for example, the insanity of fixed ideas, or of delusions, etc. Freud argues that many of these secondary personalities, as is the case in insanity, represent attempted realizations of certain wishes, desires, ambitions, which the subject has been prevented from successfully carrying out, or which he has voluntarily repressed (Neurosenlehre, ed. E. Hitschmann, Leipzig, 1911, p. 54). On the one hand, there is a loss (or a defect), in Janet's view, of tension or tonus in the central nervous system, or some part of it, and on the other a 'psychic miscry,' a disorganization of the mental life, in which images and ideas tend to realize themselves apart from the control usually exercised by the self on the basis of past experience and according to the claims of the social environment. (On which are important to us, are synthesized, unified in the single dominant consciousness or personality; self on the basis of past experience and according to the claims of the social environment. (On mental dissociation, see also J. Macpherson, Mental Affections, London, 1899.)

Corresponding to this disorganization of the mind is the existence of what may be called a floating mass of emotion, dread, or anxiety, ready to attach itself to any idea that may arise, and leading to actions that may be out of all proportion to the motive-idea, taken by itself. This emotion is really the re

organic and other sensations which form the basis of the 'feeling of self.' Since the alterations consist largely in an increase of bodily and especially of painful sensations, the emotion as a whole is of the depressive type. Such an emotion necessarily alters the whole mental character, and especially the moral character: the subject becomes timid, secretive, cunning, superstitious, selfish, and cruel. In originally higher types there is a tendency to pessimism: the patient is unable to carry out the ideals, frequently extravagant, which he sets before himself; hence doubt and distrust of himself and others; his life is suffused with pain; slight motives cause him distress and the basis of the 'feeling of self.' Since the altera-

distrust of himself and others; his life is suffused with pain; slight motives cause him distress and anxiety; this 'psychosis' he projects into others, and believes life to be predominantly painful.

Obsessions and fixed ideas are for the most part the result of a logical attempt to account for the emotion of which—although not of its cause—the subject is conscious. In other cases the system of ideas may be derived first from the environment—consciously or unconsciously—and the dread or anxiety is built upon it or attached to it afterwards (see Williams, in Journ. Abn. Psychol. v. [1910] 2).

[1910] 2).

The same features—disaggregation, depressive emotional-tone, or both—may occur in mental degeneration at all its levels. Thus in the imbecile, there is failure to co-ordinate experiences, to take more than the first few steps in the synthesis of personality: the result is impulsiveness of character, inability to concentrate the attention, motivation only by the simplest ideas, and these only in isolation from one another, no coherent or sustained activity either of thought or of action. Where depression is also present, the imbecile may become the criminal, with homicidal or other socially dangerous tendencies. In the paramoiac, there is failure to form, or the lapse of, the highest mental synthesis—the recognition of the 'social self'—on which the possibility of morality and of religion depends: hence the primary self-consciousself—on which the possibility or morality and or religion depends: hence the primary self-consciousness has the field to itself; there is an unrestrained assertion of individual wishes and desires, and a total disregard for the convenience, wishes, or claims of others. The enormous self-esteem easily leads to delusions of unlimited power, wealth, or bick repla (magalarments) or where depression is high rank (megalomania), or, where depression is present, to mania of persecution, etc. The nearest parallel that we have in normal life is to be found has been frequently pointed out (Moreau-de-Tours, Maury, Sir Arthur Mitchell, etc.). The higher systems are out of function, for the time being; the will is at rest; each idea, suggested by present sensory impressions or by recept eventures. the will is at rest; each idea, suggested by present sensory impressions, or by recent experiences, has the field of consciousness to itself: hence it takes on an illusory objectivity, and appears as a real experience or perception, while it tends to call up associate ideas which, however, are bound to it only by the lowest, purely mechanical, bonds (habit-associations, associations of sensory similarity). Thus, Maury (Le Sommeil et les rêves?, Paris, 1865, ch. vi.) describes a dream in which the main incidents were connected together through the words 'Kilomètre,' 'Kilogram,' 'Gilolo,' 'Lobelia,' 'Lopez,' 'Loto.' Simultaneous dissociation of personality is also a common feature of the dream; we appear to be debating with another dream; we appear to be debating with another person, who questions us and answers us; both dis-

putants, however, are ourselves. Maury (loc. cit.) mentions that the apparent revelations of dreams may sometimes be traced to forgotten memories of our own, which we recall to ourselves and put in our own, which we recall to ourselves and put in the mouth of another person, in our dream. In general, however, the thoughts of the dream are trivial, absurd, meaningless, as any one may prove for himself by writing down, immediately on waking, the words he has just been uttering in his dream. The same defect, and the same lack of power to criticize what passes through the subject's own mind, we have found to be common in mental degeneracy. The hallucinations of the insane, and the vague emotional depression, dread, or anxiety, have also their analogy in dream-life. All these phenomena of degeneracy appear also in normal life during fatigue, exhaustion, illness, senility, and in the temporary insanity of intoxication by alcohol or other drugs (nicotine, opium, hashish, etc.; see, for example, R. Meunier, Le Hachich,

Paris, 1909).
5. Progressive mental degeneration.—When degeneration attacks a well-developed mind, the symptoms frequently show a regular sequence, according to Ribot's Law of Regression or Involution (see his *Diseases of the Memory*); the more unstable forms of experience or acquirement are the first to lapse, *i.e.* (1) the most recently acquired, (2) the most complex, (3) the least frequently repeated, the least habitual or auto-matic powers. Thus, in senile insanity, or in the matic powers. Thus, in senile insanity, or in the beginnings of alcoholic insanity, it is the power to meet new situations, to face difficulties, to create, invent, or discover, that fails earliest: habitual situations are met, adequately perhaps, in habitual ways, but the bloom of individuality is gone. There follows the delicate appreciation of moral values—there is an increase of salishness and of values—there is an increase of selfishness, and of obstinacy, along with a failure of higher ambitions; then the more complex intellectual acquisitions, professional skill, scientific interests; then the memory for recent events, the recollection of the less familiar complexes of experience. With the narrowing of intellectual interest, the emotional life occupies a larger space; the patient becomes irritable, and irritating, discontented, malicious, neglectful of the ordinary conventions of life; his thoughts and his speech become less coherent, more vulgar and petty, until, finally, dementia leaves no powers in function except the primitive instincts and reflexes, with at the most a few of the more ingrained habits of mind and body. In a general way also, although by no means in detail, these stages have their parallels in the different concrete forms of degeneracy found in different individuals-from the morally deficient 'intellectual' down to the congenital imbecile or

idiot.

## DEGRADATION .- See DISCIPLINE.

India like a triangle towards the source of the Jumnā river and the main range of the Himālaya, lat. 30° 19′ 59″ N.; long. 78° 2′ 57″ E. From a religious point of view, the place is remarkable as the seat of a strong body of Udāsīs, a Sikh order of Hindu ascetics, who are said to owe their establishment. lishment to the son of Guru Nanak, the founder of Sikhism. Their gurudwārā, or temple, the work of their leader Rām Rāy, was erected in A.D. 1699. The central block, in which the bed of the gurā is Jahāngīr's tomb at Lahore. At the corners are smaller monuments in honour of the gwrā's four wives. The temple is supported by a large endowners at the corners at the corners at the gwrā's the temple is supported by a large endowners. ment, and the  $gur\bar{u}$ , who has the revenues at his disposal, is the richest man in the Dun valley. Formerly the appointment of each new guru, who was selected from among the disciples of the deceased gurū, was in the hands of the Sikh chiefs of the Panjāb, who, at each new installation, made a gift to the British Government and received in return the complimentary present of a pair of shawls. This practice is now discontinued. The special dress of the members of the sect is a cap of red cloth shaped like a sugar loaf, worked over with coloured thread, and adorned with a black silk fringe round the edge. The mahant, or gurū, enjoys high consideration in the country round and large numbers of devotees, drawn from all classes of Hindus, attend the shrine. But the most enthusiastic worshippers naturally come from the Cis-Sutlej Sikh States. The annual ceremonies, which last ten days, are performed at the Hindu feast of the Holi in spring.

Literature.—Atkinson, Himalayan Gazetteer, iii. [1886] 197f. W. Crooke.

DEICIDE.—This term, though not new, has been used in the past with such restricted meaning, and so seldom, that there is an imperative need to enlarge its definition before it can be of service in that branch of scientific research in which it is increasingly used. The following definition, taken from Ogilvie's Imperial Dict. of the Eng. Lang., will show this:

"Detoids=(1) The act of putting to death Jesus Christ our Saviour. "Earth, profuned, yet blessed with decide" (Prior). (2) One concerned in putting Christ to death (Craig). [Rare in both senses.]

both senses. I' Another quite recent dictionary defines the word thus: 'The killing of God; especially the crucifixion of Christ.' Though there is here a definition more in accord with modern requirements, the student of religions, acquainted with facts which seem to show that there has been a wide-spread content of particular to Jeeth heeth page and calmed. custom of putting to death both men and animals thought to be gods incarnate, must set aside everything that so narrows the word as to make it unlit for his purpose. Doing this, one is left with what is, after all, a mere translation of the Latin term, viz. 'the killing of a god,' or, more briefly, 'god-slaughter.' It is in this largest sense that the word is to be here used. For obvious reasons, there will be few, if any, references to what was at one time looked upon as the sole instance of at one time looked upon as the sole instance of

deicide—the Crucifixion.

None of the phenomena which the scientific study of religions has made known has aroused more interest than those obscure rites and ceremonies, those strange customs, which seem best explained by the theory that deicide, once supposed to find its only example in the Crucifixion, has been, in fact, a wide-spread custom, which has left a deep impress on the religious thought of the race. Before giving the few instances of this custom which space limits allow, it will be well to make some kind of classification, which will enable the student to understand more fully their nature and DEHRA.—A town, the capital of Dehra Dun, extent. It is suggested that instances of goda valley projecting from the Plains of Northern slaughter may be placed in one or other of two

524 DEICIDE

main classes, as being (1) real, (2) minetic or symbolic. A noticeable variety of the former is, on one theory at least, traceable in certain solemn expiatory sacrifices, and may therefore be termed 'expiatory' or 'piacular.' Again, in many of these instances for which the name 'mimetic' or 'symbolic' has been suggested, the effort 'to keep in remembrance' seems so prominent that they may well be termed 'commemorative.' The following is therefore suggested as a working classification for these instances of the law that they for those instances of god-slaughter which seem to

have been enacted.

I. Real (with sub-class 'piacular' or 'expiatory').—Cases of real god-slaughter may be seen in the strange custom, at one time wide-spread though now well-nigh extinct, of putting to death kings and chieftains at set times, or when they showed some sign of approaching decay and death. There is evidence to show that originally these high-placed victims were looked upon as Divine in a very real sense—gods incarnate. Such Divine honours are still ascribed by savage people to their king or ruler. The existence of these Divine beings in full vigour was deemed necessary to the welfare of all their people. It was a proof that their god could still safeguard their interests. The their god could still sateguard their interests. The reason for putting these gods incarnate to death is believed to have been the dread lest, through disease or decay of strength, they might be unable any longer to help and keep in safety those who looked to them for these blessings. It was necessary, therefore, that a fresh and more vigorous incarnation should be sought for, to take the place of that which was ready to vanish away. of that which was ready to vanish away.

Africa and India furnish the best attested

instances of such deicide, though traces of it are supposed to have been discovered in the accounts of old-world rites handed down by classical writers. Three centuries ago it was the practice to put to death the king of Sofala, an African State, when even a slight bodily blemish became manifest; whilst the king of Eyeo, also in Africa, was expected to commit suicide should his headmen think it demanded by the needs of the State. Again, in one of the kingdoms of Southern India the king was put to death or compelled to selfimmolation, after a reign of twelve years. Similar customs seem to have obtained in others of the Indian States. It is not surprising to find that, in course of time, means of evading this disagreeable necessity were discovered; one method, that of providing a substitute, human or animal, having a special interest as being the possible beginning of

vicarious sacrifice.

An interesting variety of these customs may be seen in cases where an original totem has developed into a deity worshipped by the members of the totem clan. It has been observed that at certain times, when the deity seems to be estranged from his worshippers or for some other reason. his worshippers, or for some other reason the clanbond needs renewing or cementing, recourse has been had to sacrifices of special solemnity and efficacy. In these the victim has been an animal of the same species as the original totem. In other words, the very deity constitutes the sacrifice which is to heal the breach between himself and his worshippers. It is not difficult to see in these solemn renewals of covenants the beginning of explatory or placular sacrifice. There seems to be a sufficient reason for thinking them to be cases of piacular deicide. On the other hand, the solemn putting to death, by his own priests, of the divine Apis bull of Egypt, after the lapse of a certain number of years, seems rather to be an instance of the endeavour to secure a renewal of the Divine life in an incarnation of unbroken vigour.

2. Mimetic or symbolic (with sub-class 'com-memorative').—This has its roots in those myths

which constitute so large a part of the quasi-theology of the great ancient Nature-religions. In these myths the phenomena of Nature are personified and deified, and her process become incidents in the lives of the gods thus originated. The myths which most readily furnish illustrations of the matter now in hand are those connected with the changes of the season which are so closely related to the growth of vegetation, the quickening of the seed, and the maturing of the kindly fruits of the earth. Such are the myths of Adonis, the Syrian deity, slain by the hunted boar on Mount Lebanon, so that his blood reddened the waters of the river which carried it down to the sea; of Osiris, slain by the malice of his brother Set or Typhon; of Dionysus, god of the vine, who, according to the Greek myth, was put to death by isolove. Into jealous Juno. Many quaint superstitions and ceremonies still surviving, among the peasantry of Europe as well as among the farmers and cultivators of well-nigh all other lands, find their best explanation in the wide-spread belief in similar stories. In them, and in the rituals based upon them, were set forth the death by violence and, in some cases, the subsequent resurrection of a god-a god of vegetation, and especially of corn.

god—a god of vegetation, and especially of corn.

J. G. Frazer writes thus of the Adonis rite: 'His death was annually lamented with a bitter wailing, chiefly by women; images of him, dressed to resemble corpses, were carried out as to burial and then thrown into the sea or into springs; and in some places his revival was celebrated on the following day' (GB² ii, 116).

Concerning the Egyptian deity Osiris he says: 'Of the annual rites with which his death and burial were celebrated in the month Athyr we unfortunately know very little. The mourning lasted five days, from the eighth to the twelfth of the month Athyr. The ceremonies began with the "earth-ploughing," that is, with the opening of the field labours, when the waters of the Nile are sinking. The other rites included the search for the mangled body of Osiris, the rejoicings at its discovery, and its solemn burial. The burial took place on the 11th of November, and was accompanied by the recitation of laments from the liturgical books' (ib. 140).

Again, of Dionysus he writes: 'The Cretans celebrated a

Again, of Dionysus he writes: 'The Cretans celebrated a bicanial festival at which the sufferings and death of Dionysus were represented in every detail '(ib. 103).

Other evidence obtainable warrants the belief that mimetic or symbolic deicide occupied no small place in the ritual of long-vanished religions. Such god-slaughter was not a mere amusement, or even a gratification of the dramatic instinct so deeply implanted in human nature. It had a far more serious purpose. Most probably these annual rites were performed in the firm conviction that they would further and assist those great and all-important natural processes on which the very life of the world depended. No doubt, in course of time, many of these customs, at least before they became mere superstitions, would be retained as a means of keeping in remembrance that which ought not to be forgotten. In other words, they would be more distinctly 'commemorative.' Such seems to have been the case with some very striking ceremonies observed by the ancient Mexicans, in which it was the custom to make paste or dough images of certain of their gods. These images images of certain of their gods. These images were then 'killed' and broken in pieces to furnish material for a sacrificial meal. It is a curious circumstance that portions of this consecrated food were reserved for the sick, and carried to them 'with great reverence and veneration.'

Concerning such customs as these, many questions arise which it is not easy as yet to answer, Even the conclusions already arrived at are by no means so established as to be accepted without reserve. The evidence, after all, is so scanty and elusive that one is compelled to a resolute distrust of one's own judgment, and to reliance rather on the sagacity of those skilled in such investigations, reserving to oneself the right of giving a casting vote in cases where the evidence for and against a certain view seems evenly balanced. Yet, nota certain view seems evenly balanced. Yet, not-

withstanding all this, no part of the great study of religions is fuller of suggestion than this, more especially in the strange parallels noticeable between pagan and Christian thought and ritual. It is only necessary to name such themes as 'Incarnation,' 'Crucifixion,' 'Sacrifice,' 'Eucharist,' etc., to show this. What influence the recognition of such analogies may have, in the future, on Christian speculation it is impossible to say.

T. STENNER MACEY.

DEIFICATION (Greek and Roman).-I. The Greeks.-The deification of actual men and women among the Greeks is a natural development of that view of the gods which their early literary documents show already prevalent. The Greek was not satisfied to leave the superhuman beings whose presence he divined in the operations of Nature, and whose legends he learnt as a child, in a mystical haze, as vast powers of shadowy and uncertain outlines; his mind loved the light of day; he early wanted to know exactly what these beings looked like, what definite things they had done, in what relations of kinship they stood to each other and himself. Hence it was that the gods of the Greek came to be anthropomorphic in a peculiar sense. He conceived them as really like men; they had actually trodden the hills and fields familiar to himself: the Athenian could look at the very mark which the trident of Poseidon had left upon the rocks of the Acropolis; the Spartan knew from a child the grave of Hyacinthus, whom Apollo had slain with the discus.

SIAIN WITH THE dISCUS.

'From one origin are begotten gods and mortal men,' says a line attributed to Hesiod (Works and Days, 108); and Pindar echoes it in the opening of Nem. vi.: 'There is one self-same race of men and gods; and from one single Mother have we both the breath of life; only faculties altogether diverse distinguish us; since man is a thing of nought, and those have brazen heaven for a sure abiding home. And yet we have some likeness, either by greatness of soul or by fashion of body, to the Deathless Ones.'

Vet more, the gods had hegotten have a shidness.

Yet more, the gods had begotten human children in intercourse with men; the families of the legend-ary chieftains, and such families of a later day as could make out a descent from the heroes of legend, were literally and physically their issue. The ancient heroes, as Homer tells us by a number of recurring epithets, were very much like gods to look at. And not only could the Divine thus come to earth, but the legends knew of men becoming gods (Eur. Andr. 1255, etc.).

Especially is the boundary-line between the worship of the dead and that of the gods hard to draw, for the rites offered generally to the dead implied the belief that the deceased had some power of action in the living world; only the scope of such power was greater in the case of those worshipped as heroes, whilst the distinction, again, between the rites proper to heroes and to gods respectively tended in practice to become blurred (Deneken, col. 2526, note). A difference was, indeed, recognized in common parlance between the ordinary attention to the dead, 'heroic' honours, and divine honours (see Arr. iv. 11. 3); but, when we try to draw a hard-and-fast line, the difference

try to draw a hard-and-fast line, the difference appears rather one of degree.

The mass of the heroes worshipped by the Greeks were mythical figures imagined in a remote past, especially the legendary founders of cities, the eponymous ancestors of clans, or the patrons of particular professions. How some cases occurred in which actual men were assimilated after their death to these heroes of the fabulous past we cannot say, but it seems to have happened early in certain parts of the Greek world (esp. Thrace and Sicily) that the founders of new cities received the same honours which the older cities gave to their legendary heroes (Timesius in the 7th cent. B.C. [Hdt. i. 183]; Miltiales in the 6th cent. [Hdt. vi. 38]; Gelon, Theron, and Hiero in the 5th cent. [Diod. xi. 38, 58, 66]; Hagnon and Brasidas in the same century [Thuc. v. 11]); or that the spirits of those

who had been violently slain under circumstances which made some community dread their vengeance were placated with 'heroic' honours (Philip of Croton in the 6th cent. [Hdt. v. 47]; Onesitus, king of Salamis, in the 5th cent. (Hdt. v. 114). It was thus natural that, when the emotions of

reverence or gratitude entertained with regard to some actual man were raised to a high degree, they should be felt as almost identical with those which had the gods for their object (Γσον γάρ σε θεῷ τίσουσιν 'Αχαιοί [Hom. Il. ix. 603]; θεὸς δ' ὡς τίετο δήμφ [ib. v. 78, etc. 1). In a moment of exaltation it might even seem proper to express such feelings in the same ritual performances as those used for the gods. <sup>7</sup>Ω παίδες, <sup>7</sup>Αργείουσιν εὐχοσθαι χρεών, θύεω τε λείβευν θ' ώς θεοῖς <sup>7</sup>Ολυμπίοις σπονδάς, exclaims the Danaus of Æschylus (Supp. 980 ft.). Such language was, of course, a rhetorical exaggeration; but, when the notion, even as an extravagance, was present to the mind, it was a short step, in days when the old awe of the gods had declined and novel dramatic expression was craved for, to translate it into action. According to Duris, the first instance of the formalities of religious worship being addressed to a living man was when Lysander, at the end of the 5th cent., became the object of a cult in Samos; altars, sacrifices, preans, and games are specified as its constituents (Plut. Lys. 18). The case did not remain isolated. In Thasos, soon after, it was taken for granted that the State might confer divine honours on whom it pleased; but the fact that this new development was reprobated in quarters where old-fashioned piety still existed is shown ters where old-fashioned piety still existed is shown by the answer of Agesilaus when the Thasians informed him that they were building him temples (Plut. Apophth. Lac. Ages. 25). When Dion entered Syracuse in 357, he was received as a god, with sacrifices, libations, and prayers (Plut. Dion, 29). Clearchus, the tyrant of Heraclea, adopted the insignia of the Olympian gods, and compelled his subjects to approach him with prostrations (Suid. 8.2. Khégayos).

(Suid. s.v. Khéapyos).

To understand the state of mind which led to such practices, we must remember the movement of Greek thought which had taken place since the days of Æschylus. The religious scepticism which was abroad had, no doubt, for many minds emptied the traditional forms of worship of their content of awe and devotion, and in proportion as they had become mere formalities there was less restraint from offering them to men. So far as the old gods remained as figures for the imagination, anthropomorphism had gone a step further, as may be seen in the contrast of Praxiteles with Phidias. Scenticism had in fact brought anthropomorphism to its ultimate conclusion by asserting roundly that the gods were men, as was done by the popular Euhemerism. The gods, according to this theory, were kings and great men of old, who had come to be worshipped after their death in gratitude for the benefits they had conferred (see EUHEMERISM). On this view, there was nothing monstrous in using the same forms to express gratitude to a living benefactor. In so far as the worship of living men arose from these conditions, it was a product, not of superstition, but of rationalism. It shows, not how exalted an idea was held of the object of worship, but how depreciated in meaning the forms of worship had become. If this is so, Frazer (Early Hist. of Kingship, 1905, p. 137) errs in confusing it with primitive superstition, of which it is really the antithesis. At the same time, the development of religious feeling, which revolted against the traditional anthropomorphism, was not altogether unfavourable to such cults. The tendency to merge the separate divinities in the conception of One pervading Divine power (Schmidt, Ethik d. alt. Griechen, 1882, i. 52) would make it easier to see manifestations of this power in human personalities which asserted themselves strongly. A special kind of deification was that which we find in connexion with the mystic sects dispersed through the Greek communities and the philosophies which borrowed from them. If deathlessness had been all along the distinguishing characteristic of the gods, those who laid stress upon the deathlessness of the individual soul thereby came near to making it divine. And so we get the idea that the human soul is a divine being imprisoned for some pre-natal offence in the mortal body. The notion, current among the Orphics, passed from them to the Pythagoreans (Rohde, Psychv<sup>4</sup>, ii. 121 f., 161 f.). So, too, Empedocles declared that, if a divine being sinned, he was incarnate for punishment till he had worked out his salvation in a number of successive lives, and was restored to fellowship with the gods (frag. 146, 147 [Diels]). Empedocles himself was already reaching that consummation, and claimed divine honours: έγω δ΄ ὑμῶν θεὸς ἀμβροτος, οὐκέτι θνητός, | πωλεῦμαι μετὰ πᾶσι τετιμένος, ώσπερ εσικα, | ταινίαις τε περίστεπτος στέφεσιν τε θαλείοις (frag. 112 [Diels]; cf. Rohde, Psyche<sup>4</sup>, ii. 171 f.). So, again, on the funeral tablets discovered at Thurii, the dead man declares to the gods that he is of their kindred, and is saluted as one who has passed from mortality to deity: "Ολβιε καὶ μακαριστέ, θεὸς δ' ἔση ἀντὶ βροτοῖο. Θεὸς ἐγένου έξ ἀνθρώπου (Michel, Recueil, 1896–1900, nos. 1330, 1331; Harrison, Prolegomena to Gr. Relig., 1908, p. 660 ft.). If any one had the right to divine honours,

Alexander, after feats of conquest to which Greek story knew no parallel except the mythological triumphs of Dionysus and Herakles, obviously had a pre-eminent claim. Already his father, Philip, had in his own kingdom caused his own statue to be carried in procession, together with those of the twelve gods (Diod. xvi. 92. 5). It is absurd to call in the influence of 'the East' to account for what followed so inevitably from the prevalent disposition of the Greek world. As a matter of fact, the Achæmenian kings were apparently not worshipped as gods (Æsch. Pers. 157 is cited by Beurlier and others to prove that they were, but the evidence of the native monuments is against it, and the Greek notion represented by Æschylus seems to rest upon a misapprehension of the formality of prostration). In Egypt, indeed, since the New Empire, the reigning king had been so worshipped, and it was natural that Alexander should here be saluted as the son of Amen (Ammon). But we may safely say that, even without this, the Greeks would have worshipped him. The oracle of Didyma had already in 331 (unless Strabo is right in his scepticism) declared Alexander to have been begotten by Zeus (Strabo, xvii. 814). In 323, on Alexander's return from India, embassies arrived at Babylon from turn from India, embassies arrived at Babylon from Greece, wearing and bringing crowns such as indicated that they were  $\theta \epsilon \omega \rho o l$ , approaching a god (Arr. vii. 23. 2). There was still, indeed, in Greece a party of old-fashioned piety who opposed the extravagant flattery as profane. The question provoked stormy debates in the Athenian assembly. The divine honours were defended on the other side with flipport savegue are form to compart we attraction. with flippant sarcasm as a form too empty to matter. "By all means,' exclaimed Demosthenes, 'let Alexander, if he wish it, be the son of Zeus and Poseidon both together' (Hyper, [Blass]i. 31. 17; of, ps. -Plut. Vit. X. Orat. vii. 22; Valer. Max. vii. 2, 13; Dinarch. in Demosth. i. 94). The expression shows that Alexander was understood himself to demand such honours. According to an account preserved by Arrian, it was the philosopher Anaxarchus who was employed to propose divine honours to Alexander in the circle which surrounded the king's person. The prostration which Alexander demanded was regarded by the Greeks as an acknow-ledgment of doity, and Anaxarchus is represented as defending Alexander's deity on purely rational-

istic euhemeristic grounds (Arr. iv. 10). Hephæstion, at any rate. Alexander demanded worship after his favourite's death. The worship was 'heroic' in kind; Arrian gives under reserve the story that Alexander had wished to make it properly divine, but had been forbidden by the oracle of Ammon (Arr. vii. 14. 7; but cf. Diod. xvii. 115).

If worship offered to the living Alexander had offended the more conservative Greek feeling, worship offered to the dead Alexander as a hero was in accordance with Greek tradition. The forms of worship chosen would show numberless local variations which we cannot now trace. The Ionian Confederacy maintained a cult of Alexander centred in a sanctuary near Teos (Strabo, xiv. 644) till the days of the Roman Empire. Under the Roman Empire itself the cult of Alexander flourished (Lamprid. Alex. Sev. 5. 1; Herodian, iv. 8; Dio Cass. Ixxvii. 7).

Naturally, the Macedonian chiefs who entered upon Alexander's inheritance saw their interest in

publicly recognizing his divinity. In what forms they severally did so is not recorded. Eumenes had a 'tent of Alexander' in his camp, with a throne before which the officers offered a sacrifice as to a present god (Diod. xviii. 60, 61; Plut. Eum. 13; Polyæn. iv. 8. 2). The appearance of Alexander's head, with the horns of Ammon, upon the royal coinages is an assertion of his assimilation

to the gods.

Antipater was an exception; in him the old feeling which condemned these practices as impious (ἀσεβές [Suidas]) still found a representative. The official worship of Alexander at Alexandria as god of the city cannot be traced further back than Ptolemy II.. who transferred the conserved that Ptolemy II., who transferred the conqueror's body from Memphis to the new temple called the Sēmu in Alexandria. [It is curious that Diod. speaks of the honours offered to Alexander in Alexandria as inpactat (xviii. 28. 4). Probably the expression is used loosely, because the honours were offered to a dead man.] Henceforward the annual priest of A lexander, chosen from a limited number of privi-leged families, was eponym for the year till Roman times. A golden crown and a crimson robe were his insignia. The cult continued in Alexandria till the institution of Christianity (Otto, Priester und Tempel in hellenist. Aegypten, i. 138 f., 253). The Greeks, who had worshipped Alexander in

his lifetime, were ready enough to give the same sort of worship to his successors. Craterus, who died in 321, was honoured at Delphi with a pean (Athen. xv. 696e). Scepsis in 310 voted the living Antigonus a répevos, altar, and image; they had already some time previously instituted sacrifice, games, and stephanephoria in his honour (Dittenberger, Inscr. Orient. i. 6). In 307 Athens exhausted all forms of adoration in regard to the same two princes. They were addressed as  $\theta \in \partial t$   $\sigma \omega \tau \hat{\eta} \rho e s$ : a regular priesthood was established for them; and changes, ostensibly permanent, were made in the calendar and religious organization of the in the calendar and religious organization of the people. In 290, a hymn, which has been preserved, was composed for the reception of Demetrius. In it Demetrius is hailed as the son of Poseidon and Aphrodite; he and Demeter are the 'greatest and friendliest of the gods,' and so on (Diod. xx. 46; Plut, Dem. 10f.; Athen. vi. 253, xv. 697a). It is important to observe that the really religious people citil projected against these perversions and saw in the failure of the vintage a judgment of the true gods (Philippides, ap. Plut. Dem. 12). The first Greek State to offer divine honours to Ptolemy was apparently the Confederation of the Cyclades (τετιμηκόσιμ πρώ[τοις τ]ὸν σωτήρα Πτολεμαΐον Ισοθέοις τιμαΐς [Ditt.  $Syll^2$  i. 202]); Rhodes in 304, or soon after, conferred upon him the divine surname of

'Saviour,' and dedicated to him a τέμενος and festival (Diod. xx. 100. 3 f.; Paus. i. 8. 6; cf. Πτολεμαίου τοῦ Σωτῆρος και θεοῦ [Ditt. Inser. Orient. i. 16]); and Lysimachus was worshipped with altar and sacrifice at Priene (*Inser. of the Brit. Mus.* cocci.) and in Samothrace (Ditt. Syll.<sup>2</sup> i. 190). Seleucus, after his conquest of Asia Minor (281), had an altar built to him by Ilion, and games were instituted to him like those held in honour of Apollo (Hirschfeld in Archuol. Zeitschr. xxxii. [1875] 155; Haussoullier in Rev. de Philol. xxiv. [1900] 319). Both Selecuts and his son Antiochus were worshipped by the Athenian colonists in Lemnos (Phylarch. ap. Athen. vi. 254). Especially where a chief had founded or re-founded a city, he had the founder's prerogative of worship: so Cassander at Cassandrea (Ditt. Syll.2 i. 178), Demetrius at Sicyon (Diod. xx. 102f.), and Ptolemy at Ptolemaïs (Otto, Priester u. Tempel, i. 160).

It is probable that all through the epoch when the dynasties of Seleucus and Ptolemy ruled in Asia and Egypt respectively, the Greek cities which were subject to them, and some which were properly allied appropriate their level to the merely allied, expressed their loyalty in a cult.

which were subject to them, and some which were merely allied, expressed their loyalty in a cult. Our evidence is, of course, fragmentary.

We find at Ilion a priest of Antiochus 1. soon after his accession (Ditt. Inser. Orient. i. 219); and cults of the same king celebrated by Bargylia after his death, and by the Ionian Confederacy during his lifetime (τίμενος, altar, image, sacrifice, games, stephanephoria (Mochel, 486]). At Erythrae, games called Σελενίκεια are mentioned, and Σωτρρα at Mylasa (Michel, 252, 502). At Didyma, Antochus 1. and his wife Stratonike seen to have been worshipped after their death as θeol σωτήρες (CIG 2852; cf. Haussoullier, Hist. de Milet, 1902, p. 51). Smyrna instituted a special worship of Stratonike as Aphrodite Stratonikis, in which her son Antiochus 1. was associated with her (Ditt. Inser. Orient. i. 229: Tac. Ann. iii, 63). Similarly, in the case of the Ptolemies, we find Hroλεμάνα celebrated at Athens, where Ptolemy 1. was chosen as the eponymous hero of a tribe (Paus. i. 5. 5; CIA ii. 444. 32, etc.), in Lesbos (Ditt. Inser. Orient. i. 360), and by the Confederation of the Cyclades (Delamaire, Rev. de Philot. xx. (1896) (1981.). Halicarnassus dedicated a stoo to Apollo and king Ptolemy (Ditt. Inser. Orient. i. 40). The Antigonid dynasty which inherited Macedonia was honoured by 'Αντγώνια, which are found at Delos (BOH vi. 143), in Eubca (ib. x. 102 1.), and, after 223, among the Acheans (Plut. Arat. 45, etc.; cf. Niese, ii. 338). Attalus of Pergamum became in 200 n.c. the eponym of an Athenian tribe, and his wife Apollonis the eponym of a deme; a special priest was attached to his service (Polyb. xvi. 25; CIA ii. 1670, 465, 460). Sicyon in 198-7 instituted a festival in honour of Attalus x. (Polyb. xvii. 16); Cos a πομπή to Eumenes II. (Ditt. Syll. 2ii. 619). As a matter of course, the cities actually subject to the Attalus maintained some such worship (Cyzicus Itemple of Apollonis), Arnh. Pal., bk. iii.; Sestos [priest, birthday festival], Ditt. Inser. Or. 332; Elne [Ionis,

All these cults are instituted by cities, ostensibly by their own act, as separate communities; the cult of one city differs in its forms from that of another. They are to be distinguished therefore from cults instituted by the kings themselves for The first cult of the latter sort we the realm. The life cut of the factor sold we know of is that instituted for the first Ptolemy, as θeès σωτήρ, after his death (282–3), by his son Ptolemy II. (Ditt. Syll. 2 i. 202). With his father Ptolemy II. associated his mother Berenice on her electh (soon of to 270) the two being synchimmed. death (soon after 279), the two being worshipped together as  $\theta eol \ \sigma \omega r \eta \rho es$ . First of all men, dead or living, says Theocritus, this man established temples fragrant with incense to his mother and his sire' (xvii. 121). When the sister-wife of Ptolemy II., Arsinoë Philadelphus, died in 270-1, she too was deified. And now a further step was taken. Ptolemy II. had himself put on a level with his sister; the living king and the dead queen were worshipped together as  $\theta \in \mathcal{O}$  declared. This cult was combined with that of Alexander, a single priest

serving the group of divinities; the cult of the  $\theta \epsilon o l \ \sigma \omega \tau \hat{\eta} \rho \epsilon s$  remained for the time distinct. Ptolemy II. was succeeded by Ptolemy III. Euergetes, the θεολ εὐεργέται (i.e. Euergetes and his wife Berenice II.) were added to Alexander and the  $\theta$ eol άδελφοί, and so on with the other kings till the end of the Ptolemaic dynasty. Under Ptolemy IV. Philopator (between 220 and 215) the cult of the θεοί σωτήρες ceased to be distinct; their name now appears in the official registers after that of Alexander. The seat of this official cult seems to have been the Sema of Alexander, to which a H705eµáccor (a mausoleum of the Ptolemies) was joined
(Otto, Priester und Tempel, i. 139). Some of the
Ptolemaic queens had priestesses of their own— Arsinoë Philadelphus a κανηφόρος, Berenice II. an αθλοφόρος, Arsinoë, sister-wife of Ptolemy IV., a lέρεια, and Cleopatra III. (daughter of Ptolemy Philometor, wife of Ptolemy Euergetes II.) a variety of ministers, a  $\sigma re \phi u \eta \phi b \rho o s$ , a  $\pi u \rho \phi \phi h \rho o s$ , a  $l \phi e c a$ , and a male priest styled  $l e \rho b s$   $\pi \omega \lambda o s$  (Otto, p. 158, cf. p. 411). The priestesses of the queens may have performed their rites at separate shrines in have performed their rites at separate shrines in Alexandria. Distinct, of course, from this system of Greek worship was the worship given by the Egyptians, on the lines of their national tradition, to their foreign kings and queens; though the influence of the Egyptian forms of worship upon the Greek may be seen, e.g. in the king himself becoming, on occasion, priest of his own deity in Alexandria (Otto, p. 182, note 6). Cyprus, a Ptolemaïc dependency, had a high priest (ἀρχιερεὐς τῆς νήσου οτ τῶν κατά τὴν νῆσον ἰερῶν) of its own, in whom we may see the president of the proin whom we may see the president of the provincial cult of the kings (Strack, Dynastie der Ptolomäer, no. 76, etc.).

In the Sciencid realm, when Sciences was murdered in 281, his son Antiochus I. was forward to do as much for his father as Ptolemy II. had just done for his. The tomb of the old king at Seleucia was constituted a temple, a Nikaropelor, and a cult was officially instituted for him as a god (App. Syr. 63). With him each of the following kings was in his turn associated; one priest served the founder and his deified successors, and one the reigning king (Ditt. Inscr. Orient. 245). How soon it came about in the Seleucid realm that the living soveabout in the Seleucid realm that the living sovereign was the object of worship instituted by the court we do not know. The important inscription which gives us a rescript of Antiochus II. (261–246 B.C.) (Ditt. Inser. Orient. 224) shows us such already existing. It is a worship of the king organized by provinces, each province having a high priest. The rescript is issued in order to associate the queen Laodike in the cult, instituting provincial high priests for her side by side associate the queen Latitute in the circ, insti-tuting provincial high priests for her, side by side with those of the king. Incidental mention of provincial high priests in later reigns shows us the system still in continuance (Michel, 1229), and they present an obvious parallel to the high priests of Cyprus in the Ptolemaic realm.

Although a difference is rightly insisted upon between the cults instituted by the central govern-ment and those offered by the Greek communities as independent agents, the dividing line between the two is not easy to draw. This is due to the ambiguous position of the Hellenistic kings, who wished, while retaining Greek cities under their control, to leave them the semblance of autonomy. control, to leave them the semiclance of attonomy. Cults offered ostensibly by a city spontaneously might be framed at a suggestion from the court which it was impossible to disobey. In what class, for instance, are we to put the cults offered to the Ptolemaic kings at Ptolemais, to the Seleucid kings at Seleucia, to the Attalids at Pergamum? All these cities had the forms of municipal autonomy, but were entirely subject to royal dictation. The nucleus of the cult at Ptolemaïs is that of the founder Ptolemy I. Soter, and to him the later kings (at any rate after the θεοι φιλοπάτορες) become attached. The cult of Seleucia founded under Antiochus I. we have already mentioned. At Pergamum a sheep was sacrificed by the civic authorities to Eumenes I., that is to say, even before the rulers of Pergamum had acquired the title of kings (Ditt. Inser. Orient. 267). An inscription of the time of the last king of Pergamum, Attalus III., shows us sacrifices offered to the founder Attalus II., his brother Philetzerus, and the reigning king (Mitt. Ath., 1904, p. 152).

In connexion with the assumption of deity by the kings themselves, we must reckon the appearance of their effigy on coinages struck by royal authority. The official surnames, again, which they bear have been thought to have religious significance. This is difficult to prove, because the king would naturally be addressed in worship by his full titles, and if, therefore, we find the surname used in the cult, it would not necessarily show a religious origin. In favour of the sarily show a religious origin. In favour of the hypothesis are: (1) the fact that some of the surnames, e.g. σωτήρ, ἐπιφωτής, have undoubted religious associations; and (2) the practice of the Greeks of attaching surnames to the names of deities-Athene Promachos, Zeus Meilichios, etc.; cf. also the title of everyerns conferred on Diogenes

The title of  $\theta \epsilon \delta s$  does not seem usually to have been assumed by kings during their lifetime. been assumed by kings during their lifetime. For the Greeks of Egypt, as we have seen, their living king was a god from the time when Ptolemy II. associated himself with his dead and deified sister. But, whilst the living king and queen were, after Ptolemy II., regularly worshipped together as θeοl εὐεργέται, θεοl φιλοπάτορες, etc., the kings do not seem to have had themselves called θεόs in the protocol of State documents till the time of Euergetes II. (Strack, Dynastie der Ptolemäer, p. 120). In the Seleucid dynasty also it is to be noted that Antiochus IV. Epiphanes is the first king under whom θεόs is attached to the royal name upon the coinage, and Antiochus is exactly the king who seems to have put his deity prominently forward (cf. Bevan, House of Seleucus, 1902, associated himself with his dead and deisied sister. nently forward (cf. Bevan, House of Seleucus, 1902, The usage of the Pergamene kingdom ii. 154). The usage of the Pergamene kingdom appears also to have confined the title of \$\theta \text{to} to\$ deceased sovereigns. A king or queen at death seems to have been officially declared to have joined the number of the gods (Cardinali, 'Regno di Pergamo,' p. 153, note 4). This did not exclude the offering of rites of sacrifice, etc., to the living sovereign. Whether, in the case of acts which were understood to be ceremonial flattery, any attempt was made to reconcile the inconsistency of worshipping some one whose anothers is tenor of worshipping some one whose anothers. sistency of worshipping some one whose apotheosis was still future we do not know.

It remains to consider the relations to the older gods in which these cults in theory placed the men

gods in which these cults in theory placed the men worshipped. These were of three kinds.

(1) Descent.—Those Greek families which professed to trace back their family tree to heroic times had, of course, no difficulty in making out their descent from some god. It can hardly, therefore, have been the peculiar prerogative of the royal dynasties in Hellenistic times to possess this sort of link with divinity. They seem, nevertheless, to have thought it worth while to emphasize the divine origin of their families. So we find that the family of Ptolemy at the Exyptian court that the family of Ptolemy at the Egyptian court was traced back to Herakles and Dionysos, the given prominence over the former. Possibly the family of the Seleucids claimed descent in the same way from Apollo. The Attalids, like the Ptolemies, apparently took Herakles and Dionysos

for the founders of their race (Cardinali, op. cit.

(2) Immediate sonship.—Dignity of family was not enough. If possible, the person worshipped had to be himself the offspring of a god. Already, in the times before Alexander, this was asserted that the control of the at the Syracusan court of Dionysius (Plut. de Alex. virt. ii. 5). Alexander claimed that his mother had conceived him of Zeus Ammon. The real father of Seleucus, it was asserted at the Seleucid court, was Apollo (Just. xv. 4). Apollo was άρχηγὸς τοῦ γένους (UIG 3595). To, too, we saw that the Athenians in 308 hailed Demetrius as the con of Possilon and Aphydite.

son of Poseidon and Aphrodite.

(3) Identification.—For this, again, we have a precedent before Alexander in Clearchus of Heraclea (FHG iii. 526). The first instance we can trace after Alexander is that of Seleucus, who was worshipped at Seleucia as Zeus Nicator. His was worshipped at seleticia as Zeus Micator. His son at the same place was Antiochus Apollo Soter (Ditt. Inscr. Or. i. 245). In Egypt, Arsinoë at her apotheosis was identified with Aphrodite (Strabo, xvii. 800; Athen. vii. 318d, xi. 497d), and so was Stratonike I. at Smyrna. Antiochus Epiphanes probably identified himself with Zeus (JHS xx. [1900] 26 ff.). The surname péos Advivos was borne by Artiochus (145, 143 R.C.) and Antiochus XII. [1900] 26 ft.). The surname νέος Διόννος was borne by Antiochus VI. (145–143 B.C.) and Antiochus XII. (86–85 B.C.) in Syria; and by Ptolemy Auletes (81–52 B.C.) in Egypt. Cleopatra VII. was styled νέα\*Ισις (Strack), and the last Cleopatra also bore the same title, and appeared in public arrayed as the goddess (Plut. Ant. 54).

The Greeks had no idea of any divinity in kingship measures. The proffer of divine honours in the

ship per se. The proffer of divine honours in the 4th cent. B.C. was the recognition simply of a personality mighty to impress and modify the world. The Greeks, as a matter of fact, who approached Alexander with worship did not regard him as their king (he was king of the Macedonians and Persians). Naturally the Macedonian chiefs and Persians). Naturally the Macedonian chiefs who made themselves kings after Alexander attained thereby a position which gave them preminent power upon the world, and the proffer of divine honours expressed a desire to secure their good-will and protection. We have here further evidence that it is a mistaken track to assimilate the Greek worship of kings with a worship of the king as such, like that which had existed recently in Egypt and, centuries before, in Babylonia. Naturally, too, when the new kingdoms had developed settled institutions, the courts found in the cult of the sovereigns a useful means of imposing upon the popular imagination means of imposing upon the popular imagination and securing an expression of loyalty. And, as Kaerst has pointed out, it was not easy to find a formal expression for dominion over a number of Greek States which were, by Greek political theory, independent sovereign communities. Over the authorities of the city had been, in olden days, authorhuses of the city had been, in often tays, only the gods, and the assumption of deity gave a sort of legality to the relation of the king with the subject Greek States. Antiochus IV. turned his deity to further account by representing himself as the divine husband of the goddess of a rich

sen as the divine husband of the goddess of a rich temple like that of Hierapolis, and claiming the temple treasure in that capacity (Gran. Licin. 28). The Greek practice passed to the new dynasties which arose in the East. The Greek kings of Bactria, Agathocles and Antimachus (c. 190-160), are styled 'god' upon the coins. The Arsacid kings of Parthia, if, as adherents of some form of Zoroastrianism, they recognized only One Supreme Zoroastrianism, they recognized only One Supreme God, found no difficulty in giving the name of 'god' to subordinate powers, and in classing them-

<sup>&</sup>lt;sup>1</sup> Something of the same sort scorns to be implied when the Pergamene king is called Ταύροιο διοτρεφέος φίλον υίόν (Paus. x. 15. 2; cf. Suidas, s.v. <sup>\*</sup>Ατταλος), i.e. son of the divine Bull, Dionysos.

selves among the number. Here, too, on some of the coins the name of the king is accompanied by the epithet θεοῦ or θεοπάτορος (Wroth, Coins of Parthia, 1903, p. xxix). So, too, the Sasanian kings (after A.D. 224) continued to bear the title of θεόs (Pers. bag); but, whilst the Greek was ambiguous, in the native language the distinction between the lower divinity of the human deity and that of the gods proper was made plain by another word (yazdān) being reserved for these last (Ditt. Inscr. Orient. i. 432, 433). So far, then, from its being the case that the deity of the human ruler was an idea borrowed by the Greeks from the East, the borrowing was the other way; the Orientals took it from the Greeks.

Even the minor dynasties of the East came to bear divine titles. So Antiochus I. of Commagene describes himself as  $\theta\epsilon\delta$  in the same breath with which he professes piety to be the rule of his life, on the monument where his body rests after his soul has gone to the 'heavenly seats of Zeus Oromasdes.' The honours to be paid to himself and the other kings are distinguished, as 'heroic' (lines 48, 118, 125), from the cult of the greater gods. His own image is  $\sigma i \nu \theta \rho o \nu \sigma$  with that of Zeus-Oromasdes, Mithra, Artagnes, and Commagene (line 60) (Ditt. Inser. Orient. i. 383). The Jewish Herod Agrippa I. received from heathens the now banal ascription of deity (Ac  $12^{22}$ ; Jos. Ant. xix. 8. 2).

Even in the age of the Hellenistic kings, deification was not their peculiar prerogative. It was open to other men, in their degree, to become objects of religious worship. Sometimes they might secure this by the authority of the kings themselves. Antiochus II. had his favourite Pythermus worshipped as Herakles (Athen. vii. 289 f.), and Ptolemy II. consecrated his mistress Bilistiche as Aphrodite (Plut. Amat. 9). Consecration sometimes took place by the authority of a Greek State.

So Athens conferred heroic honours after his death upon Diogenes, who had commanded the Macedonian garrison in the Piraus (title of vieryérny, priest, τέμενος, games [CIA ii. 467, 24; 481, 57; 1669]). Aratus after his death was worshipped with heroic honours at Sicyon; and, as in the case of the defined kings, it was asserted that his mother had really conceived him of a god (Polyb. vii. 14. 7; Plut. Arat. 53; Paus. ii. 8. 2, 9. 4). Philopemen after his death was worshipped with duvine honours at Megalopolis (altar, τέμενος, games [Plut. Philop. 21; Paus. viii. 51. 2; Dlod. xxix. 18; Liv. xxxix. 50; Ditt. Syll. 210]).

Probably to this age, and not an earlier, belongs the consecration of the athletes of former generations who had brought glory to their cities, like Theagenes, who was worshipped as a god at Thasos (Paus. vi. 11. 2), Oebotas of Dyme (Paus. vi. 3, vii. 17. 3 and 6), and Diognetus the Cretan (Ptol. Heph. ap. Phot. Bibl. p. 151a, 20). Other consecrations were the act of gilds or associations, who worshipped their founders or distinguished members. So we find a gild of Dionysiastæ (2nd cent. B.C.) in the Piræus 'heroizing' a certain Dionysius (8πω δφηρωσθεί Διονόποs) (Mitth. Ath. ix. [1884] 279 f., 288 f.), and something like a heroic cult of their founder was maintained in the philosophical schools created in the form of religious gilds by Plato and Epicurus. In the case of Plato, the story of a miraculous birth was again circulated; he was the son of Apollo (Diog. Laert. iii. 1. 2; Olympiod. Vit. Plat.). So, too, Hippocrates seems to have been worshipped in schools of medicine, not in Cos only, but in the Greek world generally (Luc. Philops. 21). Sometimes the consecration took place according to testamentary dispositions, which founded an association for the cult of the testator, as in the case of a family of Thera, whose herōon is the subject of the will of Epicteta (CIG 2448), and in the case of Epicurus.

When the power began to pass from the hands of kings to that of Rome, the Greeks, in transferring their homage, continued the forms of religious worship. The cult which replaced that of the Hellenistic kings was that of the goddess Rome. Smyrna was the first Greek city to erect a temple to Rome in 195 B.C. (Tac. Ann. iv. 56), and the cult later became general. The Roman general Titus Flamininus a few years later was receiving divine honours in Greece (Plut. Flamininus, 16). In the last cent. B.C. it seems to have become the usual thing for Roman governors to be worshipped by the provincials under their rule (Cic. ad Q. frat. i. 1, 26, cf. ad Att. v. 21; Suet. Aug. 52); the notorious Verres in Sicily had games (Verria) celebrated in honour of his divinity (Cic. Verr., Orat. ii. 2. 21). Of the numerous temples erected to Pompey (τῷ ναιοῖς βρίθοντι πόση σπάνις ἐπλετο τύμβου, Anth. Pal. ix. 402) no material trace has been recovered; but two inscriptions, one from Ephesus and one from the island of Carthæa, show the sort of worship offered to Julius Cæsar by the Greeks in his day of power. The first (CIG 2957) describes him as 'God manifest and universal saviour of humanity'; and the second (CIG 2369), as 'God and Emperor and Saviour of the world.' But now the ruling race itself was prepared to follow the Greek fashion.

2. Deification under the Roman Empire.—For the old Romans the gap between gods and men was not bridged as it was for the Greeks. They had indeed, like other primitive peoples, rites for placating the spirits of the dead (di manes), but such spirits did not pass into gods proper; there was no intermediate class of heroes. The offering of divine honours to living men would have seemed to them highly shocking. As, however, the Greek element grew in Rome, new ideas found entrance. Scipio Africanus was not worshipped, but there was believed to be something supernatural about him, and stories were told of his divine birth (Liv. xxvi. 19). In the last century of the Republic, rites proper to divine worship were offered to Metellus Pius (Macrob. Sat. iii. 13.7) and Marius Gratidianus (Cic. Off. iii. § 80; Seneca, de Ira, iii. 18); but in the former case by private friends, members of a Hellenized aristocracy; in the latter, by a semi-Hellenic populace; in neither case, with official authorization.

The note of that Empire which Julius Cæsar conceived was an assimilation in which the old Roman tradition lost its prerogative. Under his rule the Roman people were allowed (Suet.) or encouraged (Dio) to adopt the Greek forms of homage. The image of Cæsar now figured along with those of the gods. A month of the year was called by his name. In 45 B.C. a temple was even founded to Juppiter Julius and his Clementia, in which M. Antony was to serve as flamen (Dio Cass. xliv. 6; Suet. Cæs. 76; App. Bell. Civ. ii. 106). On Cæsar's murder in 44 the scheme collapsed (Cic. Phil. ii. 43); but in the comet which appeared the following year the Roman populace saw Cæsar's spirit raised to heaven (Plin. HN ii. 94; Virg. Ec. ix. 47; Ov. Metam. xv. 843 ff. etc.). When the Cæsarian party triumphed, the worship of the dead Cæsar was put upon a regular footing; public policy was now shaped by the cautious spirit of his nephew. A law passed by senate and people set Divus Julius among the gods, and a temple was erected (42 B.C.) to him on the spot where his mangled body had been displayed to the people (Dio Cass. xlvii. 18; App. ii. 148; CIL i. 626, ix. 2628). There is no reason to suppose that divus had at this time acquired a meaning different from deus; it was the precedent of the Cæsars which limited it to those divinities who had once been men (Mommsen, Staatsr. ii.\* 756, note 1; Wissowa,

p. 285). In CIL x. 3903, we find dei Caesaris alongside of divi Augusti (cf. ib. 1271). So, too, we find Kaĉrap ὁ θebs as the proper designation of Julius Cæsar in Greek (Strabo, viii. 381, etc.).¹ From Rome the worship soon spread to other places. An altar of Divus Julius is mentioned at Perusia in 41 (Dio Cass. xlviii. 14; cf. CIL i. 697, 698). In the Western provinces the cult seems to have been maintained only in the colonies founded by Julius Cæsar. Antony and Sextus Pompeius, who disputed with the adoptive son of the divus the empire of the world, each advanced his own claims to divinity. Antony masqueraded in the character of Dionysos, and at Athens followed the precedent of Antiochus Epiphanes by demanding a dowry as the husband of the city-goddess (Plut. Ant. 24; Dio Cass. xlviii. 39; Athen. iv. 148; M. Seneca, Suas. i. 6; Vell. Paterc. ii. 82; Plin. HN viii. 55). Sext. Pompeius claimed to be the son of Neptune (Dio Cass. xlviii. 19; App. v. 100; Plin. HN ix. 55). When the young Cæsar stood forth supreme and brought to the vexed world an era of peace, the tide of worship could not be stayed. But the temper and policy of the new ruler inclined him rather to reduce such honours to their minimum, and among the Romans to bring them into connexion with the national tradition rather than with foreign usage. In 27 B.C. he accepted from the Senate the name of Augustus, which connoted sanctity without asserting absolute divinity (Dio Cass. liii. 16; Suet. Aug. 7; Ovid. Fasti, i. 609; Censorinus, de Die Nat. 21. 8). He showed the same moderation in the provinces.

But first three sorts of cults offered to the Emperor must be distinguished: (1) the provinces and provinces are distinguished.

But first three sorts of cults offered to the Emperor must be distinguished: (1) the provincial cult, maintained by each province as a whole at one of the provincial centres; (2) the municipal cults, maintained by the separate cities; (3) the private cults, maintained by individuals or voluntary associations. The first were far more completely controlled (if not instituted) by the Imperial Government; and to them alone strictly applies the rule laid down by Augustus, that he was not to be worshipped save in association with the goddess Rome. Asia and Bithynia were the first provinces to be authorized to establish a provincial cult of this sort; and temples to Rome and Augustus were reared at Pergamum and Nicomedia. This permission did not extend to resident Roman citizens; they were to worship, not Augustus, but Rome and Divus Julius in temples of their own at Ephesus and Nicaa (Dio Cass. li. 20; cf. Tac. Ann. iv. 37). In the West the first provincial cult seems to have been instituted in 10 B.C., when an altar was consecrated to Rome and Augustus at Lugdunum (Lyons) for the province of the Three Gauls. A few years later a similar altar was consecrated for Germania at Oppidum Ubiorum (Cologne). To the municipal and private cults much greater liberty was allowed. In ordinary practice, however, the cities seem under the early Empire to have combined the name of Augustus with that of Rome. The cult instituted in A.D. 11 by the colony of Narbo is addressed to the numen of Augustus alone (CIL xii. 4333). Or, again, the municipal and private cults might emphasize the Emperor's deity by giving him the name and attributes of some traditional god. In Egypt and Caria, Augustus is Zeus Eleutherios (Kaîrap, ποντομέδοντι καὶ ἀπείρων κρατέοντι Zaul τῷ ἐκ Zauðs πατρδε 'Eλευθερία, CIG 4923; cf. 4715; BCH xi. [1887] 306; and the expression 'god of god,' i.e. son of Divus Julius, in Ditt.

I That the Daphnis who is defified in Virgil, Ec. v., represents Julius Casar was suggested by the scholars of antiquity and is commonly repeated to-day. Daphnis has, however, nothing but his defication in common with Casar; and, since the defication was a part of the old. Sicilian story, it forms a very slender ground for the identification.

Inscr. Orient. 655); at Alabanda in Caria, Apollo Eleutherios (CIG 2903f=Ditt. Inscr. Qrient. ii. 457). At Athens the temple begun by Pisistratus to Zeus Olympios was consecrated to the genius of Augustus (Suet. Aug. 60). Not only Augustus himself, but other members of the Imperial family become objects of worship. Athens honours his grandson Gaius as νέος "Αρης (CIA iii. 444); Mitygramuson Gatus as νeο Αρης (CIA III. 444); Mity-lene, his son-in-law Agrippa as θεὸς σωτήρ (CIG 2176); Nyssa has a special priest for his stepson Tiberius (CIG 2943). A temple was consecrated to Octavia after her death by Corinth (Paus. ii. 3. 1). The first day of each month in Egypt and Asia was called Σεβαστή (Kaibel, Inscr. Grac. Sic. 1890, p. 701). Games, among the Greeks a form of religious festivity, were everywhere instituted in honour of restrictly, were everywhere instituted in honour of Augustus or members of the Imperial house (Γνωμαΐα Σεβαστά, Καισάρηα Άγριππῆα, Ditt. Syll.² 677; Suet. Aug. 98, etc.). Even king Herod built temples and instituted games to Augustus and Rome (Jos. BJ i. 21, §§ 403 f.). In Italy the cult of Augustus seems to have spread largely before his death; temples and priests (sacerdotes in some places, flamines in others) are found in existence at any rate in colonies which Augustus existence, at any rate, in colonies which Augustus had founded, and in cities of which he was in some had founded, and in cities of which he was in some way the patron (Beneventum, Cumæ, Fanum, Fortunæ, Pisæ; see Beurlier, Cults impérial, p. 17; Hirschfeld, p. 838). It was at Rome that the worship was most severely restrained. The Emperor refused to be saluted by his fellow-citizens and or to allow a tample to him to be exected. as god, or to allow a temple to him to be erected in the capital. But he permitted his name to be inserted in the ancient hymns of the Salii (Mommsen, Res gestæ divi Aug., 1883, p. 44), and the Genius Augusti to be worshipped along with the Lares of the city—i.e. so far as the worship of a living man was admitted, it must put off its alten complexion and be screened by the formulæ of the national religion, though here again the restraint could not extend to the action of in-

dividuals or the exuberant language of literature.

The poets, inspired as they were by Greek ideals, and using the old mythological conceptions without any belief in their literal truth, let their fancy run free in expressing the Emperor's deity (Virg. Georg. i. 24 f.; Hor. Od. iii. 3. 11; 5. 1 f., 25. 4 ff., etc.).

In Rome, too, men found pleasure in identifying

In Rome, too, men found pleasure in identifying the Emperor with some particular one of the old gods; sometimes it was Apollo (Suet. Aug. 70; Serv. ad Ecl. iv. 10); sometimes it was Mercury (Hor. Odes, i. 2. 41f.); cf. Reitzenstein, Poimandres, 1904, p. 176 f.); sometimes it was Juppiter (Hor. Epist. i. 19, 43; Preller-Jordan, Röm. Muth. ij. 445)

1904, p. 176 f.); sometimes it was Juppiter (Hor. Epist. i. 19. 43; Preller-Jordan, Röm. Myth. ii. 445).

When Augustus died (A.D. 14), the Roman people might at last worship him without restraint. After the precedent set in the case of Julius Cæsar, he was declared a divus by a decree of the Senate. As the timely appearance of a comet was not to be counted upon, an eagle was liberated at the funeral, to represent visibly the soul of the Emperor flying to heaven; and a senator was found to bear witness to having seen the actual Emperor ascend (Suet. Aug. 100). Tiberius followed his predecessor in restraining the divine honours offered to himself. It is only due to his resolution that we do not to-day say 'Tibery' for September or October, as we say 'July' and 'August' in memory of the first two divi. The Greeks, indeed, were permitted as before to worship the living Emperor, and to consecrate temples to himself and his mother Livia, while the merely figurative character of the worship was emphasized even more than before by the 'God-Senate' (θεὸς σύγκλητος) taking the place of the goddess Rome in the cults maintained with Imperial sanction by the provincial centres (Tac. Ann. iv. 15). Municipal priests of Tiberius are found in one or two Italian towns (Venusia, Surrentum)

(Hirschfeld, p. 842), but in Rome itself no such cult was tolerated, nor would Tiberius entertain the request of the province Batica to be allowed to build a temple to him and his mother (Tac. Ann. iv. 37, 38). The worship of Divus Augustus, on the other hand, Tiberius piously furthered. A temple was begun to him in Rome; and, whereas only altars had hitherto been erected to him in the Western provinces, Tarraco was allowed in A.D. 15 to build him a temple (Tac. Ann. i. 78). In the East, Cyzicus was even punished for slackness in this cult (Tac. Ann. iv. 36). The severity with which the transgressions of individuals were visited increased as the reign of Tiberius went on. It became punishable even to change one's garments before an image of Augustus, or carry a ring with his effigy engraved upon it into an unclean place (Suet. 12b. 58). At the death of Tiberius it was seen that the formality of consecration, if religiously empty, had some political value as a verdict passed upon a deceased ruler by his subjects. The Senate refused to raise Tiberius his subjects. to divinity. It had, indeed, not improbably been the intention of Tiberius that consecration should by no means become a rule, but should be confined to the founders of the dynasty, Julius and Augustus. But Caligula, who succeeded him (A.D. 37), was so far his opposite that he claimed the honours which Tiberius had repelled. No mummery was too extravagant for this wretched maniac. A temple was built for him on the Palatine; he made him-self the equal of Juppiter, and the Roman aristo-cracy were compelled on pain of death to offer him all the forms of religious homage. On his assassi-nation is 41 the South refract him also divinity. nation in 41, the Senate refused him also divinity; his reign was a mad episode; but under Claudius we register further developments of a lasting kind in the worship of the Emperors. Caligula had already caused his sister Drusilla to be consecrated by the Senate as the first diva. Claudius had his grandmother Livia associated as diva with her husband Divus Augustus (Suet. Claud. 11; Dio Cass. Ix. 5); and he permitted (between A.D. 50 and 54) a temple (not an altar) to be erected to himself in Britain at Camulodunum (Tac. Ann. xiv. 31; Sen. Apokol. 8; cf. Kornemann, p. 102, note 2; Toutain, Cultes païens, p. 86). Claudius after his death (54) became the third divus by decree of the Senate; his elevation provoked the lampoon called Apokolokynthosis, which has come down to us among the works of Seneca.

After the precedent set by the elevation of Claudius, consecration became a normal formality at the decease of every Emperor, unless it was desired to affix a stigma to his reign. The outlines of the worship of the Emperors remained very much as they had come to shape themselves under Augustus, Tiberius, and Claudius, i.e. in the Greek East various local cults of the reigning Emperor, whilst at the provincial headquarters the cult of Rome and Augustus became, after the apotheosis of Claudius, a cult of the  $\theta = 0.2 = \beta a \sigma rol$ , among whom the reigning Emperor was included; in the Western provinces, the cult of Rome and (the first) Augustus became a cult of Rome and (the reigning) Augustus or 'Rome et Augustorum.' Beside the original altars, temples would seem to have generally arisen after the precedent of Tarraco; at Lyons, in the latter part of the second century, the altar was consecrated to the cult of the reigning Emperor ('Cæsaris nostri'), the temple to the deceased Augusti (Kornemann, p. 109). It also remained common for other members of the Imperial family to be consecrated on their decease (Poppæa and her the wife of daughter under Nero, Domitilla, Vospasian, the infant son of Domitian, the father of Trajan, etc.), although after Hadrian the privilege seems generally to have been restricted to Empresses 1 (see list of divi in Beurlier, p. 325 f.). And, although the worship of the living Emperor was not usually countenanced in Rome, the worship of his numen or genius was part of the official religious system. The oath generally recognized in the business of the Empire was by the genius of the Emperor (ὁ Σεβάστιος δρκος, cf. Apul. Motam. ix. 41). In the laws of Salpensa and Malaga the formula for swearing inserts, between Juppiter and the penates, first the list of consecrated divi, and then the genius of the reigning Emperor.

None but the worst Emperors followed Caligula in demanding for themselves divine honours during their lifetime. Nero did so, and a temple to him as divus would have been erected in Rome but for its ill omen, 'for the honour of the gods is not conferred upon the ruler before he has ceased to act among mankind (Tac. Ann. xv. 74). Domitian established a worship of himself, and was addressed at court as 'dominus et deus' (Dio Cass. lxvii. 13; Suet. *Dom.* 13; Martial, v. 8). Commodus had himself worshipped as Hercules, and was fond of masquerading with club and lion-skin (Lamprid. Commod. 8, 9; Herodian, i. 14, 9, 15, 2-5). Agrelian (A.D. 270-275) was the first Emperor of sound understanding who took to himself the titles of divinity ('dominus et deus'), but he already had conceived the idea of giving the Roman autocracy an expression no less ceremonious than that of Oriental monarchy. What Aurelian conceived Diocletian (A.D. 284-305) carried out. Among his measures was one to introduce the custom of prostration, and to take for himself and his colleague the names of Jovius and Herculius. When Christianity became dominant with Constantine, worship of the earthly sovereign had, of course, to cease. To the forms, however, of the old worship a political or social value had come to attach which made it difficult to abolish them absolutely. The Christian Emperors as late as Valerian I. (A.D. 364–375) were officially consecrated after their death (Ausonius, Gratiar. act. 7), and the use of the term divus, in common parlance, of a deceased Emperor continued for centuries (Gregory of Tours, *Hist. Franc.* ii. 8; *Cod. Just.* v. 27. 5, etc.). The provincial temples of the Emperor had become so much a centre for public festivities, etc., that Constantine allowed them to continue, stipulating, however, that no rites of pagan sacrifice should be performed in them (Wilmanns, Exempla Inscr. Latin. [1873] 2843, l. 45 f.). Such temples were no longer dedicated to any Emperor personally, but to the Imperial Family (gens Flavia) in the abstract. The priests of the Imperial cult and the sacerdotales (ex-priests) had come to form an important element in the cities of the Empire, discharging secular as well as religious functions. These, therefore, the Christian Empire allowed to subsist. Since, however, they still bore the insignia of old pagan coronati or sacerdotales, there was a feeling against them among the religious (Synod of Elvira, Canon 55). Christians did, indeed, accept the office (CIL viii. 8348), but Pope Innocent I. (Mansi, iii) 1069) propounced that all who had done of iii. 1069) pronounced that all who had done so after baptism were disqualified for the Christian priesthood. The municipal flamines continued locally as secular officials with the old name as late as Justinian (CIL viii. 10516; cf. Synod of Elvira, canons 2 and 3).

We have seen that the offering of divine honours to men arose among the Greeks as a formality

<sup>&</sup>lt;sup>1</sup> Such consecration did not, however, imply necessarily the persistence of the cult when the Imperial power had passed to other families,
<sup>2</sup> It was always, of course, possible for private persons to use forms of flattery, and the Imperial portraits which have come down to us often represent them in the conventional guise of some old divinity, the Empresses especially as Demeter; this need not signify more than the fancy of some individual.

whose religious significance was mainly that it showed how empty religion generally had become. Can we say the same of the mass of organized cults we have just surveyed-cults which endured throughout the Greeo-Roman world for more than three centuries? It is obvious that to some extent we can. Among the Roman aristocracy, among the better educated people everywhere, the ascription of deity to the living Emperor, if not mere tion of deity to the living Emperor, if not mere flattery, as in the case of the Augustan poets, was no doubt understood in a metaphorical sense which emptied it of value properly religious. The better Emperors, as we saw, repelled such homage, and Vespasian jested on his death-bed at the court fiction ('Vae, puto, deus fio,' Suet. Vesp. 23).

But how, if these practices had so little meaning, could they go on so widely and so long. The answer to this might perhaps be as follows. (1)

The practices were not meaningless in so far as they reposed upon a genuine sentiment, if not, strictly speaking, a religious one. Octavianus Cæsar brought the world relief from long anarchy, and for the following centuries order and peace and for the following centuries order and peace around the Mediterranean were felt to be bound up with the Imperial government. Real feelings of loyalty to the head of the world-State may, therefore, have sought symbolical expression, and the symbol, according to the conditions of the ancient world, could be nothing but a religious formality. The Christians appeared rebels to the civil power when they refused to the ceivil power when they refused to the regions of August upon the altar consecrated to the genius of Augustus. (2) Among the masses of the people, among those to whom the Emperor was a distant and unseen power, some real belief in his deity may have existed. The formalities of worship impressed the mind insensibly, and in the sphere of belief there are notoriously many half-shades that cannot give a clear logical account of themselves. The common oath by the genius of the Emperor must have acted continually to suggest his actual presence. The exclamation 'n Katrap seems to have been the one exclamation \( \Omega \) Kateap seems to have been the one which naturally sprang to the lips of an over-driven menial (Luc. Lucius, 16). Especially where the personality of an Emperor had impressed itself upon the popular mind might it be believed that he had at death actually become an operative supernatural power. Images of Marcus Aurelius were to be seen among the penates of Roman houses as late as the time of Diocletian, and he was believed to reveal the future to mer in dreams. was believed to reveal the future to men in dreams (Capitolinus, Marcus, 18. 6f.). (3) The cults of the Emperor once established served various interests incidentally. The prestige and profit brought to its locality by an illustrious temple, the festivities and holidays connected with a provincial or municipal cult, would tend to perpetuate it apart from religious motives; the motives to-day which maintain the observance of Christmas or Easter are by no means all religious. So, too, or Easter are by no means all religious. So, too, the natural instinct of men to form societies of a friendly or convivial kind could be gratified under cover of Cæsar-worship, just as they had been gratified by quasi-religious associations under the Ptolemies (cf. the clubs of Cultores Augusti, φιλοσεβαστοί, etc., in Beurlier, p. 258 f.). The cosmopolitan gild of dramatic artists thought it politic to set the name of Hadrian as νέος Διόννσος alongside of the Ald Dionysos who was their patron alongside of the old Dionysos who was their patron deity. So, too, the social ambitions of the freed-man class found an opportunity of gratification in the institution of the Augustales in the Latin cities of the Empire (Boissier, Religion romaine,

Deification, we have seen, had not been among

the Greeks and Romans a recognition of the divine right of kings per se, but of the material or moral power of individuals. And under the Roman Empire, if the Emperors alone were divine for the whole realm by the theory of the State, other men might attain deity for a particular locality or a particular sect. The defication of widest range after that of members of the Imperial family was that of Antinoos, the youth loved by Hadrian. The Emperor on his death (A.D. 130) encouraged the worship of him as a god; temples and in-numerable statues were erected to him, and a star was discovered which was clearly his soul in heaven (Dio Cass. lxix. 11; Paus. ix. 7; Spart. Had. 14. 7; CIL xiv. 2112, etc.). Theophanes of Mitylene, the friend of Pompey, was worshipped as a god by his native city after his death (Tac. Ann. vi. 18; coins of Mitylene), and, similarly, Cnidus voted his contemporary Artemidorus τιμαι Ισόθοι (Inser. in Brit. Mus., no. 787). The vote recorded in the inscription was passed in his lifetime; but the divine honours were probably not to be offered till after his decease. Apollonius of Tyana, according to Philostratus, though he disclaimed deity, was saluted as a god by large numbers of people (iv. was discovered which was clearly his soul in heaven saluted as a god by large numbers of people (iv. 31; cf. iii. 50); Caracalla built a temple to him (Dio Cass. lxxvii. 18), and he continued for long to be an object of popular worship (Vopisc. Aurelian, 24).

The practice of offering heroic honours to the dead became much more general in the later times dead became much more general in the later times of pagan antiquity. Such honours were sometimes conferred publicly by a city or association as a special distinction, as, e.g., by Tarsus upon the philosopher Athenodorus (pseudo-Lac. Macrob. 21; cf. Head, Hist. Num., 1887, p. 488); Athens (CIA iii. 889); Cyzicus (Mitt. Athen. ix. [1884] 28 f.). But the private consecration of the dead by their relatives and friends became increasingly common relatives and friends became increasingly common in Roman times. Cicero resolved on the 'apotheosis' of his daughter and designed a temple for her (ad Att. xii. 36; cf. the temple of Pomptilla, Inser. græc. Sic. et It. 607). The salutation of the dead as 'hero' or 'heroine' becomes an ordinary formula on grave-stones; ἡρῷον becomes an ordinary name for a tomb. That many a bereaved person who had such an epitaph engraved meant to imply that his or her dead had actually passed into a life of higher power or heatitude, is shown by such phrases as 'Thou livest as a hero, Thou art not become a dead thing' (ξη̂s ώς ηρως, και νέκυς ούκ έγένου, Kaibel, Epig. græc., 1878, p. 433). But the custom of coupling the title 'hero' in common speech with the name of a dead man became so general that it survived in Christian times, 'hero' being now simply an equivalent of μακαρίτης, 'sainted,' just as in the West divus survived as the

'sainted,' just as in the West divius survived as the title of deceased Emperors (Deneken, in Roscher, col. 2547 f.; Rohde, Psyche<sup>4</sup>, 646 f.).

DEISM.—I. HISTORICAL.—The movement of religious thought known as 'Doism' was of comparatively brief duration. Its rapid rise into notoriety, its short-lived prevalence, and its gradual subsidence all fall within the limits of a single century. Roughly speaking, the beginning of the movement was contemporaneous with the Revolu-tion of 1688. Its epitaph was pronounced in 1790, when Burke could speak of the Deistic writers as already forgotten. Nor is the speedy exhaustion of interest difficult to explain. The conditions which combined to direct men's attention to the Deistic problem were transient; and the whole dispute was too frigid and too little in contact with real life to affect the deeper currents of religious thought. Superficially, much excitement was stimulated, until the air was thick with controversial writings. But, with a few exceptions, neither was any conspicuous literary merit displayed by the controversialists, nor did their arguments penetrate far into the secrets of the spiritual life. This serves to explain why the religious debates of the 18th cent. have faded from the common memory more completely than those of earlier periods. On the other hand, to the student Deism presents special points of interest. English religion would never have reached its present condition if it had not passed through the

stage with which we are about to deal.

If the movement is to be understood in relation to the general development of theological thought, it will be necessary to seek for an explanation of its origin in a period when the name 'Deism' had not yet come into vogue, and in speculations the not yet come into vogue, and in speculations the true issue of which was not anticipated by their own authors. Halyburton, in his book entitled Natural Religion Insufficient (1714), was the first to name Lord Herbert of Cherbury as the parent of Deism. The charge was endorsed by Leland, whose View of the Deistical Writers (1754) contains much carefully amassed material, very useful to later students. Since then Lord Herbert's responsibility, whether to his credit or discredit has been bility, whether to his credit or discredit, has been commonly recognized, and this in spite of the fact that his famous book de Veritate was composed with a purpose quite different from that to which its arguments subsequently contributed. The book deserves an epithet often applied in cases where there is little justification for so strong a term. It was, without exaggeration, epoch-making. It initiated a line of thought and a method of religious speculation pregnant with results, the full measure of which has not even to-day been exhausted. No better introduction to the study of Deism can be provided than a brief analysis of the main theses which Lord Herbert sets out to establish. The title of the book, given in full, clearly indicates the writer's purpose: de Veritate, prout distinguitur a Revelatione, Verisimili, Probabili, et a Falso (Paris, 1624). At the basis of the author's theory is his belief in the existence of notitice communes, or innate principles. These he explains in his chapter 'de Instinctu Naturali,' to be distinguished by six marks, viz. Priority, Independence, Universality, Certainty, Practical Necessity, and Immediate Cogency. Ideas to which these marks belong are imprinted on the mind by the hand of God. They are axioms, neither re-quiring nor admitting proof. When dealing with

the subject of religion, he distinguishes five principles as exhibiting this primary character, and consequently independent of all tradition, whether written or oral. They come direct from a heavenly source and are common to all religions. five fundamental truths are the following: (1) that God exists, (2) that it is a duty to worship Him, (3) that the practice of virtue is the true mode of doing Him honour, (4) that man is under the obligation to repent of his sins, and (5) that there will be rewards and punishments after death. The axiomatic character claimed on behalf of principles such as these is open to debate, and Lord Herbert's theories were afterwards subjected to damaging criticism by Locke. But, whatever opinion be held as to the validity of Lord Herbert's assumptions, it remains true that in his works we are brought face to face with the principles which lie at the root of Deism. Here we find assertion of the competence of human reason to attain certainty with regard to fundamental religious truths, and insistence upon the indissoluble connexion between religion and the practical duties of life. This is precisely the theme on which the Deistic writers enlarged. The pivot of the whole controversy is the disputed question of the sufficiency of natural reason to establish religion and enforce morality—a sufficiency as vehemently asserted by the Deists as it was denied by their opponents.

vehemently asserted by the Deists as it was denied by their opponents.

Much misunderstanding will be avoided if it be remembered from the outset that the Deistic controversy was in the main philosophical rather than religious. Had it not been so, it would have been incorrect to indicate a metaphysician like Lord Herbert of Cherbury as the forerunner of Deism. Disappointment awaits those who expect to find in the writings of this period any searching analysis of a living spiritual experience. The controversy arose not from the attempt of the soul to explain to itself its joys and fears in the presence of God, but from the desire of the thinker to remove from his theory of the world inconsistencies of which he was continually becoming more uncomfortably conscious. The details of the controversy will show that the chief impulse came from the wish to find a way of reconciliation between the then commonly accepted philosophic view of the Divine nature and the facts of observation. And new facts were the order of the day. It was a period of discovery and of the rapid acquisition of all kinds of knowledge. Information was pouring in with regard to the religious systems of other parts of the earth. It was no longer possible to live in a religious world limited by the horizon of Western Europe. Travellers were bringing home from recently discovered, or re-discovered, countries reports of imposing civilizations, in which the sanctions of civil order were provided by religions of the utmost diversity in origin and character. In this way materials for the study of comparative religion began to be collected, and it became possible to form some conception of the bewildering multiplicity of religious customs, ceremonies, and doctrines throughout the world. No philosophic explanation of man and man's religious faculties could claim to be adequate which lett all this mass of new material out of account.

At the same time, other more subtle influences were at work stimulating man's natural desire to unify his knowledge. In the

r. Forerunners of Deism .- It is far from easy to form any estimate of the phase of intellectual development through which the nation was passing at the time when it was disposed to accept, or at all events to discuss, the novel theory of religion which the Deists proposed. English philosophy has never flowed in a very wide or deep stream. It is a common reproach that as a nation England has been in the past, and remains to the present day, strangely insusceptible to the influence of abstract ideas. It is difficult to deny the truth of the criticism. Even the controversies of the Reformation were in England decided to a great extent upon practical considerations. Little atten-

tion was for the most part paid to the examination of first principles. An exception to the general rule, however, is afforded by Hobbes († 1679). Together with other writers of the time, he exhibits a strong prejudice against the scholastic philosophy. In certain respects he represents, with some characteristic English peculiarities, the sceptical tendency of the Renaissance. It was, indeed, chiefly as an exponent of political philosophy that he made his mark and arrested the attention of his contemporaries. With the political theories which he defended, and with the controversies which ensued, we are not concerned. His importance in relation to the course of religious speculation lies rather in the temper which he contributed to produce than in the acceptance of his principles by any body of disciples. His self-sufficiency, his obvious one-sidedness, his disregard of necessary qualifications, and his rigorous insistence on the most paradoxical conclusions from his premisses aroused an angry opposition. Hence it is not surprising to come across the statement that, while he had innumerable opponents, his supporters numbered but one. It was a true instinct which made the men of his time feel that the tendency of the Leviathan was in the direction of a thoroughgoing infidelity. The literature of the Restoration bears witness to the existence of a general opinion that danger was to be apprehended from the spread of his influence. Though Hobbes himself was utterly opposed to that kind of natural religion which afterwards formulated itself as Deism, yet he was, in fact, one of the pioneers of the movement. As much as any other single writer he gave the impulse to religious speculation, and, by helping to shake the old confidence in tradition, contributed to the removal of one of the main obstacles to the introduction of Deism.

Another and a very different element at work in the intellectual life of the nation was derived from the influence of the Cambridge Platonists (q.v.). They were a small body standing much aloof from the general life of the country, who from the vantage ground of academic seclusion surveyed the troubled course of the political struggle and the contentions of the warring sects. For themselves, they desired to establish on rational grounds a Christian philo-sophy, leaving to others the barren victories in the field of popular controversy. In them the genuine philosophic instinct to pursue the search for ultimate truth was unmistakably present. It was their dominant motive. Influenced by the wide-spread reaction against the Aristotelianism of the Middle Ages, they discovered, in a modified form of Platonism, a theory which afforded satisfaction alike to their religious and to their intellectual requirements. In the forefront of their system they placed the conception of the human reason as receptive of illumination from the Divine source. From the elevation of the standpoint thus attained—so it seemed to them—the questions at issue between the sects were reduced to their true dimensions, and lost the exaggorated importance which had been conventionally attached to them. In the speculations of these students the them. In the speculations of these students the ethical motive is markedly prominent. They insisted on the immutability of the moral law and on its independence of any positive commands, human or Divine. For the most part they were inclined to abstain from controversy. But some of them found it expedient to meet the theories of them found it expedient to meet the theories of Hobbes with an explicit refutation. Against his materialism, and his speciously simple reduction of all human motives to various manifestations of self-loge, they opposed their Platonic idealism and their belief in the existence of moral principles to which an inviolable obligation essentially belonged.

At first sight it might appear paradoxical to maintain that two systems so consciously and directly opposed to one another as those of Hobbes and the Cambridge Platonists both helped to prepare the ground for the growth of Deism. But it will be remembered that the effect of the writings of Hobbes has been described as in the main negative. He helped to sap the defences of authority, whereas the Cambridge School contributed something more positive, accustoming the minds of men to the hope of finding in their own reason a judge capable of bringing to an end the weary series of doubtful disputations over matters of faith.

In a still more marked degree is it true that the writings of Locke († 1704) produced an effect upon the current of religious thought which he neither intended nor approved. Locke was not a Deist, though the reproach was naturally enough cast in the teeth of the man apart from whose influence Deism would never have enjoyed the vogue to which it eventually attained. While his relation to the movement was unquestionably close and intimate, it was at the same time far from simple. intimate, it was at the same time far from simple. For not only did the Deists profess to draw their inferences from his principles, but many, perhaps most, of the opponents of the movement likewise were convinced adherents of his philosophy. Locke may therefore be said to have laid down the lines along which the controversy was destined to move. This he did, above all, by his short but very significant work on the Reasonableness of Christianity (1695; see art. LOCKE). In the pages of the writers who followed along the path where he led the way we shall find the same ostensible attempt to simulify the ancient faith, at first attempt to simplify the ancient faith, at first with an apologetic purpose, then with a gradually increasing and more overt hostility; the same principle of discrimination between the supposed valuable and worthless elements of the Creed; the same pre-eminence assigned to the ethical teaching of Christianity; the same conception of religion as a moral philosophy and a code of pre-cepts rather than a power enabling the enfeebled will; the same treatment of miracles and prophecy as external evidences of the truth of the claims of Christianity; the same anxiety to discover a re-conciliation between belief in the absolute impartiality of the Divine goodness and the position of privilege assigned to revealed religion. It would not, of course, be true to say that all these ideas were novel when they were propounded by Locke. Many of them had already a long history behind them, and had provided the subject-matter of mediæval disputations. But what is worthy of remark is that here, for the first time, we meet them in systematic combination with one another. They are made to converge upon a certain point. and to conduct to a conclusion which involves certainly the modification, and possibly the repudiation, of important elements in the hitherto accepted creed.

2. Deism in progress.—Those who wish to be supplied with a chronological list of the Deistic writers may be referred to the work of Leland (see Literature at end). It will be more profitable for our present purpose to select certain writers, not necessarily those of the greatest reputation, but those most typical because representative of some critical moment in the development of the movement. Of these the first to deserve mention is John Toland, who in 1696 published his Christianity not mysterious, showing that there is nothing in the Gospel contrary to Reason nor above it, and that no Christian Doctrine can properly be called a Mystery. The author claimed to be drawing the natural inferences from the premisses of Locke's philosophy; and the title of the book indicates clearly enough in which direction

Where Locke he pushed forward the argument. had urged the 'reasonableness of Christianity, Toland would interpret the word 'reasonable' as equivalent to 'not mysterious.' This is not in the least what Locke meant. It is a long step further forward along the road which led to the rejection

of Christian belief.

forward along the road which led to the rejection of Christian belief.

The book was of no particular merit, but, owing to the highly charged condition of the intellectual atmosphere, its publication caused a considerable explosion of indignation. It was condemned by the Irish Parliament and ordered to be burnt. The Lower House of the Convocation of Canterbury took cognizance of it, and would have proceeded further, had not the Bishops decided, on a point of law, to take no action in the matter. Though the ecclesiastical authorities did not move, there was a general feeling that it was an abuse of the recently accorded freedom of the press when a young author put forward such crude and revolutionary views as that 'neither God Himself nor any of His attributes are mysteries to us for want of adequate ideas,' and that so far as any Church allows of mysteries it is anti-Christian (cf. Wilkins, Concilia, 1737, iv. 631). Toland desired so to enlarge the jurisdiction of reason as to make it co-extensive with the contents of revelation. In deliberate opposition to the principle of earlier writers, he refused to acknowledge the validity of the distinction between apprehension and comprehension. What man could not comprehend was on that account to be rejected as false. Not content with merely stating this general principle, he attempted to give a historical account of the process by which mystery had intruded itself into a Christianity originally devoid of this baser element. He pointed out, correctly enough, that in the language of the NT the word 'mystery' signified not something incomprehensible, but a secret revealed to the initiated. Hence he inferred that the conception of mystery in the sense of that which is beyond the reach of human understanding was alien from the spirit of original Christianity, and he endeavoured to show that a gradual assimilation of the new faith to the lower type of Jewish and heathen religions, the intrusion of Platonic philosophy, and the ambitious projects of an unscrupulous priesthood

large measure of originality, yet his book marks a critical point in the gradual change of men's views with regard to the comparative authority of reason and revelation. A certain arrogant assertion of superiority on behalf of reason was now substituted for that deference which had hitherto been considered the fitting attitude of the human mind in the presence of knowledge communicated from above. Another and more easily recognizable result of his rash speculations was connected with his theories as to the course of early Church history. The discussion of the views which he set forth stimulated a lively inquiry into the nature and value of the documents on which the historian of that period must depend. In a book entitled Amyntor, which was published in 1699, Toland himself, taking part in the discussion, endeavoured to analyze the analyze the product to the product the produ —or so it was supposed—to undermine the credit of Scripture by calling attention to the large mass of early Christian literature, and by suggesting covertly that canonical and uncanonical writings alike were the offspring of superstition and

credulity.

Another new departure was taken when Anthony Another new departure was taken when Anthony Collins, in 1713, published the Discourse of Free-thinking occasioned by the Rise and Growth of a Sect called Freethinkers. Collins reiterated and emphasized the claim of reason to pronounce upon the contents of revelation. He advanced beyond the point where Toland had left the matter, by attempting to provide a theoretic justification of the claim to unlimited freedom of inquiry, in all directions, over the whole field of moral and religious speculation. Toland had himself exercised this freedom, but without prefixing any thorough examination of the positive and negative arguments in favour of extending this privilege to all classes. Collins had the acuteness to perceive that the whole of the Deistic argument, involving, as it did, an appeal to the reason of the ordinary man, rested ultimately upon a decision in favour of unconditional individual liberty to pursue in-

1 e.g. Bacon, 'Concludamus theologiam sacram ex verbo et oraculis Dei, non ex lumine naturae aut rationis dictamine hauriri debere' (de Augm. Scient. IX. 1.).

vestigation, and upon a conviction of individual capacity to discover the truth. Accordingly he set out systematically to prove that the progress of civilization has been furthered where men have claimed this right for themselves and extended it to others, while, on the other hand, deplorable consequences have ensued wherever the privilege

of free thought has been withheld.

consequences have ensued wherever the privilege of free thought has been withheld.

In some directions his task was easy. History provided an ample supply of examples of the evils which attend a policy of obscurantism, coupled with a blind and unintelligent deference to external authority. But he adopted a much more questionable position when he maintained that the cause of morality would be benefited by its complete dissociation from all mysterious sanctions whatever. He supported his case by the assertion that the great moral teachers of mankind had appealed, not to the fears, but to the reason, of their hearers. It was the method of the Prophets, of the Apostles, of Christ Himself. On the other hand, the endeavour to enforce belief by any other means than the plain straightforward appeal to the individual reason had been the hane of both Church and State, the source of moral corruption, the cause of every kind of discord, disturbance, and disaster. Bitter attacks are made upon all professional ministers of religion. Invective of this kind was a favourite theme with the Deistic writers, and for various reasons, chiefly political, was not distasteful to the public. The supposed machinations of the clergy served as a convenient explanation of certain facts in the history of religion, which did not easily square with the Deisti theory of religion, which did not easily square with the Deists' theory of contented reliance on the natural reason and instinct of man. From their point of view the prevalence of patently false religions and the persistence of supersuitions were anomalies that had to be accounted for. So they sought to save the credit of the natural human reason by fixing the responsibility for these evils upon an intriguing, selfish, and idle priesthood.

Another point to be observed is the markedly utilitarian character of the reasoning employed by Collins. In defending the principle of freedom of thought he calls attention primarily to the desirable consequences which will follow upon its adoption. Li

A later work by the same writer is significant of the transition to yet another phase of the controversy. In the Discourse of the Grounds and Reasons of Christian Religion (1724), Collins forsakes the question of the relative reasonableness or unreasonableness of the contents of the Christian Revelation, and turns to an inquiry into the credibility of prophecy and miracle. It had been a recognized mode of traditional Christian apology to rest the case for Christianity on two main sup-ports—the correspondence of NT facts with OT prophecies, and the miraculous powers displayed by Christ and the Apostles. So long as the Biblical record remained unquestioned and uncriticized, this position was strong enough to withstand assault. But, now that the spirit of criticism had begun to throw suspicion upon the authenticity and the good faith of the Biblical documents, serious weaknesses in this line of defence revealed themselves, of which the innovators were quick to take logical advantage. If the facts were doubtful, what became of the argument from correspondence with prophecy and from miracle? So began the long debate over the 'external' evidences of Christianity. It was a descent from the comparatively higher level of an inquiry into the fundamental truths of religion to undignified and often vituperative disputes over the veracity of the Apostles and the other NT writers. But, although the tendency to substitute this less important issue showed itself as early as the third decade of the century, it was not till some years later that the change became

Christianity as old as the Creation, or the Gospel a Republication of the Religion of Nature, was published in the year 1730. Its author, Matthew Tindal, Fellow of All Souls' College, Oxford, had passed through various changes of religious belief, and did not bring out this, his best-known work, till near we end of a long life. It was at once recognized as a noteworthy contribution to the controversy.

on the whole was free from the personalities which disfigure so much of the contemporary literature. Tindal collected, arranged, and shaped with considerable skill the arguments on which the Deists relied, and presented their case in a compact intelligible form. His book marks the culmination of Deism, when the movement had reached the height of its development, and was not yet affected by the deterioration which soon afterwards set in. He did his work as well, perhaps, as it could be done. The inconsistencies, mistaken hypotheses, and historical impossibilities which find a place in his book belong to the system as such, and could not be removed without causing the collapse of the

whole construction.

Tindal brought to its logical conclusion the process initiated by Toland and Collins. His professed purpose was the same as theirs had been—to lay down such plain and simple rules as should enable men of the meanest capacity to distinguish between religion and superstition. Like his predecessors, he repudiated mystery and mere deference to authority, and insisted on the duty of every man to fashion his own religious belief for himself. And, in order to show that it is actually possible for every man so to do, he maintained the thesis that the ultimate truth of religion is a common constituent in all creeds (apart from the influence of deterioration) and not the exclusive property of revelation. His argument may be very briefly summarized as follows:

of deterioration) and not the exclusive property of revelation. His argument may be very briefly summarized as follows:

The point of departure of Tindal's argument is found in a peculiar conception of the unchangeable nature of God, whence its drawn the inference that He will treat all men at all times allike in this important matter of supplying them with the same sufficient means of recognizing and discharging the duties required of them. Of course, a racial development of the faculty of conscience was an idea which was altogether beyond the reach of the 18th century Deist. It was therefore assumed that, from the first, man was in possession of a ready means of calculating the ultimate consequences of his actions and so securing his future happiness. Only perversity could lead him astray, because God, 'that we may not fail to be as happy as possible for such creatures to be, has made our acting for our present, our only means of obtaining our future, happiness' (Ohrsitianity as old, etc., p. 16). 'The reason of things or the relation they have to each other teaches us our duty in all cases whatever' (p. 19). Upon this primary revelation in and through the reason is constructed the edifice of natural religion. In making this point Tindal was able to avail himself of the opinions expressed by orthodox writers. Thus he quotes from Dr. Prideaux: 'Let what is written in all the books of the New Testament be tried by that which is the touchstone of all religions, I mean that religion of nature and reason which God has written in the hearts of every one of us from the first creation.' From such a statement it was not unfair to deduce the superiority of the truths of natural religion. Tindal, however, went beyond this and argued that any further revelation must of necessity be mere surplusage, adding nothing of importance to man's knowledge about either faith or morals. In his opinion, all laws, whether the laws of nations or oparticular countries, are only the law of nature adapted and accommodated to circumstances

religion, and whatever reason tells us is unworthy of having God for us author can never belong to the true revealed religion' (p. 220). Into this single dilemma is compressed the quintessence of Deism.

At many points in the above argument it would have been possible to intervene, had it been in accordance with the design of this article to find particular answers to particular Deistic contentions. But no good purpose would be served by thus taking part in an obsolete controversy. It will, however, be useful now to point out some general weaknesses, which are not peculiar to Tindal, but are integral parts of the Deistic scheme of religious

philosophy.

(a) In the first place, it will be noticed that every religious truth is measured against the standard of an imaginary Golden Age. Whatever truth Chrisan imaginary Golden Age. Whatever truth Christianity possesses it retains from an original revelation to human reason, co-eval with the Creation. But in Deistic literature references of this kind to the beginning of the world must be interpreted in a conventional rather than in any literal sense. For, though the Deists professed to look to the far past, their eyes were, as a matter of fact, riveted on the present. It was the reason of their own day to which they appealed. Not until later was any attempt made to discover by historical methods of examination what the earlier intellectual and moral condition of the human race had actually been.

(b) Secondly, it is remarkable how, in estimating the value of the Christian religion, and distinguishing between its truths and its errors, the Deist maintains a consistent silence with regard to the Person of its Founder. He has practically nothing to say about the present operation of the influence of Christ in the world. And even stranger than his silence is his apparently complete unconsciousness that the omission of so fundamental a consideration might vitiate his results. So oblivious were the Deists, and many of their orthodox opponents likewise, of the mystical elements in Christianity, that the very conception of a personal union between the believer and Christ would have been forthwith dismissed as 'enthusiastic,' and to the reproach of enthusiasm the temper of the age was morbidly sensitive.

(c) Thirdly, a kind of supercilious superiority is assumed whenever the question of miracles arises, The Biblical records are not rejected on a priori grounds as in themselves impossible. Abstract metaphysical arguments have strangely little in-fluence upon the course of the Deistic controversy. But, from the point of view of the Deist, miracles were beneath the notice of the man who claimed to be guided by his reason only. At best they might serve to arrest the attention of the vulgar herd. Religion being regarded as essentially the practice of duties, miracles were superfluous. For 'duties neither need, nor can receive, any stronger proof from miracles than what they have already from

the evidence of right reason' (p. 374).

(d) Lastly, Tindal, like other Deists, exhibits an extraordinary incapacity to estimate fairly the strength of evil tendencies in human nature. It seemed to them as though all would be well if only some artificial obstacles in the way of moral progress could be removed. The adoption of the principle of Latitudinarianism—the universal recognition of sincerity as the one and only thing needful—would not only put an end to all persecution, but would set free an amount of moral energy sufficient to regenerate the world. In Tindal's own words, 'this principle, and this alone, would cause universal love and benevolence among the whole race of mankind; and, did it prevail, must soon produce a new and glorious face of things, or, in Scripture phrase, a new heaven and a new earth'

(p. 413). Verily, this was a flimsy optimism, out of all relation with the stern facts of the world's

The time has now come to pass on to the consideration of the last stage of the controversy, when the pivot of the dispute had become the question of prophecy and miracle. It was the beginning of the end, and yet, when the current of controversy first turned into this channel, the public excitement rose to a higher pitch than it had hitherto reached. Nor is it difficult to discover the explanation of this immediate increase of interest. Up to this point the controversy, though not very profound, had yet concerned itself in some measure with the first principles of religious philosophy. In so doing it had moved in a region where the mind of the nation did not follow freely or with comfort. But now, in the place of these recondite and elusive questions concerning the adequacy or insufficiency of human reason, far plainer issues were raised that lay seemingly well within the compass of the ordinary understanding. Was the fulfilment of prophecy a fact or a de-lusion? Did the Resurrection of Christ really occur, or was it a fable easily explicable upon the supposition of enthusiasm or fraud on the part of the witnesses? Here were plain alternatives on which the book-writers and the pamphleteers could join issue. They hastened to avail themselves of the opportunity.

join issue. They hastened to avail themselves of the opportunity.

Notice has already been taken of the fact that Collins' book, A Discourse of the Grounds and Reasons of the Christian Religion, had contained criticusm with regard to the commonly received views as to prophecy and miracle. Professing (though with doubtful sincerity to write in the interests of Christiantry, he sought to convict earlier apologists of a serious misrepresentation of the true relation between prophecy and fulfilment. The object of his attack was the detailed correspondence between the two; and he endeavoured to prove the impossibility of maintaining the old position, in the light of a sound historical criticism of the prophecies. Historically the predictions did not bear the meaning which the apologists required. If, then, the argument from correspondence were to be preserved, it could only be by giving to the prophecies in question a mystical and allegorical interpretation. Such, Collins argued, had in fact been the method of procedure adopted by the writers of the NT. In accordance with this general attitude towards the OT, he defined Christianity as a mystical Judaism. It was a plausible phrase, but not likely to commend Christianity to an age which regarded mysticsm with a mixture of contempt and dislike.

This novel representation of the relation between Judaism and Christianity met with an unfavourable reception. For the most part it was vehemently repudiated by the defenders of orthodoxy. But, weak as Collins' arguments may have been, and easily riddled by the criticisms of better scholars than himself, it must be admitted that his attack on the traditional and mechanical conception of prophecy gave an impetus to a fruit ful attempt at an investigation of the historical conditions out of which the writings of the OT took their rise. It was, in fact, an anticipation, however poorly equipped with linguistic and archaeological knowledge, of the Biblical criticism which has been rich in results during the last half century.

Natu

was sent to prison.

No particular theological merit belongs to the defences of the miraculous element in the Gospels which were called forth by the attacks of Woolston and others. Sherlock's Tryat of the Witnesses of the Resurrection of Jesus (1729) is a characteristic specimen of the kind of answer which found favour at the time,

and was comfortably accepted as conclusive. An elaborate parody of legal forms is employed in order to give life to the argument. Unquestionably many good points are made, the value of the concurrent testimony of the Apostles is exhibited, and their unimpeachable character as witnesses vigorously upheld. But, while considerable technical skill is displayed, the vital warmth of a genume spirituality has given place to a fririd cleveness.

At the stage now reached in our review of the history of Deism little vitality remained in the ideas which underlay the movement. A process of disintegration had set in. Deistic writers were no longer inspired by any genuine impetus of conviction, nor was the general public in a mood to give as much interested attention as heretofore. The controversy was perishing of inanition, and had almost collapsed through the operation of these internal causes. The end, however, was hastened by a damaging blow delivered from without by one who was equally out of sympathy with either side. Hume's philosophy, though it made little stir at the time, was in its effects fatal to the continuance of Deism. A movement which had been initiated under the influence of the ideas of Locke could not survive the transformation which Locke's philosophy underwent in the hands of Hume. This is a circumstance which gives confirmation to the view that the inner meaning of Deism is best understood in relation to the development of philo-sophical, rather than of religious, ideas. It was because Deism had arisen through the application of Locke's philosophy to the subject-matter of religion that its position ceased to be tenable, so soon as that philosophy was found to issue in general scepticism. A little examination of the nature of Hume's criticism of religious belief will show how completely he cut away the foundations on which the Deists had built.

show how completely he cut away the foundations on which the Deists had built.

The Deists, as we have seen, had begun by defending the pre-eminence of Christianity on the ground that it and it alone corresponded with the true religion of nature; but, gradually becoming more conscious of their divergence from historic Christianity, they transformed themselves into the champions of natural, as opposed to revealed, religion. And natural religion meant for them that religion which any man at any time from the beginning of the world was capable of discovering for himself through the exercise of his own individual reason. The existence of a religion 'as old as the Creation' was their fundamental assumption. It was precisely this assumption which collapsed as soon as it was criticized in the light of Locke's own principles concerning the gradual acquisition of knowledge. Hume pointed out that the religion of primitive man, so far from consisting of a few pure, elevated, and incontrovertible supersitions. 'It seems certain that, according to the natural progress of human thought, the ignorant multitude must first entertain some grovelling and familiar notion of superior powers before they stretch their conception to that perfect being who bestowed order on the whole frame of nature' (Works, iv. 421).

Along these lines Hume developed his Natural History of Religion (1757). He exhibited the rude beginnings of religious belief in a barbarous type of polytheism, and sought to provide an explanation of the mode in which purely natural influences, as distinct from supernatural revelation, transformed this primitive faith into something less crude and less full of patent absurdities. Such explanations afford convenient cover for the insimuation that the final product possesses on real superiority over the rude beginnings, being equally human in origin, insecure in its foundations, and destitute of all reasonable proof.

superiority over the rude beginnings, being equally human in origin, insecure in its foundations, and destitute of all reasonable proof.

Hume's irony serves as a very thin disguise for his real sentiments. The declaration of belief in the existence of God, with which he opens his dissertation, is couched in language that would be appropriate in any Deistic treatise; but its insincerity is obvious. With the manifest purpose of undermining the common belief in God, he attributes its prevalence to the operation of irrational causes. 'The doctrine of one supreme Deity, the author of nature, is very ancient, has spread itself over great and populous nations, and among them has been embraced by all ranks and conditions of men; but whoover thinks that it has owed its success to the prevalent force of those invincible reasons on which it is undoubtedly founded, would show himself little acquainted with the ignorance and supulity of the people, and their prejudice in favour of their particular superstitions' (iv. 446). At the conclusion of the treatise, discarding even this slight veil of sarcasm, and declaring the whole question to be a riddle, an enigma, an inexplicable mystery, he advocates an escape from the contentions of discordant surperstitions into the calm regions of philosophy. In this way Huma makes short work of the pure original religion by which the Deists set such store. Not only had he the best of the argument

in contending for the probability of progress from crude to refined types of religion, but, in the face of the evidence which it was easy for him to produce with regard to the condition of religion in earlier times and among the unovilized nations of the world, it was impossible for the fletion of a religion as old as the Creation to maintain itself.

In passing it should be noticed that the strength and the weakness of Hume's essay on 'Miracles' can be properly appreciated only when it is remembered that, throughout the Deistic controversy, miracle was treated as the chief evidence of the Divine authorship of a revelation. From this point of view, the more startling the event the greater will be the stupor which it produces, and the higher its value as a credential. Unconscious of the dangers to faith involved in their procedure, the applogusts degraded miracle to the level of portent. It was a blunder of which Hume was quick to take advantage. If Deist and apologist alike were willing to treat miracle as a naked sign of arbitrary power, it was not for the common enemy of Deism and Christianity to set them right. He was only taking up the ordinary position of the time when he defined miracle as a violation of nature; and, when it is so regarded, with every adequate cause for its occurrence eliminated from consideration, it is undeniably plausible to contend that no amount of external evidence can outweigh the inherent improbability.

3. Writers with relations to Deism, but not properly Deists.—Some writers, commonly reckoned among the Deists, have been intentionally passed over in silence. It will be well, therefore, to add a few words of explanation why this course has been adopted. During the period under review, while the Deists were the most forward and active antagonists of orthodoxy, it was not unnatural

while the Deists were the most forward and active antagonists of orthodoxy, it was not unnatural that any writer who maintained unorthodox opinions should be reckoned as belonging to their camp. Yet obviously the classification is likely in some places to be inexact. It was so, for example, in the case of Lord Shaftesbury, the author of *Characteristics* (1711). It is no doubt true that there are certain points which he and the Deists have in common, but the superficial resemblances are more than counterbalanced by fundamental differences. He displays the same antipathy to priests, and employs the same kind of invective against the poisonous influence of superstition; but, while he thus directs his attack upon the same objective, the principles on which he bases his criticisms are very far from being those of the Deists. Their characteristic conceptions of the desired the same of the desired the tion of a law of nature imposed upon His creatures by the Creator, and enforced by means of rewards and punishments, is absolutely alien from his system of thought. For him the ethical standard was determined by the dictates of an intuitive moral faculty, forming part of the essential endow-ment of human nature. Of this moral faculty the effectiveness would indeed be reinforced by theistic belief, but is not dependent on it, whereas in the Deistic system the sense of moral obligation is derived from the recognition by man of his

in the Deistic system the sense of moral obligation is derived from the recognition by man of his relation to his Maker.

Since the existence of God was of comparatively little moment in Lord Shaftesbury's system, he cannot properly be styled a Deist; and in some ways he exhibited a positive antagonism to their mode of thought. For example, he raised a much needed protest against the undue prominence given to hedonistic considerations by both parties in the controversy. He found an appropriate object for his wit in exposing the shallowness of the conception by which ethics was degraded into an elaborate calculation of pains and pleasures. The pointed weapon of ridicule is effectively used in his hands. Unfortunately, in his references to religion his satire frequently degenerates into a sneer. The defenders of religion winced under his sarcasms, and retailated by calling him a Deist. But there was little justification for the charge. The word 'Deism' would cease to have any definite connotation if it were made to cover systems or radically divergent as those of Shaftesbury and Tindal.

If there is little justification for ranking Shaftesbury among the Deists, there is even less for assigning a writer like Mandeville to their company. The Deist may not have been remarkable for any particular moral excellence, but at least he was eminently respectable. There is no reason to question the sincerity of his desire to further the cause of morality, and to lend his aid in raising a barrier against the encroaching tide of moral laxity. Such was not the purpose of Mandeville. He is cynical enough to set out on the title-page

of the Fable of the Bees (1714) the thesis that private vices are public benefits, and in his opening inquiry into the nature of moral virtue adopts the conclusion that it is the political offspring which Flattery has begot upon Pride. Intrinsically the book is as worthless as it is paradoxical, but it raised a laugh, and its sophistical arguments in favour of self-indulgence ensured its popularity in circles where every moral restraint was regarded with contemptuous indifference.

Leland, the contemporary historian and critic of Deism, devotes as much as a third of his work on the Deistical writers to a consideration of the works of Lord Bolingbroke. It is a clear indication of the high importance which was at the time when Leland wrote, Bolingbroke's collected writings (with Life by D. Mallet), of which the one here most relevant is his Letters on the Study and Use of History (written in 1738), were newly published, having been issued posthumously in the year 1754. The effect of the book, however, was almost nil, and Dr. Johnson's sentence, in which he contemptuously described it as a blunderbuss which the author had not resolution enough to fire off in his lifetime, is a more accurate appraisement of it than Leland's elaborate criticism. The old sneers at priestcraft, the old arguments in favour sneers at priestcraft, the old arguments in favour of a purely rational religion, re-appear. But there was no new point to make; and Deism was too far gone in decay to be revived even by Lord Bolingbroke's name and his 'five pompous volumes.' In England, Deism was to all intents and purposes defunct, though about this time a kindred movement on the other side of the Channel was exhibiting fresh vitality under new forms.

4. The foreign movement.—Deism such as we have been describing was so native a product of English thought, with a form so markedly determined alike by the strength and the weakness of the English mind, that its transplantation to a foreign soil could not be accomplished without the most profound modification of its character. When the ideas to which the English Deists had first the ideas to which the English Deists had lirst given expression were taken up by French exponents, new elements were introduced which gave to the resultant product a very different quality. Thus, what had been Deism in England became in France another movement, with a character and history of its own, which cannot properly be handled in this article. At the same time the history of Deism is not complete unless account he taken of the fact that it is the parent. account be taken of the fact that it is the parent stock from which sprang the French movement of reaction against traditional belief.

It is significant that both Voltaire († 1778) and Rousseau were largely indebted to English sources for their inspiration. During the years which the former passed in England (1726–1729), he gathered former passed in England (1725-1729), he gathered impressions which he afterwards systematized and elaborated into a philosophy of religion. As a friend of Lord Bolingbroke he naturally came into close contact with men who, whether secretly or openly, sympathized with the Deists. The ideas which he derived from this intercourse were in keeping with the bent of his mind. Moreover, his people of the properties of the propert his peculiar abilities enabled him to give them a keener edge and a wider range than they had possessed in the hands of the English writers. In France the conceptions characteristic of Deism found a soil more favourable to their rapid development than England had ever afforded them. The logical French mind, impatient of compromise and qualification, insisted rigidly on the necessary consequences of abstract principles, where English conclusions had been influenced by numberless practical considerations. And, further, the con-

ditions of social, political, and ecclesiastical life in France were such as to accentuate the criticisms of those who were opposed in spirit to the prevailing order. Resentment against repression manifested itself in a sharper opposition to the unbending attitude of authority. In proportion as an external submission to rule was enforced, so was an internal passion for revolt stimulated, especially in the domain of religious thought. So marked was the opposition between the old and the new points of view, that Deism became almost at once identified with an anti-ecclesiastical movement. Instead of aiming at a transformation of the old theology into another pattern, as had been the object of the earlier English Deists, the French representatives of the movement advocated a general repudiation of theology and the substitution of an undogmatic religion in place of Roman Catholicism. To this end Voltaire applied the weapons of his caustic satire, and the Encyclopædists added the weight of their accumulated knowledge. Indeed, Diderot (†1784) and his school represent a further stage in the downward transition from Deism towards Materialism. With him even that residue of Materialism. natural religion which Voltaire would have retained became a mere superfluity, resting on no secure foundation of reason, and therefore destined to disappear before the advance of intellectual enlightenment. See art. ENCYCLOPÆDISTS.
